

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# The Nation.

NEW YORK, THURSDAY, JULY 6, 1899.

## The Week.

Two of the most conspicuous leaders of civil-service reform addressed the public on Thursday on the interesting subject of William McKinley. One of these was Gov. Roosevelt, the other Charles J. Bonaparte. Neither of them, however, touched the subject of civil-service reform. Both of them had in view the war policy of the President. Gov. Roosevelt considers that the Philippine war makes it a national duty to reflect President McKinley. Mr. Bonaparte thinks that the President has bartered his conscience, on a question involving the blood of his fellow-countrymen, for the sake of a party victory at the polls or possibly to secure his own reelection to office. A more formidable indictment than this, he thinks, could hardly await any man at the bar of history. Mr. Roosevelt's views are diametrically opposed to this. He holds that there is danger of our becoming a nation of hucksters unless we have frequent wars, and that the real criminals in our history are those who neglect favorable opportunities for fighting. Between such notable champions of civil-service reform how are we to choose? To which of them should other civil-service reformers look for safe leadership? Evidently they should look less to leaders and more to their own principles and their own platform. We have had a war with Spain and it is ended. Nobody can recall the past or bring the dead to life. We have a war with the Filipinos which is a heavy weight on the consciences of many, and, we would fain believe, a sorrow to all—even to those who believe in war for war's sake. Even they must have some sympathy for a people who believe that they are fighting for liberty. In the presence of the dead past and in the midst of present perplexities, Mr. McKinley has dealt the heaviest blow at the principles of civil-service reform, and given that cause the worst set-back that it has received since the passage of the Pendleton bill, nearly twenty years ago. This surrender to the spoils-men ought to solve all doubts among the friends of the merit system as to

Boston *Record*. Their editors, especially those on the Pacific Coast, from which section most of the troops who are fighting in the Philippines have been drawn, are clearly of the opinion that Imperialism will be an issue in the next Presidential campaign, and that the President is not on the popular side of it. The utterances of the Portland and San Francisco journals, all of them very strong Republican organs, are in no sense timid or equivocal. They undoubtedly reflect the steadily rising tide of popular dissatisfaction in their section with the shilly-shallying course of the Administration and with the situation in the Philippines. It is no anti-Imperialist, but the chief Republican organ in San Francisco that says we have not yet tried the policy of conciliation with the Filipinos, as we should have done first of all, but have tried the policy of subjugation and have failed, and that the question now is: "Do the American people want to resolve their war for humanity into a bloody conquest of subjugation?"

The uncensored dispatch from Manila which the *Herald* has received from its correspondent by way of Hong Kong, contains information as to the real condition of affairs in the Philippines which coincides exactly with the news that has reached this country in other ways. The two views which the *Herald's* correspondent delineates, the official rosy view, and the non-official gloomy view, are familiar to us here. Nobody takes stock any longer in the first, though it continues to be put forward in the Manila dispatches which the War Department gives to the public, and in interviews with cabinet officers. The second view has come to be accepted generally as the true one, because it has been sustained by every trustworthy authority who has spoken for several weeks. It found its most convincing expression in the declaration of Dr. McQueston of Gen. Otis's staff, who announced on his arrival at San Francisco that a force of 100,000 to 150,000 men would be necessary to subdue and hold the Philippines. It is idle for cabinet ministers at Washington to attempt to offset information of this kind, direct from the seat of war, and from the lips of a man in the possible position to know the facts, some general observations by  
— Emory Smith  
— Griggs. The situation is serious, no

Clayton-Bulwer treaty abrogated. The two things are separated from each other by nearly the whole length of the North American continent, and they have nothing in common except that both subjects are in the field of the diplomatic discussion now pending between the two governments. It constitutes an obvious objection to our taking the position that the treaty is abrogated, that we are now negotiating on the theory that it is not abrogated. It would be ungentlemanly to say to-day that a thing does not exist which we were asking the other party yesterday to help us get rid of. Moreover, if we should say that we consider the treaty already abrogated, very likely England would say, as she did once before, that she considers it in full force. That would not commit her to do anything, but she would hold herself clothed at all times with the rights that the original treaty guaranteed. So no progress would be made, but, on the other hand, the present friendliness of the two countries would be seriously chilled. It is worth remembering also that the Senate recently, in an amendment to the river and harbor bill, would have authorized the President to enter into negotiations with Great Britain looking to the abrogation of the treaty. This failed in the House, but its adoption by the Senate was tantamount to an expression of opinion by that body that the treaty has not been abrogated, but is still in force.

Secretary Alger's candidacy for the United States Senate has become ridiculous within a week after he announced that he had entered the contest. His own weakness standing alone has only been aggravated by his alliance with Pingree. The Governor of Michigan has been very successful in winning office for himself, and has proved himself very strong with the people. But it has been shown already that he cannot turn over his strength to anybody else, and his attempt to beat Senator Burrows for reelection with a Pingree man last winter was a humiliating failure. What he could not do for another man who was respectable enough, he certainly cannot accomplish for a politician so thoroughly discredited as the Secretary of War, while the Governor's opposition to McKinley's war policy would of itself drive  
— Alger has

defend the removal of Mr. Shurtleff from the office of General Appraiser by producing evidence of inconsistencies in his appraisements, or showing in other ways that he was not an efficient officer. The trouble with this kind of defence is that it is not pertinent. The law requires that Mr. Shurtleff should not have been removed except for cause and on charges, with an opportunity to be heard in his own defence. He was removed without charges, and his request for reasons was not complied with. If this was an illegal proceeding, as he and his counsel claim it was, it cannot be justified by the production of charges now. Tammany officials have tried to justify like conduct on their part in this way, and have failed in every instance in which the matter has been brought into court. Scannell tried it with reference to an employee of the Fire Department, and the ultimate result was an order by the court to reinstate the removed person with back pay for the time that he had been out of office.

The courts have once more given Tammany a disagreeable lesson as to the meaning of the civil-service law. In January of last year, William Dalton, the Commissioner of Water Supply, removed Major Tate, a war veteran, who held the position of Water Register for Brooklyn, without giving any cause for the removal or giving him a chance to be heard. Major Tate brought the case before the courts, and, after many rebuffs on technical grounds, he won it last week in a decision by the Appellate Division of Brooklyn, ordering his reinstatement. Mr. Dalton contended, in defence of his course, that the position was "confidential" and as such did not come within the "veteran" clauses of the law. Justice Cullen, in delivering the opinion of the court, takes occasion to define what "confidential" means, thereby showing that his interpretation of the word is quite different from the prevailing Tammany one. He says that no employee or subordinate can be said to hold strictly confidential relations with his appointing power unless the latter is held peculiarly responsible for his misconduct or defalcation. As this was not the fact in the present instance, the place was not confidential, and the removal of Tate was illegal. He must be restored, his salary of \$4,000, with back pay, must be resumed, and the good Tammany Democrat who was put into his place must be put out—or kept on the pay-roll of the city in some other capacity.

The feelings of our Mayor when he takes up his pen to give his official approval to the new civil-service regulations for the city will probably never find public expression. No matter what he thinks of the regulations, he has no

choice except to approve them. If he refuses approval, the whole matter will be thrown into the hands of the State Civil-Service Commissioners, who will have power to make whatever regulations they desire and to force them upon the city. It is said of the regulations which the city commissioners have agreed upon after conference with the State Commission and some despised civil-service reformers, that the number of unclassified places will be reduced one-half, and that the difficulties of getting anybody into the service without passing a competitive examination will be so magnified that few genuine Tammany men will ever be able to get anything in the way of a "soft snap," or any position more desirable than that of a day-laborer. The law is so clear, and has been interpreted with such cold-blooded rigor by the courts, that all hope of getting around it has been abandoned. Reform has never before sat with such deadly weight upon the Tammany clerical talent of this city as it does to-day, and the knowledge that he must give his approval to the hated law which confirms it in its seat, must tax the Mayor's serene temper severely.

It is to be hoped that the grand jury will take notice of the violation of the corrupt-practices act in the Ninth Assembly District, where the Croker-Sheehan fight is going on. The act makes it an indictable offence for any person holding an office, or seeking a nomination, or claiming to have authority or influence, to threaten any other person with removal from office or public employment with a view of influencing that person's political action, or to promise him an office or other valuable consideration for the like purpose. Notwithstanding this prohibition and the penalty of fine and imprisonment annexed thereto, the crime is of daily occurrence, probably in both parties. Just now it is especially flagrant in the Tammany crowd, where the men are removed from public employment or threatened with removal in large numbers in order to force them to abandon Sheehan as a political leader and adhere to Croker. We do not look to Sheehan for elevation of the tone of public life; nevertheless, a great deal of good would result from a vigorous enforcement of the law which forbids intimidation at the primary elections. The primaries are the nesting-places of free government. No reform can do much good which does not begin there. A few years ago a wholesome example was made of some ballot-box stuffers, who were actually indicted, convicted, and sent to the penitentiary. That species of crime came to an end for the present at least. It would be a still greater contribution to the cause of good government to make an example of the corrupters of the primaries in the Ninth District or in any other

district where violators of the law can be found.

It is generally believed that there is to be a consolidation of the Metropolitan, the Manhattan, and the Third Avenue Street Railways, and perhaps, also, the Brooklyn Rapid-Transit Co. If the reports to this effect are true, the cause of the movement must be found in the use of electric propulsion for street traffic. If the old system of locomotion were retained, wherein the motive power of each car or train is separate and detached from all the rest, there would be no economy in consolidation of the several companies. But in the new conditions which have come about, great economies can undoubtedly be affected by attaching all the rolling stock to a few large power-houses. In this the public have an interest as well as the companies themselves. It is for the public interest that the movement of passengers in the streets shall be accomplished without the use of coal, smoke, and flying cinders and puffing locomotives. It is their interest also that it shall be done at the least possible expenditure of fuel. A few years ago such a consolidation would have been looked upon with alarm, as tending to monopoly, oppression, and perhaps increased fares or inferior accommodation. There is nothing to be apprehended now, so far as can be discerned. If the consolidated company becomes oppressive, the new franchise-tax law can be invoked to relieve it of any excessive gains.

There is no longer any doubt about the negotiation for a lease of the Boston and Albany Railroad to the New York Central. The lease is subject to ratification by the stockholders of the former company and approval of the Legislature of Massachusetts. The terms of the lease seem to be sufficiently attractive to insure the ratification by the Boston and Albany party, but the Legislature may offer some opposition, especially since the State itself has the right, reserved under the charter, to acquire the property by reimbursing the shareholders. A commonwealth is apt to be a hard bargainer. There are so many people and such varied interests to be consulted, and so many politicians to be placated, that a good deal of work may yet be required to secure the final execution of the lease. In any event, the New York Central can hardly fail to secure the place of advantage in any future competition for control of the property, and this may be its main object now. New York has no objections to offer to the lease, so far as we can see. The New York Central Railroad extends itself to Boston—that is all. It has no reason to favor one city at the expense of the other.

An interesting discussion has been

started in the South by the views about the condition of agriculture in that section which were recently given to the Industrial Commission in Washington by the Vice-President of the Georgia State Agricultural Society. According to this witness, things are already worse than they ever were before, and the situation is steadily becoming still more unfavorable. Indeed, his evidence was one mass of undiluted pessimism. But the leading newspapers of his own State and of other parts of the South earnestly protest that his picture of the situation is altogether wrong. He lives in Augusta, and the *Chronicle* of that city says that, while the farmers are still carrying a heavy burden and there is room for betterment in both agricultural and industrial conditions, the "burden is growing lighter and lighter every day" and "conditions are bettering." The *Atlanta Constitution* is equally emphatic in the view that, although for the past few years agricultural conditions in the South have been deplorable, "the causes for this condition are equally well understood, and there is in sight a relief from them, and the possibility of a future condition in which the farmers of the South will stand far ahead of those in the East or in the West." The *Greenville (S. C.) News*, speaking for an adjoining State, is even more positive. It declares that "so far as South Carolina is concerned, the people are not in a depressed condition; on the contrary, agricultural conditions are better in this State than at any time since the war."

The truth about the matter appears to be that the conditions of cotton-raising have changed so radically that farmers who stick to the old ways are "getting left," while those who realize the necessity of a change and show the enterprise which is required are better off than ever. When cotton brought fancy prices, the planter could make it his only crop, buy everything else that he used, and lay up money. But when the price of the staple fell to four or five cents a pound, and he continued paying high prices for meat, grain, and other articles, brought long distances over railroads from the North, he was sure to "run behindhand." There has been a great difference in the rapidity with which the farmers of different States have learned the lesson. The *Greenville News* testifies as to South Carolina that "diversified farming is redeeming this State from financial depression and illiteracy; it is improving the land, putting money in the farmers' pockets, and making everything different from the conditions described by Mr. Barrett as existing in his section of Georgia." In Georgia itself the progressive agriculturists are already profiting in the same way, and the last report of the Commissioner of Agriculture shows that the area sown to wheat is 15 per cent. larger this year

than last, and the acreage in corn nearly 25 per cent. larger. Wherever in other parts of the South this diversification of agriculture has occurred, the condition of the farmer has improved in the same way.

One cause of lynching is the doubt which is so often felt by the people as to whether a criminal will suffer the just penalty if the mob shall let the law take its course. This doubt is largely based upon the frequency with which men who are undoubtedly guilty of grave offences escape all punishment through a resort to technicalities by their lawyers, and through the elevation of form over substance in the interpretation of law by the courts. The Supreme Court of Tennessee has gained an unenviable prominence for thus sacrificing the interests of justice. In one case which was recently carried up to it, a colored merchant had been convicted of receiving stolen property, and the jury which tried him felt no doubt about his guilt. Among the men summoned from whom this jury was selected was a cotton-picker, who lived in a tent, one of the family of nomads who go from place to place. The law requires that a man shall be "a householder or a freeholder" to be eligible for jury service, and when this tent-dweller appeared, the judge declared him incompetent, and filled the box with twelve men who were plainly eligible, who tried the case and convicted the accused. But the criminal had a shrewd lawyer, who decided to take the chances of getting a reversal of judgment on appeal, and the highest court set aside a just verdict because it held that living for a while in a tent in a certain county made a man "a householder," and that the whole trial must go for nothing because a man who was eligible to be a juror was not taken.

It had been urged, it seems, by some nervous and flighty people—probably by the very people who wished the Government, a year ago, to buy wheat and lock it up in storehouses—that the British Exchequer, or the Bank of England, or somebody else, ought to obtain more gold and hoard it for the benefit of British trade. This idea was apparently suggested by the fact that the gold holdings at the Bank of England are at present less by nearly £7,000,000 than they were a year ago, and smaller than at this period in any year since the heavy increase of European bank reserves began in 1892. Sir Michael Hicks-Beach replied to this suggestion by merely affirming that the Bank of England's business in the gold market was confined to increasing its reserve when this was needed to meet its banking requirements, and that neither the Government nor the Bank had any excuse for wasting capital in an unprofitable hoard of specie. The truth is, that the amount of

gold in the Bank of England's vaults is merely an automatic reflection of the conditions of international trade and international credits. Whether larger or smaller in amount than usual, its sum total represents the amount of gold received from abroad in settlement, which its holders have chosen to convert into Bank of England notes. The question of increasing what the Bank describes as its reserve involves a different principle, because it is purely a matter of prudent banking. Generally, it has been thought that a reserve of notes and coin in the banking (not in the issue) department equivalent to something like 40 per cent. of the sum of liabilities was a proper working minimum. It is clear that this percentage could be enlarged either by reducing liabilities or increasing reserves. Lately, the reserve percentage has run slightly below this traditional figure, and the Bank, not deeming it wise in existing trade conditions to contract its loans, has recently undertaken, by means of an offer of interest during transit to the gold-importers, to attract an additional sum of specie into its own reserve. But the difference between a move of this sort and an arbitrary attempt to increase a national stock of idle specie is considerable.

Sir Michael Hicks-Beach in his speech discussed the proposition that the Government ought to take some steps to secure a sufficient gold reserve to protect the business interests of Great Britain. He rightly rejected the scheme as unnecessary, and quite outside the proper duties of Government. It was a banking question solely. If it was a burden to accumulate and hold a large stock of gold, it was one for the banking fraternity to assume. Since the Government has no demand notes outstanding, and is not charged with any duties or responsibilities in reference to the currency, it would be sheer folly for it to meddle with that business, even in the way of offering advice. "If an increase of the gold reserve is necessary," said Sir Michael, "it ought to be undertaken by the combined action of the Bank of England and the great joint-stock and private banks." Here the Chancellor occupies safer ground than Mr. Goschen did a few years ago, when he held the office that Sir Michael now occupies. Mr. Goschen, in two speeches of considerable length, maintained that both the Bank of England and the joint-stock and private banks ought to be compelled to keep a larger stock of gold than they customarily held, and he indicated about what percentage it ought to bear to their total liabilities. The tone of his speech, and the position he then held as the chief financial officer of the Government, led the public to expect that if the banks did not increase their gold reserves, he would bring a bill before Parliament to compel them to do so. But he did not.

## JAPAN'S COLONIAL EXPERIENCE.

One of the shrewdest foreign diplomats in this country, speaking the other day of the situation in the Far East, mentioned as a noteworthy incident Japan's failure to subdue Formosa. She holds the seaports, while the interior of the island is still about as untamed as ever. Courtesy doubtless forbade his suggesting any parallels which might be offensive to the people among whom he is making his home; but one, at least, must have crossed his mind.

Formosa passed into the hands of Japan after the war with China in 1895, in much the same way that the Philippine archipelago has passed into the hands of the United States. From a strategic point of view, Japan had some need for Formosa, because the smouldering fires of Chinese revenge are liable to burst forth into flame one day, and then a naval base within a few hours' sail of the Chinese coast will be of value. If we had demanded Ceuta instead of the Philippines from Spain, we should have acted upon the same logical motive as Japan in demanding Formosa from China. Having acquired title by the treaty of Shimonoseki, Japan proposed to take possession of her new domain. She soon found that she was an owner in name alone. A considerable part of the island was known to the outside world only through travellers' tales, having never been scientifically explored. It was reported to be rich in material resources, including among its agricultural products tea, sugar, rice, camphor, and castor-oil, and among its mineral deposits coal, petroleum, iron, and gold. The Mikado had no Becker to make a superficial survey, and to furnish estimates of the extent of this potential wealth, but all the stories brought back by persons who had ventured into the interior agreed in representing the country as one which could be made to pay a fine tribute to the imperial treasury.

But there were the inhabitants. Of all the human mixtures outside the Philippines, probably no country could show one more complex than Formosa's. In one small district eight different languages were spoken. There was an almost countless number of tribes, each having its own chief and council, its own laws and social customs, and its own peculiar arts of savagery. Some of the tribes were headhunters, some were cannibals. One region was inhabited by a race of pigmies, while at the other extreme of the physical scale was a clan of giants cruel and cunning to the last degree, and expert in the use of spear and arrow. For some 200 years the Chinese had tried to reduce the wild tribes to subjection, but in vain. The struggle had been carried on very much like the Spanish effort to conquer the Filipinos. A victory here and there would be greeted as an assurance of success; but at the first sign of relaxation on the part of the

invaders there would be a sudden raid from some fastness still held by the natives, and its story would be told a few hours later in a long trail of blood and ruin. The Formosans felt that, having possessed the land before any strangers came among them, they had a right to live on it and enjoy its fruits undisturbed. They may have been savage, but they knew what liberty meant; and though the supreme authority in most of the tribes was despotic, it was a despotism of their own making, and not one forced upon them against their will by aliens.

Of course, China's deed of cession could convey no more than she herself controlled, and that was little. Where her army had gained a foothold in the southern end of the island, her people—mostly the daring Cantonese—had poured in as settlers and mixed with those natives who were willing to acknowledge her sovereignty. Out of this union had grown a new element, proud of their Chinese origin and much more advanced in civilization than the pure aborigines, but quite as tenacious of their rights. Their immediate ruler, when the Japanese arrived, was the renowned Liu Yuen Fou, the provincial potentate whose Black Flags had taught the French a lesson eleven years before. In a way, he was the Aguinaldo of the Formosan episode. Admiral Kabayama, whom the Mikado had named as Governor, issued a proclamation, in the form of a letter to Liu, briefly rehearsing the story of the war between Japan and China and the treaty ceding Formosa to the Japanese, and adding:

"As I hear you occupy Tainan, with the intention of resisting our occupation of that portion of the island, I wish to point out to you how fruitless will be your attempts to oppose us. . . . You will be unable to obtain reinforcements, and, shut out from outside help as you are, success will be almost impossible. It is easy for you to understand this.

"Your name is widely known, and you have the reputation of being a brave man. You are well acquainted with international law, but you go contrary to its precepts. . . . In this you conduct yourself in the manner of an ignorant person. If you will . . . disband your army and give peace to the country, I will beg my Emperor to send you back to the mainland with honors worthy of your rank, and the soldiers in your command will be pardoned and given passage to their homes.

"As I have long been acquainted with your name, I offer you these suggestions and advice. Whether you choose to accept them or not, remains with you."

Liu's answer was a contemptuous refusal to come in and be good. Then began a campaign of subjugation, the results of which, up to the present time, we have summarized above. A Japanese Jingo resents to-day the insinuation that his government has not brought peace and good order to Formosa, with not less spirit, though perhaps with better manners, than an American Jingo resents a like suggestion regarding the Philippines. Yet Japan, after four years of constructive occupancy, still has to keep a well-equipped

army in Formosa, and the wild tribes of the interior lead their old lives unchecked. Does the reader need to have drawn for him in detail the parallel between Japan's experience with her ceded province and that upon which our nation is entering in a neighboring archipelago? Is there not a familiar ring in almost every sentence of this condensed history? Might not the description of Formosa, with its stores of natural wealth, its variegated population, its unexplored areas, and the resistance it has offered to a transfer from one putative owner to another, have been written as truly of the Philippines? Might not the Otis proclamation have been copied, in spirit at last, from Admiral Kabayama's letter of benevolent admonition?

It may be argued, in defence of Japan's situation in Formosa after such a lapse of time, that she is a small nation, comparatively. Let us see. All Formosa, if set down on the single island of Luzon, would leave half of it uncovered; whereas Japan is larger in area than New England, New York, and Pennsylvania combined, and her population is more than half that of the United States. Moreover, no people understand dealing with Orientals so well as Orientals themselves, and Japan is easily first of the Oriental Powers. If she cannot show a clean record of success in Formosa, no other nation could. She is wise enough to recognize her limitations, however loath to confess them in public. It is an open secret that she could have had the Philippines last year if she would have accepted them. She did not want them; she does not want them now. She has had enough of the sort of trouble which must go with their ownership; and from the store of her costly experience she could teach a thing or two to those countrymen of ours who still think we drew a prize in our latest lottery of war.

## THE COMPETITIVE PRINCIPLE.

Nothing exposes more clearly the bad logic of the President's recent changes in the civil-service rules than the contempt flung by his apologists at the competitive feature of the tests applied for admission to certain grades of Government employ. Secretary Gage, for example, is quoted as saying: "There is the mint service. Why should we subject to competition the women who want to weigh and file the blanks which are to be stamped into standard dollars? All that one of those women has to do is to sit before a little scale and weigh bits of metal. If a piece is too light, it goes into one box; if too heavy, she files off enough to bring it to the right weight and throws it into another. It is 'weigh, file—file, weigh,' day in and day out. Why not appoint these women from a registration list? Fine scholars are not needed for such work. What is needed is character, and physical en-

durance enough to keep at this monotonous task month after month without breaking down. Exclude favoritism, of course; but don't require such women to compete in an examination."

This is a fair sample of the reasoning of all the members of the Administration who deign to discuss the "backward step." Let us analyze it. Mr. Gage will surely not pretend that the mint at Philadelphia can give employment to all the poor women in that city, of good character and fair powers of endurance? Then how choose between them? By some system of registration, he tells us. In other words, all the women who are too decent to steal, and who are warranted not to succumb to fatigue or bad air, are to enter their names on a list, from which the superintendent is to take them in order. This, it is assumed, would get rid of the obnoxious element of competition. But in fact it would not; it would merely change the form of the competition. Naturally, a large number of applicants would seek to stand at the top of the list, and would make some sort of a contest for the choice places. Would they all assemble at the registration office and crowd and jostle each other, thus making it a contest of muscle and avoirdupois? Or would they decorously form a queue before the office door, and hire messenger-boys to hold their places over night, like ticket-buyers for a new play?

Even the spoils and patronage abuses have their competitive feature. Twelve candidates besiege a public man who has an office in his gift; one endeavors to show that his appointment would please the largest number of voters; another, that he has friends who could contribute handsomely to the next campaign fund; a third, that his family is socially powerful, and could further the ambitions of his benefactor's wife. The only thing that none of the dozen will think worth proving, is that he is better fitted than the other eleven to do the work; but the competitive feature, at which every spoilsman rebels, is there just the same. We venture to say that Mr. Gage would not employ a servant for his household except on a competitive basis, if there were more than one applicant for the place. He would not question the candidates about algebra or astronomy; no more would a civil-service board. But if three men wished to drive his carriage, and two brought good testimonials from their last employers, while the third did not, the third would be excluded at the start. Of the two remaining, if one could read and write and cipher a little and the other could not, the Secretary would choose the one who knew the stable and something besides. That would be human nature. The mistake most persons make in dealing with the public service lies in forgetting that it is only private service vastly expanded. The same prin-

ciples which appeal to common sense in the one case may safely be applied in the other.

The most radical reformer who ever lived would not claim that a scholastic test will show whether a woman can file the edges of a silver disk. But if, as Secretary Gage assumes, almost any woman can do that, what possible harm can there be in assuring the Government of a group of employees who can do that and something more? Is a woman any less able to weigh bits of metal all day long because she is able also to describe her duties in writing? When she drops these bits into boxes, is she any the worse for knowing that ten in one box and five in another make a total of fifteen? Do not abolish the competitive test in her case, but enlarge its scope. Set twenty candidates to filing and weighing at the same time, if you will, and see who does her work fastest with accuracy. Infuse as much of the practical into your tests as you can—the more the better; only bear in mind that the Government ought to have the best help its money will buy, instead of being compelled to pick it up haphazard and train it afterwards at the public expense.

A favorite refuge with public men opposed to the competitive system is the remark: "I believe in examining candidates, but I want to do my examining myself. I question a clerk before I set him to work. You don't mean, surely, to say that I would conduct an examination unfairly?" It is pitiful to be obliged, at this late day, to review the kindergarten course in civil-service reform for the benefit of men in high public office. Suffice it to answer that charges of wrong-doing and suspicions of evil intent, are not now under discussion. It is not necessary to go into the question of personal sincerity, and inquire whether this or that appointing officer will provide an honest "pass" examination or deal fairly with a registration roll. The point to settle in each case is whether a competitive test is practicable. If it is, it should be applied; if not, resort may be had to the next best method. Why take the second quality of anything when you can just as well have the first?

#### THE SECURITY OF RAILROAD MORTGAGES.

The recent decision of the Supreme Court of the United States concerning the rights of unsecured creditors is certainly disquieting. The case was that of the Louisville Trust Company against the Louisville, New Albany and Chicago Railway Company, and others, and the decision practically overthrew the reorganization of that railroad. The plaintiff represented some unsecured creditors of the road, and alleged a kind of conspiracy between the holders of its bonds and its stockholders, by which the

road was to be sold, and to be bought by a company in which these parties were to be interested. So far as appears, this reorganization did not differ materially from many others that have taken place within recent years. The stockholders were allowed something by the bondholders on account of the sacrifice which they made, but the bondholders, of course, retained their priority of lien.

The court has upset these proceedings, not because fraud was actually committed on the unsecured creditors, but on the bare ground that no agreement between the bondholders and the stockholders of a railroad, contemplating the foreclosure of a mortgage, is equitable unless all claims against the road are provided for. "No such proceedings can be rightfully carried to consummation which recognize and preserve any interest in the stockholders without also recognizing and preserving the interests, not merely of the mortgagee, but of every creditor of the corporation. In other words, if the bondholder wishes to foreclose and exclude inferior lienholders or general unsecured creditors and stockholders, he may do so; but a foreclosure which attempts to preserve any interest or right of the mortgagee in the property after the sale must necessarily secure and preserve the prior rights of general creditors thereof." The court conceded that the bondholder might voluntarily, after he had acquired title by foreclosure, make a gift of some interest in the property to the former stockholder; but it declared intolerable any agreement between these parties that did not recognize the claims of all creditors.

Unsecured creditors, under the system of receiverships which our courts have developed, have gradually attained a tolerably safe position, but they are certainly likely to fare even better hereafter. In the case of one railroad, at least, it is a fact that the unsecured creditors captured the railroad and "froze out" the first-mortgage bondholders altogether. The court sanctioned the issue of receiver's certificates to such an extent as to exceed the value of the property. There have been so many notorious cases of this kind that railroad lawyers say that, when a road goes into the hands of a receiver, it may as well be understood that every one will be paid before the bondholders. If there is any surplus they may get it, but their priority of lien has become a legal fiction. The wages of employees must be paid; furnishers of material must be paid; every one, in short, who can make delay or trouble, has to be taken care of. As Justice Brewer says, the public interest requires that the road be operated, and hence the running expenses become the first lien by means of receiver's certificates. He now holds that equity, if not public interest, requires that these general creditors shall

participate in the ordinary schemes of reorganization, if they wish to do so.

It is of course conceivable that the owner of a piece of property may conspire with the holder of a mortgage thereon, and consent to a sale in foreclosure on the understanding that he is to participate in the proceeds. Such a collusive proceeding, however, would be a fraud on the holder of a second mortgage only if he were prevented from bidding at the sale. The law supposes that if a man lends money on a second mortgage, he will be prepared to protect himself by buying in the property when it is sold. Justice Brewer very properly says that it is different in the case of a railroad, which the bondholders are seldom in position to buy. Indeed, to acquire such a property is generally the last thing that they wish to do. Hence they are to a great extent helpless. If they can unite and raise a contribution, they may be able to purchase the property, or at least to secure some recognition of their claims. Otherwise they are at the mercy of the men who get up the scheme of reorganization, and who may, as in the case at hand, give general creditors no opportunity to participate in it.

It is quite evident from the tone of Justice Brewer's opinion that he suspected fraud in this reorganization, and intended to have it exposed, if it existed. Unfortunately, the receivership system, as enlarged by the courts, gives every opportunity for such frauds. Had the courts not prevented the holders of first mortgages from exercising the rights granted them by deed, many iniquitous reorganizations would never have taken place. As it is, whenever these creditors propose to act on their rights, the managers of the railroad run to court and get themselves appointed receivers. Then they can deal with bondholders and every one else at arm's length. They can, in fact, bring all creditors to terms; and so long as this is the case, there is consistency in the present decision. It is a decision really making new law concerning reorganizations, and until the abuses of the receivership system are abated, such judicial control of reorganizations is indispensable. Although in apparent disparagement of the rights of prior lienors, this decision will perhaps not affect them unfavorably, for, as a matter of fact, the courts had already undermined, if not abolished, priority.

#### THE MUNICIPAL ASSEMBLY.

What shall be done with our double-chambered Municipal Assembly? A writer of a communication in the *Evening Post* of Friday is of the opinion that one branch of it, the Council, should be abolished, but that the other branch, the Board of Aldermen, should be retained with certain changes in its powers and functions. This is tantamount to a

proposition that we return to the condition of things which prevailed in the old city of New York before consolidation. This correspondent is undoubtedly familiar with the estate to which our Board of Aldermen had been brought at that time, after many years of experience. We had been compelled to take from it one power after another, till virtually none of value was left, simply because the men who were chosen to the Board could not be trusted with any power which could be turned to their pecuniary or political profit. Nothing remained except the granting of licenses and permits for petty street privileges of one kind or another.

We had, in short, demonstrated by the practical experience of half a century that municipal legislatures were useless and generally pernicious bodies. Seth Low, writing of them in Bryce's *'American Commonwealth'* as early as 1888, expressed the view held by all unprejudiced students of municipal government when he said that "whether these bodies have been composed of one house or two, the moment a city has become large they have ceased to give satisfactory results," and that "as a rule they have so far abused their powers that almost everywhere the scope of their authority has been greatly restricted." Writing again upon the same subject for the *Century Magazine* in 1891, Mr. Low was even more emphatic, saying: "All efforts to secure a Common Council composed of men who by character and experience are competent for the duties which ought to be committed to them, thus far have been singularly unsuccessful." Nobody whose opinion was worth a copper disputed these conclusions when, in the winter of 1896-'97, our new Charter Commission was engaged in constructing a form of government for the enlarged city; and the proposal of that Commission to revive what was universally admitted to have been a demonstrated failure, and to revive it in the most extreme form in which it had ever existed—that is, a double-chambered legislature, with a very large membership—created great astonishment.

It would be cruel to reproduce at this time the arguments which the chief advocates of the revival, Gen. Tracy, ex-Judge Dillon, Mr. De Witt, and the majority of the Commission, advanced in favor of their extraordinary course. Mr. Low and Mayor Strong opposed it, but finally agreed to give their approval to the charter with this inexcusable blunder in it. In the discussion which went on at the time, it was shown that all genuine expert authority was against it. The objections, based upon the results of experience, were not directed against a double-chambered legislature, but against any municipal legislature whatever, as an obsolete institution. Mr. Hewitt, heartily approving Mr. Low's utterances, agreed with him in the view

that "city affairs should be administered precisely as a corporation is"—that is, with a President and board of directors; the Mayor as President, and the heads of departments as his advisers and assistants. As Mr. Hewitt said then, the "great mistake we make lies in supposing that municipal administration is a political question or presents political problems to deal with. It is a pure question of business, and should be treated as such."

We had been for half a century working towards this business basis, and had concentrated all really important powers in the Board of Estimate and Apportionment. This was the basis upon which our charter-makers should have constructed their new system, and they were so advised by Mr. Hewitt, Mr. Grace, the legal talent and experience of the city, speaking through a formal protest of the Bar Association, and by the press. It was suggested to them that instead of returning to the old and vicious system of a legislature elected by districts, they should provide for a kind of local governing body, with the Mayor, Comptroller, and certain heads of departments, or the old Board of Estimate and Apportionment, as a basis, and associate with them a certain number of men elected by the people, each representing a large constituency; the Borough Presidents, it was suggested, might be made members of such a body, or a certain number of members might be apportioned to each borough, to be elected by the voters of those divisions. In this way, it was hoped that a body could be got together which would be far more truly a representative one than our Municipal Assembly is, and which would bring to the conduct of the city business far more character and intelligence. But no heed was paid to advice of this kind. Our charter-makers deliberately chose the system which had been proved to be the worst ever known, and it is working precisely as it always had worked up to that time.

There are no municipal powers which cannot be trusted more safely to a small body, of the kind outlined above, than to a Board of Aldermen based upon any form of representation, district or other. There is absolutely nothing to hope for from such a body. We have proved that by bitter experience, and the sooner we recognize the point as settled, the better for us. The power to grant franchises is best regulated by statute, with public sale to the highest bidder. Nobody in his senses would think of restoring any power of that kind to the Aldermen again. All other powers that they possess could be exercised more safely and wisely by a small governing body, of the kind suggested, or by the heads of the departments to whom they would most naturally fall. We cannot see how the reasons for abolishing one chamber of the Assembly do not apply absolutely to

both chambers, or to any local legislature whatever based upon the present method of selection.

#### PROBLEMS OF OUR COLLEGES.

The steady growth of our educational institutions is the feature of the commencement season which most strongly impresses one who glances over the mass of reports from all parts of the country. The size of the graduating class increases, the endowment fund swells, the curriculum becomes more varied, the range of opportunities widens. All these are hopeful signs. But there is one thing which is still more encouraging. It is the fact that our college presidents are not satisfied with the situation; that they confess the existence of grave problems which press for solution, and that they are trying to solve them.

By an interesting coincidence there have just appeared, almost simultaneously, two presidents' reports which are notable for their discussion of such problems—one from the veteran head of Yale University, who last week retired from the great institution from which he graduated fifty years ago; the other from one of the younger generation of educators, who presides over one of the smaller colleges in New England. Writing independently in Brunswick and in New Haven, and summarizing observations made under very different conditions, it is an impressive fact that President Dwight of Yale and President Hyde of Bowdoin find some of the same defects in the methods which have developed in both colleges, and agree, broadly speaking, as to the nature of the changes which are demanded.

The distinguishing feature of the typical American college in its earlier days was the personal influence of the instructor upon the student. The professor knew the young men who came into his class-room as the teacher in a small school knows his pupils. He became familiar with their peculiarities of mind and character; he understood their special needs; he exerted, in many cases, an exceedingly strong personal influence over dozens of new students each year. Speaking of the period of 1850 in New Haven, then a town of but moderate size, Dr. Dwight says that it was the almost universal rule that the instructors met the entire company of students, and that not infrequently, during the course. With the great increase in the number of students, with the scattering of instructors' residences over a city of 100,000 people, and with the development of the elective system, attended as it is by the separation of students and teachers in their work, "there is no such universal acquaintance between the two bodies possible as was characteristic of the former period."

Even in the far smaller college community of Brunswick the same tendencies exist. "The growth of our colleges

in numbers," says Dr. Hyde, "brings great temptation to resort to mechanical methods of dealing with the students in the mass, and to neglect the individual factor." Discussing the development of individuality, the President of the Maine institution says:

"When a college has taught the regular classes at the hours required in the schedule, it has done only half its work. Sons of well-to-do New England parents, who have never been obliged to work at anything, who have begun to go into society, who find college life crowded with competing athletic and fraternal interests, need much more than the regular routine of recitations if they are to acquire any vital interest in scholarly pursuits. The attitude of the individual student is a much more important factor than the contents of text-book or lecture."

Something must be done to prevent the modern college from becoming, as Dr. Hyde puts it, "unwieldy and intellectually impotent; a respectable loafing-place for a throng of young fellows who are pleasantly passing away their time until serious professional training or actual business life shall rouse them to responsibility." Both Presidents have definite remedies to suggest for the admitted evil. Dr. Dwight declares that "the call of the present and the coming time upon our professors and teachers is an impressive and earnest call to enter into as close relations as possible with the individual students who are under their personal instruction"; and he does not hesitate to say that "no professor or instructor fulfils his duty to his pupils who sees them only in the lecture-room." Summing up the conclusions of his long observations, and putting them in practical form, he lays down the principle that every professor and other instructor should have certain hours in every week, if not a certain hour of every day, in which students can meet him on or near the university grounds, for conference on their studies and on other subjects of common or personal interest connected with their daily work or with the wants and aspirations of their intellectual life.

President Hyde's idea is that the only way to guard against the threatening evils is to "appeal strenuously and attractively to the individual student; give him work that he must do himself, and for which he must be individually responsible; offer him interests in which he can freely and enjoyably engage." Bowdoin College endeavors to meet these responsibilities in more than one way. A plan of individual instruction, supplementary to the regular class work in languages, was instituted two or three years ago, and is working excellently. During the opening term last fall the freshman class was divided into groups of six men, each of which groups, besides attending the ordinary recitations, spent with the instructor weekly a half hour in Latin and the same time in Greek. The students were prompt in attendance, and have shown and expressed their interest in the work. The scheme of individual instruction in this

way is pronounced an assured success.

Another development of individual work at Brunswick is the formation, by members of the faculty, of clubs, composed of members of their classes, for the discussion, in a friendly and informal way, of topics connected with their departments which are of such current or general interest as would not ordinarily fall within the scope of the regular course, but yet illustrate the practical and popular significance of the work done in the class. These clubs meet sometimes at a professor's home, sometimes in a student's room, sometimes at a neighboring inn. All students in the latter part of the course who desire to join a club have the opportunity, and some have belonged to more than one. Besides promoting pleasant social relations, these clubs prove of substantial value in starting the students in lines of scholarly interest, and in connecting college study with the life of the outside world.

Such developments as these in our educational institutions are full of promise. The rapid growth of the colleges has brought difficult problems. Blind adherence to old methods, failure to recognize new difficulties, would furnish ground for serious apprehension as to the future. But when we find the authorities alive to the demands of the situation, and alert to devise methods for meeting those demands, there is every reason for confidence.

#### THE CHEVALIER DE ROHAN.

PARIS, June 13, 1899.

M. Ernest Daudet, the indefatigable searcher after inedited documents, has just laid his hand on curious memoirs, which were quite unknown, and which were written by an officer of the time of Louis XIV. named Du Cause de Nazelle. Nazelle was born in the province of Agenais, near Agen; he led the life of a soldier. His military career was not different from that of so many other young noblemen, and his memoirs, in which he speaks of his campaigns in Germany, in Flanders, in Holland, and even in Crete (whither he accompanied the Dukes of Beaufort and Navailles, in an expedition which ended very unfortunately), would probably not have been printed if M. Daudet had not found in them a very complete account of a famous conspiracy against Louis XIV. which made an immense noise in its time, and in which were implicated one of the members of the Rohan family, Louis de Rohan, who had been *grand veneur de France*, and a certain La Trémoignon, who has become in our time the hero of a popular novel.

The first part of the memoirs is not without interest. Young Du Cause de Nazelle left his province at the age of fifteen (he was probably born in 1649, judging from the age of twenty-six which he declared at the trial of Rohan in 1674); he went to Paris and entered as a cadet the regiment of the Gardes Françaises. He had thus frequent occasion to become acquainted with the court. He left soon for the wars, but we will follow him only in his expedition to Candia, which was made at the request of the Republic of

Venice. In 1648 the Turks undertook to capture the island of Crete, which the Venetians had held since 1204, and in 1667 were besieging Candia, the capital. The rest of Europe remained insensible to the appeals of Crete; Louis XIV. alone was moved by them, and decided in 1669 to extend some help; but it was too late and the French army was too small. M. de Nazelle was a lieutenant in one of the regiments which landed in the island. The Turks had the advantage. M. de Beaufort was killed, and the French were forced to retreat to their ships.

On his return, Nazelle made a campaign in Holland, and saw some service in the Gardes du Corps, and, after sundry adventures in which he seems to have played a dangerous part, he left the Guards and went to live under an assumed name in the house of a Dutchman called Van den Enden. Of Flemish origin, Van den Enden had the reputation of being a very learned man; he was familiar with all sciences, he knew almost all the living and dead languages—Hebrew, Syriac, Greek, Latin, German, Italian, Spanish, French; he knew even the principal provincial idioms of France. He was a philosopher, "Catholic with the Catholics," says Nazelle, "and Protestant with the Protestants. I have often seen some of our famous doctors and M. Arnauld [the great apostle of Jansenism] himself come to confer with him on the Hebrew and Syriac texts of the Gospel."

Van den Enden was in reality a spy, sent by the Spanish Governor of the Netherlands at a time when the courts of Spain and of France were in constant hostility. He became acquainted in Paris with many scientific men, and opened a school in the Picpus quarter, where he received many young men. He was already old, but he lived with a handsome woman whom he called his wife, though it was never ascertained whether they were really married.

Nazelle's attention was attracted by the visits which Latréaumont often made to Van den Enden.

"I had known him," he says, "as an officer in the army of very bad reputation. He entered by a secret door at the end of the garden, of which he had a key, and took extraordinary precautions not to be seen. He afterwards brought with him the Chevalier de Rohan by the same door and with the same precautions. The sight of the Chevalier de Rohan surprised me. I could not conceive that a man of his rank could have relations with Latréaumont, whose reputation was absolutely forfeited in the army, and who was known as a dangerous character, capable of the greatest crimes."

Latréaumont came of a good family of Normandy, but he was a reckless man and had lost caste. He attached his fortunes to the Chevalier de Rohan, a younger son of Louis de Rohan, Duke of Montbazou, and of Anne de Rohan, Princess of Guéméné. At the age of twenty, in 1656, he inherited the office of *grand veneur*. He was one of the handsomest men of the court, and counted among his conquests Mlle. Duparc, the greatest actress of the day; Mme. de Lyonne, Mme. de Thianges, a sister of Mme. de Montespan, and, it was said, Mme. de Montespan herself. He helped the beautiful Hortense Mancini, Duchess of Mazarin, to flee from her eccentric husband. Louis XIV. asked him, on this occasion, to resign his office of *grand veneur*, as the elopement of the Duchess was a great scandal. From that day Rohan considered himself a victim of the King. He

was thirty years old. His military services had been forgotten, and he was overwhelmed with debt when he met Latréaumont, who was one of the tools of Van den Enden. They told him that the provinces of the western part of Normandy were going to rise, with the help of the Spaniards, and that he might, with his name, find his advantage in the rebellion. Van den Enden promised him the sovereignty of Brittany.

Nazelle tells at length how, with the help of the youngest daughter of Van den Enden, he succeeded in discovering the details of the plot. He affected himself to be very much discontented with the Government; he had conversations with Van den Enden on the subject of the war with Holland. All the forces of France were employed in ruining a distant land; the people were obliged to pay exorbitant taxes. Van den Enden knew that the coasts of France were defenceless; it was easy to make a landing. The Protestants of the west, who were so far quiet, would rise if they found a favorable occasion. Van den Enden had conceived the bold project of kidnapping the Dauphin, who used often to hunt the wolf in the forests of Normandy; the Prince was generally alone with a huntsman; ten men were to seize him and transport him to a Dutch ship on the coast. Nazelle overheard the particulars of the conspiracy, and it was decided, when all was settled, that Van den Enden should start for Brussels, to make the last arrangements with the Spanish Governor. Du Cause de Nazelle was much agitated by the discovery he had made; he despised Latréaumont, but he had much regard for the family of Rohan, and he had a great admiration for Van den Enden. He decided, however, to make a report to the Marquis of Louvois, who was Secretary of War. Louvois gave him an audience, and immediately issued orders for the arrest of Latréaumont and Rohan. Van den Enden had left for Brussels, but was expected to return.

Latréaumont was arrested at Rouen by Brissac, whom he had known in the army. He fired at Brissac, but missed him, and, with a second pistol, at one of the guards who accompanied Brissac. The guards fired in return, and Latréaumont died from his wounds. The Chevalier de Rohan gave himself up without difficulty to the persons who were sent to arrest him, at Versailles, and was conducted to the Bastille. The Rohans did not attempt to interfere on his behalf; they were afraid to offend the King and to compromise themselves. Van den Enden returned to Paris two days after the arrest of his accomplices; he heard the news of it from his wife, and immediately concealed himself. Nazelle advised Louvois of his return, and was presented by him to the King, who wished to hear from his mouth how he had discovered the plot, and asked him to try to find traces of Van den Enden. Nazelle succeeded in finding him at Le Bourget, a small place on the outskirts of Paris. Van den Enden, seeing Nazelle among those who came to arrest him, thought for a moment that the Frenchman had been arrested as an accomplice, and said to the officer that he had never taken him into his confidence. He did not for an instant try to deny that he had been conspiring; he preserved the greatest composure, took leave of his wife and of Nazelle, to whom he gave a small box as a memorial. "I accepted the box," says Nazelle, "with the officer's permission, and I could

not help wondering how a man, who from that moment was sure of his fate, could keep so cool. I remembered what he had so often maintained to me, that death is nothing, and that consequently it is no evil."

The Court and Paris were much surprised when the details of the conspiracy became known. The death of Latréaumont, who was the chief agent in the conspiracy, prevented the arrest of many accomplices, whom he alone knew. He had already ordered uniforms of guards for five hundred and fifty men, with whom he had planned to seize Honfleur, at the mouth of the Seine, opposite Havre. Louis XIV. said at Versailles that if the conspirators had succeeded in kidnapping the Dauphin, he would have made no change in his plans, notwithstanding the great affection which he felt for his son. Commissioners were designated to make the preliminary examination for the trial. Many persons of distinction at Court interested themselves for the Chevalier de Rohan, more out of hatred of Louvois, who had many enemies, than of affection for him. The Rohans themselves remained passive. The Princess of Soubise, who had great influence with the King, does not seem to have said anything in favor of her cousin. (Anne de Chabot was married in 1663 to her cousin François de Chabot, in favor of whom she obtained from Louis XIV. the erection into a principality of the barony of Soubise. She was extremely handsome, and became a mistress of the King.) The enemies of Louvois formed the party of the Chevalier de Rohan, but, numerous as they were, they could not save him. Louis XIV. called in council the Prince of Condé, Marshal Villeroi, M. le Tellier, Minister of State, and heard with them a report on the trial and the verdict. The great Condé, "so famous in our history by his victories and by the various incidents of his life, began his speech with what was most capable of touching the King. He said that after what he had himself experienced of the King's clemency, he believed that there was no man so guilty that he could not hope for pardon; that there was much extravagance in what Rohan had done, that his projects were very criminal, but could not be executed, being too chimerical." Le Tellier spoke in an opposite sense; after eight days of hesitation Louis XIV. decided that the verdict should be executed.

The Chevalier de Rohan died with great fortitude, and with every sign of repentance for his crime. His head was cut off before an immense crowd, who could not help pitying his youth. The Marquis de Villars and the Chevalier de Préau, who were in the plot (Nazelle says very little about them and the part they took), were beheaded after him. Van den Enden seemed quite indifferent to his fate: "He showed the firmness and constancy of a hero." He was hanged like a vulgar criminal.

## Correspondence.

### THE TRUTH IN SPITE OF CENSORSHIP.

TO THE EDITOR OF THE NATION:

SIR: There seems to be no way for the American people to get the whole truth from Manila so long as the military censorship continues, and this state of things may last for years. There is, however, one source of

information which has as yet been drawn on in only the slightest degree, and that is the evidence contained in soldiers' letters. A private or line officer has not the best means for forming opinions, and yet, in the aggregate, the information contained in the letters from the front must give a sufficiently accurate picture of the conditions there, while the great number of personal observations contained in those letters by intelligent and wide-awake volunteers, would supply a mass of uncontrovertible testimony invaluable to those who are endeavoring to bring this erring nation back to the straight path of moral rectitude. Individual letters have here and there appeared in print, most of them in country newspapers, but why cannot a systematic effort be made to collect these valuable documents in numbers sufficient to carry conviction to the doubting?

The volunteers who have done the fighting in the Philippines come from towns scattered all over Kansas, Nebraska, Colorado, Washington, Oregon, and a dozen other States. The home towns of the various companies can very easily be found, and correspondence with the families of the soldiers, based on the company rosters, would result in bringing to light an unlimited store of letters from the front. Or, better still, let a man be put into the field. A vigorous agent, in a few months' time, would unearth an amount of first-hand testimony which would be simply overwhelming. These letters, properly edited and published in a volume, would furnish a campaign document of unparalleled power. The Anti-Imperialist League has made a beginning in this line, though it has as yet done little more than reprint letters which have already been published; but the immense value of such material has been amply demonstrated by its little tract, "Soldiers' Letters." Cannot it take up the larger task of making a really comprehensive collection of these letters? Only by sheer mass of evidence can the country be brought to an adequate comprehension of the real state of things.

In no other way can such statements as those in Mr. Dean Worcester's open letter to the American people be combated. He tells us, with pompous officiousness, that he has personally inspected great numbers of battle-fields, and can assure the dear public that nothing rude or ungentlemanly has occurred. Enough has already been published to lead us to suspect that this indefatigable inspector of battle-fields has not obtained the whole truth. Would not a systematic compilation of soldier testimony do more than anything else to stop this tiresome official reiteration that "all is lovely" in our new tropical possessions?

EDSON R. SUMDERLAND.

OAKLAND, CAL., June 28, 1899.

#### THE KENTUCKY NOMINEE.

TO THE EDITOR OF THE NATION:

SIR: The Democratic State convention which adjourned yesterday has nominated for Governor a man who, if elected, will be to Kentucky what Platt is to New York. That he will be elected, no sane man doubts for an instant, for he is the author of an election law, passed by the last General Assembly, by means of which he can become Governor, no matter what may be the will of the people.

His nomination was accomplished by the boldest piece of thievery ever perpetrated in Kentucky politics. When the convention was called to order, he was the weakest

of the three candidates in number of instructed votes, but, by combining with the Stone men, he effected the organization. After that, he dictated every action of the convention. His chairman ruled that the contests should be voted on as a whole, the contesting counties not voting. Thus, one hundred and fifty-nine anti-Goebel delegates were thrown out, and a like number of Goebel delegates seated; and the chairman would entertain no appeal from his ruling.

Personally, Goebel is a brilliant young man, and is conceded by all to be the shrewdest as well as the most unscrupulous politician in Kentucky. He has too much sense to be for free silver, but recently went over to that camp in order to make this race. For a dozen years he has been the ruler of the Kentucky Senate, the dominant motive in his career being opposition to corporations. With the party machinery in his hands, he will henceforth rule Kentucky.

There is, however, one bit of encouragement. When Goebel captured the party machinery, free silver suffered. Although his platform endorses the Chicago nonsense of 1896, nevertheless, every one knows Goebel to be its enemy. The gold-standard men, however, are opposed to both Goebel and his methods.—Very respectfully,

B.

WINCHESTER, KY., June 29, 1899.

#### RUSKIN AND MILLAIS.

TO THE EDITOR OF THE NATION:

SIR: In your review of William Rossetti's new book there are some misapprehensions that do injustice to Ruskin, and which an intimate personal knowledge of the man enables me to correct at first hand. It is untrue that "Ruskin could never see any merit in the work of Millais after their personal quarrel," nor is it even true that he quarrelled with Millais—the quarrel came from the other side. The "known fact" in the matter is this: Ruskin invited Millais to come and pass the summer with them in Scotland, and Millais and Mrs. Ruskin "fell in love" with each other, and she applied for a divorce to be free to marry Millais. Ruskin, in spite of the insistence of his father, refused to oppose the suit, and he was so far from "quarrelling" with Millais that he wrote him expressing the desire that their personal relations should not be changed by the affair. I have repeatedly talked with Ruskin on the subject, and he always expressed the utmost consideration for Millais, and he said to me that "the only regret he had for the occurrence was that Mrs. Millais had ruined a great artist." I am certain that he cherished no animosity towards Millais, nor did he modify in any respect his opinion of his art; but it must be remembered that Millais, very soon after this change in his life, changed the character of his art so completely that he was regarded by the other pre-Raphaelites as a renegade to the principles of the brotherhood—a change due, in Ruskin's opinion, to the urgency to increase his income under Mrs. Millais's influence, which led him to paint for money. Under the circumstances, it is easy to understand that any further criticism of Millais's work became difficult on account of the inevitably false interpretation which Ruskin's enemies would have given it, and it was owing to the delicacy of their relation that he never made him the subject of comment; not to the rupture in their intercourse.

Ruskin was not only singularly generous

and liberal, but singularly just when he saw a matter rightly, but he conceived violent antipathies, especially for people who disregarded his opinions, for he held them, as he himself has said, "not as opinions, but as positive knowledge." When he and Brown came into collision, it was as if two popes met in controversy: they were two infallibles, and Brown was as unforgiving for any difference from his opinions as Ruskin, and far less ready to reason out the matter, which Ruskin did with extreme grace, though, unfortunately for himself, he always returned to his opinion when the discussion was forgotten.

Few people can know Ruskin better than I do—very few know so well his high moral nobility, his generosity, and the warmth of his friendship; but probably no one else has ever paid so heavy a penalty for submitting to his leading and undergoing his caprice, and I have experienced his good as his bad qualities, so that I am competent to say with authority that the dictum of your critic, that "of justice or of moderation he is alike incapable," is unjust and excessive. That he is not always just or moderate may be said, but no more. His lavish generosity to Rossetti, Burne-Jones, Millais, when generosity was life, besides scores of minor instances in which the recipients have never been known, cannot be offset by the cases in which his exactions were onerous and his friendship capricious. No other man living has the right to complain of Ruskin that I have, but I cannot permit personal and temperamental defects to obscure the proper estimation of one of the noblest and most Christian characters of our time.

Yours truly, W. J. STILLMAN.

WEST BOURNEMOUTH, ENGLAND.

#### Notes.

'Books Worth Reading,' by Frank W. Raftery, and 'The Foundations of the Creed,' by the Lord Bishop of Carlisle, are on the eve of being published by E. P. Dutton & Co.

The Macmillan Co. announce a series of seven volumes on the History of the Church of England, edited by the Dean of Winchester. The first volume, by William Hunt, D.D., will bring the record down from the landing of St. Augustine to the Norman Conquest. They will also publish 'Gardens, Ancient and Modern,' by H. Forbes Sieveking.

'When Grandmamma Was New,' by Marion Harland, is in the press of the Lothrop Publishing Co., Boston.

The American Academy of Political and Social Science, Philadelphia, has made a volume of the discussion of 'The Foreign Policy of the United States, Political and Commercial,' at its April meeting, of which we gave a general report at the time. Prof. Woolsey, E. W. Hufcut, A. Lawrence Lowell, Carl Schurz, Worthington C. Ford, and J. B. Moore are some of the more prominent speakers.

Cassell & Co. issue 'Royal Academy Pictures 1899' in the usual form, as being a supplement to their *Magazine of Art*. Our London correspondent has given our readers some notion of what they may expect to find in these samples of the exhibition. There are a few portraits of notable characters—busts of Dr. Garnett and of the Queen, and a painting of Gerald Balfour, among others. There is no text beyond a brief introduction.

From Mr. C. A. Ellis, manager of the

Boston Symphony Orchestra, we have received the usual bound volume of the programmes played at the six concerts given in Boston last season. The value of these programmes lies in the historic and descriptive notes contributed by Mr. W. F. Apthorp, and in the literary interludes on miscellaneous musical topics, in which Mr. Apthorp shows to the best advantage. A list of these topics ought to be included in the summary at the end of the volume.

A new edition of Mr. James E. Matthew's 'Handbook of Musical History and Bibliography' has been issued by G. P. Putnam's Sons, with such changes as were called for by the death, since the first issue, of Brahms, Gounod, Rubinstein, Ambroise Thomas, and other composers of distinction.

'Laurel Winners' is the title of a brochure of 118 pages published by the John Church Company. It contains short biographies of thirty American composers. The absence of Paine, Foote, Kelley, Parker, and MacDowell from the list prevents it from being a comprehensive treatise on American composers, and the utility of the book is further lessened by the fact that the list of works given in each case includes only those issued by the publishers of the book. However, as far as it goes, it is an acceptable contribution to a field of biography in which it is sometimes difficult to get authentic information.

The fourth volume of the Wolseley Series of military works (importation of Charles Scribner's Sons) is 'The Conduct of War,' by Gen. von der Goltz, translated by Major Leverson, Royal Engineers. It is a systematic treatise on the modern method of conducting war, condensing into 300 open-print pages the outline of the military art. It is intended to be a handbook for the use of officers and students, and does not aim to supplant the larger treatises of Clausewitz or Jomini, or special works on strategy like that of Hohenlohe. In a former small volume, 'The Nation in Arms,' the author has treated the raising, equipping, and organizing of armies, and he promises a final one covering the relations of a general to his army, including the system of intelligence, the publication and transmission of orders, etc. The recognized merit of the writer is his clearness of thought and style, and he has been well seconded by the translator, who gives us a good idiomatic English rendering.

Another military work which has attracted much attention in Europe is Hoenig's 'Inquiries concerning the Tactics of the Future,' translated by Capt. Bower of the English Army, and published with maps by Longmans, Green & Co. (8vo, pp. xxv, 363). The present edition is a considerable enlargement of one first published under the title of 'Two Brigades,' in which, using his experience in the battle of Königgrätz (1866) and at Mars-la-Tour (1870), the author boldly criticised the General-Staff history, and drew important conclusions from the corrected account of what passed under his own eye. His thesis was that the lessons of the terrible conflicts about Metz had not been fully learned, and that the tactics since adopted, as those evolved from the effects of new weapons and smokeless powder, need important modifications, in view of the true history of late wars. The work was in the nature of a rebellion against the opposition of the Prussian General Staff to any questioning of the official

history, and showed an independence of thought and force of reasoning which compelled attention. The translator has been laborious and conscientious, but his English is often tangled with the German idioms, and one sometimes feels the need of the original as a "pony" to help out the translation. For instance, what would an Englishman, unacquainted with the German, make of this sentence: "It is like the senseless rule of crude forces, and therewith has never anything been attained"? (p. 300).

Mr. Wiley Britton has published the second volume of his 'Civil War on the Border' (G. P. Putnam's Sons, 8vo, pp. 546), which, with the former volume (1890), completes his narrative of military operations in Missouri, Kansas, Arkansas, and the Indian Territory. The work bears the marks of careful compilation and good use of the opportunities given by the author's connection with the War Office at Washington, and deals with campaigns in which he had a part. It is well printed, with ornamental head and tail-pieces, maps, and illustrations. It has two serious deficiencies: it is without an index, though this is partly supplied by full analytic tables of contents of the chapters. It lacks the references to the Official Records, without which any testing of the narrative is very laborious and difficult. The conflict of assertions between Confederate and national writers is perhaps more sharp in discussions of these frontier campaigns than elsewhere, the charges of brigandage and violation of the laws of war are more frequent, and the array of the author's authorities was therefore more imperative than usual. By this omission he loses the weight as an authority which would have been given him if his accuracy as an historian could be proved by his use of his materials.

Taking *cum grano* the author's suggestion that, "for the ordinary man with the ordinary purse," there is not "a better playground to be had in Great Britain or the Continent," some visitors to Ireland could not do better than purchase Stephen Gwynn's 'Highways and Byways in Donegal and Antrim' (Macmillan), and visit the districts described. There is too much history, too much effort to place the now matter-of-fact inhabitants of that part of Ireland in an "interesting" light; the author makes too little allowance for capricious weather (often for weeks fatal to all enjoyment); but upon the whole the book is lively and interesting. The illustrations are charming; we have never seen better of Irish life and character. "The Church," "The Royal Irish," "The Cattle Drover," "The Guide," "The Piper," "The Donegal Lass," "A Low-Backed Car," are, to any one who knows Ireland and has a sense of humor, in themselves worth the price of the book.

In 'Homère: Étude Historique et Critique' (Paris: Fontemoing), M. Victor Terret has written more than 600 pages of extreme interest to lovers and students of the Homeric poems. His first chapter deals with the tradition as to the life, time, and residence of Homer, which is followed by a consideration of the MSS. of the poems in their relation to the early critics. With chapter 3 begins the discussion of modern Homeric criticism, which is then examined in its relation to both 'Iliad' and 'Odyssey.' The conclusions of the author are thoroughly in favor of the unity and authenticity of the poems, as he has an answer to all the

arguments brought forth by the several schools of criticism. In conclusion comes a chapter on art in the poems, followed by a fairly good bibliography of works on Homer filling 100 pages. The book will be welcomed by conservatives who still prefer to maintain their belief in the reality of Homer.

The *Swansea Review* of the University of the South, a serious quarterly review of history and literature, edited by Prof. William P. Trent, will hereafter bear the imprint of Longmans, Green & Co.

The hydrography of the Caucasus, with maps, and the native tribes of the upper Ubangi Basin are the subjects treated in the *Scottish Geographical Magazine* for June. In the notes, a favorable account is given of the economic condition of German East Africa. The trade is steadily increasing, in consequence largely of the fact that the Government has constructed nearly eight hundred miles of road for wheeled carriages. The principal products are tobacco, sugar, and coffee, the last being cultivated by native labor under German supervision. Notwithstanding the injury to the coffee plants from drought and locusts, the export of the year 1897-98 was nearly three times as great as that of the previous year.

The principal topic of the *Geographical Journal* for June is the Nyassa-Tanganyika plateau. Capt. Bolleau, a member of the Anglo-German Boundary Commission, gives a topographical description of the region and an unusually sympathetic account of the natives. They are industrious, honest, "extraordinarily unselfish," and keenly appreciative of the value of industrial education. At the Livingstonia Mission school at Bandawe and in the branches within the radius of twenty miles the daily attendance was 6,000, each child paying six cents for a session of three months. "This, it is found, secures a regular attendance, owing to a feeling, not altogether extinct among ourselves, of 'having our money's worth,' and consequently it gives the teachers a much greater hold over the pupils than if the teaching were given gratis." The most interesting part also of Mr. L. A. Wallace's narrative of his explorations in this same region is that in which he describes the customs, superstitions, industries, and amusements of the natives who accompanied him on his expeditions. The set phrases of some of their longer songs and stories, he discovered, were not fully understood by the people, and he suggests that they may be the remains of an archaic language handed down orally through many generations. A detailed account is given of Lake Rukwa, which he was the first European to explore thoroughly, and also of Lake Mweru and of the extraordinary fluctuation of the water in all this region. The great Mweru marsh, a noted resort for elephants, has recently been proclaimed a preserve by order of the British South Africa Company.

The Paris Geographical Society has reciprocated the courtesy of the Royal Geographical Society, which presented two medals to Frenchmen at its annual meeting in June, by awarding a medal to Mr. F. G. Jackson, the well-known Arctic explorer. At the same meeting of the British Society our Ambassador, Mr. Choate, in behalf of the American Geographical Society of New York, presented a medal to Sir John Murray of *Challenger* fame.

A movement of practical bearing upon the well-being of man and beast is the advance-

ment of veterinary science, which has recently received a new impulse in Switzerland. It is not improbable that the excellent veterinary school at Berne will ere long be united with the University as a special faculty, in which case the students would be held to the same preparatory requirements as those of (human) medicine and be recognized as candidates for the doctor's degree. The University of Giessen already confers the degree of *doctor medicina veterinaria* upon German veterinarians in possession of a *Maturitätszeugnis*; but in other German veterinary institutions the requirements for admission and graduation are comparatively low. Dr. von Salvisberg, the editor of *Hörschel-Nachrichten*, points out, in a recent number of his paper, the timeliness of elevating veterinary studies to a plane corresponding to the advanced state of the tributary sciences.

—The Nebraska Historical Society prints the Journals of William Walker, Provisional Governor of the Territory, with notes by William E. Connelley. Walker was of Indian blood, belonging to the Big Turtle Clan of the Wyandot tribe, and of much influence among the Indians. He was a classmate of S. P. Chase, had served as Secretary to Gen. Cass, and in 1843 went with his tribe to Kansas (which then included Nebraska). The discoveries of gold in California in 1849 led to a large migration of persons through this Territory, and the pressure of population from the East was increasing. It was obvious that the white men would want the lands, and for them to want was to have, in spite of treaty obligations. The Indians determined to institute a Territorial government, and carried it through in the face of objection and obstruction from Washington. Walker was the first Governor, chosen by his nation, and at the first election of delegate to Congress the candidate he favored was defeated, by means which indicated the nature of the situation. The opposition "had the whole power of the Federal Government, the presence and active support of the Commissioner of Indian Affairs, the military, the Indian agents, missionaries, Indian traders, etc.—a combined power that was irresistible." A slaveholder, Walker hated abolitionism, and when the time came for his nation to decide between North and South, it went over to the side of slavery. The feeling was intensified by the fact that it was a church question, a split in the Methodist Church; and four years after the break, Walker wrote a sixteen-page letter to show up the preachers of the northern division of the church and their abolitionism.

—It is not for their bearing on national politics that the Journals are most interesting. They tell more of the life on the frontier of these half-breeds, the incidents of a new settlement under a somewhat better government than their white neighbors could show. The Council was regularly elected each year, passed laws, made regulations, held trials, and granted divorces. There was much killing, and the drinking was general and deadly—"manis a potu" being frequently recorded. As Indians, the people kept up some of the tribal observances, such as the grand dances and the green-corn feast. As whites, they gave dinners, entertained strangers, and received instruction in music. Certain superstitions remained in force; Friday as an evil day being one, and the holding

in the hand of a live mole till it was dead, a supposed cure for rheumatism, being another. An excessive indulgence in drugs may also be noted, and Walker adopts, in 1846, the "Turkish custom" of a daily sponge bath, a practice not common in the East at that early day. Walker was a man of more ability than his Journals show, for he was an eager reader of the newspapers and a frequent contributor to them, a critic of Schoolcraft, a correspondent of Lyman Draper on Indian affairs; and he read 'David Copperfield.' His daily life was varied. "Chunked up my log heap. Finished my letter to the Archbishop. Must attend a special meeting of the chiefs to-day to prepare for the convocation of the nation to-morrow"—was the record on one day. Some interesting extracts from the diary of Abelard Guthrie, the agent of the Territory at Washington, are given, and the work is enriched with much personal history collected by Mr. Connelley. The French sentences, of which there are many, need much revision.

—The results of the hypsometric measurements recently made by Sir William Martin Conway of the High Andes of Bolivia seem to determine definitely that Aconcagua, in Argentina, is the loftiest summit of the American Cordilleras, and accordingly the culminating point of the entire Western Hemisphere. Although this was the general assumption of geographers, the rival claims of the Nevado de Sorata and Illimani, which in the older geographies were represented to have altitudes respectively of 25,200 and nearly 24,000 feet, and even quite recently to approximate these heights, have left the question an open one. The present observations reduce these elevations to 21,710 feet (for the highest peak of the Sorata or Illampu) and 21,015 feet, a result strikingly in accord with that obtained by Minchin—21,470 and 21,224 feet—and about equally correspondent with that derived by the English geologist Pentland from his revised triangulation conducted in 1838, which gave 21,286 feet for the Sorata and 21,145 feet for Illimani. The absolute altitude of Aconcagua is, perhaps, still in doubt, but the measurements of Fitzgerald and Zuerbruggen, made during their late successful and unsuccessful attempts to attain the summits, would seem to give the mountain a height fully equal to that which had been assumed for it by Fitzroy and Darwin, 23,200 feet, and about a thousand feet more than was claimed by the Spanish engineer Pissis (22,422 feet). The Sorata and Illimani now not impossibly also yield second place, as a number of summits, both in northern Chili and in Bolivia, are close competitors, and have at least the advantage of being reputed to be more lofty.

—With these revised measurements of the South American summits it is interesting to note that the North American mountains have likewise suffered some change as regards their respective claims to supremacy. Mounts Brown and Hooker, which for a long time occupied on the map a position among the Canadian Rockies as generous rivals of the highest peaks of the Alps, have, so far as it has been possible to identify these mountains in the field, suddenly withdrawn 4,000 to 6,000 feet of their accredited heights, and are now only modest elevations of less (perhaps considerably less) than 11,000 feet. A somewhat similar fate befell Mount Hood, in Oregon, the better part of a quarter of a century ago, when its sudden fall from stages of

17,000, 15,000, and 13,000 feet brought out the saying that a new measurement (subsequently made by Lieut. Williamson) would reduce the volcano to a hole in the ground. Fifteen hundred feet has been taken off the summit of Mount St. Elias, in Alaska, as a result of recent measurements, leaving it second in height to Orizaba, in Mexico, as one of the culminating points of the North American continent. A compensation for this loss is, however, had in the superior height of Mount Logan, which stands near to it in British territory (assumed to be 19,500 feet), and in that of the giant mountain of central Alaska, south of the middle course of the Yukon, which has been "developed" as the result of the recent exodus to the gold regions. A late Government survey gives to this mountain (the Mt. McKinley of the newer maps—*Bolskaya* of the Russians)—an elevation of 20,464 feet, and, therefore, the highest eminence north of South America.

—A work of high importance has just been issued in Paris under the direction of the Commission of the Naval Records. It is called 'État sommaire des Archives de la Marine antérieures à la Révolution,' and was prepared for publication by M. D. Neuville. The almost chaotic condition of the French archives has been a sore trial to those wishing to obtain material from them, and this careful list of the manuscript volumes, with a glance at the general nature of their contents, will be a welcome guide. The operations of the French navy in American waters during the colonial period and in aid of the American Revolution (the latter in thirty-nine volumes) are merely special phases of its history. There are four volumes of personal notes and letters from D'Estaing, and two volumes of letters addressed to him. The records include all the ordinances relating to the navy and the construction of ships, lists of the officers and men, dispatches from civil and naval officers at home ports, in the colonies, and in foreign countries; the notes and orders from the King and his ministers of the navy; memoirs on the defence of the kingdom and on naval operations abroad; the expenses of maintenance and construction. Not a branch of naval activity is neglected, and the records extend from 1278 to 1790. This mine of manuscript material has hardly been touched by investigators.

—The files of the Marine Office are not complete, for much has been placed in other departments, like that of Foreign Affairs and the Hydrographic Bureau, and much has been lost. The National Library has some of the records, the Mazarine Library other parts, and the Ministry of the Colonies has claimed not a little for its service. The records for 1771 can be found only in the different ports where agents were placed, while those for 1786 to 1789 are very incomplete, owing to the destruction of papers during the Revolution. M. Neuville has prepared many notes giving short sketches of the principal officers of the marine, and has indicated the changes in organization, or in the details of management, which have affected the relations of the navy to the Government, or the different divisions to each other. Not the least interesting are the consequences of political or religious events such as the revocation of the Edict of Nantes or the expulsion of the Jesuits (p. iv). A brief list is given of the men of science who have been connected with the navy, and of the voyages of discovery or exploration set on foot by this branch of the service—an honorable record,

indeed. M. Neuville notes with some pride that Spain and Russia adopted their naval administrations from that of France, and borrowed French engineers, constructors, and officers to organize their marines, to arm their ships, and even to lead them against the enemy. One chapter should not be overlooked, viz., that which tells of the *Chiossmes*, men condemned to penal servitude but employed in the arsenals and the galleys. Of course, the galleys are an important detail in this interesting and valuable compilation. An index is to follow.

—The twenty-fifth anniversary of the founding, by Godefroid Kurth of a practical course of historical instruction at the University of Liège, in 1874, has been celebrated by his friends and colleagues in a handsome volume, edited by Paul Fredericq, recounting the development in Belgium of scientific training in historical studies. This method of teaching history, which has produced results so admirable, was started so long ago as 1830, by Leopold Ranke. It spread through Germany and Austria, and in 1848 Victor Duruy introduced it in France by founding the *École Pratique des Hautes Études*. Its development in Belgium, after the initiative of Prof. Kurth, was the work of earnest and self-sacrificing men, who, without governmental assistance or the equipment essential for the full advantages of the system, resolutely persevered until, in 1890, their voluntary courses of instruction were recognized officially as part of the curriculum of the universities, although the necessary financial assistance has still been withheld. The main portion of the volume consists of reports of sixteen of these courses, showing the various plans adopted to overcome obstacles and to produce results with inadequate means. It is a story full of encouragement, and ought, we think, to afford valuable hints to those in our country who are engaged in the task of elevating the study of history from a mere mnemonic exercise to the position of a veritable science.

#### PATTEN'S DEVELOPMENT OF ENGLISH THOUGHT.

*The Development of English Thought: A Study in the Economic Interpretation of History.* By Simon N. Patten, Ph.D., Professor of Political Economy, Wharton School of Finance and Economics, University of Pennsylvania. Macmillan. 1899. Pp. xxvii, 416.

This book rejoices in the reproach of paradox. Its dominant principle is that to write the history of English thought you must study something else. The common notion is that the history of a people's intellectual life is like the history of a special science, like the history of geometry. There is a special matter to be understood on the one side, there are a number of persons investigating it on the other. One man discovers one thing, another another thing; each teaches and learns from his companion, and the whole affair is a matter of pure intelligence. Its development is a continuous growth from within. In the case of a people, the subject to be investigated is simply the universe, and the persons investigating are simply everybody. In distinction from this, Dr. Pat-

ten looking at things are not and cannot be determined primarily by intelligence. They must be such as confirm that people in habits that fit it to its environment, and the ideals and beliefs that fit one people at one time do not fit another people or the same people at another time. The beliefs are determined not by intelligence but by the environment. "Hereditry thus creates both the ideals of a race and the motor reactions through which they may be realized"; and if these change, it is because the environment has changed first. The beneficent lie—say, for the followers of Mahomet, the dogma of the Mohammedan paradise—takes precedence of the discouraging truth; and individuals who discover the latter are simply eliminated in the struggle for existence. They are handicapped by the disease of an untimely intelligence. The intellectual life of a people does not develop from within and is not a continuum, it is simply a succession of by-products, of indications of a succession of changes in something else; and histories of thought on the model of the usual histories of philosophy are dull because they are unintelligent; they are simply a succession of anecdotes with dates and names. "History, to be valuable, must be studied in groups, and each group of ideas connected with its roots in the underlying conditions, and not with its antecedents in the same group." "Each nation has as many epochs in the development of its thought as it has marked changes in its environment."

The changes in the environment, then, of a people are, in Dr. Patten's judgment, what the historian of thought must first master; and, migration apart, the changes in a people's environment are for the most part economic. The importation of a new food-stuff or material for clothing has more to do with the development of thought than all the doctors of all the schools. The growth in England, for example, of Puritanism and all that it has meant for literature and ways of thinking about morality and the family, was due, in Dr. Patten's judgment, in the main to the introduction—well!—of woollen underclothing and sufficient shelter. There was a time when the Englishman, in his inclement climate, was clothed in linen, and was ill-housed. The feeble simply never reached maturity in such circumstances. The survivors were literally riotous with health, and all their institutions—their food, their merrymakings and games, no less than their literature and habits of speech and thought—reflected their temperament. "Man lived only for a moment; they acted quickly and fiercely," because, on the whole, only by so acting could they act and live at all. And "in fighting clans it was necessary to offer every inducement for childbearing. Festivals, feasts, and social gatherings were designed to provoke the passions." Chastity becomes a dominant motive only after economic welfare has progressed so far that the danger to the community is over-population rather than under-population.

"Even a century ago, men enjoyed washing out of doors in winter, and loved to throw ice-water over their bare shoulders. The internal furnaces raged so fiercely that only by such means could they be rendered bearable. Picture the early English clothed in linen instead of wool, and you will begin to realize what constitutions they had."

"There is no better way of showing the results of economic changes than to take this man of nature and put him into heavy wool-

len clothes, build him a comfortable house, and set him by a blazing fire. The fierce internal combustion and the vigorous appetite will not only be useless, but positively injurious. The fires must be banked and the appetites reduced. Changes like these cannot take place in a day without evil results. The dissipation that Englishmen plunged into was largely due to the suddenness of the economic change. What could not come to the surface went to the heart and corrupted it. In contrast to this natural Englishman we must think of the Puritan as a man needing warm clothing and a comfortably heated house. He wore mufflers and fur-gloves when out of doors, and used pills instead of exercise to promote his digestion."

His mode of thought in effect was but the expression of his temperament; and it and he became dominant in English life, not because of any truth to fact in their way of looking at things, nor because of the genius of Hampden and Cromwell and their kind, nor because the Puritan by temperament was a new thing in the world, but because in the old circumstances the Puritan baby died in the cradle, and in the new circumstances the Cavalier baby was diseased in his manhood.

The main criticism to be passed on Dr. Patten's book is, that it is a large general theory which, in its application to the history of English thought, he has illustrated rather than proved. The theory itself makes a powerful appeal to a generation that has been subjected to the vogue of the "development hypothesis"; and the actuality of the beneficent lie, of the invigorating illusion, will hardly be denied except by the enthusiast who illustrates in his own person the fact which he ignores. But the circumspect theorist, who is conscious of a plurality of possible causes, will ask for a great deal more evidence than Dr. Patten has given that the Puritan really did possess a feeble constitution than the Cavalier, or a different constitution, and that the Cavalier's comparative ineffectiveness was for the most part due, however remotely, to his inherited vigor. Also, when Dr. Patten comes to select specific authors in whom to trace and to explain the course of English thought, his choice, in especial his choice in omissions—Berkeley, for example—is apt to seem to the reader to be governed by the exigencies of his theory; and the necessity under which he finds himself of reconstructing their books, sometimes on inferential grounds, cannot but leave the reader with a sense of legerdemain, in spite of the wholly probable principles of interpretation upon which Dr. Patten proceeds, viz., that "all great writers are lazy," and that "discovery follows a natural track, but expression has all the errors of current education." It may seem a more serious criticism that, in his reconstruction of the writings of the philosophers, Dr. Patten makes here and there a statement about them which the specialist will probably challenge outright. But it must be remembered that none of Dr. Patten's illustrations are of the essence of his argument; and that his errors in detail, if errors they be, are but the blemishes which, by a preestablished discord, are always present in books too good to be wholly academic.

In any case, Dr. Patten's conviction, that the ideals and deepest beliefs of men are determined in accordance with the law of causation rather than in accordance with the laws of right thinking, is one in which philosophers, as distinguished from metaphysicians, may well find their account; and the last word of any criticism of the 'Development of English Thought' must be that the book is persistently and almost wantonly intelligent.

Even a hostile critic will hasten to admit that it is clever, and will add at once that it is clever at a great depth. It is clever page by page, and sentence by sentence, in season and out of season—if cleverness in a book is ever unseasonable. There is everywhere in it the suggestion of a quaint humor which has counted for something in the insistence on woollen underclothing, the bath-tub, the sugar diet, and the motherly man, and it is full of *obiter dicta* which, by force of sheer perceptiveness (we do not say sheer sense for fact), have much the effect of wit:

"Home is a concept the power of which depends even more on what it excludes than on what it contains." "The law aims at securing peace, not justice, and vests property-rights in things possessed, not in things earned." "New conditions give modern nations in each new epoch the same impetus to progress that in former times they gave new nations." "The enduring nations are kept progressive by repeated transition from one environment to another, in each of which the process of development and adjustment is renewed." "The striking features of every progressive nation are due to the breach between the national character and the environment." "As a race, we no longer see the world as it is, but as we make it," and "our appetites are stronger than they need be to secure survival under present environing conditions." "The only remedy for vice is elimination. Those ideals that represent the highest type of men as possessing strong appetites and passions under firm control, are based on false premises. This control is possible only under primitive conditions, where strong appetites and passions are necessary."

Of longer passages, the following is at the moment, perhaps, especially pertinent:

"There is really nothing on which the English race can base the claim they so often make that they have a peculiar aptitude for the development of political institutions. They have been too conservative to develop institutional life beyond the needs of a primitive society. [Dr. Patten on another page speaks of "the difficulty of governing half the world on principles that are fitted for a country town."] Peace and security have come not from Anglo-American institutions, but from the instincts inculcated during the supremacy of the Church, the favorable economic conditions, and that spirit of compromise which has been forced on the race by the presence of opposing types of men. Given these instincts and conditions, almost any institutions would be successful. Where these conditions are lacking, the failure of our institutions is lamentably apparent, and our inability to remedy them even more obvious."

#### THE PITFALLS OF GENEALOGY.

*The Principal Genealogical Specialist*; or, Regina v. Davies, and the Shipway Genealogy. By W. P. W. Phillimore. London. 1899. Pp. 64.

*Matthew's American Armoury and Blue Book*. London: John Matthews.

The forgery of a pedigree has always been an attractive pursuit for literary rascals. It is so easy to change a name or a date, so easy to copy genuine documents with such a change, and yet have the result otherwise impregnable to literary criticism—the very critics are so friendly and the rewards generally so generous—that it is not surprising to find the taint of fraud resting upon scores of genealogies. In fact, the real genealogist hesitates to accept any authority, excepting one tried as by fire, for any statement, however trivial. The respect for ties of ancestry and relationship which seems innate in all British races, the desire to come of good stock, leads to a facile reception of all stories, and especially of all documents, which seem to dignify the bear-

ers of an old name. The proofs are rarely understood by the persons interested, being old documents written centuries ago, in a handwriting decipherable only by experts. The public is but slightly interested in the truth, and false politeness forbids any criticism of the pedigree of an acquaintance, even as you would forbear testing the quality of his silver at a dinner party. For example, how many of your friends parade coats-of-arms on their rings and their note-paper, and yet how often do you stop to inquire into the genuineness of such pretensions? Every man is allowed to make his claim, protected by the fact that his neighbor is sinning similarly.

Great Britain has kept herself very free from spurious peers. The democratic principle by which only one of the heirs of a peer in each generation becomes a peer, and the rapidity with which the junior branches lose even courtesy titles, has a very salutary effect upon pretenders. The title of Earl of Derby is one of the landmarks of English history; but the late Prime Minister entered Parliament as a commoner, Mr. Smith-Stanley. Queen Victoria may live to see her great-grandchildren return to the ranks of the gentry. Four or five generations have brought the descendants of William Duff, the corn-factor, Earl of Fife, to a royal alliance; the same number of descendants will bring them back to the Duffs. Once in a great while some one lays claim to a forgotten peerage, some title forfeited or in abeyance is revived by royal favor, but always after as close a scrutiny and compliance with proper laws as if the revenues of the Duke of Westminster were involved.

But alongside the peerage there exists the untitled class of gentlemen of birth and coat-armor having a claim to social recognition most precious in their eyes. To gain admission into this charmed circle is a distinction, yet a claim thereto is not such a challenge to the whole world as the assumption of a title. Here, therefore, is the great field for the enterprise of the pedigree-maker, and it is the one which has afforded the greatest triumphs of his skill. The immense fortunes accumulated within a century in commerce and the arts have brought forward millionaires able to buy every luxury but ancestry. Why should this crowning glory be denied them? In fact, the supply equals the demand, and the gorgeous fictions of Sir Bernard Burke do credit to Ananias. Of course, from time to time, some indignant critic exposes a specially flagrant case, but after a brief space the trade revives. In 1864 a distinguished Scotch antiquary, who wrote much over the signature of "Anglo-Scotus," exposed to scorn the famous Coulthart pedigree, perhaps the boldest and most absurd of all examples. For some ten or twelve years, by pamphlets, engravings, and even by memorial windows and tombs, the presumed records of the great Coulthart family had been made public. County histories, genealogical magazines, even Burke's 'Landed Gentry,' were crowded with citations from the annals of the family of John Ross Coulthart of Coulthart, traced through thirty generations to Coulthartus, a Roman lieutenant under Julius Agricola. In every generation the Coultharts were famous in war and fortunate in matrimony. In 1340 Sir Roger was granted the famous coat-of-arms of three black colts courant on a silver shield, and married a daughter of Walter the

Steward of Scotland. In each generation knights maintained the family honors, and their wives were from distinguished families. And yet the slightest investigation showed that this pedigree was an absolute fabrication, the proofs being absolutely and amusingly set forth in the book entitled 'Popular Genealogists, or the Art of Pedigree-making.' It was shown that there never was any clan of Coulthart, no barony, no knights, no noble alliances, no person of the name holding even a small piece of land worthy of record. The very coat-of-arms was merely a modern grant, purchasable by any one. The earliest ancestor capable of identification seems to have lived in the last century, and was great-great-grandfather of the credulous gentleman at whose expense this fairy tale was prepared.

It is understood that this exposure had a salutary effect for years, but the first book cited at the head of this article refers to a recent fraud and a late exposure. It is not a glorious fraud like the other, but it has some novel features. In 1895 one Col. Shipway, knowing only that his grandfather came from Gloucestershire, desired to trace his ancestry. To his misfortune he met one Herbert A. Davies, "the principal genealogical specialist," whom he engaged, for some \$9 a week and expenses, to make researches. Mr. Davies went for facts, and soon reported the existence of parish records, wills, family records, etc., of Shipways and the ancestry of his patron. He forged the necessary proofs, and crowned his exploits by stealing the tomb of one Hicks in Mangotsfield, a new tombstone being set up; a monument to the Blounts was also appropriated and turned over to the alleged Shipways. Owing to the gross carelessness of officials, Davies had access to the original wills at Hereford and Worcester, and he substituted forgeries in the files. He also borrowed and altered the parish records.

Retribution came when Mr. Phillimore was informed by Col. Shipway of these interesting discoveries. The antiquary promptly recognised the forgery, and began investigations. Luckily, Col. Shipway communicated Mr. Phillimore's report to his solicitors, Messrs. Underwood & Upton. We say luckily, because Mr. Underwood, jr. (why did they leave the second mate in charge?), wrote several supercilious and pompous letters to Mr. Phillimore, severally criticising his report, and adding that he (the aforesaid second mate) had had the whole of the papers inspected by a "gentleman who, we believe, is recognised as the *highest authority* in these matters, and he has pronounced them *perfectly genuine*," while Mr. Phillimore's points were "absolutely futile and without foundation." Alas, poor Davies! This impertinence sealed his fate. No genuine genealogist, especially one as learned and as prominent as Mr. Phillimore, could brook such an insult from a layman. Col. Shipway was wise enough to trust the expert, and, by due process of law, the whole miserable imposture was exposed. Mr. Davies got about \$3,500 from his employer and a sentence of three years' penal servitude from the Court.

It is only fair to add that Mr. Phillimore's interference was due not merely to his zeal as an antiquary, but to his belief that the "public records are mostly in a very inefficient custody." "They are exposed to every danger of theft, fire, damp,

and fraud. Their custodians care little about them; more often than not they cannot even read the documents of which, grotesque though it may seem, they alone are the persons authorized to supply certified copies." Again he writes: "These priceless documents are now the heritage not merely of Englishmen, but of our kindred beyond the seas in America and the Colonies, and we ought to guard them properly." Mr. Phillimore's name is well known on this side of the Atlantic for his genealogical researches, and we shall think all the more of him for his persistence in exposing knavery at home.

The editor of 'Matthews's American Armoury and Blue Book' shrewdly states that the "Armoury" contains the names of those entitled to bear arms by descent in some form, and the "Blue Book" contains the names of those "descended from the early settlers in America, and of those who held high positions in the state either before or after the Revolution." Mr. Matthews also includes among his *armigeri* those whose right to arms is "by reason of their having been used for at least three generations or the space of not less than one hundred years, for which a precedent is to be found in the words of Sir William Dugdale, Norroy, King of Arms, on the occasion of a Heralds' Visitation A. D. 1668, which runs as follows:

"Therefore, it will be requisite that he do look over his own evidences for some seals of arms, for perhaps it appears in them; and if so, and they have used it from the beginning of Queen Elizabeth's reign or about that time, I shall allow thereof, for our directions are limiting us so to do, and not for a shorter prescription of usage."

Now if Dugdale ever wrote thus (and no citation is given), the reply is that he is no authority, being only one officer of Heralds' College and a writer notorious for making fictitious pedigrees. Secondly, the authorities on English and Scotch heraldry expressly deny any such rule, and insist that no arms are legal or recognized unless approved by the college. Mr. Matthews's statement makes us mistrust either his knowledge or his honesty, as his limit of one hundred years takes us back to the period when impostors were flooding this country with spurious coats-of-arms.

Now as to the Book and Armoury, we will take the cases as they run, criticising only New England names, because Savage's great book tells us about these emigrants. The first name is that of Lord Fairfax, which is incontestable. The next is a family descended from John Greene of Providence, 1637. Savage says he was from Salisbury in Wiltshire. The arms here engraved are borne by many families of Green, but where is the pedigree? Then we have a family descended from James Boutwell of Lynn, of whom Savage says merely that he was a freeman, 1639, who left two sons. No titles or pedigree recorded there. The family of John Thomas of Portsmouth, R. I., is not recorded by Savage. John Benjamin of (Watertown and) Boston, 1632, was a constable in 1632. George Thomas of Boston, 1660, is barely mentioned by Savage. Richard Dana of Cambridge, 1640, though famous in his progeny, seems never to have held any position to mark him from his fellows. Ensign Samuel Corning of Boston, 1641, is not in Savage. Thomas Macy of Nantucket has no facts added to the record of his children. John Emery of Newbury seems to be undistinguished. Deamond Fitz-

gerald, the eminent civil engineer, born in Nassau, N. P., is an undoubted member of the Fitzgeralds of County Mayo, Ireland, with a pedigree and a coat-of-arms.

We will stop our regular examination, page by page, with a descendant of Miles Standish, whose coat-of-arms is on p. 15, especially as Mr. Matthews refers to this family in his preface as one of his strong cards. But Miles Standish did not know his own pedigree, as the following extract from his will shows. It is printed in the *N. E. Historic and Genealogical Register*, v. 336: "I give unto my son . . . Alexander Standish all my lands as heire apparent in Ormistick," etc., etc., "given to me as right heire by lawful descent, but surreptitiously detained from me, my great-grandfather being a second or younger brother from the house of Standish of Standish." This is a pretty slender claim, with four generations omitted, and we need hardly say that the Visitations and county historians do not record this line, though the property mentioned has never lacked an owner.

A careful inspection of the names in this book fails to show more than a half-dozen families in New England belonging to the colonial gentry. The plan of the book is perfectly absurd, as no American pedigree even is given. The present generation and its alleged progenitors, some three centuries ago, are named, but not a single proof of English pedigree or affiliation is adduced. The coats-of-arms are evidently copied from 'Burke's Armoury,' that ragbag of heraldry, but the local and civic honors of the subscribers are fully set forth. We regret to notice that so many belong to the mushroom crop of so-called "Sons and Daughters" of various kinds. Probably herein lies the explanation of the publication of this absurd book. In its present form it is a disgrace to our literature, and will make American heraldry a target for the ridicule of Britishers. But probably the persons who have paid for this immortality are serenely unconscious of any foreign rules and customs, and will continue to parade their fictitious coats-of-arms, and to swear by Mr. Matthews until the educated public covers them with deserved ridicule.

#### A WOMAN'S ADVOCATE.

*The Life and Work of Susan B. Anthony*; Including public addresses, her own letters and many from her contemporaries during fifty years. By Ida Husted Harper. In two volumes. Indianapolis: The Bowen-Merrill Co. 1898.

This is an autobiographical biography. Though written by Mrs. Harper, it has been written under Miss Anthony's supervision, and gives us at every point her own construction of events and of her part in them, except that she has sometimes objected to the lavish praise; but this Mrs. Harper was bound should not be left out. The book is somewhat loosely put together, too many of the letters being without date even where the date counts. The writer has not cultivated Emerson's virtue of understatement, especially in speaking of meetings addressed by or doing honor to her friend. There are few obvious errors, the persistent misspelling of Abby Kelley Foster's middle name being the most conspicuous of these. It is difficult to recognize Samuel J. May as "Rev. May," and William Henry Channing as "Rev. Channing," but these are minor matters. Of much more importance is it that the sub-

title of the book, "A Story of the Evolution of the Status of Woman," is not made good in these two bulky volumes, numbering jointly 1,070 pages.

What we have here, told with contagious sympathy and loyal admiration, is the story of the evolution of the status of a woman—Susan B. Anthony. It is an instructive and inspiring one. The contrast between the earlier and the later stages of her great contention is exceedingly dramatic. The gains have been immense: "the full right to speak in public; nearly the same industrial and educational opportunities; in many States, almost equal legal rights, and not one State wholly under the English common law which wholly prevailed" when Miss Anthony began her work. To these gains add the right of equal suffrage in four Western States, the school suffrage of women here and there, and certain approximations to municipal suffrage, though Miss Anthony regards such concessions as injurious to the main business—they are tubs to the whale that divert him from his normal course. But what is most significant in the story of Miss Anthony's personal career is that "there was [when she set out] as much opposition among the masses of men and women to all that [she] advocated as exists to-day against the demand for the ballot; yet the close of the century finds all practically granted except the ballot." It is clear that economic and social pressures have been Miss Anthony's "great allies" in some particulars.

It is a pleasant and important circumstance that, with infinite social obstruction, Miss Anthony had only kindly furtherance from those of her own family and home. This made a difference that we can hardly overstate, especially as hers was a most tender filial heart. Of the social obstruction we have many hateful illustrations. There were no limits to the scurrility of the attacks made upon her by the politicians, the pulpit, and the press. No doubt she sometimes stirred up animosity where she might have conciliated her opponents. It was not her business, again, to celebrate the felicities of domestic life. Even to the marriage of true minds she would have admitted impediments, could she have done so, when the contracting "parties of the second part" were her friends Mrs. Stanton, Lucy Stone Blackwell, and Antoinette Brown Blackwell. Indeed, Mrs. Stanton's domestic consciousness appears at less advantage here than in her own Reminiscences. So does her co-operation with Miss Anthony. Where Mrs. Stanton had only praise for Miss Anthony, Miss Anthony has some bright reflections on Mrs. Stanton's chronic backwardness in coming to her help. But there was never any serious break between these two, though they did not always pull together. With this exception, almost everybody falls out with everybody else in the course of the narrative. Mrs. Harper finds in this tendency to incoherency the penalty of pronounced individuality.

Miss Anthony was not infallible in judgment. She made some serious mistakes. Her alliance with George Francis Train was one; her long endeavor to work the Fourteenth Amendment as an instrument of equal suffrage was another. Both of these mistakes cost her many friends. Her alliance with Train saddled her with the *Revolution*, which, when Train pulled out, left her with a debt of \$10,000 on her own

back. Nothing in her life became her more than the paying of this debt. It was the work of six or seven years. She had generous help, but about half of the sum was made up of her own lecturing. Happily, at the same time, she was doing her appropriate work, from which she never turned aside. One cannot imagine a life more unified than hers by a great central purpose subordinating every other to itself.

The book abounds in situations, episodes, and incidents of a highly dramatic character, some of them amusing, some of them pathetic, if not tragical. The collapse of the *Revolution* was as tragical as anything, measured by Miss Anthony's feelings. It almost broke her heart. She will, even now, handle the bound volumes as caressingly as if she were a mother and they the garment of a lost child. One would expect to find the Bloomer episode one of the most humorous, but, in fact, it is one of the most pathetic. The correspondence it occasioned, however, has some amusing passages. Miss Anthony was one of the last to adopt the dress, one of the first to discard it. She wore it from a sense of duty and to support her friends in their course of courageous action, but the fatal shirt of Hercules was not more painful to his flesh than that to her. She was between two fires: "Garrison, Phillips, Channing, May were bitterly opposed to the short dress, and tried to dissuade the women from wearing it by every argument in their power"; on the other hand were those women who believed in the reform and had suffered martyrdom for their adhesion to it. Miss Anthony agonized about it as only one could do with her exacting conscience and her loyalty to her friends. At length the hated dress was given up, and by the lengthening of her skirts her heart was made happier than it had been for a year.

Miss Anthony's financial management was as improvident as "Müller's life of trust," and had not, like that, the adjunct of resounding prayer. Sometimes, however, her necessities were prayers distinctly overheard by generous friends: hence at one time \$5,000 from Francis Jackson, and at another \$25,000 from his daughter, Mrs. Eddy. But much of the anxiety of Miss Anthony's experience has consisted in getting into debt and getting out again. Every new enterprise had its deficit, to which generally she contributed the most from her own earnings—frequently the whole amount. Her energy and pluck were something marvellous. This woman, who was derided as unfeminine, could come home exhausted by her travels and their incidents of hardship and privation, and do more housework and better than many of the women who called her evil names. One entry in her journal reads: "Helped the girl wash this morning; in the afternoon ironed six shirts and started for New York at four o'clock. Was a little bit tired." In one particular she afforded some color of truth to those who said she was unsexed: she could do man's work if necessary. She could whitewash her own kitchen, and, when her father would go to Kansas for the summer, "she took entire charge of the farm, put in the crops, watched over, harvested, and sold them; assisted her mother with the housework and the family sewing, and, by way of variety, pieced a silk quilt and wove twenty yards of rag carpet in the old loom."

Her capacity for work and her endurance were preternatural.

Miss Anthony's long struggle for woman suffrage is hardly more impressive than the seven years' planning, working, and speaking for the married-women's-property law finally passed in 1860. A hundred times she was cast down, but never quite destroyed. Political parties she found to be all things to all women if by any means they might save some votes by getting women to speak on their platforms. Tempted to get woman suffrage by restricting the general basis, she stubbornly refused. She had no arts of concealment and abjured all compromises and half-way measures. One must seek long to find an equal consecration and such supreme unselfishness. So far was she from enjoying publicity that she shrank from it; was timid about speaking, and did not discover her ability as a speaker till 1870, when she was fifty years old. Nor may we forget that her half-century of devotion was to a cause which meant for her an equal good for men and women.

*Our Insect Friends and Foes: How to Collect, Preserve and Study Them.* By Belle S. Cragin, A.M. With 255 illustrations. G. P. Putnam's Sons. Pp. xix, 377.

*Everyday Butterflies: A Group of Biographies.* By Samuel Hubbard Scudder. With seventy-one illustrations, plain and colored. Houghton, Mifflin & Co. Pp. vii, 391.

'Our Insect Friends and Foes' is an attempt to assist the child interested in insects, anxious to know how to get them and what to do with them when secured. The author aims to answer the questions most generally asked concerning apparatus for collecting, methods of preparation and general classification; and, in the main, she has succeeded well. Personal interest and knowledge are evident throughout the earlier pages, and the recommendations are both clear and practical. Had the book stopped there, or been continued merely to give a definition of the orders, with brief references to a few of the generally distributed forms in each, it would have been entirely commendable. Unfortunately, it goes further, and gives a classification (largely from Comstock's 'Manual,' but sometimes apparently from sources less reliable) which extends to families.

In the Lepidoptera the enumeration of families is quite complete; but in most other orders it is not, and in many, perhaps most, cases there is not the least indication of what the family characters are. Usually one, sometimes two or three, species are enumerated, and some general information is given in a few lines; but this part of the work makes it evident that the author has little personal acquaintance with her subject, and writes only what she has read, laboring to put it into a more simple and popular form. As a result, the enumeration becomes tedious to the reader, as the characterizations seem to have become perfunctory to the writer. The classification used in the Coleoptera is certainly unique, and utterly at variance with that accepted as standard by entomologists in the United States.

Concerning the illustrations it is impossible to say a good word. They are bad from every possible point of view: coarse line or stipple work, redrawn from published figures by an artist who never saw the specimens

themselves, and did not hold detail except in the most general way. The picture of *Catocala illa*, on page 126, must be one of the poorest insect illustrations ever published in this or any other country, and some of the beetle pictures are almost equally bad. In some cases the species are recognizable, but that is simply because the artist could not completely ignore his (or her) copy. The list of "Books of Reference" on page 339 could not easily be worse for the purpose intended, though the books cited are or have been very useful in themselves. Altogether the work as a whole will be of little use except as an introduction to the methods of collecting ordinarily available to the boy or girl of from eight to twelve years of age.

'Everyday Butterflies' is another of those delightful books which Mr. Scudder knows how to write so well. It is just exactly what it purports to be, and sixty-two species of the common butterflies of the Eastern United States have their stories told and their changes explained in a most interesting way. Mr. Scudder speaks always from personal knowledge, always with an intense interest in his subject, and always in the most accurate and entertaining way. Hence his latest book is good reading not only to the summer idler who is attracted by the fitting life about him, but to the more industrious student, who can rely both upon the accuracy of each statement and upon its completeness. Of the illustrations, nine are of the so-called three-color process engraving, and these, in the copy before us, leave something to be desired. The drawing is always good, the color generally so, but the register is bad, and this in many cases seriously mars the picture. The cuts are all good, and some are excellent.

*A Study of Wagner.* By Ernest Newman. G. P. Putnam's Sons.

Richard Wagner continues to provide topics for discussion to many writers of two continents. Among recent additions to the Wagner literature in France and Germany are Henri Lichtenberger's 'Richard Wagner, Poète et Penseur,' the Comte de Chamberlain's 'Wagner & Carlsruhe,' a book by Rudolph Louis on Wagner's philosophy of life, another by Hermann Pfordten on the sources of the Wagner dramas in legend and history, others still by Julius Burghold on leading motives, by "Dr. W. P.," on "Die Meistersinger," and by A. Schilling on Wagner's boyhood. In England the translation of his prose writings by Ashton Ellis has opened the floodgates, it is to be feared, for a number of new books. Not long ago Bernard Shaw wrote one in which Wagner's claim to consideration is made to lie chiefly in the socialistic doctrines he is supposed to have smuggled into his dramas, and now Ernest Newman comes forward with his 'Study of Wagner,' the gist of which is that "Wagner was a musician and nothing but a musician," and that his philosophical writings are full of the "crudest blunders of the amateur sociologist," consisting of "clumsy paralogisms" of the kind that Mr. Benjamin Kidd's 'Social Evolution' is made up of. And so the war goes on merrily, each writer appropriating that in Wagner which appeals to him, and berating those who differ from him. It depends entirely upon one's point of view, or mood, whether one finds this sort of thing funny, edifying, or tiresome.

Mr. Newman has unbounded admiration for Wagner the musician, but has no appreciation of his poetry; the references and notes, indeed, lead one to suspect that he does not understand German, in which case his criticism of Wagner's dramas is, of course, futile. It is too late in the day to discuss this point; a man who does not feel that Wagner showed the same genius in the dramatic structure of his poems as in the dramatic structure of his music cannot be helped by argument. In his strictures on Wagner's prose writings Mr. Newman makes out a much stronger case, but the trouble here is that he takes him too seriously as a philosopher—quite as seriously as Wagner took himself. He was not a philosopher, but an artist in every fibre, and he always wrote like an artist—diversely according to his moods, and often in a strain of exaggeration. To subject such writings to the logical dissecting knife is easy, but hardly worth while. Thus, in some of his essays Wagner no doubt did indulge in "cheap and narrow-minded laudation of the German race," but then are there not a good many praiseworthy traits in that nation, and did he not, in other moods, berate his own nation with the acerbity of Schopenhauer?

There are not a few interesting and suggestive pages in Mr. Newman's book, and his footnotes display great erudition; but he has wasted much ingenuity in hair-splitting discussion of the theories and the practice of Gluck and Wagner regarding the relations of the drama and music. Here, indeed, he comes perilously near the new school of London musical criticism which thinks it is "smart" to express opinions contrary to those which everybody else holds, and which, we may add, everybody will continue to hold. Mr. Newman has doubled the utility of his book by appending a good index, and there is another feature which increases its value—an eight-page synthetic table of Wagner's life and works and synchronous events. For instance, the seven years of Wagner's career as royal conductor in Dresden, the time when "Tannhäuser" and "Lohengrin" were composed (1842-1849), coincide with the death of Cherubini, Franz's first set of songs, Mendelssohn's "Elijah," Berlioz's "Faust," the death of Mendelssohn, Meyerbeer's "Prophète," and the death of Chopin.

*Die Geistigen und Socialen Strömungen des Neunzehnten Jahrhunderts.* Von Theobald Ziegler, Professor an der Universität Strassburg. Berlin: Georg Bondi; New York: Lemcke & Buechner. 1899.

This book forms the first volume of a series entitled "Das Neunzehnte Jahrhundert in Deutschlands Entwicklung," which is intended as a popular encyclopædia of the varied manifestations of the German spirit in the public life of the last hundred years. The political history of Germany during this time is to be treated by Prof. Georg Kaufmann, the development of the natural sciences by Prof. Siegmund Günther, the technical industries by Prof. Reuleaux, the fine arts by Prof. Gurlitt, literature by Dr. Richard M. Meyer, and so on. That Prof. Ziegler should have been selected to lead off with a prelude on the moral and intellectual tendencies of the century in general seems eminently proper.

He has certainly succeeded in producing

an interesting and instructive book. With a firm but gentle hand he leads us through the maze of conflicting movements, parties, and schools that have determined the path of German culture from the days of the brothers Grimm to those of William II. The Neo-Hellenism of the beginning of the century, the orgies of the Romantic philosophy of nature, the liberal and the reactionary elements of Hegelianism, the undermining quality of the literature of "Young Germany," the revolutionary agitation of the forties, the materialism and pessimism that set in with the failure of the uprising of 1848, the Bismarckian era, the present struggle between either socialistic or absolutistic state omnipotence on the one hand and the revived individualism of a Nietzsche or Hauptmann on the other—all these topics, and a great many others besides, stand out each in its own peculiar light and distinctness. And with these sketches of general movements there are interwoven animated and striking characterizations of great individuals, such as David Fr. Strauss, Schopenhauer, Bismarck, Treitschke—characterizations conspicuous for their fairness and objectivity even where, as in the case of Treitschke, the writer's instinctive antagonism to the personality portrayed by him is obvious.

Fairness may indeed be called the pervading trait of the whole book. Prof. Ziegler is a man of a remarkably wide range of intellectual sympathies. He is no less interested in the intricacies of the Hegelian system than in the issues that were at stake in the *Kulturkampf*; and his judgment of Richard Wagner is as well considered as that of the naturalistic revolt in the recent drama and painting. Philosophically, he is an eclectic, equally removed from any one of the metaphysical and moral systems which he discusses. Politically, he is a South German Liberal, but at the same time an enthusiastic worshipper of Bismarck; an opponent of militarism, but also a devout believer in universal military service. Sociologically, he is an individualist rather than a collectivist; yet his sympathy for the ideal demands of the Socialist creed, though half concealed by constitutional reservations, is none the less apparent. Aesthetically, he is an admirer of the idealism of the classic epoch of German literature; but that does not prevent him from breaking a lance for the sturdy realism of contemporary art. In short, he sees habitually both sides of a question; and even where, as in his somewhat unreasonable attacks upon what he calls Romanticism, he seems to deviate a little from the straight path of justice, this is the result not so much of partisan prejudice as of a rather wilful and inadequate terminology.

A personality of this sort is apt to lack the charm that emanates from whatever is impulsive, unhesitating, instinctive; and it must be admitted that Prof. Ziegler's disquisitions move on for the most part somewhat sluggishly. There is absent in them the irresistible trend of a truly inspired mind. One chapter follows the other with becoming order and neatness, but they do not grow out of each other—they are simply placed side by side; there is nothing inevitable in them, no unifying idea, no fundamental and undoubting faith. But it would be foolish to expect from a writer what the peculiarity of his temper forbids him to give, and there is certainly enough in this book to be grateful for.

Though written for Germans, it seems particularly well adapted to the needs of foreigners who wish to know how the leading thoughts and the leading men of German national life in the nineteenth century are reflected in the mind of a representative German of to-day. The influence of a book like this, especially upon the growing generation, cannot help being of the best. Its mild yet manly spirit, its fearless independence, its breadth of sympathy, its calm and unaggressive patriotism are like oil upon the turbulent waters of party passion and hatred. If the majority of German students and university men were imbued with Prof. Ziegler's spirit, the days of Anti-Semitism, of lese-majesty prosecutions, and of Socialist fanaticism would soon be numbered, and the golden words with which he takes leave of his readers would be fulfilled:

"If our young men were to combine the martial vigor and the bold realism of to-day with the enlightened tolerance of their forefathers, then the twentieth century would be, not necessarily more peaceful than the nineteenth has been, but certainly more just and more evenly balanced. I am enough of an optimist to hope for this, for tolerance is a native element of the German mind. The word of Hegel, that history is progress towards freedom, is not yet obsolete. But free are only those who are both brave and humane."

The interest of the volume is heightened by contemporary portraits of Goethe, Schlegel, W. von Humboldt, Hegel, Heine, Strauss, Lassalle, Nietzsche, and others, although the value of these portraits is very uneven.

*The United States of Europe on the Eve of the Parliament of Peace.* By W. T. Stead. Doubleday & McClure Co. 1899.

Mr. Stead's support is not always welcome to those who have the permanent success of a cause at heart. It is not many years since he proposed to extinguish sexual immorality in London by expatiating in public on its shocking particulars, with such results as might have been expected. Nor has the city of Chicago repented because of Mr. Stead's proclamation of its depravity. In fact, sensational appeals seldom produce enduring reforms, and Mr. Stead's fame is principally due to his sensational writing. But it is only just to say that the letters here collected are for the most part moderate in expression, and their substance is undeniably interesting. The author has had the opportunity of conversing with many of those to whom the control of the political relations of the European States has been committed, and it is certainly no mean privilege to be admitted to an interview with the Czar. Mr. Stead's account of the feelings of that prince is extremely encouraging to all lovers of peace.

Alexander III., the father of the present Czar, made the campaign in Bulgaria, and the horrors that he then witnessed led him to resolve that his subjects should enjoy peace during his life. He was devoted to his family, and constantly endeavored to make his children detest war. He did not dwell on its pomp and glory, but on the frightful suffering that it caused, and, after relating the terrible events that he had witnessed, he would add, with great earnestness, "May God keep you from ever seeing war, or from ever drawing a sword." Nicholas II. appears to have been thoroughly convinced by his father's teaching, and Mr. Stead assures us

that he is passionately devoted to peace. He adds that in no point in his policy is there any antagonism whatever between his aims and the interests of the British Empire. That may be true, and yet the policy of the Czar may not be that of the rulers of Russia. But when we consider that no Power has anything to gain by attacking this vast empire, and that Russia has more to gain by peaceful internal development than by warfare, it is reasonable to conclude that the future of the common people of Europe is not without hope.

It could hardly be expected that Mr. Stead should neglect to refer to the melancholy contrast between the recent appeal of the Czar for relief from the burden of arms, and the "criminal aggression" in which President McKinley declares the American republic is now engaged. He is justified in emphasizing this contrast; but we may still hope that the sober second thought of our people will affect the policy of our rulers. On the other hand, it is to be considered that the relations of the States of Europe are in many ways more civilized than they were. Not the least effective part of Mr. Stead's letters is that which details the gradual yielding of military barriers to the pressure of modern trade and travel. The custom-houses still flourish, but they are less of a nuisance than formerly, and those who remember the days when a passport was indispensable to every traveller in Europe, can appreciate the progress that a few years have brought about.

Among the causes contributing to the unity of Europe, Mr. Stead reckons as most important the telegraphic agencies, the "Riverain" commissions, and the International Railway Bureau. The first of these causes makes the citizens of every State feel an interest in the affairs, even the petty affairs, of all the rest, and Mr. Stead observes:

"Let no one overlook the value of gossip in the formation of the ties which bind men together. Take away family gossip, and the family would in most cases become a mere skeleton, without flesh, blood, or nervous system. It is by the kindly gossip of the fireside, in which every one talks about everybody else, that the sense of family union is created and preserved. The chattering of the telegraph, who, in every capital, carefully extract the kernel of grain from the bushel of chaff, and telegraph all round the Continent such items of intelligence as may be of general interest, contribute probably the most constantly potent influence that can be discovered in the growth of that common sentiment which is the precursor of common action in support of the commonwealth."

There is much truth in this, but there would be more if the newspaper gossip were kinder and cleaner, and if the extraction of the kernel of grain from the bushel of chaff were performed with more discrimination. But we need not qualify our appreciation of the work which has been accomplished by the Danube Regulation Commission, or the International Railway Bureau, or the Postal Union. It is hard for despotic rulers to contend against these powerful influences. Mr. Stead's survey of Europe is comprehensive, although taken during a hurried three-months' tour. His report of the talk of the journalists and diplomats at the different capitals serves well enough for current history, and he presents his readers with a great number of photographs of European notables. He intimates that this volume may be the first of a series of annuals intended to "provide the general reader with a more or less comprehensive survey of the movements

of the twelvemonth, written from a special standpoint after personal converse with the sovereigns and statesmen, the diplomatists and journalists of Europe." Doubtless such a series would be popular; but it would be more valuable if the future numbers were provided with indexes. The volume before us has none, and the table of contents is of little use.

*The Cuchullin Saga in Irish Literature.* Being a Collection of Stories relating to the Hero Cuchullin. Translated from the Irish by various scholars. Compiled and edited with Introduction and Notes by Eleanor Hull. London: David Nutt. 1898.

The Irish Saga of Cuchullin, as here put forward, is a mosaic set together of parts derived from manuscript sources as wide apart chronologically as the end of the eleventh and the beginning of the nineteenth centuries. These sources, furthermore, have not been rigidly or even closely adhered to. Some of the stories are adaptations of various originals, with interpolations and omissions; to one of them, "How Conochar gained the Kingship over Ulster," is prefixed the statement that it "does not correspond to any definite Irish text." The immediate source of the author's material is even more catholic; several stories are retranslations from German, several others from French; no one is by the author of the book herself, who seems to have let her Irish originals severely alone. All this is by no means necessarily an impeachment, since it is readily to be gained from the long sub-title, which clearly enough indicates the character of the work. In her introduction to the great Irish epic, the *Táin bó Cúailgne*, the compiler states that "it is intended primarily for English readers, not for Irish scholars," a characterization equally applicable to the whole book, which it admirably summarizes.

We have, then, an attempt, and the first one, to put before the general English reader in consecutive form the stories that make up what may well be called the "Saga" of Cuchullin, the "Hound of Culann." Of the two great legendary cycles of Ireland, those of Cuchullin and of Finn mac Cumall, the father of Ossian (variously called the Finn and the Ossian Saga), the former is the more ancient, both in manner and matter of content and in manuscript transmission. Its place of action is Ulster and Connaught, and its time (in accordance with Irish chronology) a few decades before and after the beginning of the Christian era. According to excellent authority, as early as the seventh century the legends of Cuchullin had begun to grow together into stories of greater or less length and were written down. The earliest versions actually at hand are in the two great manuscripts which together contain the most important part of the cycle, the *Leabhar na hUídre*, the "Book of the Dun Cow," from the end of the eleventh century, and the *Book of Leinster*, from near the middle of the twelfth. The language of both these sources in its characteristic features is, however, that of the eighth and ninth centuries. Both manuscripts have unfortunately come down to us in a fragmentary condition.

The texts of the two versions as a whole differ materially. The *Leabhar na hUídre* contains a saga in the making, with gaps in the continuity of the story, unmotivated episodes, and varying versions awkwardly joined together. The *Book of Leinster*, fifty years younger,

shows, on the other hand, the fundamental unity of narration that we are accustomed to associate with the name of "saga"; the story proceeds without unnecessary deviation or repetition. The author, in her introduction, appears to lose sight of the fact that the stories, so far as they are contained in the *Book of Leinster*, have actually come down to us in a connected form when she throws out the conjecture that, "although the cycle exists, and apparently always has existed, in a number of isolated tales, to the minds of the bards themselves it must have presented itself as a connected whole." As for the rest, she sees in these stories of Cuchullin, as we have them from all sources, a completeness and homogeneity that does not exist. The saga is only apparently complete, since a considerable number of the tales which originally made up its individual episodes have been lost, and internal criticism, which need not go too deep, readily enough yields up the fact of incongruity. Neither of these conditions may appear in the saga as the author has here set it together, but, as has been before remarked, that is another matter.

The Cuchullin Saga shows Irish literature (in goodly portion a literature of story-telling) at its best. The tales of this cycle, and not those of the better known Finn cycle, are typical, the author points out, of the literary genius of ancient Ireland. Even the retranslations of this book—as Sir Walter Scott once called their kind, "the shadow of a shade"—it must be said are good reading. At their best, the stories have a singularly attractive style of their own, a style "terse, grave, and balanced," a definiteness of purpose, and an undoubted dignity that shines even through their borrowed setting. In many of them are found the lively and humorous incidents and the witty conversations that are to be expected of Irishmen of all time as the exercise of a birthright. The author furthermore points out the tenderness of the love-tales, which she thinks have a purity and a charm hardly to be found either in the Northern saga or the Southern romance.

The *pièce de résistance* of the present book is undoubtedly the version of the *Táin bó Cúailgne* contributed to the work by Stanchard Hayes O'Grady. In Ireland itself this narrative of the raid which the men of Connaught under Alilell and Meave, in conjunction with the three other provinces, undertake into Ulster to secure the celebrated Brown Bull belonging to Daire mac Fiachna of Cúailgne, is, and apparently always has been, considered its most famous story. The present version has been made from a manuscript of this century, although it coincides in the main outline of events with the *Book of Leinster*. Perhaps unfortunately, it does not purport to be more than an analysis, for here was an excellent opportunity for an *editio princeps* of the epic in English, nor, it is pointed out, is it a critical translation, even as far as it goes. The author takes pains to tell us, however, that it "is in parts a sufficiently full and close reproduction of the original to answer all the purposes of the non-critical reader"—a dictum against which it would be utterly vain to appeal. This, like the other parts of the book, is again good reading, and furnishes, no doubt, an excellent conspectus of the story, from the gathering of the forces at Cull sillinne, when they set out for Ulster, to the last tremendous charge of the re-

doubtable Brown Bull, when from the summit of sliabh Breghe he once more sees the hills of Cualigne and rushes on to his tragic death.

The popular presentment from their literary side alone of the tales which make up the Saga of Cuchullin is an element of undoubted significance and value in the rediscovers and rehabilitation of Irish literature. That these old stories have not only interest, but beauties of their own as literature, is fully apparent from the tales in the present book, like, for instance, "The Wooing of Emir," by Kuno Meyer, which are really translations and not versions of their originals. The Sagas of Ireland, the author says, must be placed in their natural place beside the sagas of the North and the epics of mediæval Europe, and her book will no doubt play its part to bring about this result. It is to be hoped, however, that, now that we have been given an idea of what the stories of this cycle are like, somebody may give us a knowledge of what they really are.

Irish literature, furthermore, apart from mere literary interest, has a value, underestimated except by the few, as a link in the chain of the literary development of Europe which it is impossible longer to disregard. The introduction calls attention to the pertinent question of the relation of the literature of Ireland to that of the rest of Europe, and to the undoubted element of action and reaction involved. This is one of the most interesting phases of the study of Irish, and one of the most valuable. No one, for instance, to touch but a single side of the matter, can read these stories without noticing not only their generic, but their specific likeness to the saga literature of Iceland; and the large problem of Irish influence not alone upon the prose of the North, but upon its poetry, upon the Sagas and the Edda, as well, is one of the most interesting in modern criticism. To the popular recognition of all these things the present book should contribute.

The Cuchullin Saga is volume viii. of the Grimm Library. Like its predecessors, it is admirably printed. There is a map at the beginning to illustrate the Saga, and at the end are notes, appendices, and an index.

*An Introduction to the Theory of Analytic Functions.* By J. Harkness and F. Morley. Macmillan. 1898. 8vo, pp. 336.

As a book to put into the hands of those students whose turn of mind enables them profitably to relish a spoonful or two of the odorous bouillabaisse that has been stewing on the mathematical range during all the generation last past, but who do not intend to become professional mathematicians, no other has yet appeared, or is likely for a good while to appear, we believe, half as good as this; unquestionably not, if we limit the comparison to works on the theory of functions, which has served as *pièce de résistance* during that period and longer. This is distinguished from other available elementary treatises by being in the main Weierstrassian—which means (as well as we know how to describe it in general terms) that it flies straight at the algebraic throats of fundamental problems, disdaining geometrical circumventions, and with a degree of logical precision which (whether it is of the essence of the method or only a natural concomitant of it) is certainly much su-

perior to the previous habit of modern, or even of ancient, mathematics. This method offers special advantages over those of Cauchy and Riemann when the aim of the study is mental training, as it is with those students for whom this book is most adapted.

Such a book must aid in that disintegration of the traditional English idea of mathematics which has been going on of late years. For some reason the English have followed Euclid, Apollonius, and Archimedes more closely than have the Continental mathematicians. They have shared the Greek scrupulosity of logic, and, like the Greeks, seem to look upon all mathematicians with the eyes of geometers. They, more than others, for example, have been disposed to look upon a quarter-turn as an *interpretation* of algebraic imaginaries. It better accords with the Weierstrassian spirit, as well as that of the Lagrangian analysts, to regard the algebraic expression as an elucidation of the Euclidean geometry of the plane, as quaternions is of 4-dimensional geometry.

But Professors Harkness and Morley are by no means entirely given over to Weierstrass. The methods by which the theory of functions was originally rendered comprehensible are sufficiently illustrated in the book to make the student appreciate the large measures of beauty, strength, and truth that are in them. The authors are rather on their pilgrimage to Weierstrass, and perhaps already regret that they did not treat some problems in their recent larger treatise more after his example. They are not yet altogether incapable of lapsing into obsolescent modes of thought. Thus, they adhere to that opinion which calls the point at infinity in the plane of imaginary quantity an "artificial point." Wherever this phrase originated, it involves a logical slip with both feet. For first, it confuses a pure mathematical hypothesis with a matter of fact, and, second, it assumes that we are better acquainted with the infinitely distant parts of space than we are. For no matter what the shape of real space is, which is a question of physics, not of pure mathematics, it is undeniable that we may *suppose* a space which shall have but a single point at infinity. In such a space, a circular filament, or fibre, could be stretched into an unlimited and infinite straight line (as by a continuous bilinear transformation), although in the space of projective geometry, where there is a plane (or conic) at infinity, the filament could be continuously deformed only into two straight fibres (and that only by welding two particles of it together), which, however, may coincide. We can never ascertain how the infinitely distant parts of our objectively valid space are really shaped, except by inference from the parts near us; and since the hypothetical plane of the theory of functions and that of Euclidean projective geometry are precisely alike except at infinity, it would seem to follow that we never can decide that the former is not the shape of a real plane, unless the proper motions of the stars should prove that space is non-Euclidean, in which case the plane of the theory of functions would be everywhere unlike a real plane. It may be objected, however, that we cannot, from any observation of space about us, infer that the part at infinity has an essential singularity; and that which could never be inferred cannot be true. Whether or not there is a sound answer to this, it is hard to say. But

this is not at all the idea embodied in the term "artificial point."

The book has most of the distinguished merits of its authors' larger work. It also shares the chief fault of that volume, that of being here and there not so perspicuous as it might easily have been made; a greater inconvenience in the more elementary treatise. We do not quite comprehend why the book need have been so very small, only 326 pages of large and open print, exclusive of the glossarial index. True, it had to be short enough for a college course; but a little amplification in some places might have abbreviated the time required to read it. An initial short chapter discusses the number-system. If that was worth doing at all (as we certainly think it was), it was worth carrying to logical perfection; for that is the sole *raison d'être* of such a chapter. But the reasoning is so abridged that it can hardly be said that this has been done. The number system is one thing, and the system of discrete multitude is an entirely different thing. The former is an affair of pure mathematics, the latter is rather a question of logic, but of the logic of mathematics; and the work would have gained in value, especially for the class of students for whom it is adapted, if the chapter on the number system (expanded by a few pages) had been followed by another developing the distinctions of enumerable, denumeral, and the grades of higher discrete multitude, together with the true conception of continuity.

*In Africa's Forest and Jungle; or Six Years among the Yorubans.* By the Rev. R. H. Stone. F. H. Revell Co. Illustrated. Pp. 282, 8vo.

A missionary's life among the Yorubans of the Slave Coast thirty years ago was full of hardship and peril, but not because of their savagery or opposition to Christianity, for they were among the most intelligent, peaceable, and industrious of the negroes of West Africa. Mr. Stone enumerates fifteen trades carried on by the men, while the "women are even more industrious," weaving, dyeing, making soap, oils, and earthenware, and "spinning by the light of their little bowl-lamps until late at night and before day in the morning." The comparative wealth which they thus accumulated, however, made them a constant prey to their savage neighbors, and the Dahomians at this time made annual raids into their country. The town in which he was first stationed, a place of a hundred thousand inhabitants, after a year's siege was taken and destroyed so utterly that its site "is a feeding-ground for wild elephants." He escaped to Abeokuta, which, during the two years of his residence, was threatened with the same fate. One of the principal defences of this city was an almost impenetrable forest, which the Dahomians entered in single file at many places and cut their way through step by step. During the month which it took them to reach the open, "they were not allowed to make any noise which would distinguish them from the wild denizens of an African forest. If any one forgot himself and spoke in an audible voice, he was instantly slain. Even orders were given in grunts or barks like those of monkeys." A suburb was captured, and of the ten thousand inhabitants, "excepting a few hundred spared to be offered in sacrifice, everybody but one man perished." Satisfied with this

**BOOKS, SECOND-HAND AND NEW.**  
Standard and Rare. Books bought. Catalogues  
sent. E. W. JOHNSON, 2 E. 49d St., N. Y.

## Höchst Elegant!

Whether you remain at home this summer or spend it at some watering place, the seashore, or in the mountains, you will find on a cool evening nothing more apropos or thoroughly comfortable than one of our **Augusta-Victoria Empress Shoulder Shawls**, hand-woven of softest wool and silk. Colors: White, rich light green, delicate pink, recherché red or black.

Sent postpaid and registered for \$7.50.

Inducements to

## GOLFERS IN JULY

# at Mount Pleasant House, WHITE MOUNTAINS.

The Links have been put in the finest condition for season of 1899. Few Golf Courses in the world exceed the Mount Pleasant in natural interest or in perfection of improvement. A feature is the caddy service supplied by a force of active, intelligent academy and college boys.

Dark room, with complete outfit for use of amateur or professional photographers.

Mount Pleasant House is luxurious in every appointment, and has special Post-office, Telegraph, Long-distance Telephone, and Railroad Ticket offices in the hotel.

Through Parlor or Sleeping-Car service from Boston, Portland, New York, Chicago, Burlington, and Montreal to hotel grounds.

Trains leave the grounds twice daily for ascent of Mt. Washington, directly in front of the hotel

THE OPEN OBSERVATION-CARS again run through the Pass of the White Mountains. Passengers to Mount Pleasant House from Portland and from Boston, via North Conway, will enjoy this unique rail ride from Bartlett to Mount Pleasant, 8 miles of it from Deane to Crawford Notch, being high up on the Mountain-side, with the valley far below, and three miles from the Notch to Mount Pleasant, commanding the grandest view of the Presidential Peaks just across the valley Ammonoosuc. No rail ride in America, east of the Rocky Mountains, compares with this.

**Bicycle Path to Crawford Notch.**

**Bridle Trail to the Summit of the Rosebrook Range.**

**Birch Rock Spring Water.**

**Mount Pleasant Dairy Milk.**

**White Mountain Air.**

**ANDERSON & PRICE, Managers,**

Also of Hotel Ormond, Florida.

Mount Pleasant House, N. H.

## BERKSHIRE HILLS.

The Taghkanic and Cottages, Great Barrington, Mass.

An ideal summer home, charmingly located in the village of Great Barrington. Extensive, shady grounds. One hundred guests. Send for booklet.

W. F. SMALL, Proprietor.

## Travel.

GOING ABROAD ON A BICYCLE TRIP? Send for "Bicycling Notes for Tourists Abroad," 10 cents in stamps. The fine new steamers of the

## LEYLAND LINE

Sail every Wednesday.

BOSTON TO LIVERPOOL.

First cabin, winter, \$37.50 and up. Splendid new steamer Winfredian, 10,500 tons, 570 feet in length, now in service.

F. O. HOUGHTON & CO., General Agents,  
115 State Street, Boston.

## PARIS in 1900.

A word to the wise. Make sure of steamship and hotel accommodations now, at fair rates, in personally conducted parties. THE CRAWFORD TOURS, 610 Tremont Building, Boston; 230 Broadway, New York; 1011 Chestnut Street, Philadelphia.

## EUROPEAN TRAVEL.

THE MISSES WELDON, with their 9th Annual Class. Young Ladies' Foreign Tour. Restricted, highest references. Address THE MOORINGS, LOOK HAVEN, PA.

## THE BARTLETT COTTAGES.

FISHER'S ISLAND, N. Y.

Seven miles seaward from New London, Conn. Fully furnished cottages for housekeeping, or with board and attendance. Plumbing and drainage strictly sanitary. Illustrated circular mailed on application.

## EUROPEAN SUMMER RESORT,

INNSBRUCK, TYROL, AUSTRIA.

1,000 feet above the sea, with dry, bracing climate.

## HOTEL TIROL.

Open all the year. Modern conveniences. Best references. Illustrated pamphlets on application.

CARL LANDAUER, Proprietor.

## SWITZERLAND LAUSANNE.

HOTEL RICHE-MONT.

First-class hotel with moderate tariff. Large gardens. Magnificent view over the lake and mountains. Lift, baths, electric light in every room. Patronized by American families. In winter very reduced pension terms. Tariff and pamphlets sent free on application.

## BEAUMARIS HOTEL, MUSKOKA

LAKE, ONTARIO, CANADA.—1,000 feet above sea. No hay fever. Golf, fishing, boating, bathing. Send for booklet.

EDWARD PROWSE, Proprietor.

## COOPERSTOWN—"OTSEGO HALL,"

small hotel near the lake. Well kept; choice table; good boating and fishing; 2 golf courses. Now open.

# The Nation.

NEW YORK, THURSDAY, JULY 13, 1899.

## The Week.

Ex-Senator Edmunds speaks for the old and honorable tradition of American statesmanship when he writes indignantly of the intolerable mystery and secrecy in which this miserable Philippine business is shrouded. What changed the Filipinos from grateful friends to bitter and vengeful enemies? Why did the conferences between our officers and theirs last January fail? What were the instructions of our Commissioners? What is the real policy of the Administration? These are the critical questions as to which Congress and the country are left completely in the dark. Twenty years ago, Congress would no more have adjourned without getting light from the President on all these matters than it would have ordered the Capitol set on fire. Now the members seem content if Hanna says it is all right, if the absurd Smith declares that he and McKinley will see to everything, if Alger guarantees that the best possible President and the best possible Secretary of War are guiding the ship of state. "Let us know the whole truth," cries Mr. Edmunds, but the only answer is silence at Washington and the censor at Manila. Yet some voices still sound the old American note. The Rev. Clay MacCauley, an American missionary in Japan, who talked with Otis and Dewey before the February outbreak, reports the former as lamenting the stubborn ignorance at Washington, and gives this golden saying of the great Admiral: "Rather than make a war of conquest on this people, I would up anchor and sail out of the harbor."

Ex-Senator John B. Henderson of Missouri has been permitted by the *Tribune* to express through its columns some extremely "traitorous" sentiments about our Philippine policy. In giving publicity to them we are very much afraid that the *Tribune* is interfering with the triumphant progress of the war, by encouraging Aguinaldo to continue his resistance to our benevolent intentions. "I am not an anti-expansionist," says Mr. Henderson. "I believe in expansion, if it is carried on in a legitimate way; but I don't believe that you can drive a people to fall in love with anything, or that you can shoot American patriotism into anybody." What dreadful treason that is! It is all the more reprehensible since it comes from a man who has a creditable war record of his own. Mr. Henderson took the Union side in Missouri during the war of the rebellion, armed and equipped a

loyal regiment, and took the field with them, in support of the Union cause. Yet he now expresses such heretical views concerning the proper use of the American flag as the following: "When the American flag ceases to be the emblem of liberty, let it be hauled down. I know of but one flag, and that is the one which proudly floats 'o'er the land of the free and the home of the brave.' It will never float gracefully over a land of slaves." Mr. Henderson is woefully behind the times.

To our other imitations of Spanish methods in the Philippines, it appears that we now propose to add government by bribing and subsidizing. "Money considerations" are said to have entered into the abortive negotiations for the surrender of certain Filipino leaders. However that may be, the State Department makes no concealment of its determination to pay the Sultan of Sulu a subsidy, to induce him to keep the island in order for us. The Sultan is said to be quite enthusiastic on the subject of American sovereignty—with a good subsidy attached. So he formerly was on the subject of Spanish sovereignty. Let who will call himself supreme, so long as the Sultan is allowed to do as he pleases and gets handsomely paid for it besides. But what a light this casts upon Mr. McKinley's proclamation announcing "beneficent assimilation"! How it illuminates the first article of the eleven put forth later by the Philippine Commission, reciting that "the supremacy of the United States must and will be enforced *throughout every part of the archipelago*"! Spain paid the Sultan about \$6,000 a year, but if that wily potentate knows how desperately anxious the McKinley Administration now is, and how much money it has, he will demand at least \$25,000 under our higher civilization. We have no doubt Hanna would think him cheap at the money.

That was not a very flattering picture of our prospects in the Philippines which the Japanese statesman, Mr. Kaneko, drew at Cambridge, the other day. Of course, the "headline artists" of the press called attention only to the fact that he expected us to stay for ever in the islands; that he said the advent of our flag in those seas was a "portent," and all that sort of thing; and the plodding reader was left to find out for himself that this authority thinks our policy in the Philippines has, so far, been simply mistake upon mistake. We had blundered, he said, just as the Japanese blundered at first in Formosa. They thought, as we thought, that the people would consent to be handed over as booty without a murmur. When that

delusion was painfully dissipated, they thought, as we thought, that a vigorous campaign would bring the natives to their senses. Blunder number two for Japanese and Americans alike. Now, says Mr. Kaneko, it is time for Americans to learn from Japan's final policy how to do it. The true method is to give up fighting or attempting to rule in the interior at all; simply garrison the towns on the seacoast, and let the natives do as they please inland, trusting to time and trade and necessary intercourse to bring about a kind of armed neutrality and quasi-peace. This would be an awful come-down for a conqueror; but it is, we beg to observe, almost exactly the position which we at present occupy in the Philippines, and there is no prospect of improvement if the natives continue to resist our troops as obstinately as they have done.

It is said that the "Insular Commission" has prepared and submitted to the Attorney-General an opinion on the legal status of Porto Rico and the other islands ceded to us by Spain by virtue of the treaty of Paris. The Insular Commission itself has no legal status. It is composed of three men appointed by President McKinley to take a survey of things in general, and tell him what they think of the attitude of the ceded islands towards Uncle Sam. The Commission holds that the newly acquired islands, although belonging to us, are no part of the territory of the United States. They are possessions merely. The laws of the United States do not extend to them by virtue of the cession of Spain. The difference between them and the integral territory of the United States lies in the fact that they can be sold, ceded, given away, or declared independent, while the integral territory cannot be alienated even by Congress. The customs laws of the United States do not extend to them. Goods exported to them must pay the duties established for the islands. Goods imported from them must pay the same duties as those from other foreign countries. Our present government of the islands is military, not constitutional, government. It follows that the extension of our navigation laws to Porto Rico was illegal, unless that also was a military order. The upshot of the whole matter is that it rests with Congress to say whether the islands shall be a part of the United States or not. If they become such, their inhabitants must be citizens of the United States, entitled to all the privileges and immunities of citizenship, and in due time be represented in Congress and the electoral college. In other words, they must be

our governors at the same time that we are theirs, and our future candidates for the Presidency must cater to the preferences and the prejudices of Luzon as well as to those of Idaho. It is worth remarking that the Commission includes Hawaii in the same category as Porto Rico and the Philippines.

Was it not Palmerston who once said to a challenging colleague that the only distinction between a Premier and any other Minister of the Crown was that, in case of a difference between the two, it was the latter, not the former, who resigned? This is the great truth which, according to all appearances, the President is endeavoring to convey to Secretary Alger. Characteristically, he is trying to do it by indirection. Johnson bluntly asked for Stanton's resignation, and Grant went as directly to the point with Attorney-General Hoar. But that is not McKinley's way. No such rough and brutal methods for him. It is so much more considerate and delicate to "ostracise" and "ignore" Alger, as it is agreed on all hands that he is now doing; to give the hint to all the Washington correspondents that the President would be very glad if the Secretary would only relieve him from great embarrassment by resigning. It will be curious to note the effect of this enflaming fire upon Alger. Why it should disturb him in the least does not appear. If he were a sensitive man—but his worst enemy never accused him of being that. His position has been openly and defiantly indicated by himself. If McKinley wants his resignation, let him ask for it. The implication was, of course, that the President, with the resignation, might get something far less agreeable. For our part, we hope to see Alger stand by his guns.

The Administration has given us a striking example of how well the affairs of the army can be run if politics be left out of consideration. The first list of regular officers selected as field officers for the new volunteer regiments is one that does credit to the War Department and to the army. If one of the fortunate officers is a "son of his father" whose service in the late war was of no particular distinction, he is only the exception to prove the rule of merit which has evidently governed the selection of the others. Of the eight colonels chosen, Kobbé has distinguished himself in the Philippines, where he has had an independent command, although but a major; Rice, Hardin, Pettit, Hare, and Gardner commanded volunteer regiments with signal ability and success last year; Capt. Craig made his mark as an able and conscientious officer long before a war with Spain was thought of; and Major Bell, a veteran of the civil war, was badly wounded at Las Guasi-

mas. With the exception above noted, every officer of the seven majors chosen has made his mark, one as the most dashing of the artillery subalterns, and another as the best horseman in the cavalry. It is among men of this type that our future generals are to be looked for, and if chosen as such on their merits they will do as well as if not better than our Lawtons and Woods and Chaffees.

A formidable protest against the President's recent civil-service order has been drawn up and signed by more than one hundred of the leading business and professional men of Chicago. It declares in plain terms that Mr. McKinley is the first President since the enactment of the civil-service law in 1883 to take a backward step in this fundamental and vital reform. The signers say that it is the conviction of the public that the order was "a concession to the demands of avowed spoilsmen," and they add with admirable frankness:

"Your action in this matter is something more than a debauchery of the public service. It strikes at the principle of representative government itself."

The protest is signed by Republicans and Democrats in about equal numbers. Among them are the names of Gen. A. C. McClurg, Edwin Burritt Smith, Francis P. Peabody, Robert Mather, Murry Nelson, Prof. von Holst, Hamilton Borden, John J. P. Odell, Frederick C. Gookin, Prof. Laughlin, Judge Tuley, and F. J. Le Moynes. The list is fairly representative of the best element of Chicago. All of our Chicago exchange papers publish the protest except the *Times-Herald*.

Thanks to the phenomenal shortsightedness of Mayor Van Wyck, the municipal service is now completely in the hands of the reformers. He has sent back to the State Civil-Service Commissioners, without his approval, the rules and regulations which were agreed upon at a conference of that Commission, the Municipal Commission, and Mr. McAneny, Secretary of the Civil-Service Reform Association. Under the law, this amounts to a veto of the rules, and bestows upon the State Commission full power to draw up such rules and regulations as it pleases, and to compel their adoption by the city authorities. The State Commission, we have no doubt, will accept this opportunity with pleasure. It can, and doubtless will, put aside, as rejected by the Mayor, the rules and regulations drawn up in conference, and promulgate new and more stringent ones in their stead. Certain concessions made in conference will be eliminated, and the result will be that the reform wall around the city "places" will be made higher and stronger than ever. Just what was passing in the Mayor's mind when he gave the reformers this

opportunity, no man can say. He may have assumed that the State Commission would promulgate the conference rules, and that, by refusing to give them his approval, he could win a certain amount of political capital by being able to say that he was in no sense responsible for them. But he will be responsible for the more stringent rules that the State Commission is certain to substitute for them, for he alone has made it possible for these to be drawn. Furthermore, by throwing the whole question over to the State Commission, he has put them in charge of the administration of the civil-service laws in this city, making it their duty to come here at any time and see to it that there is no evasion or violation of any sort.

If the demoralization of the New York police force continues to increase at its present rate of progress, it will be necessary soon to give a separate department to the subject in the newspapers. The daily instalment of news about the shortcomings and brutalities of the force is now very large, and there is little chance of its diminution so long as the present control of the department continues. Nothing quite so bad as that control has ever before existed, even under Tammany government. We have had bipartisan Police Boards which may have been as inefficient and as unscrupulous as the present one, but we have never had a Chief of Police of so low a type as Devery. Whatever else may have been the shortcomings of his predecessors in this office, none of them had, before entering upon it, a record for open and flagrant misconduct as a captain or other subordinate, and none of them ventured in his administration of the office to defy decent public sentiment as Devery does constantly. We have never had before his advent a Chief of Police who supervised a prize-fight. With Devery at the head of the force, and such men as Capt. Price in the most important positions under him, if the force did not lose its morale it would be a marvel.

The achievement of Hogg of Texas at the Fourth of July celebration at Tammany Hall continues to be the occasion of much merriment in the metropolis and elsewhere. Hogg was noted, during his term as Governor of Texas, as the most insufferable demagogue in the Union, not excepting Pingree of Michigan or Tillman of South Carolina. In fact, he overacted his part so outrageously that Texas herself, whose stomach is not weak, sickened of him. He is now seeking to attach himself to some part of the Bryan vehicle. Bryan is popular with the Democratic masses—it would be idle to deny or overlook that fact. In addition to the popularity of martyrdom, it is a great advantage to

him within the party lines that he has no prominent competitor. All the men who had sufficient prominence, arising from their ability, character, and experience, had bolted the ticket in 1896. So the field is left almost bare of candidates—a fact which Hogg of Texas and every Hungry Joe of the Democratic party will naturally make the most of. But Hogg is a heavy weight in more senses than one. He will prove a worse encumbrance to Bryan, if he is put on the ticket with him, than Watson was three years ago.

A year or two ago, and soon after the failure of the Wolcott Commission, the Salisbury Ministry, in order to cover its retreat from bimetallicism, appointed a Parliamentary Committee to consider the subject of the monetary standard of India. Their report has just been issued in a Blue Book. It approves the decision of the Government of India not to revert to the silver standard. It argues that it would be impossible to maintain the existing condition permanently, and it recommends that measures be taken to introduce the gold standard. To this end it proposes that the English sovereign be made legal tender, and that the Indian mints be allowed to coin gold without restriction, on the same terms as the Australian mints. The advantage of the latter provision is that it saves the cost of sending the produce of the Indian gold mines to London to be coined. It serves thus to increase the stock of gold with which the standard is to be maintained. The Committee recommends also that the rate of the rupee be fixed at 16 pence in gold. At the time when the Indian Government declined to enter the trap set for it by the Salisbury Ministry at the instance of the Wolcott Commission, all the bimetallicists of the habitable world joined in saying that it was a physical impossibility that India should adopt the gold standard, and in this matter they were sustained by Sir Robert Giffen. The latter was among the witnesses questioned by the Parliamentary Committee. In the view of the *Economic Journal* (itself a bimetallic publication) Sir Robert did not appear to advantage in the investigation.

We should be glad to concur with the enthusiast who sends the press dispatches from The Hague, in the view he takes of the latest success of our delegates there. He represents it as a great triumph that they have secured a unanimous vote postponing the question of the immunity of private property at sea to a special conference to be called hereafter. The real triumph consists in the earnestness, intelligence, and vigor of the fight they have made for the principle, not in the fact that the other delegates consented to take it up on some

future occasion if their governments should agree to a future conference. Obviously the present conference has no authority to call a future conference to consider matters different from those which have brought them together at The Hague. It can recommend the calling of a future conference—any single government can do that. The United States Government would honor itself by calling it. For the present, however, we have to acknowledge that our views on this subject have not prevailed. It is plain also that the plea put forward by the representatives of the European Powers, that the subject of the immunity of private property at sea was outside the scope of the conference, is a mere pretext for shelving the question.

American lovers of peace are not the only ones to be guilty of bringing on a bloody war. Now it is the English friends of humanity and national honor and arbitration who are doing their best to plunge Great Britain into a war with the Transvaal. At least, that is what the Johannesburg correspondent of the *London Times* alleges. He gravely telegraphs that "the peace party in England is doing much to increase the danger of war." It seems that the Boers, like the Filipinos, need to have "a firm and united front" presented to them. Bluster and bullying, if only unanimous and brazen enough, will cow them; but all talk of justice and good faith and not fighting without a good cause simply incites them to insolence, and makes it absolutely necessary to "lick" them before they will listen to reason. This is the same amusing argument we have heard so often from Manila. If the American people had yelled as one man for the blood of the Filipinos, not a drop of it would have been shed. It was only because a large minority in Congress, and men of light and leading throughout the country, deprecated needless bloodshed, that it became necessary to kill 10,000 men. Perhaps we can better appreciate the unconscious humor of this solemn reasoning when we see the English Jingoos borrowing it from ours.

Mr. Balfour laughed gayly the other day at the assertion that there is at present a swelling tide for the Liberal party in England. How could there be hope or enthusiasm in a party without a policy or a leader? Well, the bye-elections have since gone on scoring Liberal victories, culminating on Thursday in the capture of two Conservative seats in the Oldham constituency. The Liberals gained 1,400 votes, while the Conservatives lost nearly 3,000, which certainly looks as if some kind of Liberal tide were running. It is all very well for a philosopher like Mr. Balfour to prove abstractly that a party without a programme and torn by factions cannot

possibly carry elections, but carry them it does, one after the other. A similar disagreeable surprise may be in store for our able Republican reasoners who are so sure that the Democrats cannot win next year because they have no issues and no leaders. If you have no policy of your own, you are all the freer to rail at the policy of the other fellows; and as for the absence of leaders, you can always thank Heaven that you have not such a set of scoundrels in charge of your party as are on the necks of your opponents. Elections are often carried through general dissatisfaction with the party in power, and when that dissatisfaction is very strong, it is issue enough for the opposition party. Some such explanation must account for the succession of Liberal triumphs in England; and we are so very English just now that we may witness a similar course of events here another year.

If anybody, twenty-five years ago, had suggested the construction of a tunnel under the sea, between England and Ireland, he would have been regarded as a lunatic, or, at all events, as an irresponsible dreamer; but the world has become so accustomed to the marvels of modern engineering that the proposition is accepted to-day almost as a matter of course, and the first question asked is not, "Is the thing practicable?" but, "Can it be made profitable?" Lord Londonderry and his associates, who ventilated the whole subject before an influential meeting of members of Parliament the other day, in London, have no doubt that this ought to be answered in the affirmative. But then they could scarcely say otherwise, since they wish the British Government to find the greater part of the needed capital, which is estimated roughly at from \$50,000,000 to \$75,000,000. It appears that the distance between the two points, in Wigtownshire, Scotland, and County Antrim in Ireland, which have been selected, tentatively, for the ends of the projected tunnel, is twenty-five miles; that the average depth of the water under which it would run is eighty fathoms, and that the geological conditions are favorable, although no less an authority than Lord Rosse hinted at the possibility of unexpected difficulties in this direction. All doubts on this subject, of course, would have to be settled by preliminary surveys. Without such special obstacles the work would simply be a repetition, on a larger scale, of what has been done before, and that, too, without such assistance as is rendered now by the latest machinery and electricity. The project is one in which a great and growing body of Americans are directly concerned. Perhaps, indeed, the most important feature in it is the fact that it would shorten very considerably the transatlantic passage, with obvious disadvantage to Southampton and Liverpool.

## THE NECESSARY TRAITOR.

Gaston Deschamps has a witty article in the *Figaro*, accounting in part for the Dreyfus madness as a result of the standing necessity that France should have a "traitor." Without one, Frenchmen cannot long be happy. The villain of the play is as necessary in public life as in the Ambigu theatre. Bazaine had successfully filled the rôle for many years. Every Frenchman knew just how many millions he had from Prince Frederick Charles for surrendering Metz, and it was the greatest comfort to emit hisses and curses at the mention of his name. But Bazaine died in 1888, and the part of national villain was vacant. The nation fumed and fretted, like an impatient audience, at the preposterous situation of having no traitor; but at last, in 1894, one was found, or invented, in the person of Dreyfus, and France smiled again. All the fool fury of the Seine during the past months is simply the fury of a great people seeing itself in danger of being robbed of its favorite traitor.

There is really more in this than excellent fooling. Deschamps's explanation will do not only for France, but for other nations. How necessary it is to Irish peace and happiness to have a traitor, or at least an "informer," every student of Irish history knows. In fact, it looks as if there were a universal need of man, in his public relations, involved in this demand for a traitor. A traitor, in public affairs, takes the place of witchcraft, or the evil eye, or diabolic agency, in private life. Things go wrong: cattle fall ill, crops fail, too much or too little rain falls. The obvious remedy, in a certain stage of human culture, is to drown a witch, or hang up a professor of the black art by his thumbs. Similar and equally powerful reasoning in regard to public misfortunes calls for the production and punishment of the traitor who is responsible. He is the civilized substitute for the adverse "medicine," or the offended fetish, or the unpropitiated Unkulunkulu of the savage. We know that we, as public men, are wise and prudent and patriotic, and that all our plans are conceived in wisdom and justice; yet they fail. What is the reason? Not that we made a mistake, not that we were foolish and reckless. That is contrary to the supposition with which we start. No, the only explanation is that we have been betrayed. Traitors have thwarted us. Thus we see how a traitor is as necessary in public life as daily bread is in our homes.

There is something so rough and ready and slap-dash and juvenile about this theory that Gov. Roosevelt would not be himself if he did not adopt and proclaim it. We were not surprised, therefore, to read his impetuous denunciation in Washington on Saturday of the traitors who are guilty of all the botheration and bloodshed in the Phi-

lippines. Not the men who fought, but those who cried out against fighting, are the wretches. Not those who favored the treaty, the mother of all our woes, but those who opposed it, are responsible for all the calamities which have flowed from it. These sentiments, delivered with undergraduate seriousness and shrillness, are the latest proof that Gov. Roosevelt, as a fountain of political wisdom, is really a fountain of perpetual youth. He is very solemn, very truculent, in his apportionment of bloodguiltiness, but it is really impossible to see in his display anything but boyish effervescence. He needs his "traitor" just as much as a Frenchman, or as any of Mr. Dooley's Irish "pathrites." It would take a hard-hearted man to deny him the villain of the piece, so necessary to his peace of mind. We would undertake the rôle ourselves rather than have the play come to an abrupt ending and the Governor's pleasure quite spoiled.

It would be easy, we think, to ask him some puzzling questions, if his deliverance were worth serious discussion. He says that those who "delayed" the vote on the treaty are responsible for all the lives lost in the Philippines since February 8. How many days before that date was it that Senator Gorman offered to take the vote instant, and Senator Davis objected and delayed? Was it not true that the Republican managers, while desperately hunting for their one or two lacking votes, were really the ones to delay action on the treaty, and so, according to Gov. Roosevelt, to become guilty of blood? But we will not press this. All the talk about traitors marks its authors as such candidates for the home for incurable children that grown-up argument with them is absurd. The traitor is only a necessary harmless toy for them to amuse themselves with, and if he did not exist it would be necessary, as Voltaire said of God, to invent him for their use. We have seen how essential the traitor is in the French and Irish economy. And the Spanish must have him too. Capt. Concas declares with tears and rage that the disasters of the Spanish navy were due, not to officers and men with the fleet, but to "traitors" at home. Evidently we cannot escape the traitor. He has become an absolute necessity of life to the politician caught in his own blunders. So we must resign ourselves, and remember that all the clatter means simply, as M. Deschamps reminds us, that the people who take politics as so much lurid melodrama cannot get along without a deep-dyed traitor, any more than a Bowery theatre can without a dark and bloody villain. Gov. Roosevelt and his frantic chorus are only chanting this song:

"C'est un 'Traître,' un 'Traître,' un 'Traître,'  
C'est un 'Traître' qu'il nous faut!"

## THE M'KINLEY FAITH.

One characteristic of President McKinley, of which certain of his admirers and supporters are inclined to make much, is his hopefulness. In his public capacity, he seems to have succeeded in convincing these persons that, notwithstanding the great difficulties with which his administration has had to contend, he himself is strong in confidence and faith. No matter how contradictory the news from Manila, how unfriendly the criticism from his own party adherents, or how irreconcilable his promises and his performances, the President, to them, stands unmoved, assured that everything will come out all right in the end. That he avoids hastening the future by positive action of his own is only another proof of his trust; for it is good and right to stand still and see the salvation of the Lord.

The attitude of the President towards the war in the Philippines is a good illustration of this. Our knowledge of the situation in our new twenty-million dollar dependency is, to be sure, mainly such as the authorities at Washington permit us to have. To neutralize the influence of the dreadful anti-Imperialists—more to be feared than the "British gold" of former days—it has been necessary to set up a censorship, interfere with the use of the mails by private citizens, and talk about treason and sedition. But these are the necessary accompaniments of war. To the clear and hopeful mind of President McKinley the future is bright, and the outcome in no way doubtful. We must be patient and trustful, and put up with limited information for a brief time; for everything is working as it ought, and, best of all, the end is near. The favorite interval between the present and the "end" was, for some time, about forty-eight hours; and a succession of most extraordinary deliverances from the White House and the War Department kept the public expectantly awaiting the success which was surely coming day after to-morrow. The days have become weeks, and weeks have grown to months. Still Aguinaldo is unsubdued, and the "end" seems as far off as ever. But the President does not waver; he still faces his callers with a mighty confidence, and assures the public, through appropriate channels, that victory is at hand.

This combination of faith and inactivity is strikingly exhibited in connection with the proposed reinforcement of Gen. Otis. Every one qualified, by training or experience, to pass upon the merits of the case, has, from the first, urged the imperative need of a larger army in the islands. Such has been the verdict of military authorities, of travellers, and of newspaper correspondents; while the reports of the losses and exhaustion of the American troops have enforced the demand. Yet no considerable reinforcements, notwithstanding great promises,

have been sent, nor have preparations been made to secure the additional men, save by the slow process of individual enlistment. The chief reason alleged for this dilatoriness has been always the same—the serene confidence of President McKinley that the foolish rebellion would soon collapse. Let others doubt, or waver, or find fault; he, let all men know, had faith.

We should be the last to deny that faith in the future outcome of things is, on the whole, a very desirable quality for a man in public life. There are many anxieties and discouragements in affairs of state, and the leader who can keep a cheerful heart through them all has a vast advantage. But faith, like grace, has to be justified by its fruits; and, in this case, the fruits are difficult of discernment. As a matter of fact, whatever Mr. McKinley or his friends may say about it, everybody knows that there was never much prospect of speedily conquering the Filipinos, and that what little prospect there was, promptly disappeared once our hesitating policy was disclosed. Everybody knows that it is not "faith," but politics, that has kept back the call for more troops, and given it the form in which it has at last gone forth. The war is not popular in the United States. The uncontroverted statements of the soldiers themselves have been a revelation. But it would never do to give the Opposition a chance to score in the next Presidential game; so the President stays his hand, and calls his game of politics faith.

What makes the deception the more dangerous is the remarkable skill with which the part is played. Mr. McKinley has so dignified a bearing and so sympathetic a manner, he has been so much extolled as a man of merciful temper and kind heart, that many of his critics, even, are loath to believe that a man apparently so highly endowed can possibly seem to be what he is not. Yet there is abundant reason to doubt the genuineness of his professions. He avoids positive and definite action, and calls it patience. He bargains and negotiates, and calls it dignity. He hedges and trims, and calls it confidence and trust. But it only smacks of these homely virtues; in reality it is pretence, a part of the game. What he is really hoping for is a reflection. What he really has confidence in is his ability to remain the titular head of the nation. In short, his so-called faith is the faith of the man who shrewdly orders his conduct with an eye single to his own immediate success. Shall such faith save him?

#### PROSPERITY, STRIKES, AND POLITICS.

Western Republicans are displaying no little nervousness over the Western strikes. These are becoming too numerous to suit. None of them has as yet

approached the magnitude and virulence of the Homestead labor troubles of 1892, but there are ominous mutterings at various points of the labor horizon; an ugly temper among workingmen has shown itself in more than one place; a storm may burst at any moment. The Amalgamated Association of Iron Workers is taking a firm stand and a high tone with the mill-owners. Almost every tin-plate plant in the country is idle, pending a settlement of the dispute about wages. This controversy is one particularly unpleasant for high-tariff Republicans to contemplate. They have shut out foreign tin-plate, only to see a Tin-Plate Trust result, with prices pushed up, and the workmen are asking where they "come in." They are apparently on the outside, as all the mills are locked. The strike at Homestead is only an incipient and seemingly an insignificant affair, but every Republican politician with a memory is set shivering by the very word Homestead. The dread least the prosperity of 1899-1900 have its seamy side as did that of 1891-1892, is, in fact, frequently reflected in the comments of loyal Republican newspapers of the West.

They have no reason, however, to be surprised at what they are seeing. It is an old story. An upward market and rising prices are the sure precursors of labor agitations. Few or no strikes marked the depression of 1893-'95. The men took even reduced wages then, if they could get them, without formal protest. But now, after wages have been restored, in many cases nearly to the 1892 level, the labor organizations are more threatening and exigent than ever. This is but the natural and normal thing. It may not be the wise thing. We are not arguing; we are simply describing the fact. It is a fact that prosperous times are the very times for workingmen to take all they can get from their employers and then stoutly ask for more. This may be ungrateful of them. It may be foolish. But the men and the unions are built that way; so they always have acted in the past, and so they will act in the future.

And it is the case, also, that wage-contests of this kind always create a certain amount of friction. If the demands of the workmen are readily granted, they immediately curse themselves for not having made their terms higher. They are the more ready to listen to agitators who tell them that the employing corporations are taking more than a due share of the product of labor. If a 10 per cent. advance in wages has been quickly granted, that only shows, so men in labor-unions will argue, that an increase of 20 per cent. could just as well have been given. This is the sort of thing which it will be very taking for labor orators to say, especially just now, when employers are displaying so many of the insignia of sud-

denly acquired wealth, when capitalizations of industries at fabulous figures are reported on every hand. It will be said in every lodge and hall and saloon where labor discussions are carried on, that the manufacturers and other beneficiaries of the tariff are, to borrow the words of an English Radical M. P., "gilding affluence with luxury," while putting off their employees with beggarly doles in the shape of wages only slightly higher when they should be doubled. And where strikes fail, as in Cleveland and Idaho, and as they have failed here and there in the iron regions, the resentment that is left over, and that spreads from trade to trade and place to place, is a thing which all may deplore, but which all must recognize. How surely the political effect of such ill-feeling in labor circles is adverse to the party in power, a long experience testifies.

We go over these familiar truths, simply, like Mark Antony, telling Republicans that which they all do know, in order to enter a warning against their being politically too much at ease in Zion merely because the country is prosperous. Was not the country mightily prosperous in 1892? And were not the Republicans in that year smitten hip and thigh? President Harrison's last annual message was one long demonstration that prosperity was never so great. This read, indeed, very like a lady's catalogue of her own charms, in spite of which a rival had been chosen; but it was, at any rate, a complete refutation of the theory that a prosperous electorate means a sure renewal of power to its governors. Hanna is loudly proclaiming that theory from across the Atlantic. Every man in America who wants work can get it, he says in London, and of course the only possible inference is that McKinley's calling and reelection are sure. When he reaches Paris and meets Mr. Harrison, he will find one who can tell him, out of a sad experience, to lay not that flattering unction to his soul. The general course under tariff legislation has been temporary prosperity, strikes, and labor troubles, and then defeat of the tariff party. If that is not to be the course next year, too, the Republicans will have to find some better battle-cry than "prosperity."

#### THE DETROIT STREET RAILWAY CASE.

The unanimous decision of the Supreme Court of Michigan, holding the act known as the McLeod law unconstitutional, is a good specimen of sound legal reasoning. The act provided for the appointment by the Mayor and Common Council of Detroit of commissioners empowered to buy or lease the street railways of that city and its vicinity, and to maintain and operate them. The price to be paid was left to the discretion of

the commissioners, with the single proviso that no obligation should be incurred except such as should be chargeable only upon the railway property acquired. If such an experiment were to be tried, it would seem that their act provided the most suitable machinery. A commission possessing the same powers as a board of directors, almost unfettered in its policy of management, would probably succeed as well as any governmental agency that could be devised. How long such a commission would remain free from political influence is another matter.

With the particular features of the act, however, the court did not deal, because it found the whole scheme unconstitutional. A judicial opinion upon a railway act can hardly be expected to attract the attention of the general public; but in this case it is much to be desired that the general public should understand the principle involved. Especially important is it that the large number of benevolent people who have taken up the notion of "municipal ownership," should learn why the Michigan Supreme Court found the theory unconstitutional, and why the Constitution was so framed as to prohibit the application of the theory. It is not going too far to say that it is the duty of such people to study this decision, and satisfy themselves that its reasoning is unsound before insisting upon the adoption of their plans. They will find no mere array of dry legal arguments, but an interesting review of the history of Michigan and of the events which caused its Constitution to assume its present form.

To put this matter briefly, the court found that the McLeod act proposed to give the city of Detroit power to engage in a work of internal improvement, whereas the Constitution expressly declares that the State shall not be a party to, or interested in, any work of internal improvement, nor engage in carrying on any such work. It was already law that the Legislature could not empower municipalities to do what the State was prohibited from doing, and thus the principal question was one of fact, viz.: Is the acquisition and operation of a system of street-railways a work of internal improvement? The court gave an affirmative answer to that question.

No doubt such a constitutional restriction seems to many minds absurd. If the State is not to engage in works of internal improvement, how are people to have roads, and sewers, and parks? If works of internal improvement are of public benefit, why should not the State carry them on? If they are profitable to private owners, why should not the public appropriate these profits? What is the State for, if not to carry on improvements of divers kinds? To the present generation such queries sound reasonable; but there is a sufficient answer to all of them. That answer is

that the experiment has been tried and failed. In Michigan it was tried thrice, and the results were so disastrous that the people ordained a Constitution which prohibited further enterprises of this character. Some public works, such as parks, roads, and drains, have from time immemorial been carried on in the exercise of the police power; but no extension of the list was to be allowed. The whole matter was thoroughly understood, and the action taken was deliberate, as a brief historical statement will show.

The first Constitution of Michigan explicitly declared that internal improvements should be encouraged by the Government of the State, and made it the duty of the Legislature "to make provision by law for ascertaining the proper objects of improvements in relation to roads, canals, and navigable waters," and to provide for "an equal, systematic, and economical application of the funds." The Legislature promptly obeyed the mandate of the Constitution. Canals and railroads were begun. Five millions of bonded debt was incurred, although the State never received all that was borrowed, and then came the collapse. The State made a composition with its creditors, abandoned the most worthless of the "improvements," and sold the others to private corporations. This experience satisfied the existing generation, and resulted in the Constitution of 1850, which prohibited the State from becoming interested in the stock of any corporation.

The following generation, however, found it necessary to be taught wisdom by its own experience. It was observed that towns and counties in other States were bonding themselves to raise money for railroads, and it was thought that the same course should be taken in Michigan. The Legislature passed acts for the purpose, even over the Governor's veto, and the business of voting money to any corporation that promised to use it in building a railroad went merrily on, until the Court decided that it was unconstitutional. There was a wild howl that the Constitution was antiquated, and an attempt to change it was made; but it was unsuccessful, and the public generally came to feel that the constitutional restraint was a valuable safeguard.

The present decision is arousing the same clamor as the earlier ones. The Court observes: "It is said that the Constitution was adopted a long while ago, and that this is a gigantic age in which enterprises are being formed on a scale so vast as to be almost beyond comprehension, and the Constitution ought to be given a construction in keeping with the spirit of the age." The reply to this argument is that "constitutions do not change as public opinion changes. Their provisions do not mean one thing one day and another another day. The written Constitution is the most solemn de-

claration of the people in relation to the power of the State." Until they show their disapproval in due form of the policy embodied in the Constitution nearly fifty years ago, the courts of Michigan will check all attempts to change that policy. The failure of the former attempt to manage railroads by the State was due to causes that will produce the same result to-day. The business necessarily falls into the hands of the politicians, and they are by the very law of their existence incapable of maintaining sound business management. If proof of this is asked, it is only necessary to look around. Where is the business enterprise carried on by legislative authority which is sound, according to business standards? If any such can be found, what percentage are they of the whole number? These are the questions which the Detroit incident should set people to consider.

#### PROF. ASHLEY ON TRUSTS.

Prof. W. J. Ashley of Harvard University discusses American Trusts in the June number of the *London Economic Journal*. He considers the movement towards consolidation inevitable. In so far as it is a successful movement, it removes the determination of the price of the monopolized article from the range of competition. "The self-interest of the monopolists," he says, "although some protection, is yet an inadequate protection of the interests of the consumer." The Trust will aim to fix the price at the point which will yield the largest net results to itself. This may be considerably above the price that would yield a fair profit. What is the remedy? Repealing the duties on monopolized articles will apply the corrective of foreign competition to those articles only that are imported, and to those only until the monopolists extend their operations so as to include foreign producers, as the cotton-thread makers have already done.

Even this remedy will not avail, however, as regards articles whose production is not subject to foreign competition. "I see nothing for it," says Prof. Ashley, "but that, in countries where the monopolizing movement is well under way, the governments should assume the duty of in some way controlling prices." He recognizes the fact that in such an event the governments would be compelled to regulate wages also, since labor is the chief element in cost of production. The difficulties to be overcome are enormous, and the scheme is not to be attempted without "a fairly efficient administrative service," but Prof. Ashley thinks that we are gravitating in that direction, and that we might as well face the problem of "the distribution of the social product without the aid of competition."

This is the Socialist programme

brought in by a side wind. Prof. Ashley's position in reference to it can be best stated in his own words, viz.:

"It may be a result of my own penchant for things mediæval, but I cannot help thinking that the economist may soon find himself confronted in modern life with some of the ideas underlying the old demand for 'just prices' and 'reasonable wages' which he has been accustomed to regard as quite out of place in political economy. When, in the great coal strike of a few years ago, the men demanded that 'a living wage' should be treated as a first charge, and that wages should determine prices rather than prices wages, the demand was commonly regarded as obviously foolish. But you may have noticed that the fundamental idea of the successful Birmingham combination, already referred to, is precisely 'the taking out of costs'; the idea that prices should never be set lower than the ordinary cost of production, including a fair profit for the *entrepreneur* and a fair wage for the employee. The subject, I know, is full of enormous difficulties, which every tyro in economics can set forth at a moment's notice."

At the risk of seeming to be a tyro in economics we shall point out some of the difficulties which beset this plan. The substance of it is that in a country governed by universal suffrage the legislative power shall be invoked to fix the prices of sugar, kerosene oil, cotton thread, bicycles, leather, tobacco, and all other things the production of which is or may be controlled by a Trust or other combination, and also the wages in those employments. Possibly this delicate task might, in the first instance, be intrusted to the judicial power. In such event new courts would have to be created for this express purpose, since the present ones are overworked already. It needs no prophet, however, to tell us that the decisions of the courts would constantly tend in the direction of higher wages. Both the feeling of sympathy and the pressure of the wage-earners would push that way, and if the movement were not sufficiently rapid, if the wages were not high enough to satisfy the workers, means would soon be found to abolish the courts and to put the wage-making power in the hands of the Legislature.

Suppose that events in the industrial world should take a turn making a reduction of wages necessary, what Legislature would have the courage to order it? Would any Legislature that has ever sat in the State of Illinois have had the courage to face Mr. Debs and his followers in the Pullman Palace Car Company's crisis a few years ago? In this case, Mr. Pullman said that the wages demanded could not be paid; that the price at which cars were sold netted a loss to the builders, and that stoppage of the works was the alternative, and stop they did. Do we hear the reply that the Legislature would, in that case, fix the price of cars at a higher rate? It depends altogether upon the buyers of cars whether they will order new ones or not, and it is not altogether in their power to say what price they shall pay. It depends upon the travelling and the shipping public to say whether the busi-

ness of the railroads shall justify the purchase of new cars, and to fix the price which can be paid for them. If a railroad has the yard full of idle rolling-stock, no decree of a Legislature can compel it to take more cars at any price whatsoever. In short, the conditions of trade determine this question, and they will continue to do so in spite of every device that human ingenuity can imagine or contrive.

What was possible in the simple state of society in the mediæval world, and in the prevailing habit of obedience to authority, and in the means for enforcing obedience, would be wholly impracticable in the changed conditions of the present day. Society is too complex. The habit of freedom is too ingrained to submit to the regulation of prices by Government. The law may raise prices by imposing a tax, but it cannot compel people to buy the thing taxed, and for this reason it cannot fix the profits of the producers of it or the wages of their employees. Chaos would be the immediate result of such an attempt in this country or in any other. Prof. Ashley, indeed, says that "any country which thinks of attempting it must provide itself with a fairly efficient administrative service." But there is no country which has an administrative service efficient enough or an army strong enough for this purpose. The German Government is probably better equipped in both respects than any other in the world. It is also saddled with industrial combinations to a deplorable extent. Yet it did not dare to fix the price of tobacco and the wages of the workers in tobacco-factories, even under the iron rule of Bismarck, although the aim was a purely fiscal one, and was justified by the experience of other nations.

#### THE PHILOLOGICAL ASSOCIATION.

NEW YORK, July 10, 1899.

The American Philological Association has just held its thirty-first annual meeting, at New York University. There was a time when the name of this society was no misnomer, but now "The American Association of Classical Philologists" would be a more appropriate designation. Of the 144 papers presented during the past five years, 114 have dealt with Greek or Latin subjects, ten with English, one with German, and none whatever with Romance; the remaining treating Oriental or general subjects. Moreover, nine of the ten English papers represent the activity of only three persons: Prof. March of Lafayette, Prof. Hempl of Michigan, and Dr. C. P. G. Scott of Radnor, Pa. The "List of Members" contains the names of nearly all the modern-language men of any importance, but these members do not take part in the work of the Association, and do not even appear at the meetings, unless these chance to occur at their college. This is certainly to be regretted. The common interests of philologists are greater than those that separate the Moderns from the Latin and Greek men, and it is in this Association that these interests should be nourished. It

has been said that the Association is a Classical Club, that its official action during the past few years proves it to be wedded to the interests of the classics, and that it is unjust that this partisan action should be presented to the world as representing the judgment of a general philological association. All of this is true; but the blame falls, not on the classical men, but on the modern-language men themselves. If they refrain from attending and participating, they cannot blame others for attending and for voting according to their convictions. The total attendance is never very large, and it always lies in the power of the modern-language men to attend and assume their rights. In fact, it would be as much an assumption of their duty—their duty to the cause they immediately represent, and to language-study in general. At present they herd by themselves, make clear to one another the merits and claims of their common line of work, and their personal excellences, and foster their hostility to and their misunderstanding of the classical men. It is the old story of the need of contact and personal acquaintance. Nor should the modern-language man fancy he will find a less discerning and appreciative audience in the Philological Association than in the Modern-Language Association. A Romance paper is often better understood by Latin scholars than by Germanic, and a paper on an English or a German subject is just as likely to find appreciative listeners among the classical men as among the Romance.

The meetings of the Association are generally held in the East. This is not as unjust as it at first appears. As a rule, the Western men are more anxious to meet the Eastern men than to meet other Western men; this they can do if the meeting is held in the East, but not so well at a Western college town. There is little to attract an Eastern man to the West in the summer time, while many Western men go East anyhow, either on their way to Europe or to spend the summer at the coast. Even Cleveland proved to be too far West for more than a very few New England scholars. The place of meeting always determines, to a certain extent, the representation of the colleges; an idea of the average participation of the various institutions may, however, be obtained from an observation of what has happened during the past five years. Excluding all institutions that have not sent, on an average, one paper a year, the data are as follows:

Yale.....	15	Barnard,	
North Carolina.....	9	Brown,	
Bryn Mawr.....	8	Chicago,	
Pennsylvania.....	7	Cornell,	
Johns Hopkins.....	6	Harvard,	
Michigan.....	6	Lafayette,	
Stanford.....			
each..... 5			

It often happens that the large representation of an institution is due to the faithfulness of an individual member. Thus, the five papers from Lafayette College were all presented by the venerable Prof. March, who has attended every meeting of the Association except the first one. Perhaps a juster idea of the representation of the colleges will be obtained from a consideration of a table based on the number of persons presenting papers. Excluding institutions represented by less than three speakers in the five years, we have the following list:

Yale.....	10	Chicago,	
Cornell.....	6	Harvard,	
Bryn Mawr.....	5	Michigan,	
Johns Hopkins.....	4	North Carolina,	
Western Reserve.....	4	Stanford,	
each..... 3			

In both tables Yale and Bryn Mawr oc-

cupy an enviable position. Yale has sent three times as many papers as Barnard, Brown, Chicago, Cornell, Harvard, or Lafayette, and twice as many men as any other institution except Cornell.

The motives that lead men to attend the meetings of the Association are varied. Most of the participants come, not to see and hear, but to be seen and heard. The college graduate, on his way to Germany, who knows he will want a place in two or three years, the newly made doctor just returned, the young German doctor who, stranded in New York, Boston, or Baltimore, is making a scanty living by giving private lessons; the instructor who wants to be an assistant professor, the assistant professor who wants to be a professor, and the professor in a small college who looks with longing eyes to the larger institution—all these are present, and some come year after year with the same sad smile and mute appeal. The man who was fortunate enough to slip into a place and hold it for a year or two, but is at last dropped, remembers a point that he once made and which he believes to be original, or his wife suggests that he "work up" something and go to the meeting of the Philological Association, and we suddenly find him down for a paper. Higher motives are, however, not wanting. Men who think independently on their subjects or on methods of teaching them, formulate their ideas and present them for the criticism of their colleagues. Such a paper may receive approbation and be published in full in the Proceedings; an abstract only may be printed in the Transactions; or there may appear simply the set phrase: "An abstract of this paper has been withdrawn." Some come not to read, but simply to be present and to keep in touch with their fellow-teachers. They are not productive, and, having good places, they do not need to appear to be producers. They like the atmosphere of the place, and enjoy mingling with the company; and, no doubt, they go back to their work with some addition to their knowledge and greater pedagogical zeal. Certain partners in the leading book firms, usually graduates of Eastern colleges, are members and regular in attendance.

The papers produced under such varied conditions are also varied. Many of them are compilations; all the isolated cases of a certain phenomenon are gathered and sorted, sometimes without interpretation or further inference. At present this is most common in the case of syntactical constructions and certain classes of inscriptions. In good hands such studies, especially if on a subject of popular interest, may assume a literary form, as was the case with Prof. Seymour's entertaining paper on "Homeric Vliads." Papers showing original thinking, the discovery of important facts, or independent observation and interpretation, are never numerous. To this class belongs Prof. B. I. Wheeler's paper on "Grammatical Gender," in which, while not going back to Grimm's theory of personification, he took issue with Brugmann and presented a new theory. According to this, inanimate objects were at an early date spoken of as *he* or *she* in the quasi-sexual sense in which *she* is now used in speaking of an engine or other moving object, and this expression of gender passed first to the adjective and then, to a certain extent, to the noun. How this use of the pronoun arose was not explained. Prof. Hempl showed that Latin *G* is the regular develop-

ment of the early Italic form of *sets*, and has always maintained its original position in the alphabet; and that the *Z* of the first and second centuries B. C. was not imported from Greece, but arose out of the angular *S* in the Italic dialects that used the Roman alphabet. Prof. J. H. Wright called attention to numerous cases of the loss in Sophocles of one of two like adjacent syllables, whereby the remaining syllable does duty for both—interesting and important cases of syllabic dissimilation.

The meeting was remarkable for a certain smoothness and steadiness. This was in large measure due to the lack of discussion. In certain cases this seemed a pity; on the whole, however, it was doubtless unavoidable and not to be regretted. The more specific the subject of the paper, the less likely is it that others will be in a position to criticize it on the spot, and the practice of anticipatory preparation for discussion is happily restricted to but one or two members. It is usually the man whose knowledge and insight are most limited and who is least open to conviction, who is readiest to engage in discussion.

The address of the President, Prof. Clement L. Smith of Harvard, dealt with "The American College in the Twentieth Century." The paper was largely a justification of the college, and few prophecies were indulged in. That those colleges which have unduly raised their requirements for admission will sooner or later reduce the undergraduate period, and that, by the middle of the next century, the three-years course will be as firmly established as the four-year course is at present, was confidently expressed. In this way the college will again be a true college, a place for the development of symmetrical manliness, and not for the incomplete training of specialists. In the women's college, or rather the "annex," was found the best correspondent of the men's college, namely, a place for the development of symmetrical womanliness; but here, as elsewhere, Prof. Smith cautiously refrained from too confident prophecy.

The social events of the meeting consisted in a reception by the Chancellor and in a drive through Bronx Park and to Poe's cottage, and in an inspection of the municipal improvements in that portion of Greater New York. The President of the Association for the coming year is Prof. Abby Leach of Vassar, whose place as Vice-President is taken by Prof. West of Princeton; the places of Prof. West, Prof. Peck, and Prof. Wright on the executive committee are taken by Prof. Fowler of Western Reserve, Prof. Hempl of Michigan, and Prof. Smith of Wisconsin. The next regular meeting of the Association will be held at Madison, Wis., July 10, 1900, but in the coming winter the Association will unite with the other philological and archaeological societies in a joint meeting to be held probably in New York city.

#### VICTOR CHERBULIEZ.

NEW YORK, July 5, 1899.

About 1860 there appeared at Geneva a singular little book whose title was as odd as its form—"A Horse of Phidias." It was a fantasy, half romantic, half philosophical, which somewhat recalled the Dialogues of Plato, though with a turn and a wit alto-

gether modern. Four or five tourists, assembled before the frieze of the Parthenon, exchange, apropos of a horse attributed to Phidias, a variety of reflections which touch now upon history, now upon aesthetics, upon literature, upon morality. The book was brilliant, ingenious, and paradoxical, but, owing to its unusual character, it seemed doomed to fail of success. Nevertheless, it found readers, select if not many, and in Paris particularly there were at least two persons who did not let it pass unnoticed. One was George Sand, whom the book captivated, and who spoke of it in enthusiastic terms to Buloz, the famous editor of the *Revue des Deux Mondes*. The other was Sainte-Beuve, who was fond of drawing attention to budding talent, and who said at this time to his friend Renan, "Have you read Cherbuliez? He is one of our sort."

Victor Cherbuliez's destiny was peculiar. His works are comprised in some thirty volumes, of which twenty-four are novels. Everything he wrote was published, with one or two exceptions, in the *Revue des Deux Mondes*. The best French critics, from Sainte-Beuve to Anatole France, have testified their admiration of the astonishing richness of his imagination, the depth and scope of his intellectual culture, the flexibility and grace of his style. Moreover, on the death of Octave Feuillet, he found himself almost the sole representative of fiction in the French Academy, to which he was elected in 1881. Finally, his novels were all of the kind most pleasing to the public, the "romanesque." In spite of all this, Cherbuliez never became what can be called a popular writer. He was doubtless known to the great public, but he never succeeded in making a name for himself in the manner of Daudet, Zola, or even Octave Feuillet and Paul Bourget. Some persons affected to speak of him as a second-rate romance-writer; the younger men of letters for the most part ignored him, and many, who had never read him, treated him as a George Ohnet, but with a slight superiority and a style. His most celebrated novels, like 'Comte Kostia,' did not get beyond the fifteenth edition, whereas one of Daudet's might reach its hundredth, of Zola's its two-hundredth, and Ohnet's 'Maitre de Forges' attained nearly its three-hundredth. His public was always restricted, composed preponderantly of lettered and university men, who were charmed by the philosophic and literary worth of his books; of women, on whom the plot of his romances, always intensely interesting, took strong hold; and finally of foreigners, who found in the exotic character of his personages and his tales something which they understood and appreciated.

As for the literary historians who are so given to classifying writers into schools and groups, they were much perplexed to find a place for Cherbuliez. Some joined him to the idealistic school, and made him a disciple of George Sand, because they found in him the same imaginative fantasy and the same improbability as in the author of 'Indiana.' Others, despairing of tracing a literary pedigree, classed him by himself as an "independent" and "eclectic." Both were right. Victor Cherbuliez is a figure apart in French contemporary romance and literature. To comprehend and define him, it is necessary to relate his career and to explain how his talent was formed.

Like J. J. Rousseau, Mme. de Staël, and

Benjamin Constant, Cherbuliez was what might be called a Franco-Swiss. He was born at Geneva in 1829, of a family of French refugees driven from their country by the revocation of the Edict of Nantes under Louis XIV. A Protestant, he must needs *ex vi termini* be a free thinker, eager for knowledge, impatient of every yoke, religious or political. He chanced, besides, to have for a father a learned and respected professor of Hebrew, who practised even at the beginning of the present century that "higher criticism" which is but now invading and terrifying America. This is tantamount to saying that Victor Cherbuliez received a good intellectual discipline. As a Genevan, he had another advantage. Brought up in that cosmopolitan city situated at the cross-roads of three civilizations, he imbibed, like Mme. de Staël, Schérer and Édouard Rod, a cosmopolitan culture. In truth, Cherbuliez seemed prepared to become a university professor. At the close of his studies at Geneva, he went to Paris to pursue Bournouf's Sanskrit courses, thence to Bonn and to Berlin, where he became deeply enamoured of the Hegelian philosophy and dreamed of becoming a disciple of the great German thinkers. But this young savant, who spoke fluently four languages, and had been initiated into all the great European literatures, turned out to have, along with his professional science, a roaming imagination and a possessed spirit in which was recognizable the influence of the charming Toepffer, author of 'Voyages en zig-zag,' who had been his master. Imagination carried the day against science, and, instead of becoming a pedantic professor, he became a novelist.

A providential accident came to his aid. A modest inheritance permitted him, instead of prematurely earning his living, to continue his travels. He visited Greece, the East, Russia. He enriched his mind, already so rich, with all the sights and observations that the spectacle of the world has to offer. He studied the art of ancient Greece, the Italian Renaissance, contemporary Russia and Germany, and when he had amassed this material he began to write novels. Evidently the novels of a man of such a discipline, who had waited till he was thirty before he produced his first work, could not resemble those of a Daudet or a Zola, who, having only a college education, and being under the necessity of supporting themselves as well as being driven by the demon of inspiration, gave to the public the hasty experiments of ardent, enthusiastic, and ignorant writers. Cherbuliez's novels resembled their author. He employed fiction not merely to study characters and types, but to discourse on topics of history, philosophy, and politics. 'Le Prince Vitale' is a veritable study of the Italian Renaissance. 'Le Grand Œuvre' is a work on the philosophy of history. 'Le Comte Kostia' is a study of the Slavic spirit, with digressions on Byzantinism.

It was 'Le Comte Kostia,' first published in the *Revue des Deux Mondes* in 1862, which revealed Cherbuliez to the French public at large. The plot of this story is so dramatic, the theme so bold, that its readers followed it with breathless curiosity. The scholar was discovered to be a marvellous romancer. As for his style, it was very pure, very classic, very brilliant—indeed, too brilliant, with far-fetched expressions, rare words, and some Swiss locutions, so that Vuilliot, the celebrated pamphleteer, with his customary injustice, accused him of

"writing in Swiss." From this epoch, every other year, Cherbuliez never ceased to give a romance regularly to the *Revue*, of which he had become a standing contributor. He studied in succession types of every country. After the Slavs of 'Le Comte Kostia' he analyzed his countrymen, the Genevans, in 'Paule Méré'; not without an ironic malevolence which grieved them. Then he created some admirable types of foreign women like 'Meta Holdenis,' the sentimental and designing German, and 'Miss Rovel,' a ravishing young English girl. His work is thoroughly penetrated with exoticism, and in it every people has its representatives, drawn with a crayon sometimes unjust, but invariably witty.

'L'esprit' is truly the most general characteristic of the work and talent of Cherbuliez. It is a delicate, subtle, and fine irony which plays across every page, and is above all discernible in the dialogue of his heroes, in the author's reflections, and even in his style. It has been said that in his novels everybody, even imbeciles, show wit—and this is true; it is what makes every page a feast. Those who take no interest in his stories, always captivatingly related, or are intolerant of the occasional improbability of the fable, can but enjoy the gentle philosophizing, the mocking good sense, the jovial wisdom—qualities unrivalled in contemporary fiction, and which justly reminded M. Lanson of Voltaire's *Contes*. One might compile an admirable book of Thoughts with phrases picked here and there from pages full of humor and occasionally of profound philosophy. I have for my part gathered them by the hundred. As for the psychology of his romances, it has been accused of being conventional and even superficial. So it may be, though no one has created subordinate figures more alive and more truthful-seeming than those of M. Cherbuliez's imagining. The American reader will find in 'Le Secret du Précepteur,' for example, an amusing type, very little caricatured, of an American old lady which cannot fail to divert him.

I repeat that his novels were not universally enjoyed; but such as did like them, liked them passionately. It happened to him, when one of them was in course of publication, to receive letters from his readers begging him not to give a bad end to this or that hero or heroine for whom he had excited sympathy. Old Buloz, a very fantastic character, doted on Cherbuliez's novels. One day he had a numerous company of friends at his country house in Savoy. The guests had amused themselves by gathering mushrooms in the woods, and had had them cooked for dinner. Some of the number, distrusting the competence of the gatherers, hesitated to partake. Cherbuliez alone bravely attacked the dish, when Buloz, alarmed, cried out to him: "What are you about, Cherbuliez? Remember that you haven't finished your romance in the *Revue*!"

To this magazine Cherbuliez did not contribute fiction alone. After 1875, under the pseudonym of Valbert, he published every month an essay in which, on pretext of a German, English, or Italian book, he unlocked the treasures of his erudition and his fancy, treating with a light touch the gravest subjects, and making the most difficult questions attractive. He thus rendered his pseudonym famous, and many who cared little for his novels awaited with impa-

tience these articles of Valbert's, which for twenty years were one of the successes of the *Revue*. Renan, who declared that he could not understand how serious-minded men could write fiction, pleasantly expressed his surprise, on receiving Cherbuliez into the Academy, that a man like him, who was able to be Valbert, should continue to be Cherbuliez. But Cherbuliez found means to satisfy the most exacting by at the same time being an essayist in his romances, and introducing into his essays the grace and imagination of the romancer.

The death of this rare writer causes a void in French letters which no one can fill. Unlike many writers, Cherbuliez was the man of his books. The mild philosophy, the serene goodness, and the large tolerance which characterize all his writings, also distinguished his life. He was gentle, simple, modest. All who came near him loved him. He knew nothing of the fussy and intriguing vanity of men of letters. He never got himself advertised. The fame he acquired came to him unaided. After the war of 1870, he removed his home to France, and in Paris his whole time was divided between his family, who adored him, his works, and his duties to the French Academy, before which he pronounced several charming discourses. His summers he spent in the country near Paris amidst the flowers of which he was so fond. To the end of his life, which was clouded by the death of a beloved wife and of a son of great merit, he preserved his intellect and his talent intact. His last novel, 'Jacqueline Vanesse,' betrays no fatigue, and is as brilliant as those of his very beginning.

His influence, less resounding than that of certain novelists who came after him, will be more beneficial and profound. Though a sceptic in metaphysics, the philosophy which exhales from his works is neither frivolous nor immoral. He believed in toil, in justice, in goodness. His raillery was reserved for two kinds of men, knaves and fools. He preached incessantly resignation, sacrifice, mutual respect, and toleration. He taught wisdom while practising it. I make bold to say that with him disappears the most sympathetic and estimable French man of letters of the present time.

OTHON GUERLAC.

#### PARLIAMENTARY GOVERNMENT IN ITALY.

ROME, May 31, 1899.

The days that are now passing offer exceptional interest to those who care for the present and future welfare of Italy. This is not so much because of the actual excitement in the political world, owing to the discussion in Parliament of the question of the harbor of San-Mun and the consequent fall of the ministry, but because of the fact that while the new ministry which has just been formed is a good one, there is reason to hope that before long there may be a still better one, and Italy herself be under way towards more happy conditions than have for many years fallen to her lot. If this hope be realized, its consummation will, in a large measure, be due to the honesty of purpose, the untiring effort, and the unselfishness of one man—Baron Sonnino.

The fall of the late ministry, of which Gen. Pelloux was Prime Minister, as he is of the new one, was consequent on the discussion

regarding the advisability of demanding the cession of the port of San-Mun from the Chinese Government. This discussion was embittered by the fact that the Italian Government had seen fit to buy a cruiser from Armstrong & Co. which had been made by them for China. This might seem a clever stroke of policy, but Italy has shipyards of her own, and the ambition of a large party is to have these yards produce whatever boats the navy needs, so that it will be readily understood how this new acquisition led to bitterness among the Deputies. Furthermore, the country at large is by no means of one mind in regard to the advisability of demanding a cession of territory from China. The sentiment of Lombardy in particular was entirely against the venture, probably in the main because of the realization that Lombard interests in East Africa would be prejudiced by any new attraction in China. Then, too, Italy has by no means recovered from the shock occasioned by the failure of the Abyssinian enterprise; and the refusal of the Taung-li-Yamen to accede to her demand for the port of San-Mun, and to grant her rights similar to those exercised by England, Germany, and Russia over the ports taken by them, had been a serious setback, while the exposure in the *Times*, by its Pekin correspondent, of the extraordinary manner in which the negotiation had been bungled by the Italian official in charge of the affair, strengthened the hands of the opponents of the Government. The result was that Gen. Pelloux, recognizing that the feeling of the Chamber was against the policy pursued by the Government, without waiting for a vote of the Chamber, most unexpectedly handed in the resignation of the ministry. Had he not done this, and had a vote passed contrary to the Government, the fleet gathered near San-Mun would have had to be recalled. The position of Italy would have been awkward.

The King, however, called Gen. Pelloux to make a new ministry, a business by no means easy. For ten days everything was uncertain, for, while there were good men enough to pick and choose from, it was difficult to find a group who would make a homogeneous cabinet. Baron Sonnino was offered and refused the Ministry of Foreign Affairs, but, notwithstanding his refusal to accept a portfolio, it was evident that his advice regarding the formation of the cabinet was of great weight with the King and Gen. Pelloux.

Born in 1847, Baron Sonnino studied under the faculty of law at Pisa and then entered upon a diplomatic career. From 1865-'71 he was attached to the embassies of Spain, Austria, Germany, and France. On returning to Italy he began a study of the economic conditions of the country, with special reference to the *contadini*, of which study one result was a book entitled 'Contadini in Sicilia.' He continued this work, extending his investigations to such subjects as the labor of children and women, mining, and emigration. That he did the work with thoroughness is shown by his journey in 1889 to Eritrea, whither he went to investigate the colony there situate. Since 1880 he has been in Parliament, his seat being on the left centre. His parliamentary career has been noticeable chiefly for his treatment of financial and economic questions. He attacked during the earlier years the financial policy of the Giolitti ministry, and when, under Crispi, power was in his hands, he showed that these attacks had not been based on any mere per-

sonal feeling, but on a correct knowledge of the subject dealt with. From 1887 to 1889 (in the latter year Crispi fell) he was Under Secretary of State for Treasury. In December, 1893, when Crispi returned to power, Sonnino became Minister of the Treasury, taking this office only after receiving assurances from Crispi that the Government would support such measures as he might see fit to institute to strengthen the country's finances, and to wipe out the deficit that then amounted to some 130,000,000 lire. The country was at the time on the verge of serious revolution, and radical measures were needed.

This deficit had been brought about, in great part, by the abolishment of the grist tax, and by the unsound methods adopted by the Government in a futile attempt to keep up the value of its securities. When Sonnino entered the Ministry, the pound sterling was worth 33 lire, and, owing to the fact that Italian silver was current outside of the peninsula, it was bought up in large amounts, exported, and then had to be bought back again by the Italian Government at its face value. Sonnino's idea was to make up the deficit by wisely placed taxes. He cut the interest paid by Government securities 1-3 of 1 per cent., laid two soldi a kilo on salt, and a stamp tax on matches. Furthermore, he economized along many lines. His general idea was to make the taxes fall equally on rich and poor, and he succeeded in wiping out the deficit. Naturally, his action caused him to be bitterly hated. His various measures were all passed by royal decree, for Parliament was not then in session. When Parliament met, the discussion occasioned by the imposition of the taxes was so bitter that his colleagues begged Crispi to throw over the originator of them. This, however, he refused to do, and Parliament ratified the measures. It was only when Crispi fell, in March, 1896, that Sonnino passed out of office.

To return to present times. When Sonnino in April refused the Ministry of Foreign Affairs, he urged that it be given to the Marchese Visconti-Venosta, one of the older generation, who he thought would counteract the more intense conservatives, and in whom there is a widespread feeling of confidence. This was done. Although since 1876 Visconti-Venosta has been but little in active politics, he is a man whose diplomatic training, absolute honesty, and ideas in regard to the advisability of drawing Italy and France together render him generally acceptable to the country. With Gen. Pelloux as Minister of the Interior and Visconti-Venosta in charge of Foreign Affairs, two of the offices are in competent hands. The Ministry of the Treasury has been confided to Boselli, a man of no great originality, but a firm follower of Sonnino. The Ministry of Instruction remains in the hands of Baccelli, who has given so much satisfaction to scholars during the past six months by his sanctioning the excavations in the Forum. Carmine becomes Minister of Finance, and Bonasi is made Minister of Justice. Lacava receives the Ministry of Public Works, Gen. Mirri that of War, Admiral Bettolo that of the Navy, Salandra that of Agriculture, and San Giuliano that of Posts and Telegraphs. This cabinet is distinguished from any that has recently preceded it by the presence of men of Sonnino's party in the chief offices,

and by its most important members belonging to the Right.

The Left has been in power a long time, and, realizing that it is running a great danger of losing the control it has held, it began its opposition as soon as Parliament came together after the new ministry was made up. The opportunity for attack proceeded from an apparently insignificant cause. Zanardelli, the President of the Chamber, was, contrary to custom, not consulted by the King as to the choice of the new ministers. Piqued by this, and believing that he would have to lose the leadership of the Left to Crispi and Giolitti if he did not resign the Presidency so as to take his seat on the floor of the Chamber, he gave up his office, and, contrary to the wish of the Chamber, persisted in maintaining his resignation. He did so, however, in an unfortunate manner, for he wrote a letter in which he made remarks about the methods employed in choosing the new ministers that were a direct insult to the King. A new President had then to be chosen, and the Socialists and the left urged that it be done at once. Pelloux stated that such action would be most unwise, the position to be filled being one of importance, and not to be voted on without allowing time both for careful consideration and for summoning absent Deputies; hence he demanded that the voting should not take place for four days—that is, until yesterday. The decision of this question was finally put to the vote. The special interest of the vote lay in the fact that, owing to the position and character of Zanardelli, it was not a vote of secondary importance, but was one of definite political and party significance, which would be an index of the power of the new ministry, and show it what support it could count upon in its plans in respect to China and to the *provvedimenti politici*, which are (in broad terms) a scheme of censorship over meetings, newspapers, etc., induced by the outbreaks last spring. Had the vote been a secret one, the Government would have derived little good from it, so by clever manipulation the Chamber was persuaded to vote openly, thus showing the Government what men could be counted on for support. The result was a majority of eighty-one—much larger than had been hoped for—in favor of the delay advocated by Pelloux. In this vote Crispi supported the Government. Yesterday the Chamber met and voted on the main question, the election of a new President. Zanardelli was put up as the candidate of the Opposition, but was beaten by Chinaglia, the Government candidate, though the majority fell nearly two-thirds.

This is where matters stand, with the important questions of China and the *provvedimenti politici* still to be settled. The Right is in power, however. Considering his age and influence, it will not be surprising if, when this particular Ministry falls, Sonnino should be seen to exert even more influence than he does at present. In such a case he will have the chance to forward his programme, and it is an interesting one. It is his opinion that the principal danger to which Italy is exposed is that of revolution. The present Government sprang from revolution, and the revolutionary idea is rampant. Another danger comes from the Church, and this works in a two-fold manner. On the one hand she neutralizes the conservatives who would, by inclination, favor the Government, by her teaching that as Catholics they ought to oppose the estab-

lished order of things; on the other hand, the more powerful part of the Jesuits are actual enemies of the present conditions. This being the condition according to Son-nino's belief, he thinks the King should possess and exert the power to counteract these evils. That is to say, the King should refuse to accept (as is the custom now) the resignation of a ministry whenever any vote, no matter how unimportant, goes against it; but a ministry should endure long enough to try thoroughly any given policy, and for the country to have time to form a judgment concerning it. Under the present system, no continuous policy is possible. Many of the occurrences last spring certainly lend color to these ideas. At any rate, as being those held by a man who endeavors to promote the welfare of his country rather than to satisfy personal ambitions, they are worthy of consideration and not impossible of trial.

## Correspondence.

### THE DRAUGHTSMAN OF THE ORDER. TO THE EDITOR OF THE NATION:

SIR: After reading your "Honest Politics" in the *Nation* of June 29, I am led to ask what you make of the statement, which I believe has not been challenged, that the President's recent civil-service order was both advised and engineered by Mr. Lyman, one of the very leaders, I take it, now that Mr. Curtis is gone, of the great reform itself.—Respectfully yours, H. D. C.  
GOVERNMENT, N. Y., July 6, 1899.

[The statement has not been challenged, because it is true. We have the authority of a leading member of the Cabinet for saying that when the President, after vainly trying to assort the mass of recommendations, drafts of new rules, etc., which lay on his desk, appealed to his advisers to name some one who could bring order out of the chaos, Secretary Gage suggested that Mr. Lyman, who had formerly been a Civil-Service Commissioner and was then employed as Appointment Clerk in the Treasury, possessed the necessary expert knowledge. To Mr. Lyman, therefore, the President turned over the whole bundle of papers, and from him received back, in due course, the formal amendments promulgated on May 29.]

Mr. Lyman was never a "leader" in the reform movement. He began his career as a department clerk in Washington, was at various times Secretary and Chief Examiner of the Civil-Service Commission, and, having a rather remarkable taste for, and grasp of, legal technicalities, was promoted to a Commissionership. Mr. Eaton and others recommended his appointment on the ground that, with his familiarity with the law and rules and bureau precedents, he would prove a valuable balance-wheel in a Commission whose other members were liable to change with the vicissitudes of national politics. His alleged inactivity at the time of the looting of the railway-mail service aroused a very

bitter feeling against him among Democrats everywhere; and President Cleveland, though reluctant to make any change in the Commission till the "blanket order" of May, 1896, had been issued, felt compelled to call for his resignation in order to save the machinery of the merit system from an assault in Congress of such magnitude as bade fair to wreck it utterly. When the McKinley Administration came in, Mr. Lyman, as a Union veteran, was reinstated in the civil service as chief of the Stationery Division of the Treasury; and, a vacancy occurring soon afterward in the Appointment Clerk's office, he was transferred thither, again on the ground of his technical knowledge.—ED. NATION.]

### CIVILIZED WARFARE.

#### TO THE EDITOR OF THE NATION:

SIR: We hear a vast deal nowadays about "civilized warfare." Many estimable people are losing sleep because of their fear that our troops in the Philippines are disregarding the rules and usages of "civilized warfare," and justify their apprehensions by quoting letters from American soldiers in the field telling of death and horror. Indeed, a conference of all the principal Powers is even now being held at The Hague, one of the principal purposes of which is said to be a codification and modification of the rules of this same "civilized warfare," and an effort to get everybody to live up to them. The interest in this conference is even greater than that aroused by the Whist Congress, which is to meet in Chicago this month, to codify and modify the rules of that game.

I should like to know what grim and gruesome humorist invented the term "civilized warfare." I would give much to have seen the sardonic grin that overspread his mocking countenance when he found his ghastly joke taken seriously by the world, and what was surely, in its origin, a ribald gibe become a commonplace of sober conversation, and of editorial, diplomatic, and religious utterance. De Quincey, with fine, unfettered fancy, wrote of murder as a fine art, but not even the imaginings of the Opium-eater suggested any connection between warfare and civilization. I fancy the author of this side-splitting phrase must be that Edward Carpenter who wrote a book called 'Civilization, Its Cause and Cure.'

The trouble is we cant too much about war, as about so many other things. In one breath we say, "War is hell," and in the next we dispute gravely and strenuously as to the rules by which it shall be played. If, indeed, war is hell, let us substitute one term for the other, and call it "civilized hellishness" instead of "civilized warfare." Much good may come from such plain talk. We shall surely not be able to keep our faces straight, or look each other in the eye, while we summon grave congresses together to consider and revise the rules of "civilized hellishness." The facial muscles will stand much, but certainly not this. Much harm comes from the grandiose glossing over of barbarism by the use of such terms as "civilized warfare," and the attempt to formulate rules by which it is to be carried on. Unthinking people are there-

by led to forget that civilization and warfare are the zenith and the nadir of thought and aspiration.

Even such a consistent and undoubted enemy of war as Mr. William T. Stead, in a recent letter from The Hague, describing the Peace Conference, allows himself to be betrayed into this fashion of talk, referring to the inhabitants of an invaded country: "If they persist in refusing to play the game fair and prefer to resort to what is regarded as foul play, then they must be prepared to take the consequences." Think of the defender of his hearthstone against an invading tyrant, whose wife is a corpse by his side or the sport of ribald soldiers, whose children have been bayoneted before his eyes, and whose own shattered and bloody members hang useless from his body, amid the blazing ruins of what was once his home—trying to recollect what Rule 17 of the game called "civilized warfare" requires of him at that juncture!

HOWARD LESLIE SMITH.

CHICAGO, July 8, 1899.

### "DONE."

#### TO THE EDITOR OF THE NATION:

SIR: One of your correspondents on the subject of dialect has referred to the word "done" as it is used by the Southern negro as an intensification of the past tense. It may be well known, though I have never seen the fact mentioned in print, that this is a pure Africanism. That it is so is proved by the analogous violence done to the French language where it was attempted to be spoken by the negro slave. In the "Creole" patois of Mauritius the past tense is always formed by placing the word "fin" (a contraction, of course, of *finir*) before the verb, and the future by the similar use of "allé." Thus, one hears "Mou fin aller," "Mou allé faire ça," exactly corresponding to the "I done went," "I'se gwine do it," of the American negro.

It may be remarked that the "Creole" of Mauritius is so far removed from the French as not to be intelligible to a French immigrant without much practice, and consequently may be assumed to be closer to the African tongues than the dialect of the Southern States darkey. May not other of the peculiarities of speech of these latter be traceable also to ancestral origin? C. M. O'D.

NEW MEXICO, June 25, 1899.

## Notes.

A Life of Horace Bushnell, by Dr. Munger; 'The Reminiscences of Julia Ward Howe'; a Life of Salmon P. Chase, by Prof. A. B. Hart; and 'Square Pegs,' a novel by Mrs. A. D. T. Whitney, will be published in the autumn by Houghton, Mifflin & Co.

'The Life and Letters of Sir John Everett Millais,' by his son J. G. Millais, will be published in this country in a few months by Frederick A. Stokes Co.

G. P. Putnam's Sons will publish in the early fall 'A Prisoner of the Khaleefa; Twelve Years' Captivity at Omdurman,' by Charles Neufeld, with numerous photographic illustrations.

The musical reminiscences of a veteran artist, Mr. Thomas Ryan of Boston, founder of the widely known Mendelssohn Quintette

Club, are to be brought out by E. P. Dutton & Co. Mr. Ryan was in at the very beginnings of orchestral organization in this country.

'Snow on the Headlight,' a story of the great Burlington strike, by Cy Warman, is about to be issued by D. Appleton & Co.

Bonnell, Silver & Co. will soon have ready 'A Pocket History of the American Navy and Naval Commanders,' compiled by Cromwell Childs.

Miss Rose G. Kingsley's 'History of French Art' (Longmans, Green & Co.) was written, as she informs us, at the request of M. Antonin Barthélemy, and with the assistance of M. Roujon, Directeur des Beaux-Arts, M. Léonce Bénédite, Conservateur du Musée du Luxembourg, and a long list of other officials and authorities. As might, therefore, be expected, it is an unusually solid and authoritative work, giving a fairly clear and just view of the general progress and development of painting, sculpture, and architecture in France, and of the achievements of individual artists in these several arts, but with no special originality of view, brilliancy of exposition, or illuminating criticism. It may be highly recommended as a text-book for general study, and it makes no pretence to be a personal contribution to art-criticism. We have detected no errors in it, and only a few obvious misprints. It is a pity that the style is marred by one or two mannerisms and a few solecisms.

An exceptionally finely illustrated work of travels in the Orient, in which the interests of scientific research and of history are well looked after, is being published by Dietrich Reimer of Berlin, the author being Dr. Max Freiherr von Oppenheim. It is entitled 'Vom Mittelmeer zum Persischen Golf, durch den Hauran, die Syrische Wüste und Mesopotamien.' Of the two volumes promised the first has appeared, and the whole work will contain 72 full-page illustrations and 200 smaller pictures in the text, together with a new map of Syria and Mesopotamia on a scale of 1:850,000, prepared by Richard Kiepert, son of the late veteran cartographer, Henry Kiepert; and secondly a political map of the autonomous district of Lebanon on a scale of 1:300,000, as also a chart of the author's journey, made in 1893.

A striking sign of the revolution which has displaced omnibuses and horse-cars is the publication of handbooks of electric travel, quite as serious and as useful as those for steam-journeymen. Miss Katharine M. Abbott of Lowell, Mass., who has already issued 'Trolley Trips on a Bay State Triangle,' and 'South Shore [Mass.] Trolley Trips,' now puts forth 'Trolley Trips: The Historic New England Coast,' embracing the Long Island shore, Connecticut Valley, Narragansett Bay, Buzzard's Bay, and Massachusetts (New York: G. P. Putnam's Sons). Like its predecessors, it is a little paper-covered volume for the pocket, profusely and well illustrated, mapped, and indexed, and is dedicated to the Patriotic Societies of Connecticut. The text has a quality superior to that of most guide-books.

The second issue of the quarterly *Mayflower Descendant* is due, but it may not be too late to speak of the January issue as full of promise to those interested in tracing their descent from the Pilgrims of 1620. It is published by the Massachusetts Society of Mayflower Descendants at their rooms, No. 623 Tremont Street, Boston; this so-

cietly being one of seven whose organization or annual proceedings are recorded in number one (add Connecticut, New York, Pennsylvania, District of Columbia, Ohio, Illinois). Publication has been begun in this periodical of the entries in the Brewster Book, and of Plymouth Colony Wills and Inventories; and there is much other valuable matter. The Massachusetts Society is endeavoring to raise a fund to prosecute researches into the pedigree of the *Mayflower* passengers, and subscriptions may be sent to the editor, who also invites any information touching said pedigree.

The *American Journal of Philology* begins its twentieth volume with the number for January, February, and March, 1899, which was issued late in June, replete with its usual number of learned articles. Among the book notices, Norden's 'Die Antike Kunstprosa' is the subject of a long review, while Prof. Gildersleeve, the editor of the *Journal*, writes in a characteristic way of Terret's 'Homère.' There are also the usual reports on foreign philological journals, the department called "Brief Mention," ever bright with the wit of the accomplished editor, and lists of recent publications.

The June number of the *Classical Review* publishes a letter from Mr. H. Furneaux which completely disposes of any hope, at least for the present, of a collation of the Toledo MS. of the 'Agricola' of Tacitus. Dr. Gudeman of the University of Pennsylvania announced some months ago that he had arranged for a collation of this MS., but it is evident that his agent in the matter has met with the same difficulty that beset Dr. Wünsch of Breslau in 1896, when he attempted to examine the MS. He was denied such privilege by the Bishop of Toledo, who claimed that the publication of any collation would depreciate the value of the document. Upon this fact, Mr. Postgate remarks in an editorial note, "If the Bishop of Toledo can take only the commercial view of learning, let him sell the manuscript, of which he is no fit custodian."

In *McClure's Magazine* for July, Prof. Newcomb sketches, with his usual exceptional lucidity, the unsolved problems of astronomy, and his text is illumined by the rarely fine photographs of the heavenly bodies by Prof. Barnard and Sir Isaac Roberts. If there is disappointment at what is yet unknown, there is at the same time cause for great gratulation at the progress and present extent of astronomical discovery.

European Turkey, especially Macedonia, is the theatre of a unique contest graphically described by Rich. von Mach in number five of *Petermann's Mitteilungen*. It is a struggle for supremacy between Greece, Bulgaria, Servia, and Rumania, and schools are the standing armies, teachers the officers, inspectors and bishops the general staff. Greece was first in the field, and her schools are still the most numerous, though from certain districts she has been driven out by the Bulgarians, who were not slow to recognize the importance of the Greek movement in the coveted territory. Her educational army is better manned and more alert and enterprising than that of either of her rivals, and its success has been remarkable. The Servians have shown the least intelligence and energy, and are now confining their efforts to districts just over their southern frontier. Latest of all, Rumania is taking a vigorous part in the

contest, and her schools among the Wallachs of central and southern Macedonia threaten wholly to supplant those of her rivals. The Turkish officials look on with characteristic indifference at this strange international strife. Accurate statistics are difficult to get in Turkey, but, according to the reports of consuls and the various religious authorities, there were, in 1896-'96, of elementary schools only, Greek 1,286, with 85,015 scholars; Bulgarian 821, with 29,846; Servian 162, with 7,511; and Rumanian 80, with 3,678. A series of four maps, one for each nationality, show the scene and the strength of this educational propaganda.

A supplemental number, 123, is a geographical monograph on the island of Cerigo, the ancient Cythera, by Dr. R. Leonhard. He treats of its geographical characteristics, its geology, climate, and scanty fauna and flora. Its bird-life is enriched, however, by the fact that the birds use it as a station in their annual migrations. He also gives a short sketch of the island's history, and some statistics and facts in regard to the inhabitants and their occupations.

In the *Biblioteca Storico-critica della Letteratura Danteica*, Prof. Enrico Rostagno has published the 'Compendio della Vita di Dante' attributed to Boccaccio, using sundry MSS., and prefacing the result of his editorial labors with a discussion in which he concludes that the Compendium was a rough draft of the full Life. A serviceable edition of the Compendium has hitherto been a desideratum.

According to official reports, there were published in the city of Paris at the beginning of the present year no fewer than 296 technical medical journals, and the list has been increased, it is thought, by several dozen since that time. The *Allgemeine Medizinische Centralzeitung* draws attention to this phenomenal growth, which it declares entirely abnormal and unhealthy, and gives some peculiar facts that explain the existence of such a multitude of medical magazines. It appears that the publication of a technical medical journal has in recent years become the approved and popular means for the advertisement of all kinds of medical and hygienic articles. Druggists, apothecaries, chemical factories, laboratories, instrument-makers, bathing establishments, societies of nurses, milk-venders, publishers of medical journals, manufacturers of patent medicines, and the like, have all begun to issue a "medical journal," in which several of the opening pages are devoted to harmless reports of the transactions of medical societies and the like, while the bulk of the periodical is filled with more or less skillfully worded advertisements of the wares offered by the publishers. Quite naturally these medical journals do not have paying subscribers, but are sent out gratis to physicians and other possible customers, in Paris and throughout France.

It appears that the *Deutsche Orientgesellschaft* has proved to be very popular, and has enlisted the coöperation not only of technical scholars, as is the case with the older Oriental Society and the more recently established Palestine Society, but of a large number of merchants and others interested in the Orient. As a consequence, the first year has already brought an income of 66,882 marks, of which some

30,000 marks were the gift of the Emperor, from whom the same amount is confidently expected for the current year. The expedition sent out by the Society at the beginning of the year, headed by Dr. Koldevey, arrived at Babylon on the 26th of March, and began its labors on the famous Kasr mound with thirty-nine Arab laborers; the number has now increased to over one hundred. More than 200 fragments of lion and cat sculptures, brick reliefs, and rosette-ornaments have been found, the bricks of the wall enclosing the mound all being of the well-known Nebuchadnezzar type. Prof. Frederick Delitzsch, who has recently been transferred from his quasi-banishment in Breslau to that goal of academic ambition in Germany, a professorship in Berlin, is very sanguine in his expectation of tangible results from the work of this expedition. He thinks that the thorough investigation of the Kasr mound, which covers a space of 25 hectares and attains a height of 20 metres, will reveal those mosaic friezes of which Diodorus reports, and such as were found by Dieulafoy and his wife in the ruins of Susa.

The "Calaveras Skull," concerning which so fierce a controversy arose in 1866, has recently become the subject of renewed discussion. The views of Mr. W. H. Dall, the only survivor of the group of naturalists who examined the skull at the office of the State Geologist of California in June, 1866, are published in the current number of the Proceedings of the Academy of Natural Sciences of Philadelphia. According to the statement of the finder, a respectable mine-owner, the skull was discovered in a bed of gravel 132 feet below the surface of the uppermost lava bed of Bald Hill, one of the table mountains of Calaveras County. It was covered and filled with a hard mass of gravel stones, mixed with particles of other human bones and fossil shells, cemented together with iron oxide and calcareous cement. It is Mr. Dall's opinion that no artificial agency could have assembled such a conglomerate about a recent skull, and he dismisses as unworthy of notice the insinuation that the relic was taken from a modern Indian burial-place subject to the lime deposit of springs, and fraudulently foisted upon the State Geologist. He believes that the attempts on the part of unscientific persons to discredit the authenticity of the skull were due to the spirit which leads the ignorant to disparage discoveries in which they have no share. He is convinced, in common with scientific men generally, that no sufficient reason exists for doubting the genuine character of the skull or its original situs below the lava. As to the coexistence of man and the extinct mammals whose remains have been found in the same gravels, he expresses no opinion, as that is an entirely distinct question.

Unusual interest attaches to the Cambridge University expedition, under the leadership of Dr. A. C. Haddon, to New Guinea and Borneo, which has just returned after a year's absence, from the fact that, according to the London Times, it is "the first purely anthropological expedition that has left England." The principal field work was in the Murray Islands, which were selected because of their position between Australia and New Guinea. These countries are inhabited by very different peoples, and the study of a geographically intermediate people was sure

to suggest several interesting problems. Numerous natives were photographed and measured, and they also were subjected to a careful examination by Dr. Rivers and his colleagues in the psychological laboratory that had been organized. This is the first occasion on which trained psychologists have experimented in the field on a primitive people, and the reports of this section of the expedition are looked forward to with eagerness.

—The *Century* for July is heralded as a "Story Tellers' Number," about half of its contents being fiction of the long or short order. A tale which will attract attention to Chicago and to the author at the same time is "A Day in Wheat," by Will Payne. It is a story of love and the wheat-pit, and shows how the course of true affection may unite the daughter of one swindler with the son of another, even by the very aid and medium of their swindling. Or rather, perhaps, we ought to say that the reader may extract this moral for himself, the author probably dwelling in the serene atmosphere of art for art's sake, which is above morality. Thirty years ago, such a story, founded on the assumption that speculation and swindling in the metropolis of the Middle West are synonymous, would have been locally resented. Now we notice that the tale, with its repulsive flavor, is thought "strong"! This is the fiction, presumably, that breeds Socialists, and which leads to the passage of anti-Trust laws. Henry Rutgers Marshall has an article on "Rudyard Kipling and the Racial Instinct," in which he endeavors to analyze the sources of the poet's popularity. "The secret of his strength lies in the fact that he expresses the force of the deeper-lying human instincts as they are stimulated by the demands of modern life." He also preaches the "dignity of arduous work," and the "nobility of the willingness to curb individual desire, to the end that greater results may be accomplished by all than was possible if individuals labored in isolation." His vigorous imperialism tells "the same story." Mr. Marshall seems to think that Kipling falls a little short of Shakspeare, but shows traits which we find in "the writings of the great masters." Is this all? Add to it, we should say, an extraordinary mastery of jingling metre and of a black-guard "dialect," and a profound indifference to what old fogies call "good taste." A bard must have the defects as well as the other qualities of his audience. Among the longer articles, most interest, perhaps, attaches to the account of "Sir Walter Scott's First Love," by F. M. F. Skene, accompanied by a portrait, and "The Making of Robinson Crusoe," by J. Cuthbert Hadden.

—By far the most interesting paper in the *Atlantic* is Prince Kropotkin's ninth instalment of his "Autobiography of a Revolutionist." It gives the story of his incarceration in and escape from a Russian prison—a terrible story (such as recalls the days of 1848) of tyranny; and also of heroic endurance and successful daring and ingenuity. In this narrative we get an intelligible account of the system of secret communication between prisoners, by means of knocking on the walls, which turns out, when explained, to be far simpler than other expositors would have had it. "English Imperialism," by William Cunningham (inferentially, Dr.

Cunningham of the two Cambridges), is an attempt to explain a system which is really a growth of centuries, by means of formulas. Formula No. 1 is that "England is being gradually excluded from the markets of foreign countries," by the expansion of protectionist nations, and therefore must have foreign territory and markets of her own. Formula No. 2 is that it is necessary that "some civilized Power should exercise effective police control in every part of the globe." So far, so good; but after this it is rather startling to find the fact plainly and truthfully stated that England never, by means of imperialism, gets any advantages in her foreign markets at all, but opens them at once to all the world on the same terms. This makes nonsense of the market argument, and makes imperialism a sort of military altruism. Dr. Cunningham very justly says that this policy has nothing in common with the nationalistic, protectionist policy of other countries, such as Russia and Germany; as explained by him, it is the use of force to introduce compulsory freedom of trade, wherever it goes, and thus to help, wherever the English power extends, commercial rivals. In other words, it defeats its own chief end. England assumes the burden, while her rivals get the benefit. "The Plot of 'Much Ado about Nothing'" is the subject of a learned and entertaining article by Dr. Horace Howard Furness, condensed from the Introduction to the play, to be published in his forthcoming Variorum edition.

—*Harper's* contains the final instalment of Mr. Lodge's "Spanish-American War." The author makes the prediction that "whatever the final disposition of the islands," and "whether we hold and govern much or little," "in the East we shall remain, because we are entitled to, and will surely have, our share of the great commerce with the millions of China, from which we shall refuse to be shut out." This should be compared with the hints thrown out by Mr. Whitelaw Reid, and tends to confirm the inference drawn by some that statesmen who buy the right to subjugate will prove equally ready to sell out at a profit. "Transitional," a story, by I. Zangwill, is a good example, probably, of the powers of that writer, though not throughout what it is the fashion to call "convincing." The old Jew is good, and there is real pathos in the story, but would it have ended so? Mr. Russell Sturgis's third instalment of "The Interior Decorations of the City House" is worth careful examination. He is not the first writer who has made "constructional necessity" the foundation of his system, but he has an individual way of elucidating the fundamental connection between beauty and construction which makes whatever he has to say about the matter interesting. For instance, who that has ever "done a house over," or built one, has not found the proper manner of dealing with ceilings a terrible difficulty? Mr. Sturgis lays down two golden rules, which should be deeply pondered: (1) "A ceiling is properly the top of the room—that is to say, the under surface of the floor above—and it should be treated frankly as such"; and (2) "The best ceiling is probably that which does not attract the eye, which is so subordinated to the walls, in the decorative sense, that one leaves the room with no idea of it except that it was not a disagreeable match to the walls, which have a right to catch the eye." Black-guard military verse is so much in favor now that it is hardly necessary to call attention

to "Trooper Jackson," by Thomas Edward Grafton. As a specimen of poetry in this style it has all the necessary qualities—the jingle, the bad English, the glorious story of fighting against heavy odds, the over-emphasis; yet it is flat, notwithstanding the full-page accompanying illustration of the "cousin, fightin' trooper." There is evidently danger that the blackguard business in literature will be overdone, just as "realism," of which it is an offshoot, has been overdone. Then there will be a reaction, and it will be seen that, in our editorial enthusiasm, we overestimated the power and potency of the blackguardly heroic.

—Mr. Russell Sturgis has an article in *Scribner's*, also, which deserves attention. The subject is John La Farge, and the text is accompanied by a number of striking illustrations. Mr. Sturgis says: "It is noticeable in Mr. La Farge's life that he should be, in many ways, like a painter of old time"—that is, he is not a mere painter, but has cultivated his talents in many directions, and so has avoided shibboleths and provincialism. It is probably not generally known that the illustrations for Browning's book 'Men and Women,' as originally published in 1855, were made by La Farge; some of these are here reproduced. The well-known face of Daniel Webster (engraved by Gustav Kruell after a daguerreotype) appears in a frontispiece to accompany some reminiscences by Mr. G. F. Hoar. These reproduce unpublished manuscripts and "examples of his preparation for public speaking." Mr. Hoar points out that in general his style was of a "somewhat ponderous Latinity," but derived its strength from the "solidity," sincerity, gravity, self-restraint" which marked everything he said. The whole was founded on a complete mastery of his subject. Mr. Robert Grant contributes a "Search-Light Letter" to "a young man wishing to be an American." A great deal of what he says is undeniably true, though we take it that the desire to be an "American" is not really what animates the young man at all. To our minds, what he appears to desire is not to be a snob, or hypocrite, or a mere moneybags, or a worshipper of false gods—all good aims, but which do not exclude the idea of his adopting French, or even English, citizenship. We should like to believe that to wish to be an American was to wish to have all the good qualities which Mr. Grant identifies with Americanism. There is a difficulty underlying the appeal to "Americanism" as a motive to a lofty ideal which Mr. Grant and, we may add, dozens of other writers do not seem to perceive. Tammany Hall, and the boss system, and the pension system, and the spoils system, are all peculiarly characteristic of this country, and their upholders can and do confidently appeal to Americanism to uphold these abuses. Those who wish to eradicate them should appeal to something else. Because Americans can always safely appeal to moral ideas, it does not follow that moralists can always safely appeal to "Americanism."

—One more has been added to the various processes of color photography—this time one which is of great simplicity and which promises to have a large field of usefulness. Prof. R. W. Wood of the University of Wisconsin describes in *Science* a method for making colored photographs which it is not

a little surprising that those who are in the habit of working with diffraction gratings did not discover years ago. A diffraction grating is nothing but a sheet of glass or metal with fine straight parallel lines ruled on it—several thousands in the space of an inch. Light transmitted through a diffraction grating of glass suffers dispersion and gives the colors of the spectrum, the position of any spectral color depending upon the distance apart of the lines. Now if light is made to go through two gratings, of a different number of lines to the inch, the two spectra formed can be caused to overlap to any extent that is desired, and a third grating will permit of the mixing of any three spectral colors together; and three spectral colors, properly chosen, will give white light, as well as all the unsaturated colors of nature. But the crux of Professor Wood's invention lies in the application of this idea to the printing of photographs, and it depends on the fact that a ruled grating can be perfectly copied on to a sheet of glass coated with bichromated gelatin by means of contact printing in sunlight. It is necessary to take (as in several of the other processes) a photograph first of all the red light in a variegated scene, then of all the green light, and then of all the blue light (as can be done by filtering the light through suitably colored glasses). Then, upon a piece of gelatin-coated glass is placed one of the ruled gratings, and over this the (positive) photograph on glass which represents the action of the red light of the original scene. Thirty seconds' exposure to sunlight impresses the lines of the grating upon the sensitive plate in those places, and in those places only, where the photograph is transparent. The green portion of the picture is now impressed upon the sensitive plate in the same way, but through a grating of a different degree of fineness; and the same thing is done with the blue light of the picture and still another grating. The gratings used by Professor Wood had lines of the fineness of 2000, 2400, and 2750 to the inch, for such was found to be the right proportion in order to cause the blue light, the green light, and the red light of the several spectra to overlap exactly. When finished, the plate is itself a diffraction grating, but one of different degrees of fineness in its different parts, and such that light transmitted through it produces, for the eye of an observer looking through a narrow aperture placed in the right position, all the colors of the original picture in their correct distribution and their correct blending. The colors are stated to be of an extreme brilliancy. But still more important is the fact that the plate thus formed can be again printed from, and thus any number of these photographs prepared with very little difficulty. It looks as if color photography were at last an assured, and a practical, acquisition.

—It is strange that Mr. Whistler, now one of the most celebrated and, perhaps, the most widely influential artist living, should still think it worth his while to exercise the "Gentle Art of Making Enemies" and to continue to act, as we believe his friend Degas once said of him, "like a man who couldn't paint." The witty irresponsibility which was so amusing in the artistic Ishmaelite, seems hardly necessary or becoming in the recognized *chef d'école*; but, the butterfly having once found the sharp sting in its tail, its use has become second nature, and it is safe to

assume that Mr. Whistler will remain to the end the "Jimmy Whistler" of the past. Age cannot wither him nor custom stale. "The Baronet and the Butterfly" (R. H. Russell) is the latest of the thin brown volumes in which he delights to record his prowess and sing his triumphs. In this case his triumph consisted of a condemnation to pay one hundred guineas with interest for four years, and forty pounds damages additional; but as he retained the picture which was the cause of the suit, without the right "to make any use of it, public or private, until it shall be completely transformed," he considers that the moral victory rests with him, and that art and the artist are vindicated in his person. As the outcome of Sir William Eden's suit against Mr. Whistler seems to have established (though not for the first time—see, on p. 71, the account of the suit against Rosa Bonheur) the fact that, under French law, an artist cannot be compelled to deliver any work of his hands against his will, but can only be sued for damages, a sober account of the trial would have had a certain interest and utility. Mr. Whistler's fantastic embroidery of comment and annotation certainly does not add to this utility, and is unnecessary to his revenge on Sir William Eden, the bare statement of the facts in the case being sufficient to show the nature of that gentleman's patronage of art; but one more scalp must be added to the collection, and the war-dance must be duly executed, or Mr. Whistler would not be Mr. Whistler.

#### MURRAY'S BYRON AGAIN.

*The Works of Lord Byron: Letters and Journals. Volume II. Edited by Rowland E. Prothero. Poetry. Volume II. Edited by E. H. Coleridge. London: John Murray; New York: Scribners.*

Mr. John Murray's "new and enlarged edition" of Byron progresses steadily, and as rapidly as can be expected of so considerable an undertaking. We have already given an account of the general plan of the work, and have examined the first two volumes with some fullness. Two more volumes have since appeared—the second of the 'Letters and Journals,' published some months ago, and the second of the 'Poetry,' which has just been issued. Both are worthy of special notice.

The letters in volume II. extend from August 23, 1811, to December 27, 1813. In addition, the volume contains Byron's journal from November, 1813, to April, 1814. An appendix includes two articles contributed by Byron to the *Monthly Review*, his speeches on the Framework Bill, on the Roman Catholic Claims, and on Cartwright's Petition, letters from Lady Caroline Lamb and Bernard Barton (the Quaker poet), and finally an interesting series of extracts from the newspapers of February and March, 1814, exhibiting the violent assault made upon the poet by the Tory press when it became known that he was the author of the poem, "Weep, daughter of a royal line." The volume, it will be observed, covers the whole of Byron's short parliamentary career, as well as the whole period of his personal vogue in English society. It begins with the publication of cantos I. and II. of "Childe Harold," and includes the publication of the "Glaucour" and the "Bride of Abydos." It closes with Byron's acknowledgment of the lines on the Prince Regent, the incredible vituperation

that followed, and the poet's resolution to write no more. Within this period falls the extraordinary episode of Lady Caroline Lamb, which becomes less and less intelligible the more it is cleared up. The 'Journal' carries the record of Byron's life some months beyond the latest letter printed in the volume. This latest letter (to Murray, December 27, 1813) coincides with that which concludes volume I. of Mr. Henley's edition. Comparison shows in a moment the wealth of new material which Mr. Murray's editors command, and the hopelessness of competition. Mr. Henley has printed two hundred and thirty-two letters, to which Mr. Prothero adds one hundred and fifty-six, very few of which have ever been published before.

In one particular Mr. Prothero's preface to volume II. supplies, in part, a serious omission to which we had occasion to refer in our notice of volume I., in that it gives some account of the sources and authority of the text. Of the three hundred and twenty-eight letters contained in these two volumes, two hundred and twenty, we are informed, "including practically the whole of the new material," have been printed from the originals. The old material, already printed by Moore, Dallas, Leigh Hunt, and others, has not been treated in the same way, for the reason that most of the originals are undiscoverable; many of them, apparently, having been destroyed by their possessors. It is, however, reassuring to learn that the originals of most of the letters from 1816 to 1824 published by Moore in his 'Life of Byron' are in Mr. Murray's possession or under his control, and that for this period, therefore, the bulk of the old material can and will be restored to its authentic form. This is a particularly fortunate circumstance, for Moore seems to have taken far greater liberties with the later correspondence in the way of omission, modification, and transposition than he found it necessary to take with those letters included in the two volumes already published. The account thus given by Mr. Prothero of the sources and authority of the text is apparently as full as the conditions of the publishing business allow. Such, at least, is the only interpretation which can be put on the remark that, "in the present circumstances, to state the sources whence the letters are derived—at all events for the present—would be so impolitic as to be impossible." We do not, however, see that book-selling politics need hinder the editor from stating in connection with each letter whether it has been printed before, and, if so, where. This appears to us a part of the necessary apparatus of his book. Nor could it disclose any secrets of which rival editors or publishers might take advantage, for it would convey only information that is already within the reach of anybody who has the patience to compare printed books with each other. Since, then, Mr. Prothero has so far yielded to his critics as to indicate in a rough way what the new material is, we must express the hope that the final volume of the series may contain, as a part of the promised bibliography, if in no other form, a list of those letters which have been printed before, with an exact statement of where they may be found.

In the matter of annotation, Mr. Prothero is certainly one of the best of editors. We have already commended his notes, in the

first volume; those in volume II. are, if possible, even better. They are singularly full, without losing form or overloading the text; their unpedantic accuracy is quite remarkable, and, in spite of their multitude of names and dates, they are almost always entertaining. Here and there Mr. Prothero prints letters written to Byron or about him. Especially noteworthy is the long and extraordinary letter addressed by Lady Caroline to Medwin in 1824, after Byron's death, and serving to correct some errors in the received account of her relations with the poet. One may hope that the plan of occasionally giving both sides of the correspondence will be continued and extended, so far as space allows and material is accessible.

Volume II. of the 'Poetry' is entirely occupied with "Childe Harold," which is edited by Mr. Coleridge with a particularity and a profusion of apparatus proportionate to its importance. In one particular, however, Mr. Coleridge seems to find it impossible to make himself clear. We refer to the matter of text. The statement made on this subject in his first preface was confused to the verge of unintelligibility, and in the case of the "English Bards and Scotch Reviewers" the supplementary corrections resulted in contradiction, and at last in a desperate "forward reference" to a promised collation in volume VI. There is, fortunately, no such imbroglia in volume II. Indeed, a distinct effort is made to set forth the facts, for the preface begins with what at first appears to be a punctilious account of the whole matter. His text of "Childe Harold," Mr. Coleridge writes, is "based upon a collation of the library edition of 1855" with certain manuscripts, which are enumerated, and, it is added, "collations have also been made" with certain earlier editions, also enumerated. This is all very well, but it does not go far enough. We know the basis of the text, but what is the principle on which, given the basis, the text is constituted? Again, how minutely are variants registered; and, if they are not given in their entirety, from what point of view is the selection made? These are questions which an editor is in duty bound to answer. The curiosity of the whole incident is that Mr. Coleridge no doubt thinks he has answered them. But a strange fatality pursues him: We hesitate to advise him to try again. It would probably be better for him to unbosom himself on this particular point to some friend, who might then be commissioned to redact the appropriate paragraph in the next volume. Meantime, a comparison of Mr. Coleridge's variants with Prof. Kibbing's collation of the "Dallas transcript" shows that, so far as this manuscript is concerned, Mr. Murray's editor has meant to be pretty minute but not absolutely exhaustive.

Mr. Coleridge's notes are very full, and will probably be regarded as lavish by some critics. On the whole, however, we think the editor's system is right; for, as he well says, although every one is more or less familiar with the subject-matter of the poem, "details and particulars are out of the reach of even the most cultivated readers." Indeed, in thus supplying much explanatory comment and supplementary information, he is but following the example of the poet himself. He is, to be sure, not quite so finished a scholar as his coworker, Mr. Prothero, and sometimes rambles a trifle; but in the main he has performed his difficult task with judgment and learning. A few

matters of detail, however, challenge remark.

Now and then the notes fall into a kind of preaching vein which ought to have been avoided. Magisterial comment on particular passages in a poem that has been before the world for three-quarters of a century, is out of place in an edition meant to be definitive, however useful it may be in a schoolbook. Again, the exposition of obscure or carelessly expressed passages is not always conceived or executed in the best manner. Several of the notes in this category are quite unnecessary, and a round half-dozen of them are almost irritating. There are a few notes of the kind usually called "philological," and these, though more accurate than one might expect, are sometimes pretty feeble. Why, for example, should twelve lines, with extracts from "Titus Andronicus" and the "Ancient Mariner," be thought necessary to illustrate *feere* in the sense of "companion"? The word is no curiosity, and might have been dismissed with the simple gloss which Byron himself allowed it. Similarly needless is the remark that *brast* for *burst* still survives in the Lancashire dialect (p. 71). At p. 155, apropos of Byron's accentuation of *record* on the last syllable, we are referred to Chaucer, and the implication appears to be that the form in question is something very old and rather unusual. Mr. Coleridge might have remembered a famous passage in "Hudibras." But there is not much of this kind of thing.

We throw together a number of observations on other matters neglected or insufficiently treated. The Courts of Love (p. 6) were not understood by Byron, but his editor ought to be better instructed. When one remembers, however, that even Prof. Skeat, in editing the 'Chaucerian Pieces,' can refer with approbation to Mr. Rowbotham's preposterous essay on this subject, and that Prof. Courthope, in his 'History of English Poetry,' had no information that was not ninety years old, we are not disposed to insist on Mr. Coleridge's oversight. The note on 'Sir Tristrem' (p. 203) leaves the reader with the impression that Scott's ascription of this romance to Thomas of Erceuldoun was correct. The note on gibbering and shrieking ghosts at p. 255 is too long to quote, but will excite the mirth of the pneumatologist. At p. 236 one wonders why a comparison with Carew is preferred to a far more pertinent and really famous passage in Donne's "Broken Heart." The note on stars (p. 270) is oddly pedantic, a fault seldom discoverable in Mr. Coleridge's work. At p. 291 the drinking song (*σκάδιον*) on Harmodius and Aristogiton is amusingly called a *scholium*, whether by misprint or confusion of thought. The quotation from Hofmann (p. 228) is disagreeable and not to the point. The abbreviation *ap.* (p. 295), followed by the name of a book and not of an author, is none the less objectionable because it is common.

These are all trifles and would not be worth mentioning in the criticism of an ordinary book. The editorial work of these volumes, however, is so uncommonly good in almost every respect that slight flaws of this kind immediately attract the eye. Most of them may easily be repaired in a second impression. They might be far more numerous than they are without depriving Mr. Murray's 'Byron' of the reputation that it bids fair to achieve—that of being one of the very best editions of any modern classic.

## THE RELIGIOUS IDEAS OF MARGARET OF NAVARRE.

*Les Idées Religieuses de Marguerite de Navarre.* Par Abel Lefranc. Paris: Fischbacher. 8vo, pp. 126.

Many writers have much discussed various doubtful points regarding the religious ideas of Margaret of Navarre and her attitude towards the doctrines of the Reform; but before entering in among these discussions, and still more after coming out from them, one is inclined to question their intrinsic value. What does it matter to us what Margaret believed, or thought she believed? There is no doubt about what she was, or about the spiritual conditions that were the sources and motives of her actions; and what a man or woman believes is of interest only as throwing light on these secret springs. It is, too, not unreasonable to feel that those beliefs which have never been professed should lie buried with the heart that held them; and though M. Lefranc is of the opinion that Margaret did, in her poems, profess her beliefs, and that they were Protestant beliefs—that she professed them very openly and distinctly and boldly—this opinion is not shared by many of those who have most carefully studied her writings.

How diverse may be the impression made on different minds by the same words is shown by the fact that within the past two or three years—since the last evidence on these points was put in with the publication by M. Lefranc of the *Dernières Poésies de Marguerite de Navarre*—two of the best-informed and most trustworthy critics of the day, M. Doumic and M. Faguet, have expressed opposite judgments, the one asserting that Margaret, at the close of her life, clung with all her strength to the dogmas of the Catholic faith, which had always been hers, the other observing that the "fond," the soul, of one of her poems (a poem of six thousand lines is Protestant thought, Calvinistic thought. M. Lefranc thinks she was more Lutheran than Calvinistic in her tone.

Is it not possible with one touch of the wand of imagination, with one throb of that dramatic sympathy which alone gives us true knowledge of our fellow-creatures, to transform these seeming opposites into a coherent whole? A fact, that is scarcely referred to in these multitudinous and multiform debates on the shades and degrees and dates of Margaret's beliefs—beliefs which, in the present writer's opinion, were continually changing their shades, and altering their degrees, and mixing their dates—one fact may be considered. In 1530, a year before the first publication of any of Margaret's poems, appeared the first French translation of the Bible by Le Fèvre d'Étaples. It had been ten years or more in preparation, during all which time—as for the rest of his life—Margaret was in close relations with the translator, as his friend and protectress. Le Fèvre d'Étaples was not a Protestant (the Protestants published their translation five years later); he and his Queen read the Scriptures as children of the mother-church. It is to be remembered that, before the Council of Trent, Catholicism was far from having, even in the eyes of men of learning, the distinct outlines with which we are familiar, and consequently, many thoughtful minds, when the teachings of the Gospel were made known to them, were far from perceiving that they

were or could be at variance with the teachings of the Church; at most they conceived that the Church had left on one side some special points, but in due time would be ready to bring them into the light.

That Margaret studied the Bible with eager interest, that especially she absorbed the writings of St. Paul with the same intellectual ardor that made her familiar with Plato and with Dante, every page of her writings indicates; and when M. Lefranc brings forward line after line which seems to him "Protestant," the necessary rejoinder is to point to the passage in the Bible of which Margaret's expression is a simple transcript. The immediate, direct connection is patent; Margaret herself in one poem constantly noted it in the margin. M. Lefranc, of course, admits the connection, but he admits it as if it meant little or nothing. On the contrary, it means everything, not only as regards the passages of pure paraphrase, but as regards other passages in which the same doctrinal phrases are employed in personal connections. What Margaret read in the Bible, she had no hesitation in repeating in other terms; but that does not imply that what she read and what she said meant to her what it meant to Luther and to Calvin. There is no indication that, as M. Lefranc fancies, her beliefs were derived from the "Institution Chrétienne" of Calvin; they were visibly derived from the Epistles of St. Paul. The words of her poet Marot come to mind, when he was suspected of the "errors" of Luther:

"Point ne suis luthériste  
Ne suingien, et moins anabaptiste;  
Je suis de Dieu par son fils-Jésus-Christ."

That Margaret was probably led to intimate familiarity with the Bible by friendship is in perfect keeping with the general quality of Margaret's mind. The thing, the person, next her had always peculiar weight, a peculiar emotional weight with her. M. Lefranc imagines her a thinker, a logical thinker; to others she seems to have had the brain of a mystic, a tender, suffering heart, and a winged soul, sometimes capable of soaring to great heights in vague spiritual spaces, but for the most part feebly fluttering among the woes upon woes, the misdeeds and misfortunes, of those dear to her.

If she had held with any long conviction any doctrines peculiar to Protestants, it seems impossible that it should not have been known to Protestants, and that they should not, during her lifetime or afterwards, have recognized her as one of them. Still stranger would be the fact that, the year of her brother's death, both before and after the event, she withdrew in her overwhelming grief to a convent, where she had a temporary building erected for her use, and where she passed four months in the strictest seclusion; often kneeling, it is said, for long hours before the altar, and sometimes assuming the position of Abbe and chanting with the nuns. This was only two years and a half before her own death.

Immediately after her reappearance in the world, she had performed before her "a comedy" composed by herself, which is one of the most interesting and especially one of the most charming of all her works. It is "a morality" of which the personages are *la Mondaine*, *la Superstitieuse*, *la Sage*, and *la Bergère* ("ravis de l'amour de

Dieu"), Margaret herself.\* M. Lefranc points out that the sentiments expressed by *la Bergère* are akin to those of the "libertins spirituels" whom Calvin had violently attacked three and two years previously in two of his most famous treatises. M. Lefranc puts forward the somewhat original opinion that the pantheistic doctrines of this sect were at bottom "only a systematic exaggeration of certain fundamental principles of the Reform," and from this draws the conclusion that Margaret's hereticalness was even bolder than that of Geneva.

It was certainly not of a kind agreeable to Calvin. In his treatises against the "libertins," he attacked members of Margaret's own household, and, on hearing of her consequent displeasure, he wrote her, to exculpate himself, a letter in which occurs what M. Lefranc considers, and perhaps justly, as "the most authorized testimony ever given to Margaret regarding the services for which the Protestant cause was indebted to her." It is the official compliment of one magnate to another, his secret enemy. The severity and injustice of Calvin's criticisms make it seem very probable that there was some mingling of personal indignation and personal antagonism in the public expression of the beautiful ardors of *la Bergère*.

The soaring songs of this other self are the last utterances of Margaret, "*la ravie de l'amour de Dieu*"; and in reading them one feels that it would be as reasonable to class Mme. Guyon among Protestants as the Queen of Navarre. Her personal relations with Calvin had been of kindness in his youth; but as his character showed itself, and his position became defined, the earlier sympathies disappeared on both sides, and gave place, in M. Lefranc's own words, to "a coldness approaching animosity." Margaret's unfailing sympathies were with Catholics accused of heresy: it was round them, not over real heretics, that she drew the cloak of her protection. Her position in this respect was in contrast to that of her friend and kinswoman Renée of France, Duchess of Ferrara, whom she might have resembled except for a good many reasons; her love for the King, her brother, being one. But this love, one may be sure, controlled her beliefs, not simply the avowal of her beliefs.

M. Lefranc thinks he has cleared up not only the mystery of Margaret's religious ideas, but also the mystery which has surrounded one of her poems, "*La Complainte pour un détenu prisonnier*." Some critics have believed the "prisoner" to be King Francis; some that he was the preacher, Gérard Roussel; some that he was an allegorical personage. It is of the smallest possible consequence who he was, since the obscurity of the poem deprives it of any real historic or personal value; but M. Lefranc has made himself happy by convincing himself that the unfortunate "I" (the poem is in the first person; Margaret borrows the voice of the prisoner) is Clément Marot. His proofs are not such as to carry much conviction to other minds, any more than his extraordinary assertions regarding Marot as "un conducteur d'âmes" and concerning "le caractère profondément évangélique" of his "activity." But the reader of M. Lefranc's

\*It is characteristic of M. Lefranc that, when editing this work two years ago, he misread in the MS. the constantly recurring word "ravis" and printed it "raïne." He now makes this correction in a note.

pages is not ungrateful for being startled into attention by such passages as these, and by his extravagant praises of Margaret's poetical achievements. A great, original Poet, a conscious, avowed Protestant—that is our author's conception of Margaret of Navarre.

*General Sherman.* By General Manning F. Force. [Great Commanders.] D. Appleton & Co. 1899.

This volume of a series intended to be an epitome for the general reader of the more elaborate histories of leading actors in the war for the Union, was begun, with love, by Gen. Force, a soldier of honorable service in the campaigns which he undertook to describe; but growing disease, from which he died almost at the time when the book was being published, compelled him to turn over his unfinished task to his friend Gen. Jacob D. Cox, who is, therefore, responsible for the latter (and, measured by the significance of its attempt to fix Sherman's fame among soldiers of genius, the more important) part of the biography. The completion of the work could not have fallen to better hands. Gen. Cox, an admirable officer in many of the campaigns which he describes, also enjoyed a long personal friendship with Sherman, such as gave Gen. Force a right to undertake the story of Sherman's life; and besides having been, before and since the war, an enlightened student of military history, he had written several notable books of discussion of the operations in Georgia and Tennessee, where Sherman won his most distinguished reputation. We have, therefore, an account of Sherman which, as it reaches the fields in which Sherman was a recognized and responsible leader, depicts with spirit and freshness of particulars the man of vigorous intellect, fertile resource, clear and prompt judgment of men and affairs, and attractive and noble personality, which will long cause him to stand out as one of the greatest of Americans.

The early portions of the book are of unequal satisfactoriness as a specific biography of the man. There are effective representations of the characteristic qualities which from the first marked him as an exceptional mind—his voracity for all sorts of useful knowledge, his quickness of decision in emergencies (as when he quietly disposed of an incipient rebellion against the newly constituted military authorities in California of 1847, by the settlers of Yerba Buena, afterwards San Francisco, by carrying off the candidate for Alcalde, around whom the rebellion was rallying); his courage and independence in withstanding, in the interest of the lawful mode of dealing with crime, the actions of the vigilance committee; his observations of the topography and food resources of the country around Marietta, Georgia, in 1844, which were to play so great a part in his conquest of that country in 1864; and the well-known case of military common sense when, in October, 1863, he insisted that, to hold Kentucky, at least sixty thousand men (not two hundred thousand, as the sensation-mongers reported it) were indispensable. But the campaigns of 1863 and '63, in which he was a subordinate officer, are rather devoted to repeating the thrice-told tale of Shiloh and Vicksburg for the purpose of settling disputed questions of those battles than, as we might have expected, to showing how they were the field in

which the new soldier was trained into that superiority to nearly all his associates, which he soon displayed.

The movement of the narrative, after Sherman's appearance at the relief of Chattanooga, in October of 1863, leaves nothing for criticism. Especially interesting are the accounts of Sherman's relations towards his peers, like Grant and Thomas. Thomas and he were West Point classmates, and, notwithstanding the frequent attempts of admirers and politicians to set them up as rivals, their mutual regard and loyalty continued unbroken to the end. When the March to the Sea began and Thomas was assigned the responsibility of taking care of Hood's army, and preventing his invasion of Kentucky, the distribution of troops between Sherman and Thomas was entirely satisfactory to the latter, although Sherman has received severe criticism for having left Thomas with the odds and ends of his army. But it was at the suggestion of Schofield that the Twenty-third Corps reinforced Thomas, and not as a result of any complaint of the inadequacy of his forces by Thomas, who wrote to Sherman that, with what troops had already been given him, he would undertake to deal with all his adversaries. The proverbial friendship between Sherman and Grant received but one shock during all the years of their public life, and that single break has its forcible moral for existing conditions in the conduct of the War Department.

One of the first acts of Grant upon becoming President was to order that change in the relations of the general in command of the army and the Secretary of War which the experience of Grant, and of all other commanding generals, had demonstrated to be imperative for the efficiency of the army and the self-respect of the general—that is, giving the latter officer actual instead of nominal command of the army, so that all chiefs of staff corps and all departments and bureaus of the army should report to him. Up to that time, as now, the Secretary of War received all the reports and issued such orders as seemed to him good, while the name of the general was signed to them as a mere ceremony. Sherman felt that he might now add to his other fame by carrying out this reform, with the assurance that President Grant would support the measures which, as general, he had urgently tried to bring about. The project of army reformation lived three weeks. Rawlins, Secretary of War, was too feeble of body and mind to resist the pressure of the wire-pullers and place-hunters who insisted that his office had been shorn of its rights and dignities, and on the 27th of March the earlier order of March 5 was rescinded by the President. Sherman, profoundly agitated, went to Grant for explanation and remonstrance, but the conversation, beginning with the old-time intimacies of comrades and friends, ended with the usual argument of the man who has been convicted of wrong—a petulant declaration from Grant that he could rescind his own orders when it seemed best. To which finally Sherman replied, dropping the phraseology of friendship: "Yes, Mr. President, you have the power to revoke your own order. You shall be obeyed. Good-morning, sir." Rawlins soon died, and the era of scandal under Gen. Belknap followed, and to this day the War Department is impervious to reform.

The March to the Sea, like all similar campaigns of living upon the country by

foraging, has been suspected of encouraging loose discipline. Two notable instances to the contrary are cited with regard to the beginning of the movement towards Savannah. A brigade of Leggett's division was assigned a place in the morning column of march, but, after two notifications to set out, was found unprepared. When camp was reached at night, the colonel commanding the brigade was ordered to report back to his regiment, and the brigade was distributed among other brigades. So a soldier of the Seventeenth Corps was ordered by court-martial to be shot for stealing a quilt, and he actually served his commuted sentence to the Dry Tortugas for the rest of the war. Whatever may justly be said of the vigor which was shown throughout the column of advance through Georgia in keeping the forces firmly in hand, the demoralizing influences of foraging have been proved too often to be offset by an occasional example of severe punishment. There is ample testimony of eye-witnesses that the contents of houses found deserted by their owners were often scattered to the winds in sheer wantonness of destruction; and the hosts of "bummers" who increasingly constituted an army without a head, were often, under the opportunities of plunder, a set of unscrupulous wretches who were not contented with the necessary forage, but took whatever caught their fancy. Authorized pillaging is warrantable only under the inexorable necessity of beating an enemy with all available weapons.

*A History of Bohemian Literature.* By Francis, Count Lützow. D. Appleton & Co. 1899.

It is now more than a century since literature began to shape the fates of nations to an extent entirely unknown before. It is asserted that the Finnish question arose from an interpretation put on a short sentence in Prof. Jellinek's work on state unions, published in 1882, and this is borne out by the repeated references of the friends and foes of Finland to that professor's utterance as the starting-point for all discussions. In a similar manner the growth of national consciousness in the disjected members of the Slavic race has given rise to that unusual intellectual activity with which Bohemians, Slovaks, Lusatians, Slovenians, Serbs, Croats, Bulgarians, have for less than a century taken part in the problems of European civilization. But this national consciousness is directly attributable to the preoccupations of a few learned men with the creations of the popular mind, as the outcome of the flood of romantic literature which has swept over Europe for the last hundred years, and dates its beginning from Macpherson's forgery of 'Ossian.'

Up to within fifty years Bohemian was the coarse dialect of a rude country population; men of polite society did not venture to speak their native tongue, for fear of being spat upon by their own countrymen. Only a few folk-lorists and historians, like Safarik, Hanka, Palacky, dared to write at all in Bohemian, in spite of the persecutions they had to undergo in consequence. There is a well-attested story of the time which tells of a gathering of a small number of friends at the house of the historian Palacky. The question was proposed: "What would happen to the regeneration of Bohemian letters and of the nation if the roof should fall and kill all present?" The unanimous opinion was

that it would have been the death-knell of the Bohemian language. This anecdote is literally true, for up to 1850 that literature was fostered only by a coterie of men whom the romantic spirit in literature had brought together for a common cause. Since then the development of the language has been remarkable, for with astounding rapidity it has ousted German from all branches of literature.

Previous to the fourteenth century, Bohemia can boast of a number of legendary poems, chronicles, and prose stories, not unlike those then current in Germany, of which they are frequently only remodellings or translations. Then began the religious awakening under the influence of the teachings of Wycliffe, which culminated in the Hussite movement. This period gave rise to a vast theological literature, most of it in Latin, but some also in Bohemian. The chief representative of that time is Huss himself. This department of literature was increased in the next two centuries by the controversial writings of the Brotherhood of Unity. After the downfall of Bohemia in 1620, Bohemian books almost entirely disappear, not more than a mere handful having been printed before our own century. The only shining light in the first half of the seventeenth century is Komenaky, better known by his Latinized name of Comenius, that great teacher and credulous visionary, to whom even the schools of the present age owe much. Only one hundred years ago Dobrovsky began to study the Bohemian language, and he became the forerunner of Slavic philology. Then the visionary Kollar, the learned Safarik, the historian Palacky placed Bohemian, so to speak, on its legs, and prepared the way for the present era. Not an inconsiderable amount of the enthusiasm of those writers, and of others as well, was derived from the manuscripts of Grünberg and Königshof, which are forgeries after the manner of Macpherson, and in which Hanka is said to have had a hand.

Two things must interest the average English reader in the history of Bohemian literature: the history of the religious awakening which received its impetus from England, and the development of belles-lettres in the present century. All else is rather of a special character, and is accessible to the scholar not only through native sources, but also through a number of German and English works, of which a succinct bibliography is given in the work under review. The former subject the author has well treated—in fact, too well, for he has devoted 350 of his 410 pages to the period preceding the nineteenth century. He has everywhere in view the English reader, and his references to England are prominent. The second subject is well handled up to the year 1850, after which the treatment must be regarded as a complete failure. Imagine the entire belles-lettres of the nineteenth century treated in a single page! Moreover, nearly all that space is given to the poet Vrchlicky. Mrs. Světlá, a name to conjure with among Bohemians, is but mentioned; Schulz, the historian, critic, and writer of charming novels, has no place here; of the development of the modern novel, of the boasted Bohemian stories of peasant life, not a word is said. And yet the author informs us himself that "the critics of the future will perhaps call the last quarter of the nineteenth century the 'golden age' of Bohemian literature." He cannot complain of a lack of works bearing on that period,

for there are the scattered articles of the Bohemian Tieftunk and the admirable work of the Pole Czajewski, the latter of which covers every detail of the period of regeneration up to 1886. One is at a loss to explain the idiosyncrasy of the author's procedure except on the ground that he had talked himself out in 400 pages, and was compelled to stop short. This is the more probable since his style is unduly familiar and discursive, and the many quotations from the older authors are unnecessarily literal and inelegant; the English reader can hardly recognize the meaning of such phrases as "A Pilgrimage to the Grave of God." Similar interlinear translations may do for the schoolroom, but they ought to have no place in a history of literature. Then, too, the typographical execution of the book is very defective, for more than half the diacritical marks are omitted, the Bohemian words are frequently spelled incorrectly (the most annoying of these mistakes being the ever recurring Bohoslav for Bohuslav), and worst of all is the entire absence of a guide to the pronunciation of the Bohemian names and words with which the work teems.

*Fashion in Paris: The Various Phases of Feminine Taste and Aesthetics from 1797 to 1897.* By Octave Usanne. From the French by Lady Mary Lloyd. With one hundred hand-colored plates and two hundred and fifty text illustrations by François Courboin. London: William Heinemann; New York: Charles Scribner's Sons.

This fashion book is a sumptuous piece of bookmaking. Its colored plates for each year of the century, and its myriad little black-and-white vignette illustrations of dress and pastime, throw a vivid light on life and manners. The illustrator has given to each of his drawings a background reminiscent of some appropriate building or pleasure resort, and finally the author has delved deep into the chronicles of the time to bring forth treasures, not of the fashions of clothes alone, but of the amusements and pursuits that have gone to the making of a century of Paris, both street and salon.

With the French, above all people, dress is inseparable from politics, history, and sociology, reflecting every new turn in public matters and every fresh intellectual revolution. From the wild and wanton pleasures of the Directory down to the athletic cast of the present nineties, every period has had its expression in costume. The people who, in reaction from the Revolution, instituted the "Bal des Victimes," with salutations and collures copied from the exigencies of the guillotine, would naturally rush into every extravagance of dress that the passing hour prompted. So, with Josephine, we find them reflecting in their gorgeous Eastern shawls and embroideries the Egyptian expedition. With the Restoration the fleur-de-lis reappears, and the foreign adornments that the presence of English, Russian, and Polish troops brought into vogue. In the year 1830, Romanticism in literature having become the fashion, a mincing style of dress, manners, and talk marks the Parisian belle; affectation in every form rules the hour. As might be expected, the rebound from the simpering, sensitive, Byron-reading woman of this pe-

riod was the "Lionne" of the forties, all restlessness and excitability, devoted alike to "sport, the turf, pleasure, and elegance"; reading her hunting and fashion gazettes with equal zeal, making her home luxurious, yet able to ride, shoot, smoke, with the best of her cavaliers. There was the Lionne fashionable, literary, and political. Of all the century's array of women she seems the likeliest ancestress to the active, unresting woman of to-day, rushing from her athletics to the extremest lengths of luxury. But her dress, reacting from that of the Romantic, who would have been historically clad under all circumstances, became individual, "though less faithful to local color"—the archaic color, that is, of her house decoration, which was one of her pet hobbies. The Lionne of sport ignored literature. She "does not seem to have been aware of the fact that Victor Hugo had just entered the Academy, that Alfred de Musset was publishing his poems, that Lamartine had plunged into politics"; that Mérimée, Théophile Gautier, Henry Heine, and Dumas were writing masterpieces. Hearts were steady, and "Love in fact, during this 1840 period, is only to be found in the student's Bohemia and among the populace." So-called "Snobisme," an "exaggerated parody of a certain class of English habits," stamped the time. The motto of "Lions" and "Lionnes" alike was "to seem, or not to be."

But with the stormy days of '48, the Lionnes depart, to be succeeded by two schools of fashionables, the "showy" and the "mysterious"; the former affecting the audacious in dress, the latter the artistic and the copying of famous pictures. "Mme. de M.'s becoming head-dress" was an "exact copy of the veil in the Vierge aux Raisons," with an addition of gold and spangles. The year '50 brings mention of an eccentric dilettante, Carnavale, who was the last man to walk the boulevards in colored habillements.

"His garb varied according to the weather, the color of his own thoughts, and the performances at the Italian Opera. When the 'Barber of Seville' was to be played, he put on a canary-colored coat; for the 'Tancrède' he donned an apple-green jacket; for 'Semiramide' he wore a red frock-coat; and for 'Lucia' he affected a sky-blue garment."

With the middle of the century he disappeared, leaving men's attire to darkness. And now the Second Empire looms in sight, with certainly the ugliest clothes that man can remember; due, says our author, to railroads, travelling, and the bringing to the front of parvenus and of the baser sort, who "inaugurated a reign of ugliness, of huckstering, of moral corruption, and vulgarity." The plates amply attest this statement, and give a curious illustration of the connection between bad morals and hideous costuming. The rule of crinoline is synonymous with one long offence against taste in dress and manners, ushered in by courtesans and by women of the great world, who aped their sisters of the lesser one. For fifteen years the world suffered under the crinoline and its attendant monstrosities of taste in art and manners. It disappeared just as the war of '70 darkened the horizon. With the opportunities of heroism during that awful year, the dress of Frenchwomen grew modest, and, for the moment, the same in all ranks. Veiled in crape, great ladies, nuns, and opera singers faced sorrow together.

Then, from '72 to '78, came political and industrial revival, leading up to the great Exhibition; and during these years France grew, as always after public disturbance, busy, prosperous, and gay. With Alsace and Lorraine to weep for, with peace to rejoice in, patriotism became the watchword of society. Interest in everything military, adulation of Regnault, of Erckmann-Chatrian, testified to the passion of the hour, and fashion reflected the sentiment in lines of Japanese simplicity, in styles quiet and uniform.

In another decade arrived the bicycle, and, "mounted on that iron steed, the last remnant of girlish shyness departed." The huddling and shouldering together of all classes is the symptom of the latest phases of Parisian life, as elsewhere; even in a book on fashions there is less to say of woman's clothes in the past five years than of her strides in the direction of art and science.

"Who can say," concludes M. Uzanne, "whether the Parisian of the present day represents the end of a race, the last expression of a state of being shortly to disappear,

or whether she should be accepted as an evident type of evolution, an embryonic form of the woman of the future, called to play her part in the birth of a new society?"

## BOOKS OF THE WEEK.

## IN THE DIAL'S LIST OF 100 BOOKS FOR SUMMER READING.

## ADRIAN ROME

A Contemporary Portrait. By ERNEST DOWSON and ARTHUR MOORE. 12mo. \$1.25.

In Adrian Rome, a London poet who allows circumstances to turn him from his ideals and make him a man of fashion, the authors have produced a notable character study. There are two love themes and vivid glimpses of university life at Oxford. The dialogue shows marked ability, and even the minor characters are strongly drawn.

## THE HOOLIGAN NIGHTS.

An Actual Criminal's Reminiscences. Edited by CLARENCE BROWN. 12mo. \$1.25.

Literature:—"An impression in Criminology as impressive as one. There is much humor in the book."  
Springfield Republican:—"An interesting and valuable chronicle of criminal ways, not unworthy the attention of serious students."

## GOD'S PRISONER

By JOHN OXENHAM. 12mo. \$1.25.  
Adventures in England and the Southern Seas.  
Dial: "One of the most captivating works of fiction that it has been our good fortune to read."

## HENRY HOLT &amp; CO.,

29 W. 23D ST., NEW YORK.

## PUBLICATIONS IN FRENCH.

Le Tour du Monde  
En Quatre-Vingts Jours

By JULES VERNE.

With English Notes by HERMAN S. PLATT of the Department of Romance Languages and Literature in the University of Illinois. No. 13 Romans Choisis.

12mo, paper, 373 pages. Price, 60 cents.

"An extremely amusing and instructive story, that will be found doubly entertaining in the original. Jules Verne is never dull, and to even an ordinary reader of French the extraordinary tale will prove full of interest."—*Evening Wisconsin*.

Complete catalogue on application. For sale by all book-sellers, or postpaid on receipt of price by the publisher,

## WILLIAM R. JENKINS

851 and 853 6th Ave. (cor. 48th St.), New York.

## Study and Practice of French in School

IN THREE PARTS.

By L. C. BOSNAME, 258 South 16th St., Philadelphia

A carefully graded course, meeting requirements for entrance examination at college. Practice in conversation and thorough drill in Pronunciation and Grammar. From Editorial Boston: "A well-made series. Teachers and pupils will find the three books helpful and interesting."

## Soule's Synonymes.

Houston's revised and enlarged edition. Now more indispensable to the writer than ever.  
Crown 8vo, cloth, \$2.00; half leather, \$2.50.

LITTLE, BROWN & CO., Publishers, Boston.

New Volume of Poems by the Author of  
"ADMIRALS ALL."

## THE ISLAND RACE.

By HENRY NEWBOLT.

Crown 8vo, \$1.00.

The London Daily Chronicle says: "It contains nothing better than the best things in 'Admirals All,' for the excellent reason that these things were perfect in their kind and could not be bettered."

## JOHN LANE,

140 Fifth Avenue, New York.

CLARENDON PRESS  
PUBLICATIONS.

For sale by all booksellers. Send for Catalogue.

OXFORD UNIVERSITY PRESS,  
(American Branch) 91 8th Ave., New York.

BOOKS AT LIBERAL DISCOUNTS. When calling please ask for MR. GRANT. Whenever you need a Book, address MR. GRANT. Before buying books write for quotations. An assortment of catalogues and special slips of books at reduced prices sent for 10 cent stamp.

EDWARD PROWSE, Proprietor.

# The Nation.

NEW YORK, THURSDAY, JULY 20, 1899.

## The Week.

In unconcealed consternation, our Imperialists at Washington and throughout the country discovered on Monday that their policy of suppression and deceit is a melancholy ruin. The exposure by the newspaper correspondents at Manila of the fraud which has been deliberately practised upon the American people, is the most terrible blow which President McKinley has received. For to him it comes back. This futile war in the Philippines is his war. If his underlings have acted like knaves or fools, they are still his underlings, chosen by him, kept in office by him, directed in all things by him. Attempt to dodge responsibility as he may, the American people know where to fix and fasten it. If they have been tricked into thinking this war on the Filipinos anything but a criminal blunder, if they have been steadily deceived as to its causes and course and the prospect of its speedy termination, William McKinley is the man to be held ultimately responsible. Politically, that is the most momentous inference to be drawn from the collapse of imperialistic lying, brought about by the united action of the American correspondents in Manila. There is really no surprise about the revelations. They came in a dramatic way, and will shock the country, but they only confirm indications which have been accumulating for many weeks. Private letters, talks with returned correspondents and volunteer officers and men, and information obtained from naval officers, all have pointed to the fact that official deception had been practised on a monstrous scale.

As for Gen. Otis, we think of him mainly as an unlucky subordinate blunderingly carrying out his orders. There can be no doubt where he got his inspiration to secrecy and deception. The phrases of his which the correspondents quote—that certain facts “would alarm the people at home,” or would “have the people of the United States by the ears”—show that he was acting not as a general but as a politician. That is, he was taking the White House view that this is “a Republican war,” and must be conducted not so as to win battles but to win votes. In this, Gen. Otis no doubt thought he was just as faithfully serving his master at Washington as he was by telegraphing the manifest absurdity the other day, that only the encouragement derived from anti-imperialists in America prevented the Filipinos from surrendering. That there was no mili-

tary reason for the censorship is proved beyond all dispute by the correspondents, who show that the very statements of fact which Gen. Otis would not permit them to telegraph to this country, lest somehow the news get to the ears of the Filipinos, were printed in newspapers in Manila which freely circulated among the insurgents. It is clear enough that Gen. Otis was acting in all this matter of the censorship from political motives, under political instructions from Washington. This is the main reason why the exposure leaves him, as a mere general, in so ridiculous a position.

Gen. Funston, who is frequently alluded to as the “Roosevelt of the Philippine war,” and who is undoubtedly the popular hero of that war, is credited with sentiments about it which are extremely likely to be regarded as “treasonable” at Washington. Mr. Wildman, our Consul at Hong Kong, represents him as saying, in a statement of his views, that there “should be a little less gunpowder and more diplomacy” in our Philippine policy; that a “little diplomacy at this time would go a long way towards settling the trouble and bringing peace and prosperity to these unfortunate islands”; that, strange as it may seem, he is “almost a peace-at-any-price man”; that “when life and property can be saved, it is almost crime not to follow that rule, whatever may be the circumstances arguing against it,” and that, though he is a Republican he is an anti-expansionist, but not a bitter one. His view of the future possibilities of the islands seems to touch upon some of the hidden forces which are behind this extraordinary “war for humanity”:

“Big syndicates and capitalists will be greatly benefited by the retention of these islands, but, outside a few exceptional individual cases, I can see no advantage in their possession by the United States. The islands are so thickly populated and labor so cheap, there certainly is no inducement for the American laborer.”

Secretary Wilson of the Department of Agriculture confirms this view of syndicates and capitalists by his glowing picture of Old Glory floating over the butter cans of the Pacific Coast, which the Filipinos will buy by thousands after they have been subdued.

Washington confirms, albeit with a little shame, the statement from Manila that this Government is going to subsidize the Sultan of Sulu. Not only that, it is going to make him a little present of \$10,000, or so, to start with, just to put him in a good humor. This is a good deal of a novelty in the way of republican government, but the State Department officials put on a grave face and

say that here is a shining proof of our sincerity in promising to give the Philippines self-government. The dear public, how it does like to be humbugged, if it swallows this! Anybody who reads Foreman or Worcester can see for himself the kind of “self-government” which the island of Sulu enjoys under its Sultan. It is the regular system of Mohammedan absolutism. The plain truth is, that the Administration has its hands so uncomfortably full in Luzon that it is appalled at the idea of having to fight in Sulu also. So it comes down with the dust, and tells the Sultan to do whatever he pleases in the way of oppression and arbitrary rule if he will only fly the American flag.

The report comes from Boston that the Republican machine in Massachusetts will oppose the reelection of Senator Hoar because he is not in harmony with the Administration on the subject of the Philippines, and because he (Hoar) is reckoned an anti-imperialist. It seems to us that it would be wiser for the machinists to wait and see what the McKinley policy is, before throwing Senator Hoar overboard. It may prove that McKinley is in harmony with Hoar. Such a vacillating person is liable to turn up anywhere at any time. It would be most embarrassing if Senator Hoar and all the Massachusetts Republicans who agree with him were read out of the party for anti-imperialism, and at the last moment McKinley himself should turn around and become an anti-imperialist also. However that may be, Senator Hoar cannot change his position. He has won a crown of exceeding glory by upholding the Declaration of Independence as a document of world-wide truth, applicable to all people struggling for liberty, whether white or black, whether the Malay or Caucasian, whether of the New World or of the Old. If Massachusetts throws him overboard for this reason, the dishonor will be great, but it will be all her own.

Unwitting confession of wrong-doing is often more conclusive than open beating of the breast and acknowledging one's self a miserable sinner, and this is what we are now getting from the Administration. Its virtuous declaration that all the commissions for the volunteer army are to be given strictly for merit, is indirectly the plainest kind of admission that its different course last year was all wrong. One of its thick-and-thin defenders has a dim perception of the awkwardness of praising the new departure, and inserts a solemn explanation that to laud the new method is not to admit that the old method was nefarious. But if the old way of handing

over commissions to a "pull" or a purse was commendable, why abandon it? That is what the politicians are asking who are now overrunning the White House in search of military appointments. If their demands must be refused this year, as calculated to injure the army, why were they not refused last year for the same reason? If a stern sense of duty compels the President to appoint only experienced and capable officers now, where was his sense of duty last year?

The baleful effect of President McKinley's act in removing 10,000 offices from the merit system at the instance of the spoilsmen finds a fresh illustration in the resolutions adopted by the Republican State convention of Kentucky on Thursday. The politicians there assembled hailed the new order with delight. They so far forgot themselves that they repudiated that part of their own national platform which relates to civil-service reform, although it is binding on the party until repealed or until a new platform is adopted. They forgot, also, that Mr. McKinley, or at all events his Secretary of the Treasury, adheres to the St. Louis platform, and maintains that the recent executive order is not in conflict with it. These trifling incongruities were not noticed by the Kentucky politicians. They went to the heart of the matter at once, and passed two resolutions on the subject, viz.:

"We reaffirm our adherence to principles and to policies proclaimed by the last national Republican convention, except as to the civil service."

"We commend the present amendment of civil-service rules by the President, and declare our belief that further modifications of existing civil-service legislation may be made with advantage to the public service."

For the purpose of contrast, we reprint the clause of the last Republican national platform, which the party in Kentucky now repudiates in express terms:

"The civil-service law was placed on the statute book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced, and extended wherever practicable."

An edifying controversy sprang up last week in New Hampshire, when Senator Chandler and Senator Gallinger appeared on opposite sides in a prosecution of the latter for levying contributions on federal office-holders for campaign purposes. This is a violation of the civil-service law, and ex-Governor Busiel took the initiative in calling Gallinger to account for it. Gallinger thought that Chandler had inspired this movement against him, and he asked in the preliminary investigation whether that was not the fact. When it came Chandler's turn to testify, he said that he had withdrawn from membership of the cam-

paign committees of his State on account of the passage of the civil-service law, and had advised Gallinger to do the same, and that when he found that Gallinger was assessing federal office-holders he left the committee rooms altogether. This was very becoming on the part of Chandler, and we set it down to his credit that, although not a friend of the civil-service law, he would not openly violate it or countenance its violation by remaining in the company of those who were levying assessments on office-holders.

The real significance of the row between these worthies is the neglect and contempt into which the whole civil-service law has fallen under the present Administration. As we have repeatedly shown, the system had been honeycombed, through unrebuked violations of the law, long before Mr. McKinley threw off the mask in his order turning over 10,000 offices to the spoilsmen. It is well known that case after case of flagrant disregard of the civil-service law and regulations has been brought to the attention of the President, who has effusively thanked and flattered his informants, and then done precisely nothing to bring the offenders to justice. With the Chief Magistrate thus consenting to see the law made a mockery, what wonder that senatorial bosses like Gallinger should go back unblushingly to the old system of blackmailing federal employees? The violation of the law in New Hampshire was notorious. A copy of the assessing circular, with Senator Gallinger's name on it, was produced. Now such assessments are criminal. A statute of the United States so declares, and provides a penalty of \$500 for each offence. It is a statute, moreover, which was enforced under President Arthur, and offenders convicted. A vigilant Executive, eager to put down this form of crime against the United States as well as all others, would long ago have instructed the United States District Attorney to look into the matter and see that the law was respected and enforced. But Mr. McKinley has been so busy sending greetings to the Christian Endeavor Convention that he has had no time to attend to his sworn duty.

The importers of Swiss embroideries, in their proceedings to test the law under which Appraiser Wakeman acted in his harassing movements against them, drew out some facts of importance last week. One was, that the Collector of the Port did not, of his own motion, order a reappraisal of the goods; that he was satisfied with the first appraisal, but that he was instructed by Mr. Howell, the Assistant Secretary of the Treasury, to order such reappraisal. The law does not authorize the Assistant Secretary, or anybody except the

Collector, to order the reappraisal of goods that have once been passed. The question which the Board of General Appraisers have now to pass upon is, whether the Treasury Department is vested with such general powers of oversight that it can contravene or supplement the mandate of the law relating to the importation of merchandise in such a way as to inflict losses upon merchants for which they have no remedy. We trust that this question may be brought before the courts, and that it may be made known whether there is any limit to the persecution of that portion of the community whose business supplies the Government with two-thirds of its revenue.

The republic of Mexico desires to consolidate its debt in a 5 per cent. gold bond to the amount of about \$110,000,000, of which about \$25,000,000 has been allotted by the contracting syndicate to the United States and Holland. The remainder goes to England and Germany. The loan has been underwritten by the syndicate of which the American branch is the house of J. P. Morgan & Co. The amount allotted to this country is small, but it has some significance in the fact that it is the first introduction of foreign government loans to this market. It may have a further significance as being the first step of the republic of Mexico towards the gold standard. Mexico has the double standard in law, but the single silver standard in fact. All her revenues are collected in silver, and all her obligations are paid in that metal except such as are made specifically payable in London or Berlin. We shall hope to hear from our silver doctrinaires on this subject in due time. Senator Jones of Nevada might well devote a couple of days to it, and Mr. Charles A. Towne of Minnesota might prove to the satisfaction of himself and George Fred Williams that the gold standard can never be adopted in Mexico even if her people and rulers desire it.

The American-China Development Company is one of the evidences of the superabundance of capital in the United States for domestic use. The surplus which has been accumulating since our own Western territory was supplied with rather more railway mileage than was needful, must and will find an outlet. China presents a field that is inviting in the sense that it is a country of large resources as yet undeveloped. It is not yet known publicly what kind of a charter the American company has obtained for a railway from Han-Kow to Canton, or what, if any, obstacles have been put in the way of its realization by the Chinese authorities. It is reported from Washington, however, that Minister Conger has been instructed to use his good offices and influence to secure the effectual carrying out of the contract,

and the securing of other privileges of trade and investment in the Celestial Empire, but not to take joint action with any other Power in such a way as to form an international engagement. To this there can be no objection.

That a large increase in importations of foreign goods follows a year of extraordinary domestic prosperity and profit has often been manifested in our history. It is not surprising, therefore, that imports for the fiscal year 1899, as last week's statement shows, have increased \$81,027,000 over 1898. Nevertheless, the total importations of the year are smaller by far than those of any year in the decade past except 1898 and 1894. Two explanations are advanced for this remarkable result. Now and then, some belated protectionist will point with pride to the Dingley law as the cause of our relatively slow recourse to foreign markets. But this explanation can be easily blown away. Of the eighty-one millions increase in importations, seventy-two millions came from dutiable goods. In the similar trade year, 1880, under a similar tariff, imports increased no less than \$222,000,000, or nearly three times their present increase. Furthermore, the folly of talking of protectionist barriers when our own manufacturers were invading the foreign markets, is so plain that he who runs may read. The simple fact, proved as conclusively by our export trade as by our imports, is that American capital and American ingenuity have so far broken the fetters of protection that we no longer depend on foreign markets to meet an increasing home demand. This year, it is the foreign markets, even for manufactured iron goods, which depend on us to make good their shortage. Last May's report, which showed for the eleven months an increase of \$45,000,000 in imports of raw material for the use of our own exporting manufacturers, gives a hint at the great industrial change which has been in progress.

What is most likely to strike the reader's attention, in the foreign trade statement for the fiscal year ending with June, is the fact that the total export trade virtually shows no decrease whatever from the fiscal year 1898. Such a result would hardly have been predicted, a year ago, by any experienced observer. The corner in wheat had then collapsed. Exportation of cereals from the United States had fallen to barely half the monthly average of May and June. The European famine and the European alarm over a possible blockade of wheat supplies were both ended. Europe, through its urgent purchases of our wheat in May and June, had raised its own storehouse reserves nearly fourteen million bushels beyond their total of the year before, and this great in-

crease in the supply at hand came at the moment when European farmers, for the first time in three years, were reaping an abundant grain harvest. A heavy decrease, both in quantity and in value, of agricultural exports from the United States was thus inevitable. Since agricultural shipments had made nearly 70 per cent. of the total American exports in the fiscal year 1898, it was natural to expect a rapid decrease in our export trade. As a matter of fact, agricultural exports in the fiscal year just ended were less by nearly \$86,000,000 than in the fiscal year 1898. But what had not been reckoned on by the commercial prophets was the sudden development of a world-wide famine in iron, which, like the wheat famine of 1897 and 1898, was by far most acutely felt in Europe. The result was an increase in our steel and iron shipments for eleven months, shown by the May report (the latest classified summary available), exceeding by \$21,000,000 those of the similar period in 1898. Simultaneously, the foreign demand for other commodities of manufacture expanded rapidly, and the increase during the fiscal year, in all manufactured goods, can hardly have fallen short of \$50,000,000. A similar increase in the foreign demand for products of the mines raised the total exports almost to the level of 1898.

When the Tammany rank and file grasp the full meaning and effect of the new rules and regulations which the State Civil-Service Commissioners have prepared for this city, they will not only agree with ex-Senator Plunkitt about the "civil-service curse," but will, unconsciously, of course, parody the exclamation of Shylock by saying the "curse never fell upon Tammany till now"! The State Commissioners have eliminated most of the concessions which they made in the conference with the City Commissioners, greatly reducing the number of places which are to be exempt from competitive examinations, and placing in the competitive class many which have hitherto not been there. They have also taken from the appointing powers the right to set aside persons heading the eligible lists and to substitute others for them, and have inserted such perfectly fiendish requirements as that causes for removal must be filed, and that sworn certification must be made that an office-holder has actually done the work for which he is paid a salary, before he can get his money. There will be groans and writhings in Tammany when this "curse" falls, and the feeling towards Mayor Van Wyck, who made it possible, is not likely to be kindly.

An acute English statesman said long ago that Mr. Chamberlain was the nearest approach to an American politician

known in English public life. Recent occurrences will not make that opinion seem less just. There was the revelation in Parliament the other day that Chamberlain owned stock in the Niger Company, just bought up by the Government. He confessed a certain indelicacy in the situation, but indignantly repelled any suspicion of official impropriety. Yet it is matter of public notoriety that he visited with severe denunciation another public officer for doing the same thing. But he jauntily puts this all aside in a manner that is not only American but Blaineish, which is, of course, another way of saying "intensely American." And he has a true American agility in slipping away when "cornered." Thus, in the debate a little while ago on the Indian sugar duties, Sir Henry Fowler produced a formal opinion by Mr. Chamberlain, both as public man and as economist, flatly opposed to the course which he is now eagerly advocating. But did this trouble the Colonial Secretary? Not in the least. Why rake up his old speeches? Whatever he may have said in the past, *this* is what he says now, and honorable gentlemen who differ with him had better look out or they will lose their seats. Truly, the sincerest flattery—by imitation—of the ways of the American politician.

English war preparations go on, but it is difficult to see how there can be a war with the Transvaal. Mr. Chamberlain thinks that President Krüger's concessions respecting the franchise for the Outlanders are tricky and may be illusory in practice; but the Prime Minister of the Cape declares, on the contrary, that they are generous and satisfactory. This must have great weight with English public opinion. Though the Government is plainly determined to be ready for the war, if war must come, yet it just as plainly expects a peaceful solution. One curious item in the war measures is the announcement that the English troops are supplied with the Dum-Dum bullet. This shattering missile has been defended as necessary for use against savages, and on that ground alone the English delegates at The Hague voted that it might be used in war. A civilized soldier, when he gets a small-calibre steel bullet through his diaphragm, knows enough to stop right where he is. But Zulus and Dervishes and Pathans rather like being made a sieve of in that way, and come rushing on as before. Hence the necessity of a ball that will "stop" them when it hits. But how about the Boers? Is the use of the Dum-Dum against them intended as an insulting suggestion that they are no better than savages? Or will they take it as a tribute to their prowess? It seems a very doubtful form of compliment, as well as, we must say, a very doubtful proof of England's desire to make war "humane."

## THE SILENCE OF M'KINLEY.

Among the great men to whom the President's adulators compare him, simply by way of showing what a composite picture of greatness he is, we often see the name of Lincoln. That patient and humor-supported man, having gone where envy is extinguished, will not feel outraged by the comparison; and his admirers can afford to smile at it as he might have done. But they may, however, even granting the asserted likeness, reluctantly point out some differences. Perhaps the chief one, which instantly turns the comparison into contrast, is to be found in Lincoln's habit of freely informing the country of his plans and policies; of frankly and in person answering criticism; of pursuing, in short, the method of reasonable publicity.

It is said that the President resembles Lincoln in carefully watching the development of public opinion, and never getting too far in advance of it. McKinley's friends proudly accept the description of him as a man with "his ear to the ground." It shows how like Lincoln he is. Well, if it is true that Lincoln listened, it is also true that he gave people something to listen to. His public utterances were as frequent as they were frank. One has only to run over the index to Hay and Nicolay to see how numerous are the letters which Lincoln wrote and published to explain and defend his policy. His letter to Greeley of 1862; his letter concerning Vallandigham's arrest and imprisonment; his great letter to the Illinois Republicans in 1863—"The Father of Waters again goes unvexed to the sea"—all are specimens. It was Lincoln's habit, at strategic moments and under adverse criticism, to throw out these letters of his which were truly half-battles. He not only followed but formed public sentiment.

Now no one could reasonably ask Mr. McKinley to write letters worthy of being named the same day with those of Abraham Lincoln, one of the greatest masters of style that ever lived. Any man living might well shrink from that comparison. But if the President cannot be expected to put pen to paper and rout his opponents as Lincoln did, he can at least be expected to say something. It will not do for him to fall back on the dignity of his office as a justification of his silence. Lincoln did not make the same office undignified by his way of speaking out in person. In critical times like these, when so many questions of domestic and foreign policy are hotly debated, it is the duty of the President to take the people into his confidence; it is their right to know what he thinks and means to do. But where Lincoln was ready and willing to tell what he thought and intended, McKinley wraps himself in silence as in a garment.

Take the civil-service order. Expert reformers agree with expert spoilsmen

that it is a step not only backward, but downward—not only off the platform, but into the mud. Various half-hearted and inconsistent explanations have been attempted by McKinley's subordinates, but he himself remains dumb. Why does he not come forward in person to defend the order, if it can be defended? A special duty to do so is laid upon him. He has not always been so voiceless about civil-service reform. He spoke and voted for it in Congress. He committed himself to it explicitly in his letter of acceptance. Yet thousands of his friends and supporters are sorrowfully saying that his acts have eaten his words. Can any one imagine Lincoln remaining silent under such circumstances? Is it "dignity" on McKinley's part, or is it confusion of face and uncertainty and dismay? He may be sure that as long as he says nothing, people will think the worst.

As to his Philippine policy, the case is even more flagrant. All the light the President has given us on that subject is but darkness intensified. His brief references to it in his message to Congress, his studiously non-committal speech in Boston, and his car-platform platitudes in the South are all we have to go upon, and they do not get us forward one inch. What Mr. McKinley is now doing in the Philippines, what he means to do, the country does not know. His angriest defenders do not agree in their statements of his policy. Is he going to kill the Filipinos with kindness or with bullets? Is he going to buy up Aguinaldo as he has undertaken to buy up the Sultan of Sulu? Is his policy peace or a sword? The country is left in blank ignorance about all this. The oracles are dumb. McKinley lies with his ear glued to the ground, but not one stroke does he himself give to convey a vibration to the ears of others.

This persistent and astonishing silence of the chosen leader of the people, when so great a crisis is upon us, is susceptible of various explanations. We think the most plausible one is that the President does not speak because he has nothing to say. This was Sydney Smith's explanation of the taciturnity of Englishmen; they kept still because there was nothing in their heads. If Mr. McKinley cannot defend his civil-service order, no doubt his true plan is silence, and mighty little of that, as the Irish magistrate said. If he has no Philippine policy except one of drift, he is wise to keep close-mouthed, and, like Hotspur's wife, refuse to utter what he does not know. His silence is a good deal of a puzzle if he is a second Lincoln; but there is a theory of portentous and solemn silence which an increasing number of people are saying exactly fits McKinley's case. It is laid down in Shakespeare:

"O my Antonio, I do know of these  
That therefore only are reputed wise  
For saying nothing, when, I am very sure,

If they should speak, would almost damn those  
ears  
Which, hearing them, would call their brothers  
fools."

## IT WAS A "BACKWARD STEP."

In one respect it is to be regretted that proof of the inaccuracy of Secretary Gage's defence of President McKinley's recent civil-service order is so abundant. It swells the answer which the Secretary of the Civil-Service Reform League makes, to such a volume as greatly to reduce the number of persons who would naturally be inclined to read it. Yet every word of it is well worth reading, for there is scarcely a sentence in it which does not contain an item of proof that the President has violated his most solemn pledges, and that the worst offender in breaking down the law is Secretary Gage himself. Whoever else may be fitted to speak as an authority on civil-service reform, Mr. Gage clearly is not. He has been one of the worst enemies, if not the very worst enemy, the cause has had in official life since the original law was enacted.

In formulating his evidence that the President's order is a "backward step," and does restore to the spoilsmen a large number of places which had been taken from them, Mr. McAneny has very wisely put the proceedings of the Treasury Department first. Secretary Gage invited this distinction when he made himself the champion of the President's course; but if he had not done so, the record of his department so far eclipses all others in assault upon the system that it is thereby entitled to first place in the assembling of the proof. Whatever else he may read, or omit to read, we entreat every one interested in good government to peruse carefully the passages in Mr. McAneny's reply which relate to the conduct of the Treasury Department. Mr. McAneny shows, in the first place, that Secretary Gage, when he entered upon office, found the Internal Revenue Service wholly subject to civil-service rules; that he began, long before the recent order was issued, to permit such violations of the law as freed a large portion of the service from these rules, and that at present the entire service has been restored to spoils politics. When it is remembered that, under our new internal-revenue laws, the chief portion of the income of the Government, aggregating no less than \$276,000,000 during the year ending July 1, is collected through this branch of the service, the full meaning of this betrayal becomes apparent.

In the second place, Mr. McAneny shows how, under the guise of war-emergency appointments, the rules have been broken down so completely, by one piece of hostile legislation after another, that all appointments, in both the Treasury and War Departments, are now made without competitive examination. All temporary appointments, of which there

have been a great many, have been made permanent by the President's order. In instance after instance where the law was violated, Secretary Gage, though requested to interfere and assert his authority to enforce the law, has declined to do so. The mass of evidence against him is overwhelming, and furnishes melancholy reading for reformers who thought they had a champion of the first order in Mr. Gage when he was made Secretary.

The original charge of the Civil-Service-Reform League, that the President's order withdraws fully 10,000 places from the classified service, is shown by official records to be strictly accurate. Equally conclusive proof is advanced in support of the League's other charges. Temporary appointments are shown to have been made permanent, and persons appointed after passing one of the lower grades of competitive examination are being transferred, after a "pass" examination only, to higher grades. "The effect of this practice," as Mr. McAneny says, "is likely to be that the higher grades, in time, will be placed on a virtually non-competitive basis"—that is, the whole system will be overthrown. This destructive process will be assisted by the other provision of the President's order which permits the reinstatement, at the discretion of department officials, of persons who have been removed from the service for any stated reason. This opens the door for the return of incompetent and unfit men, and nobody who knows anything about politics will question that the opportunity will be fully improved.

We have given only a cursory and incomplete outline of Mr. McAneny's reply. He devotes small space, and very properly so, to Secretary Gage's ingenuous contention that the opportunities which the President's order gives for evasion of the law will not be improved because the Administration does not intend to use them. If the power was not intended for use, why was it conferred? Has it not always been the chief aim of every spoilsman to "beat the law," if he could? Is it not a fact that every opportunity to "beat" it which the new order affords is already being improved? And this is not the worst aspect of the situation at Washington. Mr. McAneny declares that, for the first time since the National Civil-Service Commission was created, access to its records has been refused to him, because he wished to find there proof of the Administration's bad faith. This fact, coupled with the spectacle of a Civil-Service Commissioner, appointed by President McKinley, defending publicly this "backward step," shows clearly enough what the friendly professions of the Administration towards the reform are worth. The first step towards the overthrow of the entire system has been taken, and all efforts to disguise the crime or confuse the

public judgment about it will be unavailing.

#### RESPONSIBILITY OF LAWYERS AS CITIZENS.

The recent meeting of the Bar Association of Pennsylvania was in several ways of unusual importance. Mr. Hornblower's address was itself worthy of public attention, and the fact that he was heartily applauded for defending the political ideals which have distinguished our country, is extremely encouraging to the truly patriotic. To the mass of the people the Constitution is but a meaningless name. To most of the educated it is a technical term, which they can perhaps define, but do not comprehend. To lawyers, however, such an instrument is full of the profoundest significance. They know what wonderful skill, what patient thought, what prolonged labor, were employed in its fabrication, and they alone can fully appreciate the prodigious blessings that have resulted from its existence. They are in position to understand the mischief that will follow from disregarding it, and they, more than any other class, can effectively protest against its violation. They are called on as citizens to use their professional skill in the public interest, just as doctors are called on for similar exertions in times of pestilence. The more they uplift their voices, like Mr. Hornblower, the sooner will sane counsels be listened to by our politicians.

As an illustration of what can be done in the way of procuring better laws by combined and persistent professional action, the report of the committee on uniform legislation may be referred to. It is now about eight years since this matter was seriously taken up by the profession, and in many of the States Commissioners have been appointed whose conferences have had very substantial results. Legislatures have been brought to recognize the importance of enacting laws with some reference to those already existing in neighboring communities. Bills have been perfected which systematize the acknowledgment and execution of written instruments, the sealing of deeds, the execution of wills, and the law of negotiable paper. Some States have already adopted these bills, and, the way having been broken, other States will more easily be induced to follow. Here, we may fairly say, we have genuine reforms due to a recognition by lawyers of their responsibility as members of our society.

This illustration serves to give additional force to the address of Justice Mitchell of the Supreme Court of Pennsylvania. His theme was "Fidelity to Court and Client in Criminal Cases." He referred to the alarming increase of crimes committed, not by the criminal classes, but against them, which go under the general name of lynch law. This

description of crime he attributed largely to the feeling of impatience with legal delay, and distrust of the enforcement of justice. "Men not criminals themselves in intent refuse to wait for the law, and commit crime in the name and for the purpose of justice." The number of homicides in the country at large is appalling. No very trustworthy figures exist, but those which are presented may be reduced one-half and the result is still frightful. Judge Parker of the United States District Court, Arkansas, states that from 1890 to 1895, inclusive, there were nearly 44,000 homicides in the United States, while in the same period there were 723 legal executions and 1,118 lynchings. The Attorney-General has reported to Congress that in a single year there were 10,500 homicides, 100 convictions of murder by the courts, and 240 executions by illegal agencies. Judge Hillyer of Georgia declares that in 1896 there were more men murdered than fell at Gettysburg. Many States are comparatively free from this stain of bloodshed, but in Ohio, and Indiana, and Illinois there have been episodes that indicate the existence of dangerous tendencies.

As one cause of this deplorable blot on our civilization, Justice Mitchell did not hesitate to assign the inexcusable delays of the law. It has long been recognized that the efficacy of punishment as a deterrent from crime depends more on celerity than severity. Lawyers are always present in our legislatures, and they can generally shape laws as they desire. In the administration of justice they have almost complete control. Were they to devote themselves to accelerating the course of justice, they would be successful. Lawyers are often unjustly blamed, as individuals, for delay in bringing cases to trial. But for delays and hindrances and obstructions in the course of the trial and afterwards, Judge Mitchell said, counsel must accept the heaviest responsibility. They have a duty to the court as well as to the client. "Counsel represents the prisoner to defend his rights. In so doing he is bound to exercise competent learning, and to be faithful, vigilant, and resolute. But he is at the same time an officer of the court, part of the system which the law provides for the preservation of individual rights in the administration of justice, and bound by his official oath to fidelity as well to the court as to the client."

While individual lawyers were to blame for abuse of their position, Justice Mitchell held that the criminal law was full of unreasonable technicalities. Under the sanguinary code of an earlier day, these technical devices protected the interests of humanity, but under our milder laws they merely defeat the ends of justice. "The bar must take care that it shall not fail of its proper share in the right establishment of a new order

of things, lest a whirlwind of popular impatience and distrust shall sweep away not only the hurtful obstructions, but with them some barriers that are true safeguards of innocence." These are wise words. They are addressed to those who are peculiarly responsible for the preservation of life and property from violence. If there is to be any reform, it must be carried through by lawyers. If lynching is to be checked, it must be by means of such reform. The profession is called on to act, both by its own members and by the laity. As they have shown what they can accomplish in other directions, let them now direct their efforts to this end. It may be called a "parochial" question; but 10,000 homicides a year is a phenomenon large enough to demand serious consideration.

#### COURTS AND COMBINATIONS.

The signs are abundant that the politicians of both parties will declare war against what they call "Trusts." The term "Trust" has established itself in the political vocabulary, and lack of significance will not displace it. It is a substitute for the "money power," a term which has done service for so many years that it may be regarded as worn out. The "money power" was the great bugbear during the early part of the century; and when Jackson was carrying on war against the Bank, the fury of the demagogues over the diabolical malignities of wealthy corporations exceeded the present display. The real object of attack then was accumulated wealth, and that is the object now. Corporations are denounced, but it is, of course, the men composing the corporations and owning their wealth that are really guilty, and they are capable of oppressing the people severally as well as by combination.

The obstacles which the demagogues will encounter when they undertake to legislate against combinations of capitalists are set forth in a judgment recently pronounced by the Court of Errors of New Jersey. A number of concerns engaged in making pottery in that State were bought and their works carried on by a corporation; a condition of the purchase being that the men bought out should not engage in the pottery business again within fifty years, except in a few remote States and Territories. Having received their money, some of these men proceeded to establish new potteries, and to compete actively with the larger corporation. On application by the latter, the Court of Errors held that the operation of the new potteries by these men should be enjoined. Their only justification for refusing to be bound by their contract was that such a contract was contrary to public policy, and the Court of Errors held that it was not.

For, in the first place, it was shown that a contract by the vendor of a business and its good-will that he will not compete with the purchaser, although a contract in restraint of trade, is not opposed to public policy when it is not absolute, and is reasonably required for the protection of the purchaser in his enjoyment of the business purchased. On any other principle, the good-will of a business would have no market value. No one could afford to pay anything for it if the seller could at once resume it. As Sir George Jessel said: "If there is one thing which more than another public policy requires, it is that men of full age and competent understanding shall have the utmost liberty of contract, and that their contracts, when entered into freely and voluntarily, shall be held sacred and shall be enforced by courts of justice." In other words, freedom of contract is more important than almost anything else. To allow a person to enter into a contract, obtain the benefits of it, and then repudiate his obligations under it, is, as another English judge has said, "*prima facie*, at all events, contrary to the interests of any and every country." And so our Federal Courts have held that the burden is on him who would avoid a contract because it is against public policy. Unless the Legislature is prepared to enact that no sale of the good-will of a business shall be valid, it cannot enact that no agreement not to compete in business shall be valid; or rather if it enacts the latter rule, this involves the former one.

Furthermore, if a man may lawfully buy the good-will of one business, how shall he be prevented from buying that of two? And if he may go so far, why may he not go further, and finally acquire all the concerns engaged in a particular industry? In the New Jersey case, it was urged that the five potteries bought were the only ones in the country making what is called sanitary ware, which has become one of the necessities of life, and that the intention of the purchaser was to obtain a monopoly. Shall the Legislature then enact that no one shall buy all the factories making a certain necessary thing? Or shall it be lawful to buy all but one or all but 10 per cent. of them? And shall it forbid the purchaser of a part to have any interest in the remainder? Or shall there be unlimited freedom of purchase if the purchaser does not intend a monopoly? And who is to tell, and how, whether he does or not? According to the New Jersey court, "the contracts in question were not intended to withdraw, and do not appear to have withdrawn, from work a single workman in that industry. They restrain a comparatively small number of capitalists, who had previously employed their capital in such manufacture, from continuing to do so. The entire capital of the country,

except theirs, is free to be employed in the manufacture." There was no proof that the public would suffer under such a consolidation as was effected.

The situation had no peculiarity because a corporation did what an individual might do. The New Jersey law authorizes a corporation to buy the stock of another corporation. If such purchases are prohibited, as has been elsewhere done, individuals may make the purchase, and organize a corporation afterwards to carry on the business. What the demagogues must do, if they wish to prevent the carrying on of business by combinations, is to forbid not only corporations but also firms and individuals from agreeing to carry on any industry. Unless this is done, individuals will direct the policy of competing corporations by controlling their stock. Such management may be inconvenient and expensive, but it is possible. The cost of production would be increased, and the public would have to pay a part at least of the increased cost of products. Perhaps we shall try the experiment, but it is doubtful if the public will like the results of the policy after it is adopted. All coöperation involves combination, and it is not yet the fashion to denounce coöperation. Combination on a great scale is the consequence of doing business on a great scale. It results from the great accumulation of wealth in modern times. Our governments can do much to hinder the accumulation of wealth, and thus limit combinations. We have yet to see how they can otherwise prevent them; nor is it easy to frame a statute against great combinations without including small ones.

#### TAXES AND INTEREST.

It was laid down as a maxim by Adam Smith, that wherever a great deal can be made by the use of money, a great deal will commonly be given for the use of it; and that wherever little can be made by it, less will commonly be given for it. Hence it may be inferred, in a rough way, that profits vary with the rate of interest. Accepting this rule, we cannot fail to be impressed with the decline that has taken place in the rate of profit in this country within the last twenty-five or thirty years. Before 1873, seven per cent. was a common rate for money loaned on bond and mortgage in the city of New York, and a not uncommon rate for railroad mortgages. Five per cent. was a rate hardly thought of even by persons and corporations enjoying the best credit. As money was freely borrowed at those rates, it would follow that the average rate of profit was from 12 to 15 per cent., taking the country at large. In many lines of business, and in certain parts of the country, the rate was higher than this; but in the older and richer regions this rate was probably not generally exceeded.

At the present moment, the rate of interest is little, if any, more than one-half what it was in 1870. A great deal of money is loaned at 3 per cent., and many very large issues of 3½ per cent. bonds are quoted above par. Frequently the rates for call loans are even lower, and the lending capacity of the country seems to be unlimited. Under these circumstances we know, *a priori*, that the rate of profit must fall. Competition settles that. If money can be borrowed at 3 or 4 per cent., there are plenty of alert men who will borrow it and undersell those who are trying to maintain the old-fashioned rate of profit. Whether profits of 6 or 7 per cent. are sufficient to content the ordinary business man cannot as yet be accurately determined; but under present conditions the average rate of profit cannot long be maintained above that figure. The firm or corporation that can earn, year in and year out, 7 per cent. on its capital, is doing as well as can be expected.

Such a decline in the rate of profit has necessarily many important economic, as well as social, results. One of these is the extinction of business enterprises having small capitals. Their earnings are not enough to pay the wages of management in addition to the wages of labor. Another result, no doubt, is the combination of business concerns. The steadily falling rate of profit compels attention to economies, and in the office expenses and the cost of marketing goods very great economies have been effected. Such economies enable particular concerns to maintain for a time a high rate of profit; but such success can be, in most cases, only temporary. By the aid of protective duties, patents, and other conditions favoring monopoly, many enterprises will doubtless long continue to pay very high profits on the capital originally invested, but even they will be unable to maintain such profits indefinitely.

Such being the return of capital, the amount demanded by the tax-gatherer becomes a very important subject of consideration. Here we find no such tendency as is seen in the case of interest and profits. Taxes have very generally increased. The indirect taxes collected by the United States authorities have been enlarged in number and in rate. The direct taxes levied in the States and municipalities, while not generally much higher in rate, are double what they were, if we compare them with the rate of interest. It is this fact to which public attention should be directed, for it is never referred to. Little dependence can be placed on the census statistics, but we know from other sources the condition of affairs in most of our cities. In some few cases, and those not unimportant, the valuation of property has not been raised in the proportion in which its real value has been enhanced; but as a general rule assess-

ments have kept pace with the advance in values, and in some cases have surpassed it. Hence, it may fairly be said that even if the nominal rate of taxation were the same as formerly, the actual burden would be twice what it was. In other words, the taxes levied on accumulated property are as high as ever, while the revenue derived from such property is only one-half what it was.

Such an increase of the burden of government cannot be regarded without alarm. It is, of course, to be remembered that many things are done by the State that were formerly not done. There have been great improvements in streets and parks, in water and light, in public buildings, in police, and in education. Such improvements, however, could have been made and could be maintained for much less than they cost. The manner in which our rulers spend the taxes in all large communities has long been a scandal. Every one knows the condition of affairs in Illinois, in Pennsylvania, and in New York. In our own State many millions of dollars have been wasted within a few years, under the pretence of improving the canals. The evidence is overwhelming that our rulers spend the taxes badly, and the increase of taxation must therefore be regarded as an economic evil. Little further fall in the rate of interest can be anticipated, and if the increase in taxation is not arrested, the prosperity of the country cannot continue. At least we must be prepared for a material reduction in the rate at which wealth and population have heretofore increased.

#### A MODERN MASQUE.

LONDON, July 1, 1899.

The Art Workers' Guild is little known, even by name, to the outside world, but it is probably the most genuine society of artists in London. It includes men who practise every art and every craft, from the painter and sculptor to the basket-maker and metal-worker, from the illustrator and architect to the painter and designer. It finds a place for artists as entirely opposed in intention and method as Sir Edward Poynter and Mr. Sargent, as Mr. Walter Crane and Sir L. Alma-Tadema; in a word, so far from imitating the foolish exclusiveness of the Royal Academy, it aims at being as representative as possible, and at encouraging a practical union of all the arts. It has its headquarters at Clifford's Inn, one of the picturesque old inns of court just off Fleet Street, where the members are understood to meet and talk, speaking their minds with a freedom that would be alarming to the seeker after Academic honors. But such is the Guild's rare talent for keeping its own affairs to itself that, beyond this, little can be said of it with authority. Its performance of a Masque at the Guildhall this week is its first appearance before the public.

Why it should have decided to make a public appearance at all, may not be easy to explain. But perhaps the example of the balls and processions arranged, from time immemorial almost, by the artists of

Paris and Munich, together with the knowledge of the Guild's ability to rival them, had something to do with it; or perhaps it was simply the desire to create a beautiful pageant. If the Masque was the form in which this desire was eventually expressed, it was probably because no other manner of pageant is so essentially English, and gives such a chance to the invention and fancy of every kind of artist and craftsman. In the days of the famous masques, the spectacle was always the great thing. While the legitimate boards were still as bare and unadorned as the Elizabethan Stage Society loves to show them, the Masque was as splendid and gorgeous and lovely as the artist, with a royal or princely purse at his command, could make it. Ben Jonson might write for the theatre, too, but it was only for the Masque that the services of Inigo Jones were in request, and this calling-in of the artist was its special distinction. The theatre gradually borrowed the gorgeousness but left out the artist, and in the gaudy glitter of Drury Lane, in the showy pretentiousness of the Lyceum and Her Majesty's, most people to-day have forgotten that there is no reason in the world why the picture on the stage should not be as beautiful, as dignified, as harmonious as the picture on canvas. There have been two or three revivals of the Masque during the present century, but the object then was rather to borrow the pretty, artificial old fashion of celebrating a royal event than to take advantage of a delightful form of pictorial expression. The Art Workers, on the contrary, have been interested above all in the pictorial possibilities. What they wanted to revive was, not Ben Jonson's, but Inigo Jones's share in the pageant.

But, of course, there had to be a play, or dramatic allegory, as motive for the picture, and this they undertook to write themselves, for the Masque was to be from beginning to end their own creation. If they may not be able to boast a Milton, there are two among their number, Mr. Selwyn Image and Mr. Henry Wilson, who write admirable verse, and three or four others, Mr. Walter Crane, Mr. Christopher Whall, Mr. C. R. Ashbee, Mr. Harrison Townsend, who can at least versify fluently. The regret is that William Morris, for many years an active member, and for one the Master, of the Guild, did not live long enough to join in the work, for he could have made it worthy to rank as a poem with the Masques of Tudor and Stuart days. However, as it was, "Beauty's Awakening" answered its purpose excellently. The princess of the fairy tale was transformed into the Spirit of All Things Beautiful, the redemption of London was the joyous result of the kiss of the Prince in his new rôle as the good Knight Trueheart; and, if this seems very naïve, it must be remembered that not even Milton in "Comus" ventured upon a subtle or intricate plot.

As the pageant slowly took shape, as the scheme for it, that originated about a year ago, was more and more developed, it was realized, no less to the astonishment of the Art Workers than of any one else, what a big thing had been undertaken. Big as it was, however, professional assistance was called in only for the music, composed by Mr. Malcolm Lawson—though at the performance it was a member of the Guild, Mr. Belcher, an architect, who led the orchestra

—and for the stage management, as it was found absolutely indispensable to have some one who could devote the necessary time and attention to every rehearsal, and also to the proper drilling of the dancers. But it was a more serious matter when it became evident that the scheme had outgrown the limits of the Guild's own hall in Clifford's Inn, where it was first intended that the Masque should be given. The new version of the old story meant many dancers and groupings and processions; it meant, besides, from a hundred and fifty to two hundred performers. In Clifford's Inn hall was scarcely more space than for a stage of the required size. It was useless to think of the ordinary theatre with its tinsel and gilding and sham; a more discordant frame could not be imagined. But, with nothing less than a stroke of genius, the Art Workers determined to ask the Lord Mayor to lend them the Guildhall. There is no more beautiful or statelier hall in London; it is in the very midst of the richest and most commercial part of a town where, according to some authorities, the Spirit of All Things Beautiful sleeps her soundest. Moreover, it is the scene of the most impressive and magnificent official pageants still left in the world, though, it must be confessed, the actors in these are apt to look rather sheepish and ashamed of themselves. Somehow, it is hard to say just how, but largely through the intervention of Mr. Merwyn Macartney, the Master of the Guild, the Lord Mayor and the Corporation were induced to consent, and though, afterwards, the County Council, by the imposition of tedious and vexatious restrictions, did its best to prevent the Guild's profiting by the generosity of the City, in the end the Guildhall was delivered over to the carpenter for the great part of one week, and to the performers for the greater part of the next. And, indeed, this has proved but another of numerous occasions when the City refuses to justify its reputation for outer barbarianism. I think most people, when they came away from the finest pageant seen in London for many a long day, must have felt, with me, that the County Council, for all its pretensions as a refining influence and a promoter of art, can still take a lesson or two from the much-abused Corporation.

The stage, set up at that end of the Guildhall over which Gog and Magog preside, was the triumph of the Masque. It was designed by Mr. Henry Wilson, an architect of whom the world will be sure to hear more in the future, and it was as little as possible like the usual big, bare stage, with its flimsy scenery and stale devices—it was a "lordly pleasure-house" rather, a Palace of Art, its architecture as stately and sumptuous a setting for the figures that passed before it as the terraces and colonnades of Versailles for his painted courts and ceremonies. Wide steps led up from the audience to a great central portal, flanked on either side by graceful columns, gray and cool in color, harmonizing with the surrounding stone-work. Above the great golden arch, above the spreading colonnades, towering to the mysterious roof, was a majestic vague veil of blue, over it no meaningless arabesques, no bedraggled flowers, but only one single silver figure keeping guard in the centre. The solemn, the immense mystery of the proscenium concentrated the eye on the figure; nor was there in the detail and ornament any of the tawdry prettiness or glare

ing tinsel, so dear to the professional stage decorator, to distract it. At the back of the stage were three rounded arches, filled as low as the capitals with a dull gold lattice; and every capital—the design of Mr. Wilson, carried out by Mr. Stirling Lee and Mr. Murphy—was delicately sculptured, and painted in green and red and the same dull gold, giving just the right notes of color. Hangings, like rare tapestries, fell between the columns at the sides. A drop-curtain, for certain scenes, represented, very conventionally, a wood; for others, it rose, showing the three arches, with, beyond, the hedge of flowers and briars that must enclose the palace of every Sleeping Beauty, and that was replaced for the last scene of all by "arras green and blue." Nothing could have been simpler, nothing more imposing. When the stage was dimly lit, and you looked through the Romanesque portal to where the gold of lattice and capitals glowed in the tender gloom, it was like looking into one of the shadowy chapels of St. Mark's, somebody said to me.

Mystery is essential to all great art, we have been told. It was the element of mystery Mr. Wilson introduced in his stage that was one reason of his success, nor was the importance of this quality undervalued in the arrangement and action of the several scenes. On the professional stage there is always either a uniform illumination or a uniform darkness, or else a sudden, abrupt flash upon one figure. Gradation of light and shade is not understood by the professional managers. But the Art Workers knew its value in a picture, and their sole idea was to produce pictures. Every costume, down to the most minute ornament, the most trivial detail, had been designed by one or another among their number; every emblem borne by the different characters, every chair set upon the stage, was their work; and yet they never hesitated to subordinate the beauty of the various parts, when necessary, to make a perfect whole. There were no footlights; but why should there have been? There are no footlights in a picture. The illumination came from the sides, it seemed to issue mysteriously from the clustered columns. Some critics have found fault with this, as is natural, for critics have a way of damning everything they do not understand because it is new to them. But in the crude glare to which the conventions of the theatre have accustomed us, the faintest or most splendid color-schemes would inevitably lose. When, after the Prolocutor, who, in his red and black robes and laurel wreath of gold, introduced every scene, had made his first announcement, and the curtains were drawn, and at the back of the stage, below the golden lattice, the Sleeping Beauty, with her Seven Lamps grouped about her, was seen in a soft pale green light, it was in very truth like an enchanted palace. And when, into the midst of these "perfect forms in perfect rest," the Fallen Leaves of the Forest—children in russet and green and gold and scarlet—were blown by the Four Winds and sent whirling and swirling in a rhythmical flight, to the strange, old, wind-like music of Mr. Arnold Dolmetsch and his orchestra, now they were but dim, shadowy shapes, as if clouds were sweeping across the unseen sky, now they shone forth radiantly, as if in a sudden gleam of sunshine, so gay that a little butterfly, with orange-streaked wings, came fluttering

down the stage. The management of the light was masterly, both from the symbolic and pictorial standpoint. Without it, the dance would have been charming, for the dresses designed by Mr. Louis Davis were very pretty and graceful, and Mr. Arnold Dolmetsch and his musicians, in their antique costumes, with their curious old instruments, grouped at the foot of the steps, were as picturesque. But the play of light made it more than charming—as exquisite a poem as the dance of the nymphs in Corot's glades. I was sitting at the far end of the hall; the audience was in all but complete darkness, out of which loomed up the gray walls of the ancient building and the ghostly monuments of Pitt and Wellington; and the stage in the distance, with its shifting lights and shadows and its dancing leaves, was as unreal, as fantastic as a Midsummer Night's Dream.

There was another lovely picture when the Knight Trueheart in his glittering armor slept in a mystical forest that made one think of Merlin and Vivian in the wild woods of Brocelande; and again when, armed by Fortitude and Hope, he met and slew the horrid dragon Aschemon, and vanquished the whole tribe of modern demons, as uncouth as the "monstrous rout" of Comus. These demons, Jerrybultas, Slumdum, and the others, held their own high revels in the dusky twilight best adapted to such an evil crew. But it was when the drop-curtain was raised and the palace within once more revealed, that the richest and most sumptuous scenes followed, that some of the most marvellous effects were rendered. At the bidding of Clio, the Muse of History, the Fair Cities of the World with their attendants, passed, as in a vision, by the couch of the Sleeping Beauty, whose sway they had once owned. Each of these groups was composed by a member of the Guild, each was as historically accurate as pictorially it was splendid, and, in several, well-known artists themselves figured—Mr. Walter Crane as Dürer in the train of Nuremberg; Mr. Pomeroy, the sculptor, as Phidias, with Athens; Mr. Stannus, the architect, as Titian, with Venice; Mr. Hughes, as his own St. Louis, with Paris. Miss May Morris, who, in her severe white draperies, might have stepped down from some old Byzantine mosaic, led the way as St. Helena, for Byzantium. Each group appeared beyond the arcade, paused a moment by the Sleeping Beauty and her unlit Lamps, then passed out into the full light of the stage to be lost slowly in the shadows of the colonnades. I have never seen anything like this on the stage before; it reminded me of the effect in certain pictures, in the "Night Watch," for instance, with the few figures brilliant in the centre, and the others gradually disappearing, merged into the mysterious glooms and distances. And the arrangement of the scene pointed to another mistake made on the ordinary spectacular stage, for it was shown clearly that it is less by numbers and crowding that grandeur and splendor are to be suggested than by two or three figures well placed. Thebes, with her single attendant, Rameses II., in simple white draperies, seemed to fill the stage far more effectively than the endless battalions of a Drury Lane spectacle.

One by one, the Cities passed separate-

ly, to the dramatically appropriate melody of Mr. Lawson's music, and then, in long procession, they passed again: lotus-bearing Thebes; Athens, with, for insignia, a Venus held aloft; Rome, with globe of power; Byzantium, with cross and scroll of the law; Florence, lily-laden, scattering flowers in her path, accompanied by two of her greatest sons, Dante and Cimabue; Venice (jewels her burden), large and resplendent as the women of Giorgione and Tintoretto, a Doge and Titian in her guard of honor; Nuremberg and her craftsmen "born of Toil and Liberty," with whom it was only in keeping that Mr. Walter Crane should enroll himself; Paris, with St. Louis, Joan of Arc, and the Three Graces to explain her greatness and her charm; Oxford, with her band of students. And when, at the kiss of Trueheart, the spirit of All Things Beautiful awoke, and the lights burned once more in her Seven Lamps, London at last, like the Lady in Comus, was set free from the demons, and took her place with the Fair Cities; Labor and Invention, Freedom and Commerce waiting upon her. The Five Senses, gay and many-hued as a garden of flowers, celebrated their deliverance in a joyful dance, and all the performers, Fallen Leaves and Demons and Fair Cities, joined in a triumphal procession. The stage now was one great blaze of light, and so was the hall, and the music burst into a stirring march, and in and out among the columns, even down the steps where the Prolocutor stood, and in and out among the audience, just as the performers in the old Masques marched through the streets of Whitehall with all London looking on, the procession passed, a winding line of rich, iridescent color. The pageants that Carpaccio watched, that Veronese painted, were not more gorgeous.

I know that as a revival the Masque has an historic interest. I know that to many the ethical intention of the allegory has seemed a recommendation. But its importance really, the one thing that distinguished it from other revivals and moral allegories, was its pictorial beauty. There may have been defects, here and there a slightly discordant note may have been struck. In the course of time it might have been still further perfected—indeed, the fourth performance, in many ways, was an improvement upon the first. But it is useless to search for defects when they were overshadowed by so much beauty. If any lesson was taught it was that, on a finely built stage, in a carefully graduated light, with the costumes and groups and movements designed by the artist, pictures may be composed as great as those of the greatest painter; that the crude conventions of the theatre are as inartistic as they are needless. And this lesson, if lesson you can call it, was taught by the Art Workers solely and entirely for their own amusement. Only the four performances were given: three for the public that chose to pay and so help to meet expenses, one for the Lord Mayor and the Corporation, who certainly deserved it, and who are so used to be themselves the performers in the Guildhall spectacles that they must have found it a strange experience to take part as lookers-on. Nor will the Masque be repeated. But I do not believe the true Art Worker ever grudges time and trouble to create a thing of beauty even if merely for a day.

N. N.

#### A MILANESE ART FOUNDATION.

ANDERMATT, June 29, 1899.

Municipal ardor has been, during the entire course of Italian history, the source of most of the good, as it has been of most of the evil, that has befallen the Peninsula. Town no longer meets town on the field of battle, but rivalry is not dead. It finds less bloody outlets. On the cruder side it has become a race to outdo each other in the number and noisiness of electric trains running through broad, new streets, lined with hideous blocks. But the same rivalry leads to endless pride in the past, to exultation in its artistic achievement, and—in rarer instances—to a sincere desire to preserve the artistic patrimony. Here also we encounter a nobler and a less noble tendency. The same spirit has led towns to admire their own artists beyond all bounds of considered criticism, and has inspired such foundations as the Querini-Stampalia at Venice, the Filangieri at Naples, the Galliera at Genoa, the Carrara-Lochis-Morelli at Bergamo, and, best of all, the Poldi-Pezzoli at Milan.

Where energy abounds, everything is possible. Milan, which led in tramways—it should be added that they have been "municipalized," and are the best and cheapest in Europe—is now leading in the recovery and intelligent arrangement of its art treasures. Milan was the home of Morelli and is still the home of the scarcely less eminent Signor Frizzoni, and of that alchemist in the restitution of begrimed and ruined pictures to their original state of perfection, Signor Cavenaghi. At his studio you find old and young of the best and most cultivated society, come to see the paintings received for restoration, and to watch the scrupulous magician at work. There also congregate the amateurs and students from all over Europe who happen to be passing through Milan. The interest in art aroused by these meetings has happily passed from words to deeds. It has led to the saving from demolition, and to the restoration, of the Castle of Milan, which bids fair, when completed, to be one of the most delightful and artistically instructive sights in Italy. It has induced a number of Milanese gentlemen to give their best energies to the proper installation of the works of art already collected. On some other occasion I hope to speak of the various treasures which Signor Vittadini is arranging in the Castle. Here I will say a few words about the Poldi-Pezzoli Museum which MM. Frizzoni, Boito, and Nosedà have just ordered anew.

It was the private collection of the Milanese patrician, Cav. Poldi-Pezzoli, which he left to the town, adding an endowment for further purchases. The collection consists of bronzes, ivories, enamels, arms, tapestries, and pictures by the old Italian masters. All is interesting and of a high quality, but it is the pictures which give this museum its now almost world-wide fame. The other treasures are there by way of relief. It lacks but little of being an ideal show. There is not too much, and almost nothing of the sort of stuff which, instead of being discreetly hid away where the devout and forgiving eye of the archaeologist alone shall see it, is too often flauntingly displayed to the puzzled or jeering gaze of the tourist or scoffer. You could spend a morning there

in rooms not too large, among masterpieces not too overwhelming, amidst works of art which do not hate each other's company. It is in many ways a model that our collectors should study, and it will perhaps decide them not to leave their acquisitions to those monster storehouses where one perhaps may study, but scarcely ever enjoy, a work of art, but to endow them as separate small foundations containing only such objects as will give refined and elevated pleasure.

Unhappily, Cav. Poldi-Pezzoli combined with his passion for what was best in the art of the past a taste naturally bad in the art of the present. The wood carvings, the stained glass, the one or two pieces of modern statuary which still disfigure what was once the Cavaliere's private apartment, one fervently wishes away. The greatest eyesore was a huge bed, a nightmare of skilled and odious modern carving, which filled one entire room. This has been banished by the new arrangement, and the paintings and other works of art have been put in better light, and in such wise that they shall produce the greatest sensuous and aesthetic harmony.

One entire room is given up to the painters of the Milanese school. I regret that among them neither Foppa, nor Borgognone, nor even Bramantino is to be seen—none, in short, of the heroic or grandly decorative artists of the Quattrocento, but only the later brood whose prettiness renders them popular, and whose value Milanese critics (Morelli was a Milanese) have succeeded in raising far beyond their deserts, but who impress me as more or less empty echoes of Leonardo, mirroring his smile, catching much of his technique, but possessing neither his sovereign sense for form, his command of action, nor his deep insight into the human heart. The best of these followers was Beltraccio, who is represented by two Madonnas, the one beautiful in color, and reflecting more than a little of Leonardo's gracious, mysterious beauty; the other, a recent acquisition, badly drawn, hard, and bricky. Here also is Solario's masterpiece, the famous "Ecce Homo," in sentiment on the very edge of the Bolognese abyss, but technically a masterpiece of oil painting. Luini appears with a "Marriage of St. Catherine," one of his least glassy and vapid works. Even Cesare da Sesto is here somewhat less distasteful than usual. To him Signor Frizzoni now ascribes a small chromo-like version of Leonardo's "Madonna with St. Anne," but with St. Anne left out—a picture which bears some such relation to Leonardo as an abbreviated arrangement for an accordion might have to a Beethoven symphony. Finally, Leonardo's assistant, Ambrogio da Preda, author of the "Vierge aux Rochers" in the National Gallery, displays his not mean talents in a stately profile of an elderly gentleman. One of the very loveliest portraits ever painted in Italy hangs here. It is the likeness of herself in all the charm of young womanhood, with not a little of a great lady's elegance and grace, by Sofonisba Anguissola of Cremona, one of the few women who have left their mark on art. Heiress of Brescian and Venetian traditions, she spent much of her life at the Court of Spain, and lived on into the seventeenth century, becoming in extreme old age an

Egeria to the happy young Van Dyck at Genoa.

I shall mention but one picture of the Veronese school. It represents Samson stretched out on a bench in the foreground of a romantic, joyous landscape. He is sound asleep, and Delliha, in the bravery of all her beauty, sits by listlessly shearing his hair, while her paramour kneels watching. If this work of glowing deep color, quiet lyrical feeling, and exquisite arrangement of masses did not bear the forged signature of Carpaccio, it surely would pass for Giorgione's. Few pictures have more right to this title, and indeed a far inferior work in the Uffizi by the same hand bore it until the other day. The real author is Michele da Verona, a third-rate painter usually, but at times lucky.

The painters of Venice and her subject States have a well-lit room all to themselves. There you see first and foremost a Madonna by Montagna, a canvas of his latest years, dark but comely in color, and of intimate feeling. Around him are grouped the rugged, patriarchal masters of the Venetian Quattrocento. The heroic Montagna, majestic in form, in color mighty, is here with two splendid figures, a St. Paul and a St. Jerome, parts, doubtless, of some scattered polyptych. Cima shows the head of a female saint, done in his last years, when his porcelain-like surfaces were more than ever enamelled and transparent. Crivelli has two tiny pictures; in the one a St. Sebastian, in the other a St. Francis kneeling at the feet of the Man of Sorrows—tiny pictures, and precise, yet done in his unrivalled large decorative style. The unequal but grand Bonsignori is represented by at least three works. The bust of a female saint with pearls on her forehead and loose yellow hair is of radiant beauty—unhappily not altogether original. Better preserved and more rugged are the bust in profile of an old man, and another bust, full face, of a Venetian senator. Neither Giovanni Bellini nor Alvise Vivarini is to be seen here, although pictures bear these names. The Venice of the sixteenth century is represented by an indifferent Holy Family of Lotto's decline. On the other hand, the eighteenth century can boast of little or nothing to surpass the small Guardi recently bought, a view across the lagoon to the Lido, a delicate study in opalescent effect of sky and sea, diaphanous, evanescent, yet intensely real and intensely poetical—a prophecy of Whistler, if ever there was one.

Tuscany has sent few pictures to this delightful show, but all are interesting, and one at least of the highest order. The deep and intense but slovenly Pietro Lorenzetti is here with an unusually lovely Madonna and angels, replete with the ardor of Trecento Siena. Here Pietro makes his nearest approach to his brother, the great Ambrogio, but there is yet a gulf between them. The earliest of the Florentines at the Poldi-Pezzoli is Pesellino, one of the most gifted of Tuscan artists, rousing among his town-folk the highest expectations, but dying in his prime—a Florentine Giorgione. His work here is a smallish Pietà, so close in form and color to Filippo Lippi that it took the piercing eye of Dr. Bode to see that it was not Lippi's but Pesellino's. There is yet another panel which at first glance (or if one saw a photograph only and not the original) one might be tempted to ascribe

to Pesellino. It is a lunette of but a span long, containing an Annunciation. The composition was certainly Pesellino's, but the color and the technique are of two generations later. It is probably a copy after a lost original by Pesellino, made by Albertinelli or perhaps Sogliani. It is charming and interesting nevertheless. Albertinelli himself is represented by one of his most attractive and successful achievements, a small triptych of dainty finish and jewel-like color, both due to Flemish influence. Two panels are ascribed to Botticelli. One, a Pietà, is an unhappy caricature of the master's style, such, however, as pleases those who, caring little for his art and much for the emotions he depicts, find these emotions emphasized enough for rapid comprehension. The Madonna is much prettier now than when it left Sandro's hand, but is still his work.

I have properly left to the last the choicest morsel of the collection. It is the most famous of all the profiles of women attributed to Piero del Franceschi. So famous is it that if at Milan you ask for a post-card you run the chance of receiving one with its reproduction on the back. You see against the sky the bust, in profile to the left, of a young woman, robust yet refined, simple yet elegant, with no self-consciousness—I need scarcely add, no grain of affectation. Artistically, the supreme charm of this work is in the outlines, firm and sinuous, leaving but little for the modelling to fill in. The tone tends to blondness, the gracefully coiffed hair is almost straw-colored, the sky is pale blue, the dress is of brocade, with a dazzling pattern. Few if any works of art have, like this bust, united critics and divided connoisseurs. All agree about its quality, but each has his own attribution. I have mine. I would ascribe it to Verrocchio in his earlier years. This is not the place to give my reasons. This much I may say, that while the resemblance between this work, both in quality and technique, to certain others by Verrocchio is great, you need only look at the bust of Battista Sforza in the Uffizi or the frescoes at Arezzo to see that it is not by Piero del Franceschi; you need only look at the altar-piece in the Uffizi also to see that it is not by Domenico Veneziano; you need but look at the profile in the Hainauer collection at Berlin to see that it is not by Pollajuolo. By whom, then, can it be? Surely not by Baldovinetti. Yet it certainly is Florentine, and my conclusion is that the painter of this marvellous profile was *aut Verrocchio aut-discipulus*. B. BERENSON.

#### POISONING IN THE SEVENTEENTH CENTURY.

PARIS, June 26, 1899.

The seventeenth century remains in our imagination as the culminating point of all the elegance and greatness of France. We call it *le grand siècle*, and Louis XIV. is *le grand roi*. If we would form a better opinion of our own time, in contrast with past ages, and see the shadows behind the glaring light of the seventeenth century, we can do no better than to read a work just published on the 'Drama of the Poisons,' by M. Funck-Brentano. This elaborate work is very fully documented, if I may be allowed to use a modern expression applied to all historical works which are considered worth reading. M. Funck-Brentano has plunged into the Archives of the Bastille in the Archives of

the Prefecture of Police, where all the papers concerning the 'affaire' of the poisons are preserved; he has found in the Library of Rouen the papers concerning Le Voisin, one of the women who made a trade of furnishing poison. The trial of the Marchioness de Brinvilliers, who was one of the chief poisoners, is still remembered. Her rank has given her an historic notoriety; but she was only one among a number of men and women who used poison freely in the seventeenth century. There were regular associations of alchemists, magicians, sorcerers, poisoners. When the Lieutenant of Police, La Reynie, first penetrated this world of crime, he was so moved that he wrote: "Human life has become a matter of trade; poisoning is the great remedy in all family embarrassments; impiety, sacrilege, abominations are common practices in Paris, in the country, in the provinces."

The belief in sorcery was still popular in the seventeenth century. Jean Bodin, the illustrious author of 'Six Books on the Republic,' wrote a treatise called 'Demonomania, or a Treatise on Sorcerers.' His definition of the sorcerer is this: A person who, by diabolical and forbidden means, attempts to obtain something. "Sorcerers, men and women, formed a sort of vast association; they had traditional secrets, formulas, habits, ceremonies, generally of the most infamous, impious, and indecent character." They had their own mass, called the black mass. They were doctors and chemists. They revealed the future, they found hidden treasure; they were alchemists, and tried to discover the philosopher's stone for converting all metals into gold.

The woman called Le Voisin was a typical specimen of the sorceress of the seventeenth century, very different from the more ancient sorceress described by Michelet. She earned annually as much as 400,000 francs; she had many lovers, and gave dinners. Among her lovers was the executioner of Paris, André Guillaume, who beheaded Mme. de Brinvilliers. Le Voisin was a mere charlatan; she delivered her oracles to persons of all ranks in a splendid gown, and with a mantle covered with golden eagles. She was a real believer in alchemy. She was also a doctor, like all sorceresses, and had receipts for every malady. She was known to help abortive practices, and once, in a moment of sincerity, she confessed having burned or interred in her garden the bodies of more than 2,500 children, prematurely born. Curiously enough, she insisted upon these children being baptized. The crimes of this horrible creature were such that the Lieutenant of Police was appalled by the confession of them. One can easily imagine the stupor of Louis XIV. when they were revealed to him. A special commission was appointed to investigate what was called the affair of the poisons. This commission is known in history under the name of the "chambre ardente."

The arrests were made by *lettre de cachet*. Four hundred and forty-two persons appeared before the special commission, and two hundred and eighteen persons were kept in prison. Thirty-six prisoners were condemned to death and executed, five were condemned to the gallows, twenty-three were banished. The most guilty prisoners had accomplices in very high places. Madame de Dreux, the wife of a member of the Parliament, is a type of these accomplices. She was in love with M. de Richelieu, and am-

played the services of one of the sorceresses brought before the *chambre ardente*. She wished to be relieved by poison of her own husband, and by sorcery of Madame de Richelieu. She was accused of having herself poisoned some people—one of her lovers among the number. She was a cousin of two members of the special commission, and she received a mere admonition. "M. de Dreux and his entire family," writes Madame de Sévigné, "went to get her at the *Chambre de l'Arsenal*. . . . It was a joy and a triumph, and she was embraced by all her family and friends. M. de Richelieu has done wonders in all this affair." What seems incredible is, that, after having left the prison of Vincennes, Madame de Dreux resorted again to a sorceress, named Joly, and got from her powders for poisoning a person whom M. de Richelieu "considered." "To be sure," says M. Funck-Brentano, "the woman Joly having been arrested and having made revelations, a new warrant was issued against Madame de Dreux; but she was advised of it and fled." Madame de Dreux was condemned to banishment, but the King allowed her to remain in France, on condition that she would live with her husband in Paris. The wife of President Laféron was also implicated in the trial; she got powders from the woman Le Voisin, and her husband died soon after. She too was condemned to banishment. Madame de Poulailhon was, by *lettre de cachet*, shut up in a house of detention, the *Pénitentes* of Angers.

The declarations of the venders of poison before the *chambre ardente* were of such gravity that Louis XIV. gave special orders that they should be kept secret. The name of Madame de Montespan, the King's favorite, was pronounced. Her ambition was extreme; she had made great efforts to supplant Mademoiselle de la Vallière, and by degrees had established her empire over the King. Her favor lasted fourteen years, and she had no less than seven children by Louis XIV., the eldest being the Duke du Maine; the eldest daughter, Mademoiselle de Nantes, married the Duc de Bourbon; another daughter, Mademoiselle de Blois, married the Duke d'Orléans. Marguerite Le Voisin, the daughter, declared before the judges that Madame de Montespan paid frequent visits to her mother, whenever she feared a diminution of the King's good graces, and a rival; her mother then had recourse to some priests, who said special masses and gave her philtres for the King, in the form of powders. When Marguerite Le Voisin made this deposition, her mother had been burned on the scaffold several months before.

Many historians have thought that if the sorceresses tried to compromise people in high positions, it was in the hope of saving their own lives; but Le Voisin never pronounced the name of Mme. de Montespan, perhaps because she feared the terrible punishment of the regicides. The relations of Mme. de Montespan with the sorceress seem to have begun in 1667, when the King first turned his eyes towards her.

"In 1667," writes M. Funck-Brentano, "we find her in the Rue de la Tannerie, in company with the magician Lesage and the Abbé Mariette, a priest of Saint-Séverin. . . . In a little chamber stood an altar. Mariette, in sacerdotal vestments, pronounced incantations. Lesage sang the *Veni Creator*, then Mariette read a chapter of the Gospel over the head of Madame de Montespan kneeling before him, and recited conjurations against Louise de la Val-

lière. She said (the very words are found in one of the interrogatories of Lesage): 'I beg that the friendship of the King and of Monseigneur the Dauphin may be continued to me, that the Queen may be barren, that the King may leave his bed and his table for me, that I may obtain from him all that I ask for myself and my relations, . . . that I may be called to the councils of the King, and that, his friendship increasing still more, the King may leave La Vallière, and that, the Queen being repudiated, I may marry the King.'"

In 1688, Mariette and Lesage had the impudence to recommence their incantations at court, in the Château of St. Germain. It was in this very year that Madame de Montespan took the place of La Vallière; in 1689, she had the first of her seven children by Louis XIV. Mariette and Lesage had made the acquaintance of Madame de Montespan by means of Le Voisin, who several times gave powders to the favorite. She fell so low as to enter into communication also with a certain Abbé Guibourg, who said the black mass. The ceremony took place near Monthéry, in a house which still exists, called Villebousin. It is difficult to go into the details of this infamous black mass, and difficult to believe that Madame de Montespan took in it the part ascribed to her in some depositions. Can we believe that a second black mass was said for her at Saint-Denis, a third at Paris? We cannot forget that the evidence of such witnesses as appeared in the affair of the poisons had but little value; at the same time, there is some truth in the old proverb, "There is no fire without some smoke." It is certain, also, that at various times Madame de Montespan lost her hold on Louis XIV.; that the King had fits of devoutness, and was on the point of separating from her; that once a separation really took place for a month. Must we believe that Madame de Montespan, frantic with fear, full of superstitious notions, really addressed herself to criminal women like Le Voisin and others?

It is curious to follow in Madame de Sévigné's correspondence the ups and downs of the favor of Madame de Montespan, whom she calls *Quanto* or *Quantova*; and to compare her dates with the dates given in the trial of the poisons. In one letter she writes (September 2, 1676): "The vision of Madame de Soubise [for whom the King had a short caprice] has passed like lightning; everything is arranged. *Quanto*, the other day, at the play, had her head familiarly on the shoulder of her friend; this affection meant: 'I am better than ever.'" On the 11th of September things are changed. "Everybody believes that the star of Madame de Montespan is waning. There are tears, natural sorrows, affected gayeties; well, my dear, everything comes to an end; some tremble, the rest are glad; some desire immutability, the others a change in the play." The anxieties of Madame de Montespan became greater when she saw the King take a growing interest in Madame de Maintenon; the governess threatened to become the mistress. Were new black masses said at this juncture? Did Madame de Montespan, wounded in her pride and ambition, take diabolical means to get rid of a rival? The depositions of the Abbé Guibourg are truly terrible; but I must repeat that the testimony of such people as he can be accepted only with great hesitation.

Louis XIV. took the royal part in this ter-

rible affair; he did not allow the mother of several of his children to be disgraced. He had much affection for these children, and gave them a sort of legitimacy. Without going into further details, I will only say that M. Funck-Brentano's book is well worth reading throughout. It throws a lurid light on the substructure of the splendid edifice of the most brilliant age of France.

## Correspondence.

### DEMOCRATIC AGITATION AGAINST TRUSTS.

TO THE EDITOR OF THE NATION:

SIR: In your discussion of Prof. W. J. Ashley's suggestions for legally safe-guarding "just prices" and "reasonable wages" against the work of Trusts, you touch on the disposition of legislators to demand high wages for workmen, and on the difficulty of marketing product at the prices which these wages make necessary. Might you not have said, much more generally, that there are the same objections to the present agitation against Trusts as to protectionism? Before the Trust question can come to a vote by the whole American people it must be recognized that, on very important points, the current denunciation of the Trust system clashes with the ancient Democratic faith. We who have held out for cheapness of the necessities of life, can we be heard to complain of the Trusts that they have cut out redundant expenses of production, or that they have shut down ill-conditioned enterprises which never could have lived but for the bonus protection gave them?

Whether the Trusts can compensate the public for the destruction of industrial independence and its brood of virtues; whether, in the nature of things, the Trust tends more to the effacement of the individual than does the ordinary corporation; what protection "life, liberty, and the pursuit of happiness" must have against consolidated industry—these inquiries, comprised in the social side of the Trust question, are tremendously important; but they are quite distinct from that economic side of the question about which Democrats (if they follow the present recognized spokesmen of their party) and other believers in free trade may well be brought into confusion.

BENJ. CARTER.

WASHINGTON, D. C., July 17, 1899.

### KEEPING OUR OWN DOOR CLEAN.

TO THE EDITOR OF THE NATION:

SIR: What a prophet Emerson would be were he only living in this age, when individual self-assertion seems to be weakening in the knees. These words were true in 1865; they are true to-day. Says he, in 'Social Aims':

"The young men in America at this moment take little thought of what men in England are thinking or doing. This is the point which decides the welfare of a people; which way does it look? If to any other people, it is not well with them. If occupied in its own affairs and thoughts and men, with a heat which excludes almost the notice of any other people, . . . they are sublime; and we know that in this abstraction they are executing excellent work. Amidst the calamities which war has brought on our country, this one benefit has accrued—that our eyes are withdrawn from Eng-

land, withdrawn from France, and look homeward. We have come to feel that 'by ourselves our safety must be bought'; to know the vast resources of the continent, the good will that is in the people, their conviction of the great moral advantages of freedom, social equality, education, and religious culture, and the determination to hold these fast, and, by them, to hold fast the country and penetrate every square mile of it with this American civilization."

Yours truly, GEORGE L. REES.

4116 BALTIMORE AVENUE,  
PHILADELPHIA, JULY 11, 1899.

#### RUSKIN AND MILLAIS.

TO THE EDITOR OF THE NATION:

SIR: In a review of Mr. W. M. Rossetti's 'Preraphaelitism' in the *Nation* of June 8, headed "A New Light on Ruskin," occurs the following passage, apropos of Ruskin's alleged public ignoring of Ford Madox Brown: "Add to this the other known fact [the italics are mine] that Ruskin could never see any merit in the work of Millais after their personal quarrel, and we are led to think that while he was right in thinking himself 'very resentful,' he was singularly wrong in considering himself 'just.'"

Will you allow me in fairness to place before your readers the following known facts which tell the other way?

In 'The Art of England' (1883) Ruskin speaks of Millais's "Callers Herrin" as "that most noble picture of Millais, a picture which, as a piece of art, I should myself put highest of all yet produced by the Pre-Raphaelite School." And, in a small octavo pamphlet, entitled 'Notes on the Principal Pictures of Sir John Everett Millais, exhibited at the Grosvenor Gallery, 1886, with original and selected criticisms by John Ruskin, D.C.L., LL.D.' (William Reeves, 185 Fleet Street, E.C.), there are, in addition to the quotations of Ruskin's earlier criticisms, a series of occasional notes, in small capitals, signed "J. R., 1886," at the foot of the pages on which the titles of the pictures referred to appear. Among these are the following:

"The North-West Passage" (1874): "I have not seen this picture, but it must be a glorious one, judging merely from the coloured print."

"For the Squire" (1882): "One of the most deep and pathetic renderings of expression among the painter's great work of this kind."

"The Ornithologist" (1885): "I have never seen any work of modern art with more delight and admiration than this."

And the catalogue concludes with the following sentence:

"Looking back now on the painter's career, crowned as it has lately been by some of the best pieces of free-hand painting in the world, I am disposed to regret his never having given expression to his power of animal painting, wholly unrivalled in its kind, than any of the shortcomings of his actual work. J. R., 1886."

Trusting I have said enough to somewhat modify this "New" light which ever beats about the throne of genius,

I am, sir, yours obediently,

JAMES TROTTER.

CRICKLEWOOD, LONDON, N. W., June 30, 1899.

[There is an obvious hiatus in the last of the above extracts, but we cannot lay our hands on the volume from which it is taken.—ED. NATION.]

## Notes.

'Pupils of Peter the Great,' by R. Nisbet Bain; 'Napoleon's Invasion of Russia,' by Hereford B. George; 'With Nansen in the North,' by Lieut. Hjalmar Johansen; and 'Gypsy Folk Tales,' by Francis H. Groome, are in the press of the New Amsterdam Co.

E. P. Dutton & Co. will shortly publish 'Robert Raikes: The Man and his Work,' namely, the founding of the Sunday-school in the last century. Dean Farrar supplies an introduction.

Ginn & Co. have in preparation 'Twelve English Poets,' condensed biographies, by Blanche Wilder Bellamy.

Almost ready is 'The United States Army and Navy, 1776-1899,' told for the former section by Lieut.-Col. A. L. Wagner, U. S. A., and for the latter by Commander J. D. Jerrold Kelley, U. S. N., and published by the Werner Co., Akron, O. There will be nearly fifty illustrations.

'Our Conquests in the Pacific' (Frederick A. Stokes Co.) consists of Oscar King Davis's special correspondence from Manila to the *New York Sun*. It is written in choice journalese, and with small regard to the difference between the "reporter" and the historian, but it has a measurable value among the documents of the war. The illustrations are very good.

Another chronicle of a newspaper correspondent is 'Kuba und der Krieg' (New York: Charles Wildermann), by Joseph Herrings, who went out to the island for the *New York Staatszeitung*, and here republishes his letters with some revision. His special claim to consideration is, that he was the only German correspondent who participated in the Santiago campaign from beginning to end. He does not confine himself to his observations, witness his chapter on Weyler's reign of terror. There are numerous pen-and-ink sketches in the body of the text, which will serve.

Helene Richter's 'Percy Bysshe Shelley,' a volume of 640 pages, recently issued by Emil Felber in Weimar, is by far the best life of the English poet in the German language. It is no mere compilation from other works on the subject, but is based throughout on a careful and critical study of original sources. Even those who are familiar with the standard biographies and literary histories by Dowden, Gosse, Saintsbury, Todhunter, Brandes, and Engel, will find new points of view in this book, and may have their opinions considerably modified by reading it. The influences of the poet's domestic, social, and intellectual environment on the early development of his character, and thus in some degree on the predetermination of his career, are clearly traced. The result is a finished portrait of the "Real Shelley."

The Prussian "Pedagogical Society" has just published some interesting statistics showing that the provinces in which the law compelling all children to attend the public schools is most rigidly enforced, have the smallest percentage of criminals. Thus, in West Prussia, there are 1,926 criminals to 100,000 inhabitants, but in Hohenzollern only 751. The statistics also show that the improvement of the schools and greater strictness in obligatory attendance have everywhere been followed by a perceptible diminution of crime.

For a long time Swiss parents have car-

ried on a system of intercantonal interchange of children during the summer vacations for educational purposes. Thus, a family in Lucerne would send their children to Lausanne or Lugano and receive in return children of a family in one of those places. By this arrangement the children would acquire in a short time a practical knowledge of German, French, and Italian. It is now proposed to extend this plan, which has worked so well in trilingual Switzerland, to the principal countries of Europe, and especially to England, France, and Germany. By this method the children will easily learn not only to speak foreign languages, but also to form a more just estimate of foreign peoples. Curiously enough, this larger movement appears to have originated in Denmark.

A very interesting collection of Arabic proverbs, 205 in all, collected by L. Bauer, a resident of Jerusalem, is published in the latest number of the *Zeitschrift des Deutschen Palästina-Vereins* (vol. xxi., p. 129). It is not the first of the kind printed in this journal, which, in the course of its 19th volume, published a fine list from the pen of the daughter of the famous architect, Conrad Schick, for fifty years the leading archaeological authority in the city of Jerusalem. But Bauer's list is entirely new material gathered by himself from the lips of the people in Jerusalem and Palestine in general, and shows that not a few excellent proverbs, sayings, etc., have escaped previous collectors. The list contains quite a number that reproduce in modern shape some of the proverbial sayings found in the Scriptures, sometimes, too, almost in the words of the sacred writers; but the bulk consists of the practical wisdom of these people, put usually in metrical or alliterative form, and many of them agreeing in sentiment with the proverbs and sayings of modern and other ancient nations. In this respect the collection contains some good material for comparative ethnological study. Probably one-half or even a larger percentage could be paralleled, if not in English alone, in modern tongues in general. Bauer has published also the transliteration of the Arabic, and thus enables the non-Arabist in a measure to feel the beauty of form that characterizes this proverbial wisdom in the original.

Mr. D. C. Heath, the well-known Boston publisher, has lately acquired the library of children's books and educational works issued by Newbery in London from 1740 to 1800, and brought together by Mr. Charles Welsh when he was writing the biography of John Newbery, founder of the famous publishing-house which, for nearly 150 years, was at the corner of St. Paul's churchyard, London. Besides a number of chap-books for children, several battle-dores (the successors of the horn-books), some rare primers, a thoroughly representative collection of fiction for children and of early toy books, there are in the collection first editions of Goldsmith's 'Vicar of Wakefield,' 'The Traveller,' and 'The Deserted Village,' and of other works by Goldsmith and Dr. Johnson.

The special feature of the Boston Public Library Bulletin for July is a list of some 100 books and magazine articles on the Dreyfus affair. They are all in French and English, with the exception of a single German romance.

The Nicaragua Canal route is the principal subject of the *National Geographic*

*Magazine* (Washington) for July. The geologic history of the region is told by C. W. Hayes, one phase of which is that probably "during early Tertiary time the waters of the Atlantic and Pacific had free intercommunication across this portion of the isthmus." A popular account of Nicaragua and the different isthmian routes projected during the last fifty years is given by A. P. Davis, with some important facts in regard to the hydrography of the region. There are several interesting illustrations and two useful maps.

The Russian petroleum trade in 1898 is the first subject treated in the Consular Reports for June, especial attention being given to the residuum or oil fuel, the consumption and price of which increased over the previous year. Notwithstanding an increase of output of all products at Baku of about 200,000,000 gallons in a total of nearly 2,000,000,000, the average daily output per well has fallen from 225 gallons in 1896 to 199 in 1898, which would apparently indicate a permanent weakening of the wells. There is a short account of commercial education in Antwerp, one feature of which is the bestowal of ten travelling scholarships of three years' duration with an annual income of \$1,000; a list of the kind of goods most in demand in the Philippines; and considerable information in regard to the tea-trade of Formosa.

Railroad building is being pushed with great activity in nearly all parts of the Russian empire. 1,500 miles of road were completed last year, and there are 7,000 miles in process of construction, while the building of 2,000 miles more has recently been authorized. Among the important cities already or soon to be reached by the locomotive are Archangel, Kars on the Transcaucasian line, Tashkent on the Transcaspian, and Irkutsk on the Trans-Siberian line.

An important railway project, both from a commercial and a political point of view, is the continuation of the Anatolian Railway from Angora via Diarbekr and Mosul to Bagdad. The necessary capital is to be furnished by Germans through an arrangement recently concluded between the Deutsche and Ottoman Banks. The country which would be opened up is rich in natural resources, and most of it was formerly densely populated. Russia, however, officially objects to this route because it comes so near to the frontier and the Russian sphere of interest. This seems to be factious, as the distance to the frontier is about 200 miles; but there can be little doubt that much trade would be diverted from Russia to Germany, and German interests would become paramount in a region where Russia has hitherto been without a rival.

The popular interest of Germans in schemes for imperial expansion was still further shown at the recent meeting of the Colonial Society at Berlin. This society, numbering 30,000 members, publishes a journal, arranges lectures, gives information to emigrants, subscribes towards the cost of commercial and mining expeditions, offers prizes to colonial planters, etc. Among its expenses for last year are grants towards the transport of a steamer to Lake Tanganyika, the German School at Apia, the publication of works on New Guinea, various periodicals, and to individual students of African and Australasian languages. It has also had considerable success in finding

wives for German settlers in southwest Africa and elsewhere. The prominent subjects discussed at the meeting in question was the construction of a railway through German East Africa from the coast to the lakes, an expedition to Lake Chad from Cameroon, and the German regulation of the river Hoang-ho.

The development of their colonial possessions is a subject which is now engaging the attention of many intelligent Frenchmen. One of the latest manifestations of this is the formation of a *Ligue Coloniale de la Jeunesse*, which has for its object "the familiarizing its members with the study of colonial questions by means of lectures and the formation of a library." A department of colonial agriculture has been added to the National College of Agriculture at Montpellier, and the League hopes to found a travelling scholarship in connection with it, as well as to aid the graduates in finding situations in the colonies.

—Lady Randolph Spencer Churchill's new venture, *The Anglo-Saxon Review: A Quarterly Miscellany* (John Lane), is appropriately named, considering the Anglo-American alliance symbolized by the editor; and the main title would have been very taking for a real review. But "Miscellany" it is, rather than Review, even if we find in the contents a paper on "Wireless Telegraphy," by Prof. Oliver Lodge; another, on "Some Consequences of the Last Treaty of Paris," by White-law Reid; a third, on "The Sudan," by Sir Rudolf Slatin, etc. A short story, "The Great Condition," by Henry James, is followed by a sketch of the Life of Lady Mary Wortley Montagu, by Elizabeth Robins; and this concludes the cisatlantic collaboration. The Miscellany, Annual, Keepsake, or Friendship's Garland of other days appears in sundry portraits, as of Lady Mary above; of Sir Robert Peel, to whom Lord Rosebery devotes the most solid article; of the Queen (Onslow Ford's bust); of Washington (Stuart's full-length); of Anne of Austria, the Countess of Pembroke, the Duchesse of Devonshire, by Rubens, Marc Gheeraerts, and Reynolds respectively. The luxurious quality of paper and print offers another feature of resemblance to the Keepsake, and finally the volume is bound and very elegantly stamped with a design borrowed from a copy of André Thevet's *Les Vrais Pourtraits* (Paris, 1584), formerly in the possession of James I., as Mr. Cyril Davenport, F.S.A., explains. This binding will not be repeated, so that each number of the 'Review' will have its own character externally. The total product is evidently for the élite; and while a portion of it furnishes food for thought and possibly for comment, the 'Review' altogether is bibliographical bric-à-brac, and calls for description rather than criticism. As book-making, it can be praised without reserve.

—A slight examination of *'Who's Who in America: A Biographical Dictionary of Living Men and Women of the United States, 1899-1900'* (Chicago: A. N. Marquis & Co.) shows that it is in good hands. The editor is John W. Leonard, and his preface must conciliate every right-minded reader. The work is patterned after the English exemplar bearing the same title (*'Who's Who'*), but with retrenchment in two particulars: no mention is made of club membership, or of "recreations" or avocations, curious and interesting as these are in the English work, and likely to have a practical use for pur-

veyors for special tastes. The address, however, is given wherever possible, or in the vast majority of cases; and this feature is one of the strongest recommendations of *'Who's Who'*, English and American alike. The inclusiveness of the dictionary is the first thing to be challenged, and here we have some arbitrary *ex-officio* admissions—Congressmen, Governors, United States Judges, National Academicians, heads of universities and colleges, etc.; all praiseworthy. Moreover, "special effort has been made to include all living American authors of books of more than ephemeral value," and if one observes marked differences in the length of the very condensed notices, ten to one it is because of the bibliography. A proper latitude has been displayed in making up a company which could not be expected to be on one level of talent or character, and few will question Croker's title to a place beside Dr. Parkhurst, Grover Cleveland, and Carl Schurz, for example. The editor amusingly relates his trials in trying to keep out the insignificant or the merely promising, and especially those who wished to buy their way in. No one will accuse him or his publishers of having yielded to this temptation. In a list of thirty names chosen at random we have found but four not represented, and, of these, two at least may have declined to be taken in, while the merit of a third, though real, is inconspicuous. The accuracy of the biographical sketches (mostly autobiographical) is, so far as we have tested it, admirable. Quite exceptional is such a deformation (under W. J. Stillman) as "*Francisco Criski*" for Francesco Crispi. There are some cross-references from maiden to married name and from pseudonym to true name. Very interesting are the preliminary statistics as to sectional origin of the 8,602 men and women, more than 20 per cent. being natives of New England. A necrology, from January 1, 1895, will also be found very convenient.

—*'From Cromwell to Wellington: Twelve Soldiers'* (Philadelphia: J. B. Lippincott Co.) is a volume of biographical sketches written for popular use by men who have received a Staff College training. The editor, Mr. Spenser Wilkinson, has in one or two cases acted as the collaborator of his contributors, but ordinarily the authors are past or active officers of the British army. We give the list of subjects in full: Cromwell, Marlborough, Peterborough, Wolfe, Clive, Coot, Heathfield, Abercromby, Lake, Baird, Moore, Wellington. A superficial analysis of these names shows that a large proportion of the generals in question gained distinction in India, while almost all of them were at one time or another engaged against the French. A valuable feature of the book—indeed, the feature which is most likely to attract wide notice—is an introduction by Lord Roberts, containing brief appreciations of the leading commanders dealt with in the body of the work. Cromwell and Marlborough are particularly singled out by him for praise and illustration, though most of the others receive a word of comment. Lord Roberts also has something to say on each of several topics connected with the art of war, e. g., the advantage of fortified lines and fortified towns, the necessity of most careful equipment, the influence of sea-power on military history, the organic connection between army and navy, and the typical characteristics of a good general. He ascribes to the success-

ful fighter exactly those qualities which win success in other occupations. "In addition to military knowledge and experience, there must be good judgment, sound common sense, tenacity of purpose, quickness of perception, promptitude of decision, and, above all, an infinite capacity for taking pains. . . . The officer who is fortunate enough to be intrusted with a command in the field should be prepared at all points and ready to face all contingencies. He should follow Cæsar's example, of whom Lucan wrote: 'Nil actum reputans, dum quid superesset agendum.' " These words from a mere writer of books might seem commonplace, but with "Roberts, F.M.," after them, they represent mature conviction and wide experience. The several essays have been carefully prepared, and the book puts professional criticism at the service of a public which usually goes to civilians for its knowledge of military operations.

—We described last week a simple but beautiful device in which all the colors of the rainbow (and hence all the colors of a natural scene) are produced for the eye of the observer out of a screen of glass on which there is no trace of color printed, but only groups of lines, of three different degrees of fineness to correspond to the three physical constituents of white and colored lights (physical, because physiologically the fundamental color sensations are *four* in number). Another device has lately been put on the market which is in some sense the reverse of this: a picture which is printed in bright red and green is looked at through a pair of spectacles consisting of a plain piece of red glass for one eye and of green glass for the other. To the surprise of the observer, all color disappears, and the scene is shown in plain black and white, but with the perfect effect of stereoscopic relief. The explanation is plainly this: the two halves of an ordinary stereoscopic picture, instead of being brought into approximate coincidence by means of lenses, are printed nearly overlapping each other, but one in red ink and the other in green. Through the red glass of the spectacles the green picture becomes sharply black, and the red picture becomes so faint as to be overlooked in comparison; so through the green glass the closely contiguous red picture is black, and the other is inconspicuous. The result is the same as if the right eye looked a little more around to the right of the objects represented, and the left eye a little more around to the left of them; but this is exactly what constitutes the vision of solidity in real life, and the poor eyes, knowing no better, think that they have before them a scene in three dimensions. The ordinary stereoscope is a clumsy affair, and besides one has got tired of it; this process, in which the observer has nothing to do but to put on his red and green glasses, ought to have an important future before it. It is quite conceivable that it should lend itself to the purposes of serious art in a way in which the other method (it is hard to say why) has never done. As a means for the representation of solid diagrams for the purposes of scientific illustration, it cannot fail to be very useful. The method lends itself perfectly, of course, to the representation of pictures in the solid for a large audience, and in fact it is in this form that it has been utilized already for some time in Germany.

—'Finland's Rights and the Czar's Manifesto of February 15, 1899,' is the title of

a timely pamphlet just published at Helsingfors in Finnish and Russian, giving a succinct history of the political constitution of Finland since its incorporation into Russia after the peace of Frederikshamn in 1809, and the several crises through which it has passed during the present century. Every Czar, from Alexander I. to Nicholas II., has, on his accession to the throne, sworn to uphold the constitution of Finland, and as yet not one of them has violated his oath. But there has always been at the Russian court a crafty and unscrupulous clique of reactionists, who have endeavored to deprive the Finns of their political rights and privileges under the pretext of making the whole empire homogeneous in its organization and institutions. One would suppose that this process of "benevolent assimilation" might be accomplished most easily and effectually by granting a constitution to Russia instead of subverting that of Finland. Such a change, however, would have defeated the real purpose of the "Imperialistic" cabal. Although Alexander I. and Nicholas I. were wholly different in character as individuals and sovereigns, they pursued the same just policy towards Finland, whose constitution they recognized as the fundamental law of the land. When the latter succeeded to the throne in December, 1825, he was urged to withhold this recognition, but indignantly rejected the evil counsel. Two years later the Governor of Finland, Zakrewski, on account of some illegal act which he had committed, came into collision with the local authorities, and in the heat of the ensuing controversy exclaimed: "I am your law." Nicholas I. rebuked him for this arrogant assumption, and uttered the words, which Nicholas II. should heed: "No, not even I, the Czar, am Finland's law." As regards the manifesto issued by the present Czar, it not only imposes heavier military burdens on the Finns, but also does so without the consent of the Diet and therefore in direct violation of the constitution of Finland. Against this measure the Diet, in a recent session, has firmly protested.

—The general statistics of Social Democracy have lately been compiled and published by Dr. Lung, a prominent representative and agitator in Denmark. In his own land he credits this party with 90,000 adherents, while in Norway the political organization reports 11,600 members, and in Sweden the party societies have 40,000 followers, and the workingmen's societies, holding Socialistic principles, 80,000. In England the political organizations have a membership of about 25,000, and the trades-unions 1,600,000, not all of whom, however, can be regarded as Social Democratic votes. In 1898 Belgium reported 534,000 votes, and France, in the same year, reported 1,000,000 for the four Socialistic schools. In Austria, under the new law, some 500,000 Social Democratic votes were cast, and in Hungary, where labor organizations of a political character are forbidden, the membership of the party is computed at 200,000. In Italy, in the elections of 1897, the number of votes cast was 137,000, and in Switzerland 55,000. Spain, in 1898, gave 20,000, and Holland 15,000 votes to this party. In Germany the party is the strongest, the votes at the last Parliamentary elections being 3,107,000. In the course of a very thoughtful article in the *Christliche Welt* (No. 22) of Leipzig, a leading and influential organ of advanced religious and ethical

thought in Germany, a well-known authority on Social problems, Paul Göhre, who has made a practical study of the problem by living and laboring with his own hands for months among the workingmen, discusses the remarkable progress which the peace idea has made in Germany in recent decades, notwithstanding the militarism in official circles; and among the factors which have contributed most towards this end, he counts Social Democracy, thus assigning to this agitation a mission in modern civilization rarely accorded to it. After speaking of the Czar's project and ideal, he adds: "But still more powerful in this direction has been the Czar's most bitter enemy, namely, the Social Democracy of Germany. This party in 1893 cast about 2,500,000 votes, and accordingly has between four and five million adherents in Germany alone. And these four or five million the party has made into unconditional enemies of war and adherents of peace."

#### WISE OF VIRGINIA.

*The Life of Henry A. Wise of Virginia: 1806-1876.* By his grandson, the late Barton H. Wise. Macmillan Co. 8vo, pp. xiii, 434.

Governor Wise was a picturesque figure in the politics of the country from Jackson's second term to the outbreak of the civil war. Lank and thin, with deep-set, piercing eyes, low, broad forehead, light hair worn long behind the ears, a large mouth, with thin lips and square chin, careless in attire, an inveterate tobacco-chewer, chewing faster as he got excited with speaking, bold of speech, blurring out the passing thought or feeling with little reference to conventionalities, he was a typical example of the Southern politician of that generation as people knew him in the cartoons of the time. But he had intellectual qualities which sustained and justified the interest his personal appearance excited. With remarkable fluency of speech, his ideas were always striking and apt to be novel. His standpoint was always his own, his opinions independent, his utterance of them trenchant and even fierce, though often enlivened by a native humor and a keen wit. His resonant voice was equal to the demands of the greatest crowds in the open air, and to the habit of talking by the half-day and renewing the speech after dinner.

He was a native of the "Eastern Shore" in Virginia, and, in his congressional career, "Wise of Accomack" represented that sandy peninsula between the ocean and the Chesapeake, peopled by small farmers and oystermen, whose luxuries were the canvasback ducks and "tarrapin" that abounded in the tide-water creeks. A few parsons, doctors, and attorneys were the leaders of the community, and the petty disputes of such a people were the material on which the young lawyer practised his logic and his wit, and plumed his wings for the higher flights from the stump which were to carry him into the national arena at Washington.

After graduating at Washington College in western Pennsylvania, he studied law under Judge Tucker of Winchester in the Shenandoah valley, and, except a brief experiment in Tennessee, his home, during all his congressional career, was on the "bay side" of the peninsula. He was in an uncommonly complete sense the product of his native province, in its virtues and its weak-

nesses. His domestic life was pure and happy, and he was always frank in confessing the good influence of the womanly refinement and piety which presided there. He avoided intemperance and gambling.

He was a slaveholder, though slaves were comparatively few about him, and the few had a comparatively easy time in the small farming of the region. He adopted, however, the cardinal principle of the slaveholder's creed, that, slaves being property, any restriction which was not applied to all other property, everywhere, was a wrong against the South. The Missouri Compromise was such a wrong. The exclusion of slavery from the Territories was such a denial of Southern rights as to justify revolution. The anti-slavery movement was an impudent and senseless fanaticism. With his fashion of extreme statement, his gift of trenchant sarcasm, and habit of fierce denunciation, he became a recognized champion of the system of slavery, and was looked upon at the North as the Hotspur of the fire-eaters.

Wise's relations as Governor to John Brown's invasion of Virginia and to Brown's execution made him, to Northern men, the embodiment of the Southern idea in 1859 and 1860, almost as fully and typically as Jefferson Davis was during the civil war. The quality of Brown's act which filled the imagination of Northern men was the heroic self-sacrifice for the enfranchisement of the slave. The total inadequacy of means to the end, the misjudgment of all probabilities, the illusions amounting to insanity, were all overshadowed by the sublimity of the man's devotion to the most unselfish of purposes. To Wise, as the representative Southern man, Brown was the incarnation of aggressive abolitionism, and his raid the manifest demonstration of Northern hostility upon which years had been spent in Southern declamation. If there were illusions on both sides, there were also curious foreshadowings of the real struggle and its influences on the combatants. In the presence of Brown's patience under his wounds and physical suffering, the glib denunciation we had been so familiar with in Wise's speeches disappeared, and he stood in sympathetic respect by the pallet of his prisoner, questioning him with the courtesy due to a recognized peer and no vulgar outlaw. In Brown's amazing self-control, his unflinching purpose, his cool courage, his independence of factitious excitement or nervous exaltation, there was the premonition of the qualities of the Northern soldiery, which, when marshalled into armies under leaders worthy of the host, were to shatter the vain dreams of easy Southern victory. It is no slight evidence of Wise's real manhood that, when he came face to face with such an opponent, he anticipated the simplicity of demeanor, the absence of false pride and pretence, the frank cordiality, and the honest respect and confidence which marked the meetings of Grant and Lee, Johnston and Sherman, six years later when the great struggle had been fought out.

Wise always denied that he was a secessionist, and advocated fighting within the Union, in the last resort, by the right of revolution against what, from his ultra views of slavery, he declared would be an intolerable oppression—*i. e.*, the enforcement of the Republican doctrine that there should be no more new slave States. In short, it was the old doctrine of nullification of obnoxious laws by force, with the limitation that it

should not be invoked as a remedy except in the extreme case of the invasion of fundamental and essential rights of a State or section.

His refinement of doctrine was too subtle for most Virginians, and when the Confederacy was organized and made overt war on the national forts, he joined the secession party because the Government met war with war. It is even said that he contrived and directed a military raid upon Harper's Ferry armory and arsenal, without any pretence of lawful authority, and avowedly for the purpose of routing the Union members of the State convention by the uncontrollable excitement following the renewal of Patrick Henry's famous cry, "Our brethren are already in the field." His political and personal prominence brought him a commission as Brigadier-General in the Southern army, but, despite his energy and personal courage, his impatience of true military subordination and his combativeness for his opinions prevented him from achieving any great results. He was, besides, too old to learn a new business requiring special adaptation for any real success in it. He proved his willingness to pay with his person for the advocacy of war; but, for influence upon the progress of events, he probably might better have continued in civil life, where he was an acknowledged leader.

When failure and surrender came, he was depressed and saddened beyond real recovery at the failure of the revolution he had greatly helped to begin; but he soon saw and frankly declared that the end of slavery would prove a providential blessing to the South. At the beginning of 1866, in a letter to Fernando Wood, he said: "The main difference, that of slavery, has been determined for ever of *conciata belli*. I am convinced that it could never have been settled in any other way, and that for that reason the war itself was providential; it was God's war, and who on earth dares gainsay it?" (p. 385). Again, six years later, he wrote to a friend, expressing his gratitude to the colored people for quiet orderliness during the war, and adding, "I would not enslave them or their children again if I could, and I could not if I would. I therefore heartily adopt as well as acquiesce in the Fifteenth Amendment of the Constitution of the United States" (p. 396). Such words may well be inscribed over against the denunciations of Garrison and Quincy Adams he had uttered in the fierce controversy of his earlier years, as proof how great a revolution the armed conflict of the war made in opinion and feeling as well as in power.

His oratorical gift, by which he had led his people, had a good deal of genuine feeling, of imagination and fancy, and a natural taste for orotund phrases and balanced sentences. His facility showed itself in his varied forms of setting the same thought, turning it over and over with new verbiage, till he was sure it had made its full impression on his auditors, who had learned to enjoy and admire his fluency. He preferred to appeal to the nobler motives, and there was rarely anything low in his speeches, though he often clinched the effect of a half-poetic passage by some homely comparison which would relieve the attention and bring his hearers into rapport with him by a hearty laugh. It is hard to show the character of such speaking by a brief quotation, but one may get a tolerably fair idea of his manner from the following passage from a cam-

paign speech in 1855, in which he was calling his people away from the seductions of the "Know-Nothings," by offering the better issue of internal improvements and the development of commerce, mining, and manufactures, reproaching Virginians for their unthrifty reliance upon poor farming alone. If he had marked the effect of slavery in this, the lesson would have been complete.

"On Chesapeake Bay, from the mouth of the Rappahannock to the capes of the Chesapeake, you have roadsteads and harbors sufficient to float the navies of the world. From the River of Swans, on whose margin we are, down to the line of North Carolina, you have the Potomac, the Rappahannock, the Planktank, from Mobjack Bay to James River and the Elizabeth River—all meeting in the most beautiful sheet of water of all the seas of the earth. You have the bowels of your western mountains rich in iron, in copper, in coal, in salt, in gypsum, and the very earth is rich in oil which makes the rivers inflame. You have the line of the Alleghany, that beautiful blue ridge which stands, placed there by the Almighty, not to obstruct the way of the people to market, but placed there in the very bounty of Providence to milk the clouds, to make the sweet springs which are the sources of your rivers. And at the head of every stream is the waterfall murmuring the music of your power. And yet commerce has long ago spread her sails and sailed away from you; you have not as yet dug more than coal enough to warm yourselves at your own hearths; you have set no tilt-hammer of Vulcan to strike blows worthy of gods in the iron foundries. You have not yet spun more than the coarse cotton to clothe your own slaves. You have had no commerce, no mining, no manufacturers; you have relied alone on the single power of agriculture—and such agriculture! Your sedge patches outshine the sun. Your inattention to your only source of wealth has scarred the very bosom of mother earth. Instead of having to feed cattle on a thousand hills, you have had to chase the stump-tailed steer through the sedge patches to procure a tough beef-steak."

Mr. Barton Haxall Wise, the biographer, was a young man, full of promise, who made his grandfather's life a study of filial devotion, and died with the first proof-sheets of the book upon his table. His temperate judgments, his calm discriminations, his control of family pride, his broad political views, his literary instincts and happy power of expression, are remarkable in a young man's first and sole literary venture of importance. He has reared an honorable monument to himself as well as to his progenitor. These circumstances make us indebted to his uncle John S. Wise for an introductory sketch of the author, full of interest as well as of affectionate and appreciative feeling.

#### VONDEL'S LUCIFER.

*Vondel's Lucifer.* Translated from the Dutch by Leonard Charles van Noppen. New York: Continental Publishing Co.

Dutch literature has always been strangely neglected in England and America. Few scholars have concerned themselves with it, and even the untiring pen of the professional translator has—except for a few novels—left it undisturbed. If proof were needed for what everybody acknowledges, a single piece of evidence would suffice: Mr. van Noppen's translation of 'Lucifer' is the first English version of any of Vondel's dramas or longer poems. The fact is sufficiently curious, however one looks at it; for the 'Lucifer' is not only the supreme masterpiece of Dutch poetry, but is beyond question one of

the very great things in the universal literature of the last three centuries. Almost incredibly strange, however, is such neglect of this particular piece when one remembers how much it has been talked about of late years as the possible source of 'Paradise Lost,' or, at all events, as a work well known to Milton and systematically ransacked by him for its stores of thought and imagery.

Upon the intricacies of the "Milton-Vondel debate" we have no intention of entering at this time. Too much and too little has already been written on this interesting but not very important question; too much, if one has regard to the narrow range which the discussion has taken and the fallacies that have attended it; too little, in view of the crying need of a thorough examination of the Biblical epic material before Milton. Such an examination would, beyond a doubt, result in the cancellation of most of the parallels between the Dutch and the English poet which the partisan zeal of Mr. Edmundson has accumulated. Meantime, it is to be hoped that every student of Milton will read Mr. van Noppen's 'Lucifer,' and so convince himself that the differences between the Dutch drama and the English epic are fundamental in plan, conception, and conduct. The wonder is, indeed, not that we may detect a resemblance here and there, but that—given an identical body of Scriptural and patristic material—two great poems so very dissimilar should have been produced at nearly the same moment. That Milton had some acquaintance with Vondel's tragedy is not improbable. That it was in any sense a controlling influence in the composition of the 'Paradise Lost' we find it impossible to believe. On this point we are glad to be at one with so ardent a Vondelian as Mr. van Noppen himself, who is convinced "that a critical and impartial comparison of the two masterpieces will neither detract from the glory of Milton nor dim the grandeur of Vondel." Be that as it may, the real interest which attaches to the great Dutch drama is independent of all such questions. Whether it is studied as a work of art or as an expression of national life and character in a fervid time, it will be found equally absorbing and impressive.

The controlling motive of the tragedy is the wounded pride of Lucifer. It is not mere ambition that leads him to revolt. It is his knowledge of the Creation, and of the ultimate destiny of the Son of Man:

"God hath decreed,  
Even from eternity, that man shall high  
Exalted be, even o'er the angel world.  
Ye shall behold the eternal Word above,  
When clad in flesh and bone, anointed Lord  
And Chief and Judge, mete justice to the hosts  
Of spirits, to angels and to men alike,  
From His high seat, in His unshadowed realm."

Nor is his feeling merely that of unworthy envy. He tries to believe—he even succeeds in persuading himself—that in this proposed exaltation of humanity God is disgracing the angels and proving false to the divine nature. Thus the revolt in heaven commands, in some measure, our sympathy, as the almost sincere, though infatuated, assertion of a mistaken principle of loyalty to an ill-conceived ideal. The character of Lucifer is further complicated by a kind of weakness quite consistent with his position as a tragic hero. Like Macbeth, he needs a tempter, and this rôle is played by Belsebub, without the influence of whose subtle and disaffected nature one feels that the decisive step might not have been taken after all. Hence the fourth act, which is mostly occu-

pled with Rafael's sublimely futile attempt to win Lucifer to repent before it is too late, has all the suspense of a mighty crisis, despite our knowledge of what is to come. It may well be doubted if the intensity of this moment is surpassed by anything in 'Paradise Lost.'

With the beginning of the fifth act, however, the hand of the artist begins to falter. The 'Lucifer,' we must remember, was meant for the stage, and indeed had actually been twice performed before the clergy succeeded in suppressing it. Stage battles are never impressive, and, in the present case, a *coram populo* presentation of the strife in heaven would have been wildly impossible. Hence the poet was forced to confine himself to narrative declamation. But this is not all. The act falls into two distinct parts. In the first, Uriel describes the triumph of Michael over the host of Lucifer; in the second, the Temptation, and the Fall of Man, are reported by Gabriel, and the whole ends with a choral prophecy of the "Seed of the woman that shall bruise the Serpent's head." The interest of the act is divided; essential unity is sacrificed to the formal unities and to the exigencies of the theatre. The poet attempted the impossible, and failed. *Magnis tamen cecidit ausis!*

We must turn from the drama itself to Mr. van Noppen's version. Vondel is not an easy author to translate. His vocabulary is rich and varied, and his command of metre is no less extraordinary than his diction. The dialogue of the tragedy is in rhyming Alexandrines, and the choral songs move in complex lyric measures. To reproduce the precise effect in English is quite impossible; to approximate it would tax the powers of a great poet. Yet, despite these difficulties, Mr. van Noppen has produced something more than a merely creditable version. He has succeeded—we scarcely know how—in giving a pretty good idea of the power and beauty of the original. Wisely refusing to essay the English Alexandrine, he has put the body of the play into respectable blank verse. At its best, this is correct, and not unmusical, as in the following extract:

"Yea, e'er we yield, these empyrean vaults,  
Proud in their towering masonry, shall burst  
With all their airy arches and dissolve  
Before our eyes; this huge and joint-racked Earth,  
Like a misshapen monster, lifeless lie;  
This wondrous universe to chaos fall,  
And to its primal desolation change.  
Who dares, who dares defy great Lucifer?"

At its worst, to be sure, Mr. van Noppen's verses are pretty bad:

"O Adam," thunders God, "where art thou hid?"  
"Forgive me, Lord; I see thy countenance,  
Naked and all ashamed." "Who taught thee thus,"  
Asks God, "thy shame and nakedness to know?  
Didst dare profane thy lips with the forbidden  
Fruit?" "Aye, my bride, my wife, alas! did tempt."  
She says, "The wily Serpent hath deceived  
Me with this lure." Thus each the charge denies  
Of being the cause of their sad wretchedness."

Such verses as these remind us of the mock-Wordsworthian, "A Mr. Wilkinson, a clergyman," but luckily there are not so very many of them. In the choruses the translator has adhered to the original metres, and, though it would be folly to claim for his English odes all the high qualities of their originals—a claim which Mr. van Noppen would be the last to make—it is not too much to say that here too a difficult task has been performed with a good measure of success.

Throughout, the translator has treated his author with commendable reverence. He has done his best to stick to his text, often sacrificing smoothness rather than resort

to paraphrase. The closeness and accuracy of his version are alike remarkable. Errors occur, but they are not numerous. The worst, perhaps, is the translation (p. 245) of "Zij weken geen gestarnte in eendracht noch in peis" by:

"They would not, as now,  
Awake the stars from their harmonious peace."

The famous astronomical figure in the speech of the Chorus immediately preceding this passage is also misunderstood and erroneously rendered. Again, in the same act, the point of Bellal's retort to the Chorus ("De vader leer' het kind hem volgen op zijn spoor") seems to be missed; at all events the rendering is vague and weak. But such slips are infrequent and do not impair the general excellence of Mr. van Noppen's work.

Besides the translation, the volume contains an introduction by Prof. W. H. Carpenter, a note on 'Vondel and his Lucifer,' by Prof. Kalf, the highest Dutch authority, and a Life of Vondel and a critique of the tragedy by Mr. van Noppen himself. A table of Mr. Edmundson's "parallels between Vondel and Milton" adds to the value of the work.

The book is illustrated by John Aarts, and is printed with unusual sumptuousness.

#### BENN'S PHILOSOPHY OF GREECE.

*The Philosophy of Greece; Considered in Relation to the Character and History of its People.* By Alfred William Benn. London: Grant Richards.

Mr. Alfred Benn is known to a small circle of appreciative readers as a frequent contributor to the *Academy*, and as the author of a suggestive and readable work on 'The Greek Philosophers' which has never received the recognition that it deserves. Mr. Benn's attitude is that of the scholarly and philosophic amateur. He can follow the latest researches of the Germans, and, if need be, control their use of the sources; he writes eloquently, and evidently from personal knowledge, of the great poets and philosophers of Greece; but he undertakes no minute erudite investigations. His aim is rather to portray brilliantly the larger movements of Greek life and thought, to generalize their tendencies, and to set them forth in relation to the thought of the modern world. His special distinction is that he unites to a very sufficient scholarship and a fluent style a genuine sympathy with physical science and the modern scientific point of view. Too often the student of Greek philosophy, in the selection of a guide, is compelled to choose between a belated Hegelian out of touch with modern thought and a rampant Baconian ignorant of Greek.

In his new work, 'The Philosophy of Greece,' Mr. Benn, while restating some of his earlier ideas, is chiefly occupied with the interpretation of the general movement of Greek philosophy regarded as an expression of the character and history of the Greek people. The suggestion of this method came to him from Prof. Knight of St. Andrews, who thought that the entire history of philosophy ought to be rewritten from this point of view as a "philosophy of the nations." But, as Mr. Benn would himself admit, the idea is in the air. The most popular teachers of philosophy in this country are inclined to treat the history of philosophy in this way. That is to say, they dissociate it from the direct study of ultimate psycho-

logical and metaphysical questions, and make of it a sort of sublimated philosophy of history. They are never weary of repeating that there is nothing absolute in the philosophy of an individual or of a nation. It is in each case determined by character and circumstance. The picturesqueness of this method of treatment cannot be denied. Broad, ingenious generalizations relating the entire social, economic, and artistic life of a people to the abstract utterances of its metaphysical philosophers are interesting in themselves, and are eagerly welcomed by the student as a substitute for the toilsome determination of the precise meanings of difficult texts. But interest and picturesqueness of this kind may be purchased too dear. One may admit abstractly that all products of Greek civilization must be connected by fine-spun threads of relation with each other, with the qualities of the Greek genius and the conditions of Greek life—one may grant all this and yet distrust the ability of the modern student to unravel so tangled a web. 'God in History' proved to be "Bunsen in History," and similarly subtle laws of correlation between disparate phenomena may turn out, under the critical microscope, to be only accidental associations in the mind of the theorist, or at best ingenious fancies rendered plausible by the pseudo-inductive accumulation of citations wrested from their context, and unconsciously colored by the preconceptions of the generalizer.

So, while we have read Mr. Benn's book with great interest, our more specific criticism must take the form of dissent from propositions that seem to us either unverifiable or wholly fantastic. It may have been a special characteristic of the Greek mind to set up a sharp antithesis and then bridge it over by the insertion of transitional links—though we suspect that a clever writer would undertake to show us thesis, antithesis, and transitional mediation everywhere. But we can hardly take seriously the citation, as illustrations of this law of the fact, that "the 'Dios' was built up by the insertion of transitional links between the opening and the conclusion"; that "so also the Olympian theology was organized on a mediatorial basis, Apollo, once an independent god, being regarded solely as the interpreter of Zeus"; that similarly the Greek mind developed geometry out of Egyptian mensuration by interpolating a series of steps between the subject of the conclusion and the predicate; and lastly that Aristophanes pitches on the clouds as the goddesses of physical inquiry because they are the mediators between earth and sky. "Know thyself" was undoubtedly a fundamental precept of Greek ethical reflection, but it is going very far afield to say that, even in the worst times, self-knowledge still asserted itself as an advantage in the struggle for existence, since Thucydides tells us that inferior wits came off best in the discussions at Corcyra because, recognizing their own inferiority in intrigue, they struck at once. There is doubtless some connection between climate, social environment, politics, and philosophy; but Mr. Benn cannot really know that Heraclitus sprang from the union of the sombre enthusiasm fostered by the religion of Diana of the Ephesians with the luminous, orderly genius of Ionia; or that the home-staying Ionians took their speculative bias from meteorology and physiology because "they were occupied as such people are with the weather and the care of their health," whereas the Italic Ionians, having travelled

afar, generalized the idea of space. The pre-Socratic cosmologists were perhaps aristocrats, as Plato certainly was, but it is not a safe inference that "it was in consonance with aristocratic tradition that they disdained to explain their theories by argument," or that the negative result of the minor Socratic dialogues is due to Plato's desire to discredit induction, for which he had an aristocratic dislike. And it surely is overstepping both the evidence and the modesty of nature to denounce Empedocles as a "vegetarianterrorist," "a half-Semitized thaumaturgist reared on a reeking hotbed of salvationist superstition." These be hard words.

We may take more seriously Mr. Benn's interesting chapter on the opposition between the humanists and the naturalists among the Greek sophists, though here too we think that both he and Gomperz, whom in part he follows, strain the evidence. The antithesis between nature and law or convention held a large place in the thinking of the time. Democritus distinguishes the solid reality of the atoms from the conventional and relative reality of the secondary qualities of sense-perception. The conventional or natural origin of language was hotly debated. In ethics, too, nature was appealed to for more moral ends as author of the "higher law," and for antinomian or immoral purposes in protest against the artificiality of the moral conventions that seek to fetter the free play of human passion and appetite. But Mr. Benn goes further than this, and attempts to assign the thinkers of the time to two distinct schools, the humanists and the naturalists; and here we think he goes beyond the evidence. Hippasus is not classified by the casual remark attributed to him in the 'Protagoras' that the distinguished company assembled at the house of Callias are friends by nature and not by the artificial conventions of society. And to say that this is a "pregnant principle" from which "the fateful triad liberty, equality, and fraternity was afterwards destined to be developed," is sheer buncombe. Hippasus's self-sufficiency was a very different thing from that of the Cynics and Stoics. His was a vainglorious many-sidedness, theirs a philosophic limitation of desires. Prodicus taught natural philosophy—a genuine Sophist dabbled in everything; but his show course was the fifty-drachma lecture course on synonyms, which, by the way, Plato does not treat with bitter satire, but with playful persiflage. Both Prodicus and Hippasus seem to have been luxurious and self-indulgent rather than stoical in their habits of life, and Aristophanes's gibes at the pale-faced starveling disciples of Socrates are singular evidence for the proposition that "plain living and high thinking" was the motto of the "physiocratic school."

The evidence for the classification of Protagoras and Gorgias as partisans of *résumé* is equally defective. In the 'Theætetus,' Protagoras actually illustrates ethical culture by gardening—the Georgics of the mind, in Bacon's phrase. Gorgias's disciples in the 'Gorgias' appeal to nature. And Mr. Benn merely illustrates the danger of using Jowett without control when he quotes the remark of Agathon in the 'Symposium' that "where there is voluntary agreement, there, as the laws which are the lords of the city say, is justice." If he had looked at Shelley's version, not to speak of the original, he would have found the

simple statement, quite innocent of general philosophical significance: "and that which every [any] one voluntarily concedes to another, the laws, which are the kings of the republic, decree that it is just for him to possess"—i. e., our laws ratify voluntary agreements.

But it is impossible to pursue this theme further here. The attempt in this and similar cases to erect elaborate structures of hypothesis on an insufficient foundation of evidence, is a natural result of the professional preoccupation of thousands of acute minds with the classics. It may advance knowledge in the end; meanwhile, it distracts attention from the main object of classical studies—disinterested contemplation and enjoyment of the beautiful and the significant. *Qu'est-ce que cela prouve?* cannot be the watchword of the highest classical scholarship.

James Russell Lowell. By Edward Everett Hale, Jr. [The Beacon Biographies.] Boston: Small, Maynard & Co.

This compact and well-printed little book has a double interest for the attentive reader, as being at once a bit of literary criticism and an example of literary heredity. It is not often that a father and son, bearing the same baptismal names, publish within six months two separate books on precisely the same subject. This being the fact, the first point of interest will naturally lie in seeing how far they duplicate each other. In this search, the reader will readily find some points of style in common—a certain agreeable and conversational, not to say chatty, air; a tolerable readiness in forming and expressing offhand opinions; a few familiar catchwords, such as "all the same" and "any way"; and an occasional slovenliness of sentences, showing either haste in writing or absence of revision. The chances are, for instance, that if one of the pupils of Mr. E. E. Hale, Jr., at Union College had inserted in a thesis such a sentence as this—"He seemed to be as gifted as an occasional author as he was as a poet or essayist" (p. 105)—the reviewing officer might have pointed out that one small monosyllable was rather overworked in the passage. And, finally, another hereditary trait is seen in a habit of stepping aside for little collateral axioms, such as this (p. 110): "The great pleasures of the old are unselfish. When a man passes seventy, if not before, he is apt to take his greatest pleasure in the happiness of those about him." This is a view which, however agreeable, is not always confirmed, we fancy, by the old age of artists, authors, or politicians.

What is noticeable, however, beyond these evidences of heredity is a marked divergence from all inherited qualities in the substantial structure of the book, which is, as a whole, condensed instead of discursive, methodical and not scattering, analytic rather than gossip. This is to be placed to the credit of the new generation. Something is also due to the evident plan of the new series of biographies, which seems to be more essentially historic than biographic. The subject of the book, very clearly, is Lowell the author and the public man, not Lowell as that rather complex human phenomenon which he actually was. In this last aspect there may perhaps be a little source of disappointment to the reader. Few works, taking Lowell as their subject, have added less to our knowledge of that curious and rather fasci-

nating commingling of elements which showed itself in him, and which was indeed a life-long puzzle to himself. The value of the book is in its discussion of Lowell as a force in the literature and society which were taking form about him; and this value is quite disproportioned to the size of the book. It is really the first word on the subject from the next generation—the first answer to that "Appeal to an Impartial Posterity" which every author unconsciously makes, though only Madame Roland gave it that high-sounding title. Herein it fitly keeps the promise contained in the prospectus of this series, to deal with "those Americans whose personalities have impressed themselves most deeply on the character and history of their country"; and therefore deserves high praise.

Such praise does not imply, by any means, that we always agree with the author's assumptions or views, but only that we recognize them as frankly and clearly put. Here we see again the advantage that may be gained by a single step in the right direction. It detaches from all responsibility for the opinions of one's grandfather. With all the growing and generous interest of the Rev. Dr. Hale in the cause of freedom, he never could quite shake himself free from the shadow of the eminent editor, Nathan Hale, in his old-time contest with the new-born heresy, abolitionism. Taking one step more, Mr. E. B. Hale, Jr., stands forth free from that hereditary shadow. True, we cannot always understand just what he means by some of his phrases, even on this point, as where he says that the reader can see what a claim the anti-slavery movement made on the poets of its time "by glancing at the earlier poems of Whittier and Holmes" (p. 21). We can recall no allusion to the subject in Holmes's early poems beyond a trivial squib, as where, in his account of the very hot day, he speaks of "the abolition men and maids" as tanned by it to the color of their friends; but if this seems to Mr. Hale a sufficient basis for his phrase, we have no objection to it. Nor can we quite comprehend the contrast here made between Lowell and Whittier when he says: "Whittier's poems have each some blow at slavery; Lowell thought rather of freedom." This seems to us an exaggerated distinction. At the Garrisonian or "disunion" conventions which Lowell habitually attended, the actual negro slave was much more in evidence than at the "political" anti-slavery meetings which Whittier frequented; and Lowell was really thrown more in contact with leading colored men, such as Douglass and Remond, than Whittier was. It did not take the Mexican war to make Lowell an abolitionist. Yet even here the point taken is a fair one, if a little overstrained, and perhaps really touches a difference in the training or temperament of the two men.

Here and there we find opinions from which we should dissent, in other directions. Mr. Hale says (p. 31) that Lowell "was not in those earlier years a very popular poet," whereas the phrase of Willis, "the best-launched poet of his time," seems more in accordance with the general testimony of contemporaries. No doubt magazines were few and prices low, but when Lowell had, within a year or two of the publication of his first volume, an offer from *Graham's Magazine* to print a poem every month at \$120 a year, it meant a recognition such as few young poets win so easily. Again, when Mr. Hale says: "Lowell's scholarship was not the scholarship of to-day" (p. 41),

he speaks what is a matter of course; yet it is also true that when Lowell's interleaved copy of Worcester's Dictionary came to light, through an auction store, and was bought by the Cambridge Public Library, its scantily filled pages won at once, as we happen to know, the most cordial appreciation of their quality from the most eminent English scholars among the Harvard professors. Again, we demur a little at the rather sweeping remark (p. 37), about "the scholarship of our own time, which is not only very unpoetic, but on the whole very much opposed to poetry"; and we doubt if the English examination papers at any of our leading universities would quite justify this imputation; at Mr. Hale's *elms meter* they certainly would not. Doubtless, tastes vary at different periods, and perhaps the standards which recognize the leadership of Kipling would seem to many less valid than those which recognized the leadership of Browning. This would at any rate be our own point of view, but we cannot agree with Mr. Hale's inferences from the fact—if, indeed, this be the kind of fact from which his inferences are drawn.

Least of all should we agree with one of his most important dicta, the announcement that the twenty-five essays in 'Among My Books' and 'My Study Windows' will "probably last longer than anything else of Lowell's" (p. 83). Even supposing, which is probable, that this assertion is meant to refer to prose alone, how could Mr. Hale have allowed himself seriously to add, "What he wrote subsequently has never had any such acceptance and never will be so widely known" (p. 83)? We should say, on the other hand, that the Address on Democracy had both won more "acceptance" and become more "widely known" than anything he had previously written; indeed, that it took its place as distinctly at the head of Lowell's prose work as did the "Commemoration Ode" at the head of his poetry. We cannot, therefore, concede to Mr. Hale the very greatest felicity in critical opinion, while admitting that some of the points he makes—as, that Lowell has now passed into the position of a classic rather than of an immediate propelling force (p. viii); that the period when he came forward was one in which literature held a greater relative prominence than now (p. 11); that he was, more than any other, "the representative American man of letters of his day" (p. 111)—seem to us to be exceedingly well put, and to furnish a good preparation for the next generation's study of Lowell.

*European History. An Outline of its Development. By George Burton Adams. With maps and illustrations. The Macmillan Co. 1899.*

This book, which is designed for the use of higher schools and of colleges, possesses many excellent features and may be called without hesitation a success. Prof. Adams avoids most of the shortcomings which one expects to meet with in manuals (e. g., dullness, distorted proportions, lack of suggestion), and has many merits of his own which we shall presently specify. Speaking at large, we must give the volume our hearty approval, and express the hope that it may be widely established as a textbook.

When one analyzes the contents, a considerable range of subject-matter is obser-

vable. Besides the text proper, there are bibliographical tables and particular bibliographical references to the various subjects considered, a paragraph of "topics" at the end of each chapter, presumably for questioning purposes; "topics for studies in review," placed at the end of each main period; and a table of important dates for review, sometimes given synoptically in parallel columns. In addition to these diversified attractions must be mentioned numerous illustrations and maps. Thus the author presents a great deal of apparatus outside his plain narrative, all of which, however, is intended to supplement, emphasize, or embellish the text itself. Here lurks the danger of providing too much machinery, which has, however, been escaped by a close regard to the correlation of parts. In spite of the various elements which it presents to the eye, the work cannot be accused of lacking unity.

We are unable to tell what degree of trust Prof. Adams places in the apparatus which we have just described. Personally, we think that most of it will prove useful, and the bibliographies are indispensable. But the chief virtue of the treatise does not consist therein. A large proportion of the persons who have written outlines or sketches of European history are merely compilers, and not in any fit sense of the term historians. By process of abridging they have won a certain "base authority from others' books," and have managed to fill up a fixed quota of pages. General history has, probably, suffered more from writers of this kind than limited periods and separate countries have done. On the other hand, Prof. Adams has studied systematically; he can, through a comparative knowledge, estimate the character of epochs and nations; and therefore he models a shapely, organic whole. He is a professional who knows where to go for the best information, and how to employ it when brought together.

Next after the writer's competence, we must rank in the list of strong points the remarkable pains which he has taken with his bibliographies. They are really admirable, and so conjoined with the text that the full measure of their value is secured. Following the table of contents is placed a page which contains the titles of such books in French, German, and English as the teacher will probably require for general reference, and special bibliographies stand at the head of every leading subdivision. These are all rendered the more practical by comprising the publisher's name and the cost price of the volume. Page by page, too, as the text proceeds, the student will find in the margin some standard authority for every leading topic which is taken up, and, whatever the book in question may be, precise passages from it are recommended—which is something quite different from a nebulous allusion to the whole work.

Our final impressions are so favorable that it may seem hardly worth while to qualify them by any touch of adverse criticism. Still, we should not be doing Prof. Adams the justice of a discriminating examination unless we found one or two points less good than the rest. Beside the accuracy of the narrative and the judicious choice of the illustrations, the execution of the maps suffers a little in comparison. They are well colored and moderately well printed, but the places are not always so-

cated with perfect accuracy, and numerous misprints occur; e. g., Maestricht for Maëstricht, Landshut for Landshut, Nerwinds for Neerwinden, Mannheim for Mannheim, Legnago for Legnano, etc. Secondly, Prof. Adams's style, although clear and compact, does not reach quite the same level with his ideas and information. Finally, the love of generalization now and then carries him too far. For instance, on p. 168 this statement occurs: "The territories of Charlemagne were, by the year 800, practically those of the old Roman Empire in the West." But the Western Empire at the time of the final division between Arcadius and Honorius included the provinces of Africa, Spain, and Britain, besides Sardinia and what we may call by their later name the Two Sicilies, none of which (save the small strip of the Spanish March) Charlemagne controlled. Of course Prof. Adams knows the comparative extent of the two empires as well as possible, but here, and in several other cases, his fondness for symmetrical formulas carries him a little beyond the mark.

Our strictures, however, are quite insignificant when weighed with our commendation of this well-designed and carefully finished text-book.

*The Genesis and Dissolution of the Faculty of Speech: A Clinical and Psychological Study of Aphasia.* By Joseph Collins, M.D., etc. Macmillan Co. 1898. Pp. 426.

The study of the speech-faculty has long been a fascinating one, even for the layman, and this excellent and critical treatise, to which was awarded in 1897 the Alvareza prize of the College of Physicians of Philadelphia, deserves to be widely read. Every cultivated man knows something of the plan on which the brain is built; and the chance of extending that knowledge by gaining a closer sight of the inner working of the marvellous speech-function is one not to be neglected. The language-faculty seems, on the one hand, the antechamber to the mysterious temple of thought, while, on the other, the study of the mechanism on which it is based lets one see, with almost diagrammatic clearness, a portion of the scheme by which the brain seeks to gain its ends.

It is less than four decades since Broca published the remarkable observations that appeared at first to place the whole function of speech in a small portion of the frontal lobe, a little in advance of what is now known to be the primary centre for the movements of the organs of articulation. Nearly ten years later came the remarkable discoveries by Fritsch and Hitzig of Germany, and Ferrier of England, which opened the flood-gates of research with regard to cerebral localization in general; and soon afterwards Wernicke published his little pamphlet which made it clear that Broca's area was concerned only with speech in a narrower sense, and that the convolutions of the temporal lobe in which the higher functions of hearing were represented, were an equally important part of the "zone of language." With this admirable paper the foundations of the doctrines of speech and its disturbances were surely laid.

It is interesting to note that the tendency has shown itself, both in the study of the cerebral localization in general, and in that of the speech function in particular, to recognize more and more plainly the iron band

that ties together different sorts of functions which seemed at first sight independent. The physiologist Golts has been the strong and often much misappreciated advocate of this doctrine as regards the general functions of the brain, and Dr. Collins ranges himself squarely with those who adopt the same conception for the language-function. As in the child the growing power of utterance leans upon the ear and upon the "inner hearing," so even in the adult the areas corresponding to the organs of speech and organs of hearing remain so closely dependent one on the other that neither can be damaged without the activity of both being impaired. It was Wernicke's essay that first made clear the character of speech disturbance resulting from an injury of that part of the brain in which sounds are first interpreted as symbols of thought, showing that while the person with such an injury could still speak, his power of controlling his words was lacking. Dr. Collins aptly compares this condition to that of an engine running off by itself with the throttle-valve wide open. Speech may at first pour in an unregulated flood, but after a time even utterance will practically cease, as the engine stops when its fuel is exhausted. It must be observed that, in the modern conception of the conditions at stake, which is not likely to be materially changed, the centre concerned with the interpretation of sounds as words stands in much the same relation to the peripheral organs of hearing that Broca's convolution occupies for the organs of articulation, and the "angular gyrus," a portion of the brain situated near that part which is devoted to primary visual perceptions for the function of sight. An injury of these centres does not cause a person to become blind or deaf or paralyzed as to his organs of speech, and not until these centres or the tracts uniting them (together making up the "zone of language") are damaged is a person properly speaking aphasic. He may be unable to speak, but he still has the higher mental use of words. It is customary to say—and this is Collins's mode of expression—that these centres are "storehouses," as it were, for "memories" of the special sensations of motion, and sound, and sight necessary for the use and comprehension of speech. In other words, these sensations enter there into combinations which clothe them with new significance. The curve of the vibrations which are set up in these portions of the sounding-board of the brain is no longer a simple but a compound curve. From this point onward the processes which underlie words are no longer symbols of motion and sensation alone, but rather symbols of thought. The conception of the brain as "storing up" memories is, however, misleading. Each responsive thrill of the brain stands for itself alone, though it differs from each that preceded and from each that follows it. The memory of the past is reproduced only in so far as it forms an integral part and possession of the present.

It would, of course, be impossible to discuss here the many important questions examined in this book, such as those, for example, relating to the fascinating subject of disturbances of language-function correlated to visual impairments of different sorts. It may be mentioned in passing that the author is one of those who with good reason disbelieve in the existence of a specialized "writing-centre." On the other hand, he

seems to sanction the psychological theories of Flechsig, though they have been in some respects pretty thoroughly discredited. Many points in the doctrine of aphasia are of course still obscure. Among them are those relating to the curious functional disorders of speech, as seen in fatigue and in migraine. The side on which the book is relatively lacking is the psychological side; had this been more fully developed, the keen suggestions of Hughlings Jackson, somewhat old though they now are, would have found a larger place. Still, every chapter is full of interesting matter and contains little to find fault with.

Dr. Collins's style is clear and good, except for a somewhat fanciful straining after unusual terms. They are indeed sometimes better than the old ones, but they distract the attention to a degree that their intrinsic merit does not always make up for.

*Selections from the Manuscripts of Lady Louisa Stuart.* Harper & Brothers. 1899.

Lady Louisa Stuart was the daughter of John, Earl of Bute, the prime minister and favorite of George III. Born in 1757, while George II. was still on the throne, her life of nearly a century extended to 1851, the year in which Napoleon III. overthrew the French Republic. With her natural gifts of observation and expression, and the advantages of high position and long life, she could have become one of the most delightful memoirists of her time had she so chosen; but she was shy of appearing in print, and these interesting papers were written only for a family circle.

Her account of John, Duke of Argyll, and of some of his family is very entertaining. All readers of Scott will remember the stately Duke who befriends Jeanie Deans, but Scott gives no glimpse of the peculiarities of his character. An eccentric streak (perhaps due to the "Tollemache blood") seems to have run through that branch of the Campbells. Few things are odder than his second marriage. This great and splendid nobleman, who might have aspired to a royal alliance, fell madly in love with a poor, homely, uneducated girl, with the manners of a dairy-maid, who was not the least in love with him.

Jenny Warburton, daughter of a country Squire, was one of the maids of honor at the court of Queen Anne, where she was the laughing-stock of her companions for her blunt speech and constant blunders. When the great and admired Duke returned from the Continent, Jenny, like all the rest, thought him a very great man. So one day at dinner, when her companions called on each other for toasts, simple Jenny, instead of naming some bishop or octogenarian general, proposed the Duke of Argyll. Shrieks of laughter greeted this announcement; the Duke must at once be told of the conquest he had made—or no, such an honor would make him too proud—until poor Jenny left the table in tears. At a ball that evening the Duke of Shrewsbury told the joke to Argyll, who had been quite unaware of Jenny's existence, but now felt bound to show her some little attention by way of consolation. The result was a perfect infatuation on the part of the Duke, who soon came to look upon Jenny as the paragon of her sex, and, though he could not then offer her marriage (his separated wife being still alive), he spent a portion of every day in

her company. When his Duchess died, everybody supposed that Argyll would drop Jenny and seek an exalted alliance; but no, he flew to his Jane, whom he considered not only the most virtuous, but the most beautiful, witty, and altogether fascinating of women. Nor did time nor matrimonial experience damp this ardor; he "remained throughout life a faithful, doating, adoring lover," while his Jane, who had no spark of romance in her cool and placid nature, loved

him "as much as she had the faculty of loving anything."

But all the queerness of the Tollemache blood concentrated itself in his youngest daughter, Lady Mary, afterwards Lady Mary Coke, a kind of *Ælia Lælia* ("nec vir nec femina, nec virgo nec uxor") among women, whose extraordinary vagaries and experiences would make an admirable novel if we had a Thackeray to write it. Letters to and from Sir Walter Scott and

others increase the interest of this appetizing book.

91-93 Fifth Ave., New York.

# Prisoners of Hope

By MARY JOHNSTON. 12mo, \$1.50.

MISS JOHNSTON'S novel of Colonial Virginia has advanced steadily in popularity as its uncommon power, historic imagination, clear discrimination of character, its most interesting love story, and its literary charm have become more widely known. *The States*, of New Orleans, in the following paragraphs indicates the sources of its popularity:

"Those who have not yet read Mary Johnston's 'Prisoners of Hope' have missed the enjoyment of a charming bit of contemporaneous fiction, and have deprived themselves of a pleasure only occasionally vouchsafed in these days of abundant literary trash.

"Miss Johnston has selected for the scene of her sprightly tale the Virginia of old colonial days, and few writers have given us a more delightful picture of the period, nor better drawn, in light and shade, the exclusive society of the time.

"The aristocratic refinement of the stately mansions in which the action moves at times, the culture of its lords and masters, the beauty and grace of its maids and mistresses, are presented with a deftness of skill that distinguishes the finished artist; yet when the thread of the tale winds in among the rougher path of insurrection and bloody strife, there is not wanting that vividness of description that thrills and enchains.

"The tale is of interest rarely so well sustained. One moves into it fascinated from the beginning. It is notably strong in description."

## HOLBEIN

who only lived forty-six years (1497-1548), was one of the most precocious geniuses of history—appearing as an able painter at the age of fourteen—and was among the few masters of the North who evidenced the decided influence of Italian art and used it with perfect independence. As is pointed out in the volume on HOLBEIN, in Knackfuss's admirable **MONOGRAPHS ON ARTISTS**, Holbein was the only one among the painters of his day who reached a perfectly free and grand style, freed himself from the petty tastelessness of those around him, and conceived the human figure in its perfect truth and beauty. He was one of the first masters of religious historical painting, and his beautiful and distinct coloring has not been attained by any other Northern painter. This side of Holbein's character is especially emphasized by Prof. H. Knackfuss, whose text is based upon recent authorities, and illustrated with care and discrimination.

# The Nation.

NEW YORK, THURSDAY, JULY 27, 1899.

## The Week.

In finally screwing up his courage to the point of demanding Alger's resignation, the President has shown that, like the crow in La Fontaine's fable, he has learned something. But Mr. McKinley also resembles Maître Corbeau in having learned it "un peu tard." If Secretary Alger was ever to be removed for demonstrated incompetence and for being the best-hated public man in the country, the thing should have been done a year ago. The proofs of his incapacity were then heaped mountain-high. Reviewing them, even the subservient and whitewashing commission of inquiry was forced to report that the Secretary of War had failed to "grasp the situation." How had he failed? In almost every way in which an executive could fail. He had vacillated like a school-girl, issuing orders in the morning only to countermand them in the afternoon. He had established army camps on sites ill-chosen, and filled them with soldiers badly equipped, badly fed, to be killed by the thousand through official negligence. He had flung the army helter-skelter into Tampa, and dumped it down hugger-mugger at Santiago. He had, when warned, after the capitulation, of the danger that yellow fever would carry off half the men, announced that the troops must nevertheless stay in their pit of death, and let the fever "run its course." He had been forced to bring the soldiers home, but exposed them in their own land to such misery from slipshod contract and shocking neglect that the country rang with denunciation of him. He now goes out by a characteristic McKinley indirection. He is not removed for inefficiency—oh, no; that would look too much like a reflection on his chief for choosing him in the first place, and holding on to him in the face of public clamor. It is only that Mr. Alger has been guilty of a technical and political "indelicacy" in standing for the Michigan Senatorship and accepting the support of an outspoken opponent of McKinley. For that he must resign.

It is announced, on what seems to be good authority, that Alger will give out piecemeal to the press the various items which he thinks constitute his defence. He has begun this operation already, by showing that he was the real author of the plan to send the Spanish prisoners of war back to Spain, and it is said he will show next that if he had had his way, he would have sent a much larger force to the Philippines, and, after that,

will demonstrate that the bad war appointments were not his but the President's. Later in the series, it is to be hoped that he will take up the beef contracts, the transportation arrangements, and other features of the war management by his department, and show the country just who was responsible in each instance. The beef question was investigated twice, and a good deal of truth about it was revealed, but little was done with the contracts. The transportation and general-supply questions were never gone into at all, and if Alger will turn the light thoroughly upon them, he will be certain of attracting public attention and saving some trouble to the future historian.

We are rejoiced to hear that the State of Michigan is bursting with indignation over the treatment of Alger by the President. As for Gov. Pingree, he has burst already. He says that Alger is the victim of a "miserable conspiracy," assisted by "an unscrupulous and heartless press," that the "President is responsible for whatever mistakes have been made in conducting the war," and that he has it "on the very best authority that Gen. Alger made very few appointments of officers during the war, and that the commissions were issued almost entirely upon the orders of the President." That is all interesting and to the point, and we hope to see it followed up with a full revelation of all the evidence. Why should not Alger take the field as a Presidential candidate, with the State of Michigan in wrath behind him, and on a platform devoted to telling the truth about the responsibility for the war? That would be of great public service, and we might learn incidentally whether there is any truth in Pingree's assertions that there is a "decided odor of Trusts" about McKinley, and that Mark Hanna is a "king-maker."

Senator Foraker seldom misses an opportunity to "put a knife into the President," and long practice has made him very expert in the business. He comes to the defence of Alger in the Pingree style, speaking of Alger as the victim of hostility to the President, since all the things that he did which have been most severely criticised, as he (Foraker) happens to know, were done "with the approval and by the direction of the President." It will be a mistake, too, Foraker opines, to count upon a cessation of assaults upon the War Department now that Alger has gone, or to infer that they will be confined to Alger's successor; they "will strike higher, and aim directly at the President himself." Foraker "strikes higher" himself, not only as to Alger,

but by taking the side of the correspondents at Manila against Gen. Otis, saying: "I have no doubt of the truth of all the correspondents say in their round-robin, and, conceding the truth of their statements, I think it was all right for them to let us know the real facts as to what has been transpiring in the Philippines."

The selection of Mr. Elihu Root for the War Department is unexceptionable, so far as his legal and general qualifications for the place are concerned. It is said to be the President's belief that a lawyer rather than a military man is needed for the position, and from this point of view it would be difficult to find anybody more thoroughly equipped than Mr. Root. He will be a very shrewd and very able adviser, and there ought to be no scandals while he is at the head of the War Department.

It seems to be wholly impossible for the Administration to be frank about the Philippine situation. On Tuesday of last week it announced that it was going to "ignore" the protests of the Manila correspondents altogether. Such things were too trifling for the mighty minds at Washington to consider. Yet on Friday they gave out a statement which shows that they at once cabled Otis for explanations; that his first answer of July 20 was so unsatisfactory that they called for another, and then out of the two, with a sentence taken from another dispatch of Otis's of July 9, patched up a defence of him and themselves. In the very act, they give the lie to their former assertion that they had freely published all of Otis's dispatches except those containing military secrets. Where is the rest of Otis's telegram of July 9? Suppression, evasion, official coloring of the news are evidently not yet abandoned by the Administration. As for Gen. Otis, he is developing unsuspected powers as a humorist. The only fault fairly to be found with his dispatches, he says, is that they have been "too conservative." That is to say, a long line of unfulfilled predictions about Aguinaldo surrendering and peace coming next week, or surely the week after, with the confident and glowing bulletins put out at Washington in consequence, leaves Otis with the sole regret that he had not more positively foretold the thing which has not happened.

The Postmaster at San Francisco has gone into the business of excluding "treasonable" matter from the mails. He found it in the San Francisco *News-Letter*, in the form of a letter signed by

Mr. J. J. Valentine. It said only about what Senator Hoar said in the Senate, though it called attention in sharp terms to the actual condition of affairs in the Philippine Islands six months after the ratification of the treaty. This was treason, in the judicial mind of Postmaster Montague, and he took the responsibility of keeping the paper out of the mails. But the good man is simply belated. He does not see how the situation is changed since the ridiculous Smith announced that he was going to muzzle everybody who, by differing with him, showed *ipso facto* that he was a traitor. Traitorous publications have multiplied enormously since then. There are the protesting correspondents at Manila, and the returning volunteers, and Mr. Bryan's speeches, and the Hon. Whitelaw Reid's Miami address—all are stuffed with treason and surely have no place in "loyal" mail-bags. Treason has, in fact, grown to such unblushing proportions that the only way to keep it out of the mails is to stop the mails altogether. The only newspaper which can be safely read in Manila is the *Sun*, and even it is able to escape treason-felony only by suppressing the most important news of the day.

Ever since the lynching of the Italians in the jail at New Orleans during the Harrison Administration, wise and thoughtful persons have been apprehensive of fresh trouble arising from similar outrages. In that case the Italian Government made an instant demand for reparation, and the Federal Government was compelled to say it had no authority in the premises. The anomaly existed of a wrong without a remedy, but for which a remedy of some sort must needs be found. Italy at once suspended diplomatic intercourse with us. She did not declare war against us, but she put us in the pillory of the world as a disgraced nation, and she kept us there till an indemnity was paid out of the Federal Treasury to the relatives of the murdered men. Diplomatic relations were then resumed, but nobody was punished for the lynching, and the stigma was never removed from our escutcheon. Now we have news of a fresh one if not a worse one. Five Italians were lynched at Tallulah, Louisiana, on Friday. It is needless to inquire whether there was much or little provocation for the act. The courts were in running order, and any crime committed at Tallulah by Italians or anybody else could have been punished in due course. Nor was there any reason to apprehend that justice would be defeated by a jury trial. The case bears no analogy whatever to that of the killing of the Hungarian coal-miners, who were participating in a riot and were shot down by the sheriff's posse. In that case the Austrian Government demanded an indemnity for the relatives of the victims,

but it was justly refused because it was proved in a fair trial that the men who were killed were committing an unlawful act. In the present case there is absolutely no defence.

In the days when the Democratic party had some principles, and had not driven from it all men of ability and character, it was wont to regard with pride Mr. Eckels, who was Comptroller of the Currency during President Cleveland's second term. Mr. Eckels was driven outside the breastworks by Bryan's nomination, and he expects to be kept outside by Bryan's renomination next year. He draws a picture of the Democratic party and its prospects which is as truthful as it is dismal. He says it will be found on investigation that, from national politics down to local, no one is taking an interest in Democratic affairs who is getting a living outside politics; that the struggle which the party is now making seems to have for its object the driving away of all who own property, no matter whether the amount be large or small; that Bryan's renomination, on this basis, seems to be inevitable a year hence, with the same result as in 1896, but more disastrous to the party, and that "until there is an open repudiation of the spirit, motive, and intention of the Chicago platform, and a complete change of leadership, national, State, and local, the Republican party, no matter how many blunders it may make or how indifferent it may prove to its announced and re-announced pledges, will win in national elections." This is the view of most observers, both Democratic and Republican, and it makes the course of the Democratic leaders in going blindly ahead with Bryan's renomination the most fatuous spectacle ever witnessed in our politics. There seems to be scarcely a man among them who is capable of seeing even the vaguest outlines of the wall at which the party is rushing headlong.

How reckless threats of war can be made part of the political game, Americans perceive very clearly in the case of the tall talk of Sir Charles Tupper and Sir Wilfrid Laurier at Ottawa. We smile to see the Tory leader urging the Liberal Premier on to greater truculence in his dispute with the United States. Sir Charles's little game we see into perfectly. He is giving Sir Wilfrid a "dare"; intimating that the Conservatives would be much more stern and defiant in upholding the national dignity than the Liberals are; hypocritically offering the Government hearty and united support if it would only go ahead and do something rash and warlike. We get a good deal of cynical amusement out of this Canadian by-play, call it political manoeuvring, and scoff at the possibility of anything serious resulting. Of course,

our own politicians are never guilty of thus trifling with national interests. The Republicans were quite sincere in egging on President Cleveland to a course which they thought he would never dare pursue, and were really delighted, as they professed to be, and not chagrined and frightened, when his Venezuelan message took their breath away. So Democrats, who were in a frenzy for a war with Spain as long as they believed President McKinley could not be driven into one, were real patriots, not mere politicians like Sir Charles Tupper, and therefore had no disappointment to swallow when the war actually came and turned out to be "a Republican war," as Grosvenor triumphantly called it. Our withers are unwrung, but the Canadians—how wicked it is for them to indulge in loose talk of war for party purposes!

The Shayne baggage act seems to have a hole in it large enough to pass a whole wagonful of Saratoga trunks. The discovery of it is due to the astuteness of Mr. Lauterbach, whose high authority and standing as a Republican politician does not disable him as an attorney at law and as an attorney in fact for Mrs. Phyllis Dodge. Mrs. Dodge's jewelry, worth something like \$40,000, was seized by the customs officers a few weeks ago as she was leaving the steamer on which she had arrived at this port. The announcement was made at the time of the seizure that the Treasury officials had received information of intended smuggling by Mrs. Dodge from a spy who had travelled on the same ship with her. It was generally assumed, therefore, that she was guilty and entitled to no sympathy or consideration. It turned out, however, that a large part of the jewelry had been purchased in this country before Mrs. Dodge went abroad, and that she had legal proof of the fact. As to the part not purchased here or for which any proof was lacking, it was commonly supposed that the Government would declare it forfeited, and, perhaps, subject Mrs. Dodge to a fine in addition. But Mr. Lauterbach has discovered that the Shayne act applies only to articles purchased abroad by residents of the United States returning to this country, *i. e.*, purchased by the same persons who bring them in. If they are the gift of some other person; or if they have been purchased by some other person than the one bringing them in, and if they are articles of wearing apparel or personal adornment, they are not included in the terms of the law. If Mrs. Dodge's foreign jewelry comes within this category, it cannot be confiscated. That is not the worst of it, in the estimation of the customs officials. The worst is that the discovery of this hole in the act will get noised abroad among tourists in Europe, who will adopt the plan of buying wear-

ing apparel and articles of personal adornment for each other, and thus bring it in free of duty in defiance of the \$100 limit and in derision of Shayne.

The special counsel on the New York canal frauds, Messrs. Fox and MacFarlane, after a very careful and thorough examination of the facts in the case, conclude that it would be useless to undertake the criminal prosecution of anybody connected with the canal expenditure, since there would be little or no hope of securing a conviction in any instance. First, the law bestows upon the Superintendent of Public Works and upon the State Engineer and his assistant engineers such large discretionary powers that, no matter how extravagant and wasteful they may have been in the uses they made of the \$9,000,000 appropriation, they kept within the terms of the law, and are not, therefore, liable to criminal prosecution. Second, under the statute of limitations, no person charged with a misdemeanor can be prosecuted except within two years after the crime is committed. All the heaviest contracts, and those which caused the largest amount of scandal, were let in the fall of 1896 and in the winter and spring of 1897; and whatever criminal conduct Aldridge or Adams or anybody else may have been guilty of in regard to them, they could not enter into the special counsel's inquiry, for the statute of limitations freed everybody implicated from the possibility of criminal prosecution.

There is one very significant incident connected with the question of "discretionary powers" under which Aldridge and Adams carried on their operations. The law which authorized the \$9,000,000 expenditure, and which the people approved of at the polls, provided for bids on the gross-sum principle; and under this, the special counsel say, "many of the abuses which attended performance could hardly have arisen." In May, 1896, the Legislature was induced to pass an amendatory act, by which the estimated-quantity system was substituted for the gross-sum plan. "By this change," say the special counsel, "the discretionary powers of the engineers were greatly increased. The acts which have been most severely criticised will be found to be exercises of these discretionary powers." Who instigated this change? Did Aldridge and Adams discover that they needed it to legalize their operations? Who else could have had the foresight to see that they might need protection of this kind some day? The report of the special counsel, which is an admirable piece of work in every respect, shows with great clearness that without the protection of this amendatory act, and without the protection of the statute of limitations, Aldridge and Adams

could not have escaped trial, at least, for their operations.

Justice Beekman of the Supreme Court has administered to Mr. Croker's agents in our municipal government the most painful lesson they have yet been forced to receive in regard to the unrelenting cruelty of the civil-service law. His decision granting a peremptory writ of mandamus for the reinstatement of a driver in the Fire Department whom Commissioner Scannell had removed illegally, sweeps away almost the last hope that the Tammany authorities had of getting around the law in any particular. It will compel, if it stands, the reinstatement of about 300 employees who have been removed by Tammany heads of departments, and will compel also many of their new appointees to submit to the terrors of competitive examinations, with the well-nigh certain outcome of failure therein. Even Mr. Croker's nephew, whom Mr. Scannell has made Chief of the Fire Department without the formality of a competitive examination, may find that he will have to pass such an examination in order to retain possession of his place. This principle of central supervision and control, through the State Commission, has been firmly established by the law of 1899. The only question at issue is whether or not, during certain periods, Tammany officials had the power to violate the spirit of the Constitution and do as they pleased with appointments and promotions. All decisions thus far obtained from the courts have been against Tammany, and if the general spirit of this one by Justice Beekman controls all subsequent ones, Tammany will take no pleasure in them. As for its course henceforward, it is hopelessly at the mercy of the State Commission, thanks to the fatuous conduct of Mayor Van Wyck.

The obituary notices of Col. Ingersoll dwell on the abatement, during his later years, of the bitterness both of his assaults upon the churches and of their attacks upon him. This was partly one of the natural results of familiarity. His lectures got to be an old story. It was "only Ingersoll," church people got into the way of saying, indifferently. As he became less of a sensation, he therefore became less of an offence and terror. But we presume the main reason of his comparative ignoring for the past ten years or so is that he was really fighting windmills. The beliefs which he so vehemently attacked had, among enlightened church-members, ceased to be held or, at least, to be preached. Thus people felt that it was a caricature of Christianity, and not the real thing, which he was assailing. His guns were all pointed astern. So far as we are aware, he never showed the least comprehension of the really critical investi-

gations of scholars, which are so profoundly modifying Christian theology, but went slashing away, in his rough, gladiator fashion, at "the mistakes of Moses," and other men of straw. If he had been forced in the arena of discussion, as he would have been in a court of law, to join issue and speak to the vital points, the larger part of his somewhat lurid lectures would have been ruled out as irrelevant.

For professed leaders among the nations in all that relates to humane sentiment, England and the United States cut a strange figure in some of the votes at The Hague. They two alone stood out against all the other countries in defence of the explosive or, rather, expansive bullet. To find even Montenegro, even Siam, even Turkey voting against the Dum-Dum and similar bullets, on the ground that they cause cruel wounds, and should, therefore, be prohibited, while the English and American delegates shamefacedly said they were instructed by their governments to persist in advocating the use of such discredited missiles, makes one see "the alliance" in strange light. The worst of it is that a flavor of hypocrisy pervaded the arguments of the Anglo-American representatives. They did not come out squarely and say that they were not in favor of making war "humane." That position would be intelligible. But to profess a superior humanity, and then to resist the attempt to remove one barbarity from warfare, does not look well. Sir John Ardagh, for Great Britain, vowed that the Dum-Dum would be used only against savages, but who is to decide what enemy is savage? By shipping expansive bullets to South Africa, the English Government has apparently decided that the Boers are savages.

Candid Japanese are admitting that the glorious war of their country with China is proving a good deal of a disappointment in the sequel. On the financial side, Japan is certainly worse off than before the war. Her total indemnity is already spent on increased armament, and a large loan in addition has been placed abroad in order to carry out the ambitious military plans conceived in the intoxication of victory. All this means increased taxation and crippled industries. In fact, several Japanese commercial undertakings have fallen into such embarrassment that the Government has had to give them temporary assistance in order to prevent a financial crisis. The only other visible result of the war—Formosa—is almost as much of a white elephant on Japan's hands as the Philippines are on ours. As for having anything to say on the mainland, or taking any part in the partition of China, Japan sees herself as much shut out as if she had never sunk a Chinese ship or stormed a fortress.

## MR. BRYAN AT CHICAGO.

The meeting of the Democratic national committee at Chicago, and the various side-shows connected with it, indicate pretty conclusively that Mr. Bryan is to be the next nominee of his party for President, and also that, when the time comes for making a platform, he can make it to suit himself. He directed the course of procedure both at the regular committee meeting and at the bimetallic side-show and at the Altgeld side-show. He was enabled to do so by virtue of the fact that the Democratic masses are with him and for him. The politicians perceive this fact, and they desire to please the coming man. They hasten to consult his wishes and to make smooth his path within the party limits. The party is as much a Bryan party to-day as it was a Douglas party in the sixties, and even more so, since there was a powerful Southern rebellion again Douglas, whereas South Carolina and Texas are as strongly for Bryan now as any Northern or Western State can be. It does not follow that Mr. Bryan will be elected if nominated, but there is something to be said in favor of nominating the man who can best draw out the vote of his own party. Yet there have been conspicuous instances of failure where this rule was observed, as in the cases of James G. Blaine, of Henry Clay, and of Stephen A. Douglas. These men were as popular, as irresistible, in their respective parties as Mr. Bryan is to-day in his, yet they all fell short of an election when the supreme test came.

Mr. Bryan's speech at the Altgeld meeting was a demagogical performance of the sort that we have been accustomed to expect from him—extremely disgusting in some parts, yet not without considerable cunning and not without effectiveness. In saying that English financiers have forced the gold standard upon this country by controlling, through the Republican party, the financial policy of the United States, he exposes himself as a falsifier. How can anybody have the hardihood at this late day to parrot this ancient untruth? It is impossible to suppose that Mr. Bryan believes any such thing. Yet he offers it as suited to the maw of the Populists whose votes he desires to hold in the next campaign. When he says "the failure of the Wolcott Commission to secure international bimetalism proves that bimetalism can be secured only through independent action," he wishes to be understood as meaning that he is still in favor of such independent action, but he does not say so. He leaves himself the opportunity to put the silver issue in the background next year if it shall then seem expedient to do so—as most likely it will.

On the subject of Trusts he advances four propositions which are extremely vague, since they do not point the way

to a remedy for any evils which Trusts may be responsible for. He begins by saying that "the Trust is a menace to the welfare of the people of the United States, because it creates a monopoly and gives to the few in control of the monopoly almost unlimited power over the lives and happiness of consumers, employees, and producers of raw material." Yet he can think of nothing but prosecutions at law as a means of combating these monopolies, although by far the greatest number of them are protected by the tariff and enabled by it to exercise the power over consumers, employees, and producers of raw materials which he laments. Upon this notorious fact, trumpeted through the press as it has been recently, he has nothing to say, although the Democratic party is committed over and over against this kind of protection, and Mr. Bryan himself is committed against it with ten-fold vigor in his Congressional speeches.

On the subject of Imperialism and the war in the Philippines Mr. Bryan held more decided language than he has allowed himself in any other published speech. This is a really hopeful sign, because Mr. Bryan goes about the country gathering public opinion. He samples every audience that he comes to. He finds out what they want him to say, and then he says it. Immediately after his retirement from the army he began to talk about the policy of expansion in a very gingerly way, indicating that he considered it a doubtful experiment. His doubts gradually grew to unbelief. Where he had at first hesitated, he began to "view with alarm," and now he has reached the conclusion that the war against the Filipinos is an assault on human liberty and a violation of the Declaration of Independence. He now stands with Senator Hoar and the Anti-Imperialist League, and he is in a position where he can do much more effective service than they, because he can carry a party with him, while they cannot. After his declarations at Chicago it is impossible for the Democratic party to nominate him without committing itself to the anti-Imperialist policy. The five points which he lays down are absolutely sound and true, and the fifth one of the series is sufficient to make a whole platform in itself.

## EXPANSION AS AN ISSUE.

It is clear that "expansion" will be a leading issue in the next Presidential campaign. President McKinley has committed his party to that policy, and if, as seems probable, he is again to be at the head of the Republican ticket, his exposition of Republican principles will have to be defended and endorsed. In view of all the discussions and experience of the last year and a half, it is interesting to consider what kind of argument, for electioneering purposes,

the Republicans are likely to make out.

One point, pretty certain to be dwelt upon, is that expansion is in no way inconsistent with the history and tenets of the party, or out of harmony with the things for which Republicanism is supposed to stand. We shall be told that the Republican party has always been in spirit and temper a party of expansion; that it has always had an "affirmative policy," and has never rested upon "mere negations"; that it has "boldly faced" great difficulties and dangers, and "manfully assumed" grave responsibilities; and that it "has not yet failed" to find the best way out of the most untried situations. Cuba, Porto Rico, and the Philippines, indeed, were not sought by us. We wrestled in prayer night and day that the burden of their assimilation might not be laid upon us; but an inscrutable Providence—ever in league with Republicans—willed otherwise, and the party could not be false to the trust devolved upon it. In other words, the party is to be represented to the voters as doing its best in a situation which it took every pains to avoid, but which, the more the significance of affairs is revealed, is seen to involve no fundamental divergence from Republican tradition and policy.

This line of argument, already taken up by the stalwart Republican press, will unquestionably hold a large place in the next campaign. There are some rather serious difficulties about it, however, as a campaign issue, to which the information-for-voters bureau of the party ought to give heed. The Republicans cannot assume responsibility for expansion as a theory, and yet dodge responsibility for the steps by which the present situation has been brought about, or by which the theory is being put into practice. They must, for example, explain the action of President McKinley in yielding to the clamor of some bellicose Congressmen, and "going in" for war, when diplomacy had placed a peaceable solution of the difficulty with Spain almost in his hands. They must explain the retention of Secretary Alger at the head of a department peculiarly important in an "expanding" country. They must explain why, with the good McKinley beseeching Heaven to save us from expansion, the United States insisted upon the cession of the Philippines. They must explain the failure to come to terms with the Filipinos, and thereby avert the horrors of war. On each of these points there is earnest need of some clear-cut and satisfying statement. The voters are in no mood to be put off with generalities, and the explanation can hardly come too soon or be couched in too precise and definite terms.

There are other troublesome questions, too, which even some good Republicans venture to think important. Since the Republican party is fully committed to expansion, and since one of its peculiar

historical glories is its "affirmative policy," there will be much anxiety to know its proposed scheme, in case it is returned to power, of dealing with our new possessions. How, for example, are the latter to be governed? Are they to be colonies, or dependencies, or tributary states? Will their inhabitants enjoy the privileges and immunities set forth in our ancient and time-honored Constitution? Are we to tax their people in our discretion, or tax ourselves for their benefit? How about "grants in aid," and the other financial accompaniments of imperial rule? Then there is the civil service. The Republicans will be in duty bound to explain how it is that, with their own traditional adherence to reform, and with the patent necessity of keeping the local administration of the colonies in clean hands, a Republican Administration nevertheless does its best to dig the core out of the civil service at home, and secretly tears to pieces what years of earnest effort have put together.

In the third place we are certain to be told that expansion means great things for American trade. The languishing industry of the country is to be profoundly stimulated by the acquisition of Hawaii, Porto Rico, and the Philippines. Moreover, the partition of China is a matter of but short time; and if we can plant ourselves on the doorsteps or in the front walk, we shall be favorably situated to elbow our way in when the door falls back. Higher yet, we shall replace barbarism with civilization, and spread among the heathen peace, prosperity, and religion. Lastly, we are a great nation, unable longer to live in isolation, but destined to play a large part on the world's stage; and if a few islands come in our way, it is meet, right, and our bounden duty to take them in, as befits a nation with a Destiny. We are sure that a great deal will be made of this in the next campaign, for it gives opportunity for a deal of rhetoric, and enables even a commonplace orator to end his speech with a brilliant outburst of flame and smoke.

These are some of the things which the next Republican confession of faith will have to affirm or defend, and which will be relied upon to establish the friends and confound the enemies of the party. Yet we fear that the acceptance of the new creed will be, for many heretofore strong in the faith, a matter of great difficulty, for the expansion argument, in whatever form presented, rests, not upon facts, nor yet upon demonstrable propositions, but simply upon sordid hopes and desires. No single fact—economic, political, or social—in our national life suggests, even remotely, that we need to "expand." What the advocates of the policy mean is simply that we ought to be big. Republican success with the expansion issue, then, will depend upon ability to cajole

the voters by pictures of a hypothetical future mainly characterized by bigness. Furthermore, the way in which the Administration has gone about the business is, of itself, enough to condemn it. No Republican administration, bent upon making itself "solid" with the party, has so ignored the people and catered to the machine, or so disregarded the opinions and outraged the moral sense of its ablest adherents, or made weakness, secrecy, vacillation, and deceit so thoroughly its instruments, as has the administration of President McKinley. If the Republican managers have any arguments in store by which to commend their course to the people of the United States, we feel sure that they cannot too soon produce them; for if the party conduct of affairs during the past two years is a fair sample of what may be expected when expansion has the field, verily the Philistines are upon us.

#### CIVIL-SERVICE REFORM TO THE FRONT.

The debauch of the civil service by the McKinley Administration is likely to have one result which the conspirators may not, perhaps, have foreseen. It is pretty certain to make civil-service reform a vital issue in the coming Presidential election. The issue, of course, is in no way a new one. The subject of civil-service reform has been before the country for a generation, and the volume of discussion attending it has been, from the first, very considerable. Innumerable reports, speeches, and periodical articles have explained or criticised the veriest details of its practical workings. The political importance of the subject, too, has steadily grown. Framers of party platforms, both State and national, have more and more felt the necessity of asserting the party belief in the merit system and the purpose to uphold it. Of the two great parties, indeed, the Republicans have claimed especial credit for the inception and growth of the whole scheme, and have thus far been most constant in their professed adherence to the principle of reform; but the Democrats have not found open opposition expedient, and some of the greatest advances have, as a matter of fact, been made under a Democratic Administration. Practically, all parties, so far as their public declarations go, are committed to the support and extension of the system. Only a few recalcitrant individuals now dare publicly oppose it.

Yet the reform of the civil service has hardly been an issue of the first importance, especially in national campaigns. As compared with the tariff or the currency, for example, it has occupied a secondary place. More or less an issue in every campaign, no election has yet turned upon it. The reasons for this are, we think, fairly obvious. To begin with, the question admits of

no such elaborate discussion, and affords ground for no such fundamental difference of opinion, as do some of the matters which have been in the forefront of public interest during the past few years. As between a tariff for revenue and a tariff for protection, there is, theoretically speaking, something to be said. The advocates of free silver have succeeded in making out an argument to which, specious and unsound as it was, thinking men thought well to give heed. But to elaborate an argument for or against the merit system of appointments and removals is a bit difficult. That the administrative work of the government should be done by those who can do it best, seems like a self-evident proposition; that ability should be ascertained by competitive examination, and tenure of office depend upon good behavior, are indisputable business propositions. To argue one or question another is like trying to convince a man that his clerks ought to be honest, or that frequent changes of personnel militate against experience and skill.

In the second place, the civil administration of government is not a subject on which it is easy to arouse general enthusiasm; and without enthusiasm there is no commanding issue. The average citizen admits that clerical and statutory duties can be as well performed by a Democrat as by a Republican, but, beyond this, his interest is not keen. Whether the accounts are correctly kept or not, whether appropriations are honestly spent or Government supplies of proper quality, and a hundred similar matters, are subjects in regard to which he knows little, and with which he feels only a languid concern. Save, perhaps, for the post-office, official machinery is remote from daily life. So we get the habit of mind familiar to civil-service reformers, and one of the greatest obstacles to their success—a cheerful assent to the merit system as a political proposition, joined to a high degree of indifference to the practical operation of it.

We are inclined to think that the action of President McKinley and his Secretary of the Treasury will be found to have given the shock to the moral sense of the community needed to arouse the voters from their good-natured indifference. In the judgment of people with consciences, these leaders have not only failed to do what they and their party were pledged to do, but they have gone further, and systematically undermined the purity and integrity of the public service, in the interest of personal and party control. They have so acted, moreover, notwithstanding repeated protestations of innocence and virtue, and solemn asseverations that their course was in no way opposed to the civil-service law. The appeal to the law, indeed, is particularly unfortunate; for not only has it been shown to be unfounded in fact, but it has also made a bad im-

pression upon those sincere people who think that such a law as that for the establishment of the merit system ought to be administered with regard to its spirit, and not construed with the technical ingenuity applied to a criminal statute. When a high functionary protests, in some matter of moral principle, that his action is "within the law," the public always suspects fraud; and the fraud, in the present case, is plain beyond any possibility of doubt.

Whatever the situation may have been in the past, then, discussion of civil-service reform can no longer be merely academic, or confined to general principles or isolated illustrations. The issue before the people of the United States, from now on, is simply this: Shall the public service be administered in conformity to law, and with the single object of securing honesty and efficiency in the conduct of affairs? Or shall it be administered in contemptuous disregard of law, by men who have no regard for their word, who secretly break promises and oaths, and then, as the Republicans of Ohio and Kentucky have done, boast of their action in the face of the public? This is the issue which the administration of President McKinley has raised; and it is largely upon this issue that the Republican party, in the next struggle for national supremacy, will stand or fall.

#### THE NEW FRENCH CABINET.

PARIS, July 11, 1899.

The instability of cabinets is one of the chief reproaches that have been made against the present Constitution of the French Republic. It is one of the arguments employed by the now very numerous party who have fomented an agitation for a revision of the Constitution. This instability has an obvious consequence, namely, the difficulty of carrying out a fixed policy in diplomatic, commercial, or economical concerns. The continuity which is required in many matters is wanting; bills are presented to Parliament, studied and discussed in part, and abandoned in consequence of a ministerial change. It is surely a matter of regret that the project of forming a colonial army composed of other elements than the ordinary army—a project which is felt to be necessary—has not yet, after so many years, been embodied in a definitive law.

But the instability of cabinets has other consequences not so obvious at a glance. Every ministerial change creates a new army of malcontents. Those who are hurled from office and their friends look upon those who take office with eyes of envy and with sentiments of revenge. All the chiefs of cabinets have a certain number of satellites, who remain faithful to them after their fall, in the hope of getting office again in the future. The Parliament, after a certain number of ministerial changes, is thus converted into a number of sets (we call them *groupes*), more or less hostile, more or less friendly, to each other. Individual considerations become dominant over general considerations; the struggle for life takes the form of the struggle for office. These groups form co-

litions with a view to upsetting a cabinet; the new cabinets are the result of what we call concentrations—that is to say, new coalitions. Parliament is like a sky in which the constellations change their places and their shapes.

Of the numerous cabinets of concentration which have been constructed during the past ten years, none has taken the public so much by surprise as that recently got together, after the fall of M. Dupuy, by M. Waldeck-Rousseau. The two most important members of the new Cabinet are, after M. Waldeck-Rousseau, General de Gallifet, the Minister of War, and M. Millerand. I shall say little of General de Gallifet, his military career being well known. He rose from the ranks to the highest position in the army by his personal bravery, and, I will add, by his strenuous efforts, after the unhappy war of 1870, for the reorganization and greater efficacy of the army, and chiefly of its cavalry. His charges at Sedan, under the eye of the German Emperor, have become as legendary as the famous charge of Lord Cardigan and the Three Hundred. General de Gallifet had been on the reserve list for two years, and was chosen Minister of War in the new cabinet for two reasons only: the first was, that, having had Colonel Picquart on his staff for several years, he came forward and testified in his favor at the time when Picquart fell into disgrace on account of the part he had played in the Dreyfus affair; the second reason was, that General de Gallifet is known as a stern disciplinarian, and the Republicans, who had become alarmed by symptoms of discontent in the army, expect to find in the General the man who will maintain a strict discipline in all ranks of the army, and will enforce rigorously the verdict of the council of war at Rennes, whatever this verdict may be. General de Gallifet has never uttered an opinion on the Dreyfus affair; he has simply given impartial testimony in favor of Colonel Picquart, who, in the capacity of chief of the secret service at the Ministry of War, was the first to endeavor to obtain a revision of the trial of Dreyfus.

It is certainly a matter of astonishment for Gen. de Gallifet to find himself at the Cabinet table between M. Waldeck-Rousseau and M. Millerand, who have been in standing opposition to each other, not only in Parliament, but at the bar—for they are both lawyers. M. Waldeck-Rousseau is one of the most prominent and successful lawyers of the court of Paris; his name has been connected with some of the most notorious cases of recent years; he has been the counsel of a Dreyfus (not the present Dreyfus) who had some difficulties with the Government of Chili about a guano contract, of the famous Eiffel (of the Tower, but also, alas! of Panama), and of many financiers of more or less repute. He seemed to have almost abandoned politics for the bar. In politics he belonged to the school of Jules Ferry. He has always been a Republican, but a Republican with a conservative tinge and without any admixture of Socialistic ideas.

M. Millerand is essentially a Socialist, and in his person Socialism finds, for the first time, a place in the Government of the country. This is explained by the partisans of the new Cabinet as a transient phenomenon: they thought it necessary, by giving

a place to M. Millerand, to get the votes of the Socialist group in the Chamber which follows his lead. M. Waldeck-Rousseau needed a majority, chiefly with a view to putting an end to the Dreyfus affair, which weighs on the country like a nightmare. It is the first time in my recollection that a cabinet comes before the Chamber without any programme, any platform, merely with the object of keeping order in the country during a judicial debate. The more or less conservative Republicans indulge the hope that, the Dreyfus case once settled, and settled for ever, they will say good-bye to M. Millerand and *debark* him, to use a favorite expression of our politicians.

The choice for M. Waldeck-Rousseau lay between the voters of the Millerand group and those of the Right. He preferred the first to the second alliance, and the only possible inference from this is that he feared that the Right was not sufficiently in sympathy with the cause of Dreyfus, which he himself has espoused from the first. Such considerations, however, can hardly be openly invoked, as it would be very unbecoming, as well as very dangerous, for the chief of the Cabinet to admit that anything can affect the verdict of the council of war at Rennes except the testimony to be given before it. It has been the misfortune of the Dreyfus affair that it has created an inextricable confusion between powers which should always have their separate domain. The old maxims of Montesquieu have been forgotten; the executive power, the legislative power, the judicial power have not been kept within their proper limits. Even now, when a sort of final attempt is made for the conclusion and termination of the affair, the Cabinet has allowed itself to be suspected of being Dreyfusard; all its acts receive an interpretation which, directly or indirectly, has some bearing on the *affaire*. The new Minister of War, however, before he came into office, wrote a letter (April 15, 1899) which shows that he does not intend to give further development to the affair. This letter deserves to be translated, as Gen. de Gallifet is now the head of the army:

"Dreyfus in Devil's Island, Picquart prosecuted, Esterhazy in flight, Henry dead, Du Paty de Clam threatened with a council of war—are there not enough victims, innocent or guilty? Nevertheless, the enemies of the army, not yet satisfied, demand for the satisfaction of their hatred all the officers, general or other, who have more or less been mixed up in the disastrous affair. Would it not be better to preserve silence? Would it not be wiser, more generous, and at the same time more patriotic, not to incriminate incessantly officers whom no tribunal will think of calling to account? The army knows them; it will admit that they may have been deceived, but it knows them to be men of honor and incapable of committing a bad action.

"To its electors, the Government, I am told, has promised punishments. I respectfully advise it to renounce them, because nobody will believe that it has become firmer for having once shown itself too severe. In the interest of the country and of the army, and in order to the pacification of the public mind, I wish that this appeal might be heard. The man who gives it has taken no sides in the affair, and thinks that he loves France more and better than those who every day throw discredit on this army."

The General who wrote this letter and gave this advice to the Government, is now himself in the Government. On taking the Ministry of War, he has made some changes in the army, but so far these changes have not assumed the character of persecution.

or positive punishment. Some general officers and colonels who had written communications to the press, or made public speeches or orders of the day, having a political character, have been sent to other garrisons; but the Minister of War has adopted no other measures. He has severely shown his firm intention not to allow any member of the army to take any public part in any political question.

So far, M. Millerand, the Socialist member of the Cabinet, has not been allowed to influence its decisions in any important degree. The fact of his giving a sort of status in the Government to pure and unmitigated Socialism is, however, of undeniable importance. The Chambers are now not in session, and it will be only a few months hence, and after the new trial of Dreyfus, that M. Millerand will probably attempt to present bills to Parliament to satisfy his own party, or rather his own group.

#### THE UNDERGROUND FORUM.

CAMBRIDGE, Mass., June 29, 1899.

The work begun so auspiciously some months ago in the Roman Forum has provided continually increasing interest during the months that have passed since my last account of it. Literally, from one end to the other of the space dug over by previous excavators, things not only new but of permanent value to scholars have been brought to light. Inscriptions, vases, fragments of sculpture and architecture have all given a quota to the total result.

In front of the temple of Antoninus and Faustina the earth has been cleared away to a depth of four feet, and the brick core of four more steps of the temple is now visible. This core is of two parts, each originally supporting two marble steps. Directly opposite and on the other side of the Via Sacra, the clearing process has revealed to us three steps, nine inches in height but of unequal width, that descended from the Regia to the road. Signor Boni has long desired to determine the upper reach of the Sacred Way, and, assisted by the discovery of these steps and by that of a sewer below the road where it runs between the Temple and Regia, his efforts have terminated in success. The sewer is a large arched passage stretching its long-drawn curves, of well-built *opus reticulatum*, from the northeast westwards. Along the pebbly bed flows a small brook. It is evidently one of the original water courses of the Forum walled in and turned to serve the uses of man. The view along the mossy walls, flecked here and there with sunlight shot through the openings in the road above, with the little brook flowing just where it flowed two thousand years ago, is really very pretty.

It was natural to suppose that this sewer followed the original lines of the road, and on this hypothesis Signor Boni set to work digging on the south side of the Basilica of Constantine, and there, some six feet below the surface, found a fine pavement of carefully jointed polygonal blocks, similar to the bit by the temple of Saturn. This is unquestionably the ancient pavement of the Sacred Way. It will not be hard to continue this line of exploration and ascertain the course of the Way toward the east.

In this region another monument that has assumed a very different aspect from of old is the Arch of Fabius. The well-known pieces, discovered several years ago, lay heaped carelessly together. They have been joined with others lately found, and now, with only one or two voussours missing, the arch lies in orderly and intelligible fashion on the ground. Neither the side piers nor the basement have been found, so that reconstruction is out of the question, but the spread of the arch can be measured with an accuracy sufficient for all practical purposes. It turns out to be larger than was imagined by those who up to this time have written on the subject. Though the exact spot where the arch stood has not been determined, its position was probably close to the roughly built brick chamber nearly opposite the Temple of Romulus. One reason for thinking this to be the spot is, that most of the remaining portions of the arch were found here. Another reason is, that the eastern wall of the brick chamber just mentioned is constructed in part of the remains of the wall of an earlier structure, in which are still visible two narrow openings, like loopholes, which suggest that this was originally a guard-house. It is possible that these seeming loopholes are only windows, but it seems unlikely that in this part of the Forum there could have been any building other than one of distinctly public use.

After the work on the Vesta Temple was completed, both topographic and historic reasons pointed to the Regia as the next building to demand the explorer's attention. First, between the two buildings a system of hypocausts, at present unaccounted for, was found and cleaned up. Then the foundations of the northern wall of the temenos of the Vesta Temple were laid bare, as well as those of the walls of the Regia. Several early drains built by laying flat slabs of tufa on low perpendicular side pieces (like the drain near the top of the Scala Caeli on the Palatine) were met with during the work, but no small objects of value were found. Two interesting wells were discovered and cleared. One of these, about three feet in diameter, is near the southeast corner of the Regia. Through some misunderstanding, this has unfortunately been identified in the London *Times* and elsewhere as the Puteal Libonis. This it can hardly be, for it is a simple well, whereas the Puteal Libonis was no well at all, but a monument similar to a well-kerb set over a spot struck by lightning. Students must take note, too, that the description in the *Times* of the details of this well is quite inaccurate. It has no mouldings of any sort, and the *pedaroli* of which the writer speaks are not architectural members of any sort, but merely small holes cut in the sides of the well to give support to the hands and feet of a person who had occasion to descend the well. They are to a well what the rungs are to a ladder. Among the rubbish that choked up the well were great quantities of broken pottery and stone weights, together with one or two small altar-like objects of terracotta. The latter were prettily moulded with decorative and figure subjects, and were of late date. The pottery was, in the main, of a ware similar to the fine glazed bowls ornamented with impressions of seals or coins that come from Capua. A few skulls of the *mustela*, the animal which played the part

of the modern cat in the Roman household, were also brought up from the well. The second well is near the front of the Regia, and had not been entirely cleared when I left Rome two weeks ago. This second well differed from the first in not having *pedaroli*. Close beside it is a cistern which, from the point of view of construction, more than makes up for the ordinary quality of the well. It is dome-shaped, about ten feet in diameter, and built of two shells constructed in the common way of overlapping (but not arched) stones. The inner shell was covered on the inside with stucco, while the foot or more of space between the two shells was filled with clay.

So far as the Regia itself is concerned, nothing new of much importance has been learned. In front of it, however, the lower part of what appears to be a piece of the core of the foundations of the Temple of Cæsar has been cleared. If this is what it seems, it will show that the temple was in plan much deeper than has heretofore been supposed. In addition, several bits of pilasters, cornice, and cassettes of this temple have been added to our previous store of such fragments.

Between this Temple of Cæsar and that of Castor and Pollux stood the Arch of Augustus, of which only the lower courses of the foundation stones could formerly be seen. Superimposed on these now stand several of the lower blocks of the arch itself, which have been brought back to their original site from the various corners of the Forum to which they had been, in some inexplicable manner, scattered. As yet there are not very many of them, but what there are will be sufficient to give, to the uninitiated at least, a very different idea of the arch from any which they have been able to form before this time.

It will be remembered that on the northern side of the Temple of Cæsar and west of the Temple of Antoninus, probably about opposite the Temple of Castor and Pollux, stood the Basilica Æmilia. The desire that archaeologists have long had that this spot might be excavated is at last being satisfied. For this our thanks are due to an Englishman, from South Africa, I believe, Mr. Phillips. Happening to visit Rome this last spring, he became interested in the work that was then in progress, and heard of the difficulties to be overcome before the site could be excavated, chiefly owing to the existence of a block of squalid dwellings standing on the spot to be cleared. These were held at so high a price that the Government did not consider itself justified in buying them. To an Anglo-Saxon accustomed to make the earth give up her secrets, this obstacle seemed of little moment, and Mr. Phillips sent to the Government an offer of a certain sum to head a subscription to buy the houses. The ministry were unprepared for this turn of affairs. Special meetings were held, and finally the offer, which had meanwhile been considerably increased, was refused on the ground that the acceptance of it would be compromising to the dignity of the Government. Mr. Phillips, however, had made up his mind to see the work done in one way or another, and so he bought the whole site for (it is reported) some 60,000 lire, and made a gift of it to the Government. The houses are now torn down, and it is a reasonable hope that before many weeks have passed we shall have accurate knowledge of the Basilica. What-

ever the results of the excavation, the action taken by Mr. Phillips will long be remembered with gratitude by all archaeologists. It is to be hoped that his example may be followed, and that Americans and Englishmen may contest in friendly rivalry to promote the interests of scholarship.

It is at the western end of the Forum, however, near the *niger lapis*, that the most interesting discoveries have been made. This whole region is being slowly and carefully cleared. First, there were found pieces of a slab of travertine cut on one side with an inscription of the time of Sulla. This had been used to repair the pavement of the Comitium, probably after the fire of 283. So far as can be made out, the words refer to contracts for public works—probably drains, as the price was only about \$5 a foot. Then, close about the arch of Severus, the foundations of several early buildings were discovered, and it can now be shown that the steps by which, as Jordan and Middleton thought, the line of the Comitium was marked, did not serve that purpose, but are of late date, as are also the slabs heretofore usually thought to be the pavement of the Comitium. Bits of the true pavement have been found near the *niger lapis*. It is this, the *niger lapis*, around which the excavations have revolved like the free leg of the compass about its fixed centre. Signor Boni has even pushed his explorations directly under the "black stone," which is now supported in mair by beams and braces.

When the report first spread that the *niger lapis* had been found, Prof. Huelsen, of the German Institute, wrote an article to show that the report could not be true, because certain ancient authors spoke of two lions standing beside the *niger lapis*, and, as these had not been found, the black stones which had been discovered could not be the black stone. To those who have had experience in excavation, this argument will hardly seem conclusive, and later events have demonstrated its fallaciousness, for some five feet below the "black stone" two equal bases have been found which can hardly be other than those on which formerly stood the lions. They are of tufa, finely cut and set with strong, low, long-drawn mouldings that seem of the early fifth or sixth century B. C. Two other monuments found beside these bases are perplexing. One of them is a truncated cone of tufa set on a square base. The other is a square beam of tufa cut on all four sides with an inscription in such early Latin that when I left Rome it had not yet been read. This also stands on a square base of tufa. A most curious circumstance is that these bases for the lions and the two other monuments are directly underneath the *niger lapis*. In clearing these objects, a layer of ashes was met with in which were a great quantity of small vases, lamps, and weights and several small bronze and bone statuettes. The largest of the bronze figures, only about four inches high, was evidently of local manufacture, and represented in crude fashion a nude man with large head covered by a shock of hair. He held a short staff, bent like a hockey stick, in his hands. The others, about three inches high, were very nicely modelled figures similar to the "Apollo" of Tenea, and evidently not made by the same class of workmen as made the larger figure or those of bone, which also were crude and ugly. Whether the *niger lapis* marked the tomb of Romulus or not,

it can no longer be questioned that this spot had some sacred significance for the Romans.

The earth about the entrance to the Temple of Saturn has also been taken away, but little of interest was found except a drain running towards the Tabularium, noted years ago by Bunsen in the "Monument" (1836, Pl. 33, 34). It is an arched passage of tufa peculiar only for having on one side of the interior a continuous step some eight inches wide and about one foot high, running along the bottom.

While such has been the progress of the work in the Forum, other parts of the city have added other results to the total of the archaeological interest of the year. In the Church of the Gesù a large bit of the enclosure wall of the Ara Pacis Augustæ was found serving as the tombstone of Cardinal Sebastiano Poggio, who died in 1633. Then, while tearing down some walls of a house in the Via Giulia, the workman came across 473 fragments of the Forma Urbis. Such accidental discoveries may possibly be of great importance; but our interest is drawn inevitably to the Forum, where the constant finding of important monuments is the reward of careful work carried forward with energy and intelligence.

RICHARD NORTON.

#### LA TRAPPE DE NOTRE DAME DU LAC.

MONTREAL, July, 1899.

It is strange that Carlyle, who set so high a value on other men's silence that he preached it to his fellows in something more than thirty volumes, should never have found a good word for a company of toilers whose daily lives, in more than one aspect, practically apply his teachings. Possibly, he may have wished to include them tacitly in the off-hand declaration of 'Past and Present' which says that, "the gospel of Richard Arkwright once promulgated, no monk of the old sort is any longer possible in this world." There is, however, at present, no sign of approaching decay or extinction in an order whose houses are counted in France by dozens, while Canada, notwithstanding a relatively sparse population and severe climate, supports three establishments, in various conditions of development and prosperity. Of one of these, which it was my good fortune to inspect under exceptionally favorable circumstances, it is the purpose of this article to speak.

The visit of a young French acquaintance, furnished with letters to ecclesiastical authorities, supplied the opportunity; for although the traditional open-handed hospitality of the Trappists rendered the monastery of Notre Dame du Lac accessible to male visitors of any faith, sympathetic interest alone is but a slender warrant for interrupting the quiet of a life professedly withdrawn from the world. Yet, for all this, the welcome given to every passing stranger is so unforced and considerate that differences of belief and opinion vanish for the time at the sight of this direct but unobtrusive exercise of the spirit of humanity, shown alike and in the same measure to the beggar, the pilgrim, the priest, and the tourist.

This monastery and its adjoining farm are situated on the southern exposure of the long, easy hill-slopes of the "Two Mountains" which flank the north shore of the

lake bearing the same name—a wide expansion of the Ottawa River at the head of the Island of Montreal. In spite of its proximity to the busy industrial and commercial centre, few of the English-speaking inhabitants of Montreal know this institution otherwise than as a name. There is nothing remarkable in this fact. Between the two sides of the lake the contrast is indeed sharp. On one shore lie trim cottages and villas, the gardens, the shaven lawns, and the golf-grounds of a prosperous and luxurious bourgeoisie; across the lake, not ten miles away, stand the three white chapels of the shrine on the hill-top, and the sombre pile of buildings where the "brothers of toll" work out, as they trust, their own salvation through labor and prayer.

"The world forgetting, by the world forgot."

Landing at the miserable Indian village of Oka, the traveller promptly finds himself packed into a rickety omnibus, amid a confusion of passengers and parcels bound for the same destination. But as the rattling vehicle proceeds along the sandy stretches of road, the first impression is of a steadily progressive improvement in the appearance of the countryside, as well as in the quality of the roadway itself. It is obvious that the industry which in a few years has turned the tangled Canadian bush into a succession of admirably cultivated fields, has already begun to tell through the influence of example, spreading outwards over the immediate neighborhood. A further surprise awaits us on coming to the "old monastery" (now a small and struggling school of agriculture under Trappist guidance), entirely surrounded with kitchen-gardens, orchards, and vineyards; for one at least of our number remembers this spot as an almost impassable bit of forest. From the balcony of the simple wooden chapel under the eaves, the eye now looks down on the avenue of maples, rich with the promise of a splendid maturity, on acres of garden beds and fruit trees, and thence travels over the brown waters of the lake, flecked here and there with the purple of passing cloud-shadows, away to the southern horizon bounded by the outlying ranges of the Adirondacks. Beyond this point, at a bend and dip in the road, still stands the small *habitant* house in which the fathers settled during the first few seasons of their struggle against the difficulties of climate and soil. Immediately opposite, in noble contrast, the new monastery building stretches its huge three-story façade of rough stone, symbolical, in its stability and proportions, of the character which its founders seek to impress upon the work of their order. Alighting travellers are received by the "Père Portier" and "Père Hôtelier," the former's duty being to escort the visitors over such parts of the establishment as are generally shown, while the latter, who has charge of the hostelry forming a necessary adjunct of every Trappist monastery, provides for the lodging of wayfarers requesting hospitality for a night or more. This being our case, we were soon assigned most comfortable rooms—not cells—the walls of which were hung with religious pictures, excellent in intention at least, and also provided with a copy of the rules of the house, to which one is most courteously begged to conform. Guests are thus notified, in the first place, that

the "Hôtellerie de Notre Dame du Lac" is "neither a sanitarium, an hotel, nor a place of recreation," but is intended as a retreat for such as wish in silence and solitude to strive after amendment of life and conduct. To this end, each hour of the day has its set occupation of prayer or meditation, from early morning service till nine in the evening, when all lights must be extinguished. These rules, as well as others, were considerably relaxed for us. For the monks, discipline is naturally severe, even beyond the rule of silence. Rising at two in the morning, they at once proceed to the chapel, where services are held without interruption till high mass at seven; the rest of the day is taken up with the most arduous manual labor in the field, with meditation and worship, till the hour of the *Solst*, after which all retire. Equal strictness presides over their regimen, which excludes meat, fish, butter, and eggs (save in cases of illness, and also of travel in the interests of the order); and for drink, milk and "fair water." Cider, made by the monks, takes the place of wine, allowed in most of the houses in Europe. Visitors come under a more generous commissariat regulation, and even on the two *jours maigres* of our stay we could not plume ourselves on having bravely submitted to cenobitic fare.

After an ample midday dinner, eaten, according to request, in silence, comes the visit, under the guidance of the Père Portier, to the chapel, cloisters, refectory, cells, and all the outlying buildings which serve in the exercise of the various industries of La Trappe. The severest simplicity reigns throughout. In the long low refectory, for instance, a plain, solid deal table runs around three sides, already prepared for the next meal, which apparently will consist mainly of a generous portion of brown bread and a handful of onions; the dishes and utensils, scrupulously kept, are equally simple for all, those of the abbot himself differing in no way from the rest. As for the chapel and cloisters within their heavy stone walls, lath and plaster, unadorned save for a few primitive arabesques or mottoes and texts, suffice for the surroundings of an existence in which the sense of material beauty is accorded neither a place nor a thought. But the moral impression on the beholder is for that very reason all the more direct and intense. It is possible, one may admit, to learn by degrees to accept the sparseness of diet, the hard pallet in a wooden cubicle like a box-stall in a stable, the toll, the absence of frequent cleanings. The hardships of soldiers in the field, of sailors before the mast, not to speak of the advertised discomforts of arctic or other explorers, are often enough more severe. What seems more difficult of comprehension to those out of whose habits of thought there has grown a radically different conception of life and its implications, is the process by which a human being reaches a renunciation so complete as contentedly to take his daily recreation in a tiny cemetery where the grave in readiness awaits the next comer, and to meditate for hours in front of the inscription, "Quand il n'y a plus de moi, il n'y a plus de croix." But here, as Sainte-Beuve says, there is at all events no tarrying in the regions of doubt, no sense of failure in the pursuit of truth; nor is one any longer haunted, amid the shiftings of a fitfully reviving faith, by

misgivings, outward darkness, and the open gulf of uncertainty. Doubtless, too, more than one has found in this retreat the truth of a saying unwritten on its walls: "À cœur blessé, l'ombre et le silence."

In the sunlight, under the clear, hard blue of the Canadian sky, all graver reflections give way at the sight of the admirably ordered farm-buildings, poultry-houses, cattle-pens, dairies, and wine or cider-presses of the establishment. The silence which prevails over all the human activities engaged here is no check on the cheerful noises of the farm-yard; though one visitor stoutly maintained that he detected signs of a tendency in that direction. But one's chief interest lies less in the organization itself, which differs from that of an ordinary farm-house in nothing but unusual size and cleanliness, than in the knowledge that this constitutes one of the principal sources of revenue of the whole institution. Trappist butter, cheese, wine, and cider are now well known, the first two holding their own among Canadian dairy products, for the general improvement of which, in the last few years, a large share of credit must be given to the staff of the experimental farm established at Ottawa by the Dominion Government. All around us, during the glorious June day, the farm work goes on. The formal part of the visit over, we are free to lounge on the hillside and watch from a distance the white-gowned brothers, or the *concois* in darker robes, dotting the fields, bent over the earth like Belgian laborers, and interrupting their work only when, at stated intervals, the monastery bell gives the signal for a few moments of prayer. As a very tangible mark of their success, it may be noted that though the plague of caterpillars had almost devastated the neighborhood, reducing fruit-trees to skeletons, and laying autumnal tints on clumps of woods, hardly a trace of the scourge appeared within the precincts of the monks' property—a result achieved by detaching a certain number every day to gather up and destroy the vermin. The adjacent farms unfortunately cannot dispose of a sufficient number of hands for the purpose.

It must not be supposed that the produce of farm and dairy is alone sufficient for the support of the monastery. Notwithstanding the fact that the land on which it stands was ceded to the order by the Sulpicians, who still preserve quasi-seigniorial rights and privileges over the district and many adjoining parishes, the installation alone of so large an establishment must have demanded a great initial outlay. Without entering into questions with which neither the present writer nor his readers can have any concern, it may be conjectured that, in common with other eleemosynary institutions, La Trappe at times receives through private gifts some part of what is so liberally distributed from its doors or within its walls. The casual offerings of travellers, though not a completely negligible quantity, are too often out of all proportion to what many could easily afford to give. According to Baedeker, while more than sixteen thousand guests are annually entertained at the Saint-Bernard Hospice, their contributions hardly cover the expenses of one thousand. The writer trusts that he may be pardoned for his indiscretion in citing a parallel case, where, after a dinner to twenty-five uninvited guests, the treasury receipts amounted

to exactly twenty-five cents. The humorous twinkle and comment which accompanied the information showed that under the cowl the man is not lost. But this tolerably regular entertainment forms only part of the charity freely dispensed here. At all seasons of the year, and more particularly when labor is scarce, unfortunates drift hither from various quarters, or are directed to come by those who know that from these doors no hungry man is ever turned away. In some cases a little return is made in the form of a day's work, easily arranged for even among the varied labors of seventy or eighty monks.

One whose way of life has been determined by very different conditions and considerations from those of a cenobite finds some difficulty in expressing without exaggeration the full effect produced by the sight of an existence so ordered, so sheltered, so free from individual struggle, and yet to all appearances permanently human through its sincerity, its labor, its steadfastness in well-doing. To give definite illustration of this would imply presenting to the reader personalities long since lost to the world, and still eager to avoid it; one may, nevertheless, record one's thanks for the hearty reception to those of another belief, for the memory of genial intercourse, and for the warm invitation to renew the acquaintance. We may be far from contemplating such a life with envy—equally far from any intention of carrying its austerities into our own; but we cannot forget that the sight of it gives a wider meaning to our conception of tolerance. It is our lot, however, to return, and, in the words of the great worldly philosopher probably unknown to the Trappist, "to take our part in the suffering and struggling, the tears and laughter, the crime, remorse, love, folly, sorrow, rest."

P. T. L.

## Correspondence.

### THE PRICE OF TIN-PLATE.

TO THE EDITOR OF THE NATION:

SIR: I notice in your number for June 29 reference to the article by Prof. McVey, published in the *Journal of Political Economy*, on the subject of Trusts and tariff, and the figures there given on the tin-plate industry. Is it worthy of your notice that the *Chicago Evening Post* for Monday, July 17, attributes the recent advance in the price of tin-plate, to \$3.80 per box, to the increase in the cost of the raw materials?

Respectfully, LLOYD CHAS. WHITMAN.  
CHICAGO, July 18, 1899.

[The *New York Commercial*, a paper which has been giving close attention to this matter, says that the rise has gone to \$4.50 per box of 100 pounds, and that it "is wholly unwarranted by anything in trade conditions."—ED. NATION.]

### PROFESSORIAL INFLUENCE.

TO THE EDITOR OF THE NATION:

SIR: The editorial in the *Nation* for July 6, relating to the "Problems of our Colleges," advocates closer relations between professors and students. Permit me to call your attention to the conditions prevailing in Western Reserve University, Cleveland, Ohio, Charles F. Thwing, D.D., LL.D.,

his intellectual activity. He was perhaps the most conspicuous product of that Quaker migration from the South, particularly from North Carolina, which was caused by aversion to slavery, and which had for one result the implanting of anti-slavery convictions in the new-made States of Ohio and Indiana. He was a Whig until called upon to vote for Gen. Taylor (a slaveholder) for President; a delegate to the Buffalo convention of 1848, which founded the Free Soil party; the Free Soil candidate for Vice-President in 1852; a delegate to the convention at Pittsburgh in 1856 from which sprung the Republican party. For eight years he conspicuously represented this party in Congress, and fought the good fight against slavery with a courage, persistency, and elevation of tone scarcely surpassed in any of his colleagues. His independence was shown when, recognizing the downward course of the Republican organization under Grant's administration, he threw in his lot with the reformers. One who turns over the back volumes of the *North American Review* will find Mr. Julian in 1878 exposing the party's shortcomings in terms which drew down upon him the epithet of "traitor." He did not forfeit it by giving his support to President Cleveland, and earned it anew in a national sense by his hostility to our new-fangled imperialism. We are in danger of overlooking the honorable singularity of such a political career as this, partly because a long life cannot be grasped as a whole by the common memory, but partly because of the failure of large numbers of leading Republicans of the storm-and-stress period not only to withstand, but to recognize and confess, that corrupt tendency which has brought us to our present state of well-nigh hopeless passivity and impotence. By a second marriage, Mr. Julian became a son-in-law of Joshua R. Giddings—it need scarcely be said, without any impairment of his anti-slavery zeal and fidelity.

—Many investigations have been made upon school-children to show to what an extent the work of the school-day fatigues them, and makes them less capable of doing a definitely measured amount of work in multiplication or other tasks. Other observers have all come to the conclusion that indications of fatigue are very marked, but Dr. Edward Thorndyke believes (*Science*, ix, 234) that these results are vitiated by the fact that when the same children are given the same tests at the beginning and at the end of the school-day, they do too well at the end of the day on account of the practice they have had at the beginning, and also too ill on account of having lost interest in a repeated experiment. To obviate these presumed sources of error, Dr. Thorndyke gave four different sorts of tests to two groups of pupils, but so arranged that a group of pupils who did one sort in the morning had a different kind of task to do at the close of school. Change in willingness and interest on the part of the pupils he provided against by being present himself and observing the children in these particulars. As a result of this method of procedure, he finds no evidence of fatigue whatever on the part of the pupil, but, on the contrary, he finds that the work is done a little better (2 per cent. better) at the close of the day than at the beginning. This result is remarkable; it probably indicates that the children in the schools visited by Dr. Thorndyke are extremely well

nourished, or have an exceptionally happy and easy time of it during their school-day. Dr. Thorndyke's contention is a little difficult to follow. According to him, the children of the other observers did badly at two o'clock, not because they were tired, but because they felt a peculiar distaste for doing again at two what they had already done at nine, and nevertheless they did not do so badly as they would have done had it not been for the practice which they secured by first doing the work at the beginning of the day. But can it be supposed that one hour's practice makes an appreciable difference in the capacities of children for spelling and arithmetic? Most teachers would be of the opinion, we fancy, that many and many a weary hour of practice can be passed through by these poor creatures before a change can be produced which would have the effect of a feather's weight in the most delicate conceivable system of measuring.

—*"Archæology of Lytton, British Columbia,"* by Harlan I. Smith, is published in volume 2 of the *Memoirs of the American Museum of Natural History*, being the third contribution of the Jesup North Pacific Expedition. It describes the explorations made in several village-sites near the confluence of the Thompson and Fraser Rivers. The habitations of the prehistoric people of this neighborhood were similar to those of the Indians of recent times, as is evident from the remains of ancient house-pits at all the localities examined. These underground lodges were circular holes, some six feet deep, roofed over with timbers covered with fir-boughs and earth, which afforded sufficient protection, as there is but little rain in the region. An opening in the centre served the three-fold purpose of chimney, window, and door; a notched log projecting through it, as a ladder. The specimens found in the hearths, graves, and village-sites show that copper, stone, shells, and bone were used for making weapons, tools, and implements for hunting and fishing. Clothing probably consisted of skins of animals and of fabric woven from vegetable fibre (probably sage-brush) and mountain-goat wool, of which fragments exist. Among other objects unearthed were sets of dice made of woodchuck teeth. They are so much like dice made of beaver teeth with which modern Indians play that their use is easily understood. Proficiency in carving and engraving is indicated by specimens of tobacco-pipes, ornaments, and implements, but there is no indication that the potter's art was known. Mr. Smith concludes that the mode of life of these prehistoric tribes, their utensils, their methods of manufacture, and their customs were practically the same as those of the present inhabitants of the interior of British Columbia. One of the strongest evidences of the identity of culture is the fact that modern Indians are able to interpret the conventional designs on prehistoric remains. Specimens of carving, the use of slate fish-knives and harpoons, and the occurrence of certain shells and of ornaments made from them, indicate the influence of the coast tribes, although on the whole the prehistoric culture of the interior of British Columbia shows greater affinity to that of the western plateaux. There is no evidence of a change of type or of a material change of culture since the earliest times of which we have knowledge. The memoir is copiously illustrated.

#### ASTON'S JAPANESE LITERATURE.

*A History of Japanese Literature.* By W. G. Aston. D. Appleton & Co.

It is a strange tale to tell, yet a true one, that although the Japanese have a voluminous literature extending over twelve hundred years, no Englishman had read a page of a Japanese book before 1859. Some Continental scholars had explored this domain of thought; the Germans, especially, reading books in Japanese that were expressed mainly with Chinese script. In Holland, Hoffman had begun those readings which enabled him to write what, until the issue of Aston's grammar, was the best manual of the Japanese language for its study by foreigners. When, however, the Townsend Harris treaty had opened Japan to foreign residence and commerce, the student interpreters at the British Legation in Yedo began elaborate researches into the whole language, ancient, mediæval, and modern. The result has been an apparatus for the investigation and the enjoyment of the language and literature such as no other civil service or group of scholars can show. The grammars, dictionaries, manuals of language, literature, and history, and the papers contributed to learned societies by the members of the British Legation not only are a credit to the country whence they came, but furnish a solid argument for the reform of our own civil service. While Americans have written voluminously and ably upon Japanese themes, the honors of linguistic and literary research belong almost wholly to our British friends.

The manual now in hand is a proof of invincible tenacity of purpose. Very few living men could have handled this theme with such insight and thoroughness. Mr. W. G. Aston, a graduate of Queen's College, Belfast, in the class of 1863, began his study of Japanese in Tokio in 1864, and remained in the East, in Japan and Korea, until 1889, during which time he produced two books on grammar and made various excellent translations. During the riot in Seoul, Korea, while suffering from the night's exposure, the seeds of lifelong disease were planted in his constitution. Though for the past decade "dying by inches," he has achieved the prodigious feat of translating into English the 'Nihongi,' one of Japan's oldest and greatest books, which gives a marvellous picture of the mythological age and the beginnings of history in the eighth century. This present volume of four hundred pages is a complete conspectus of the development of the literature of Nippon, with masterly criticism and comment, bibliographical notes, a list of the most valuable dictionaries and grammars, and a good index. From the first to the last page, it is worthy of the highest praise for its accuracy, its absolute honesty, and its trustworthiness. Mr. Aston makes no pretence of judging what he has not carefully studied. Hence, for example, there is little or no reference to the voluminous Buddhistic literature in Japanese, or, rather, in that Sinitic-Japanese in which most of it is expressed. One will obtain, however, by a study of this work a pretty clear idea about what the Japanese have been thinking of during the past thousand years or so, and may get at the sum total of what their thinking amounts to. It would be cynical to say,

ration to say that their literature is wholly one of form. Nevertheless, the greater bulk of the poetry consists of mere word play and repetition of pretty conceits, while the prose is stuffed with the pedantry of men who counted it a religion not to be original, but conscientiously to keep within the ruts already marked for them.

Incidentally the work has vast value as a history of Japanese morals in both theory and practice. Its usefulness also to the actual writer of history in its larger sense is very great. It furnishes an index of taste, for in the Mikado's empire not only have customs and costumes changed with the centuries, but social life has undergone revolution, and the national character has varied with the flow of years. For example, one can see very clearly in this literary mirror that in the early ages women were treated with much more honor, allowed greater freedom, and permitted to develop their own inherent powers to an extent unknown after the sixteenth century. Then the adoption of Chinese ideas and customs kept woman more as a recluse, manifestly degraded her, and prevented any such development of her genius as flowered in the Middle Ages, when women not only were authors, but actually set the standard of the language. Even to this day the unchallenged models of pure Japanese are in the classic writings of the court ladies of the eleventh and twelfth centuries.

Very appropriately each one, except the first, of the seven periods into which Japanese literature may be divided is named after the particular city or place which was the literary centre of the age. Long before writing was introduced, which was late in the sixth century, there were Shinto songs and rituals which expressed the faith and gratitude of these island-dwellers. The student of religion must not neglect these witnesses, for as first utterances in literary form of the Nipponese, they show that some features, popularly and even by native and foreign writers ascribed to Shinto, as vital factors, were late introductions from China. When Mr. Aston talks about poetry, he, like Prof. Chamberlain, notices not only what Japanese poetry contains, its beauties and its limitations, but also its curious omissions. Primarily the expression of emotion, and confined to lyrics and epigrams, often (as to form) mere ejaculations, these stanzas, both ancient and modern, omit allusions to sunsets and stars, to war and to the prowess of heroes. The effusions of the Japanese muse concerned Nature and her phenomena and the doings and sayings of human beings, eschewing abstractions and personification. The form is an alternation of phrases of five and seven syllables each, a species of blank verse, and the spirit is impersonal. "To their minds things happen rather than are done; the tides of Fate are far more real to them than the strong will and the endeavor which wrestles with them." The recognition of a ruling personal power in the universe, if recognition there be, is very hazy. Both the "pillow words" and the "pivot words" are employed, or rather overworked, and in both cases we have a mechanical substitute for lack of ideas. The greatest of ancient collections (which the historian of Japan, yet to come, must master and digest) is the 'Manyôshû,' or Collection of a Thousand Leaves, which now, under official auspices, is handsomely printed in 122 volumes, with everything in the way of commentary and indexes that the most ardent student can desire.

After the nomadic period of life with the particular tribe which finally became predominant over the others, and the fixture of the seat of government in "the city of peace," or Kioto, there began the production of real literature in the form of poetry, fiction, essays, and semi-historical works. These have few serious masculine qualities. They reflect the pleasure-loving and effeminate but cultured and refined character of the class of Japanese who produced them. This literature may be described in one word as belles-lettres. The men wrote in Chinese with little or no literary quality. If a man wanted to gain for his book any literary reputation, or to give to his writing the preservative salt of style, he hid his personality, and secured for his book ages of fame by adopting the "woman's style" of writing. To this period, from A. D. 800 to 1186, belong the 'Tosa Nikki,' the diary or logbook of a journey from Kioto to Tosa; the matchless 'Takétori Monogatari,' or story of the bamboo-cutter and his adopted daughter, the maiden from the moon, with whom the nobles and even the Mikado fall in love, and upon each of whom she lays an impossible task. Then there are the other Monogatari, or novels, crowned by that called 'Genji,' which has been in part translated into English, and which gives a wonderfully vivid picture of life and art, customs and morals in the imperial court. To this epoch Mr. Aston properly devotes seventy-five pages. No student of Japanese art can afford to pass by the study of this era of Japanese civilization as revealed in its literature.

With the decay of the imperial authority in Kioto and the swinging of the pendulum of government towards home rule in the provinces, the literary as well as the political centre moved to Kamakura, a few miles southwest of the present Tokio. There a brilliant but corrupt court flourished and scholars gathered. The political figurehead was usually a child sent from Kioto and theoretically nominated by the shadowy or cloistered Mikado, who was shorn of all power; but the real ruler was some vigorous member of the Minamoto or Hojo family. The only works worth noticing produced in this era were written in Chinese, and are mainly dry chronicles or mere works of information. These are mines of historical information, but are of slight value as literature. Exceptions, however, may be made in favor of two fascinating works which the reviewer confesses to have spent many hours of delight upon, namely, the 'Gempéi Séisuki' (Glory and Fall of the Gen and Héi families), and the 'Héiké Monogatari,' or romance of the Héi clan. These works not only are attractive for their literary form, but relate with pathos and humor the vicissitudes of those noble families, the reds and the whites, who were, in alternation, the bosses of Japan and the ring-makers around the Mikado, and who carried nepotism and the spoils system to the most shameful extent. Finally, after long feud, they came to blows, and involved the empire in civil war, the once exiled Gen clan overthrowing and almost annihilating their Héi enemies in a great naval battle near Shimonooséki in 1184. Not a few Japanese novels are founded upon this series of incidents.

The dark age of Japan falls between the years 1332 and 1603, when the Ashikaga rulers held Kamakura and (in the latter part)

Nobunaga, and the Taiko ruled from Kioto. Little of importance was produced during this time, but the famous No or lyrical dramas came into vogue. At first purely religious performances, to propitiate the Shinto deities, and given in front of the shrines, the No began to be presented in theatres, and buildings were especially erected for them. Perhaps properly translated "opera," these lyrical dramas are enacted through the medium of instrumental music and vocal recitation and song, with the accessories of superb and appropriate costumes and a great variety of masks. To the vulgar they are completely unintelligible. They are still performed in the largest cities of Japan, by the successors of the old managers who founded the art five hundred years ago; the audiences nowadays being almost entirely composed of ex-daimios and their old retainers. The latest and most complete collection contained 235 No, the great majority being of the fifteenth century. These lyrical dramas have furnished endless themes for treatment to the artist, decorator, and poet. In fact, it seems hard to separate in mental association the literature and the art of Japan. They have lived together in mutual helpfulness, like that old couple of Takasago, first introduced in the No and remembered to this day at the marriage festivals, where a representation of the aged husband and wife, with their broom and rake under the ancient pine-tree, is a necessity rather than a decoration.

If the Kamakura period was marked by the decline of learning, the Yedo period (1603-1867) was characterized by the revival of both learning and literature. After establishing his government in Yedo, the great pacifier Iyéyasu began the collection of books and manuscripts and the encouragement of scholars and schools. Though, except at Mito and Yedo, we cannot trace the actual personality and labors of the refugee Chinese scholars who fled to Japan from Peking, on the fall of the Ming dynasty and the accession of the Tartars, yet it is evident that their presence in the country exerted a profound influence at a happy moment. On a smaller scale, they accomplished very much what the Greek scholars, driven from Constantinople by the victorious Turks, did in Europe by carrying the Greek language and opening the ancient literature of Hellas. The study of Chinese in Japan became more than a fashion, it was a rage. Whereas, the Confucian ethics had of old been studied as a guide to moral conduct, it now, in the new form as transmuted by the Chinese scholar Chu-Hi, became a religion. The Samurai, or gentlemen, turned away from Buddhism, considering its pabulum fit only for women and children, and ardently reformed their lives and thought on the Chinese model. It is pretty safe to say that between the simple teachings of Jesus and the elaborate metaphysical system which lies at the basis of popular orthodoxy to-day, there is no greater difference—abysmal as that difference is—than between the original text and system of Confucius and the creed of the Japanese gentleman of the first half of this century. An undoubted intellectual stimulus to men, the Chinese philosophy and ethics acted disastrously upon the Japanese woman and home. It retired the wife and daughter from all mental activity, and had not a little to do with the creation of the *gét-shô*, that class of bright, educated, and pretty women, who, half-way between the lady and the prostitute, furnish the chief or-

nement of Japan's social life. The Chinese philosophy, we venture to think, exaggerated rather than diminished what is known as the social evil.

Along with the study of philosophy, history, and the literature of knowledge went several other remarkable movements, which we can but briefly notice. Popular literature took the form of children's stories and cheap novels, which were printed in the *kana* script and could therefore be read by women and children. We are glad to find that Mr. Aston agrees with our own view that the well-known fairy tales or children's stories, such as *The Tongue-cut Sparrow*, *The Rat's Wedding*, *Little Peachling*, and others are not really folk-lore, in the strict sense of the term, but had definite authors, whose names have long since been forgotten. The Utopian literature is worthy of notice, and so also is the romantic school of fiction. This, in the early part of our century, while Bakin was living, took on large proportions. Yet this tract of Japanese literature has been partially opened to the acquaintance of foreigners by more or less successful translations. Mr. Aston does not mention any American translators, yet we can heartily commend the work of Messrs. Greey, Miss Harris, the 'Sun-rise Stories,' and the version of the 'Také-tori Monogatari' by the Rev. E. R. Miller, though in none of these do we find a literal translation.

The study of Japanese antiquity, which was pursued by four great scholars in succession, not only was interesting in itself and endlessly fruitful to native authors and historians, but prepared a broad foundation on which foreign scholars could build. These four discovered for the modern Japanese the language, the history, and the political structure that underlay feudalism and the Chinese superstructure, and they have helped powerfully, in this half of the nineteenth century, to unify and protect the nation during a time of tremendous foreign onslaught. Like a dike, the work of these searchers and eloquent advocates of Japanese unity has given strength within and channels without and through, so that the inrush of foreign ideas means a fertilizing conduit rather than a devastating flood. Along with this work of revealing ancient Japan went that of Rai Sanyo, who portrayed the august features of the Mikado's ancient supremacy.

In book seventh, Mr. Aston treats of some recent developments under European influence, calling this section the Tokio Period. He glances at the modern political novel, and at the romancers who attempt to use the modern colloquial grammar instead of the traditional literary dialect. He shows the profound influence wrought by the translation of European novels upon the current literature, culminating in a reaction against the methods and principles of the Bakin school of fiction. The general impression left by his examination of the drama and fiction of the last twenty years is on the whole favorable. Even the art of writing history has made progress, and he looks for a rich development of the present signs of promise. As a literary critic, pure and simple, he believes that the Japanese, having already accepted European philosophy and science, will recognize the immense superiority of Christianity and will accept it. His verdict, however, is: "Their previous history suggests that this may take the direction of a more rationalistic form of Christian belief than that which prevails in Europe."

#### NEWMAN HALL.

*Newman Hall: An Autobiography.* Thomas Y. Crowell.

There is something contagious in the enjoyment with which this book has evidently been written. The writer was born in 1816, and something of effusion, not to say garrulity, can easily be pardoned in a man writing of himself when more than eighty years of age, especially when the writer, on the best of terms with himself, is on equally good terms with everybody else. Such geniality we do not often find. Its kindly warmth exudes from every page, and diffuses itself through every recollection of the good man's life. In his babyhood he used to say, as he looked out upon the busy street, "It's boofy all," and he is similarly impressed by the entire course of his experience; the keynote of his book being furnished by his gleeful exclamation when he was a very little boy, "Hooray for every one!"

His father was that earnest Nonconformist, John Vine Hall, whose 'Sinner's Friend' has been printed in seventy (!) languages and in millions of copies. His son is of the opinion that his autobiography, 'Conflict and Victory,' is a narrative of religious experience scarcely second to Bunyan's 'Grace Abounding to the Chief of Sinners.' Nevertheless, the family seems to have been a happy one, on Sundays the unusual strain of piety being relieved for the children with a delightful Noah's Ark. Then, too, there was "Piggey Poge" (the small boy's rendering of 'Pilgrim's Progress'). To Bunyan's Delectable Mountains Dr. Hall credits in part his enthusiasm for mountain-climbing, and the idea is certainly as reasonable as Herbert Spencer's treatment of such enthusiasm as a survival of the active habits of our early ancestors. Dr. Hall's memory shows no signs of failure, and his recollections of his childhood are at least as entertaining as such recollections generally are, and this is saying much. The cap-sheaf, perhaps, was his getting so near the Duke of Wellington at a military review that the great Duke perceived his ardor and graciously extended to him his hand.

The elder Hall was editor of the *Maidstone Journal*, and, at fourteen, the son was apprenticed in the office for seven years. As a reporter, he heard Wilberforce's last speech at Farleigh, near Maidstone, and afterward went over to him with the proof. He remembers him as sitting askew in his arm-chair, exactly as he is represented in Westminster Abbey. No theatrical advertisements or reports were admitted to the *Maidstone Journal*, but the pious editor was not superior to a little artifice which had in it the potentiality of an editor's being bored beyond the limits of endurance; in order that a certain county baronet might have his speech, which he had not got off as intended, printed as "delivered in Maidstone," he shouted it in the editor's office. It was all about battering down the throne with the ruins of the altar, and that sort of thing.

Young Hall's printing ended with his apprenticeship, his mother's earliest hopes having been gratified by his resolve to enter the ministry. One of his teachers at Highbury College was Henry Rogers, whose 'Eclipse of Faith' had not yet darkened the religious world. Dr. Hall has a good word

for it, possibly forgetting its contention that "never was there a book which presents greater objections to its reception morally and intellectually" than the Bible; the whole argument being that Christianity must be accepted as a divine revelation because it is so unreasonable. A breakfast with Chalmers was the most striking episode of Hall's college course. It revealed Chalmers as at once "fervent in spirit" and "not slothful in business," for, in the same breath with the "Forever and ever, amen!" that ended his devotions, he exclaimed, "Mary, did ye put that letter in the post?" One verdict on Mr. Hall's early preaching was that it was "very well for Dover Pier, but wouldn't do for Paddington"; but he had invitations from all quarters, and accepted one from Hull, where he remained from 1842 until 1854, living a very busy life, with such results as might well breed in him some honest pride. A church of 62 members was made one of 689; temperance societies were organized with a membership of 1,200; many new branches of church work were developed, and there was much widening of religious sympathy, with a prevalence of the ethical and human elements in religion over the dogmatic. From Hull he went to London and took charge of Surrey Chapel. He was an ardent tourist, and there is much about his travels in Switzerland, Italy, and the Holy Land, in which the animal spirits and genial sympathies of the man are freely exhibited.

The twelfth chapter, "American-Political," will be more interesting to American readers than any other in the book. Newman Hall was accounted in the Civil War one of the best friends we had in England, and for good reasons. After the *Trent* affair he convened a meeting of 2,000 workmen in Surrey Chapel, and endeavored to make plain to them that the Northern people were "engaged in a war that was practically against slavery, and that to attack them would be to side with the oppressors." The speech was admirably adapted to its purpose, and afterwards, printed in tract form, was sent out in great numbers, among others to Gladstone, who, in letters of November 8, 1862, and February 2, 1863, protested his sympathy with the North's anti-slavery purpose, but insisted on the inability of the North to crush the rebellion. Dr. Hall answered in a letter that should have made more impression than it did. As the war went on, he addressed great public meetings in Birmingham, Hull, Sheffield, Manchester, and Liverpool, speaking at each meeting for two hours, and carrying resolutions favorable to the Union cause. In 1867 he came to America, bringing a letter of introduction from Gladstone to Sumner, and, traveling widely, reaped in many flattering attentions the fruit of the good will that he had sown, a degree from Amherst College, and much cordial appreciation of his endeavors to induce a better state of feeling between the two countries. The *Alabama* claims were then a matter of dispute, and Dr. Hall is not without some justifiable belief that he contributed something to their amicable settlement. Later he made two missionary tours in the United States, one of them involving an extended visit to Niagara. As he was coming away, a beautiful rainbow spanned the American and English falls, and, while he did not feel permitted to regard this lovely spectacle as a personal

compliment, it was only natural that it should seem to him a gracious symbol of that international good will he was so anxious to promote.

Dr. Hall's publications have had wide circulation. Of one of his tracts 4,000,000 copies have been issued in forty languages, a list of which is furnished by the Secretary of the Religious Tract Society. This tract is significant of Dr. Hall's persistent endeavor to make Christianity less a matter of dogma and more a matter of imaginative personal relationship with the founder of the Christian faith. His theological opinions are still mainly those with which he set out, but his emphasis upon some and his neglect of others have been determined by the natural goodness of his heart. It is not to be believed that he has contributed anything to the intellectual life of the religious world, for we find him quite recently debating such questions as "Whether the great religious revival of the world is to be expected on the occasion and as the immediate result of our Lord's second advent?" and "Whether believers, when they die, may be missionaries to former generations or to the inhabitants of other planets?" What he has done is much to soften the asperities of sectarian opposition, and to render religion a devotion to a personal ideal rather than mere acceptance of a set of dogmas.

In 1873 was laid the cornerstone of a new church, which was completed in 1876, at a cost of £62,000. To the raising of this amount Dr. Hall contributed a genius of the highest order for getting money out of people. But he got something better than money out of Ruskin—one of his most characteristic letters, quite as good as the similar one published in Collingwood's biography. He could see no use for such a building. "So far from that, I believe all our church building, all our preaching, and all our hearing is as great an abomination to God as ever incense and new moons in days of Jewish sin." There is a chapter on Dr. Hall's happy marriage, and three on persons he has known, which contain some interesting, but few valuable, glimpses of Dean Stanley, John Bright, Gladstone, the Howitts, Spurgeon, and others. Gladstone has a chapter to himself, notwithstanding the objection to "piecemeal biography" expressed in one of his letters. That Dr. Hall's personal admiration for him and his pleasant intercourse with him survived his rupture with his Home Rule policy, may mean no more than that Dr. Hall dearly loved to rub up against distinguished people; but we think it also means that opinions always counted less with him than character and personality.

*A British Rifle Man: The Journals and Correspondence of Major George Simmons, Rifle Brigade, during the Peninsular War and the Campaign of Waterloo.* Edited, with introduction, by Lieut.-Col. Willoughby Verner, late Rifle Brigade. With three maps. Crown 8vo; pp. xxvii, 386. London: A. & C. Black; New York: Macmillan.

We have here another valuable book of original material for the history of the Peninsular war and Waterloo. This "Rifle Man" (as the old fashion wrote it) was a young English surgeon who went from a militia regiment, in 1809, into the line of the Ninety-fifth Regiment, Rifles, and saw the whole of the campaigns of Wellington against Masséna, Marmont, and Soult till

Napoleon's abdication in 1814. His stirring experience in the advance guard, where the Rifles generally were, was varied by tours of confinement in hospital, to which he was carried, in anguish from terrible wounds, on the rough bullock carts of Portugal over mountain roads. William Napier (afterward Sir William, the famous historian) was his comrade in the action near Almeida, where he got his first severe wound, and Napier tore off his own neckerchief to make a tourniquet for his friend, falling beside him from a wound he himself received while this was a-doing (p. 78).

Lieut. Simmons takes evident satisfaction in contrasting the courage and usual humanity of the English troops with the unstable ferocity of the Portuguese and Spanish, as well as with their demonstrative enemies, the French. It was Simmons's act which John Morley recently used as an example of the better model of soldierly conduct, when he was criticising the desecration of the Mahdi's remains at Omdurman. Simmons's reflections and his story are well worth quoting:

"Close to the place [Olmedo] was interred the body of General Férey. He was the officer who ordered the night attack at Barba del Puerco in 1810. How extraordinary are the changes produced by war! Only two years before, he had 10,000 veteran soldiers under his command. He was then actively employed against us, and now humbled to the dust, and I standing by his grave gazing at his mutilated carcass. The Spaniards had dug him up directly after the French left the town and before we entered. He had been buried with great honor, and a canopy of laurels which had been placed over his grave was torn down, his body exhumed, and his head severed from it. It was a noble head, with a fine, expressive countenance and a pair of large moustaches. I could not help observing, 'Well, you must have been a brave soldier, although our deadly foe. You shall be replaced by an enemy where your friends interred you, to rest in peace.' The remains were then in a most decent manner returned to the grave, and the Spaniards made acquainted with the horror and disgust we felt at their inhuman conduct toward a dead soldier" (p. 243).

The journal and letters make no effort at general military criticism. They are self-evidently faithful memoranda of events and experiences as they passed daily under the eye of a simple-hearted, brave man who meant to do the duty which England expected of him, and who had unbounded faith in "our noble Marquis of Wellington," who, he says, "is adored by the army." Incidents which he tells of Gen. Craufurd, who commanded the Light Division, in which the Rifles were, help to account for the reputation that officer had of being brave but narrow-minded, selfish and vindictive. The division buried Craufurd with military honors at the foot of the "little breach" at Ciudad Rodrigo, in storming which fortress he fell, but it is evident that real affection for him was lacking. In his home letters, Simmons continually repeats the injunction to keep them strictly in the family circle, and on no account to let what he says be talked about; and so the precious packet has lain for two generations without seeing the light.

At Waterloo the Rifles were in Picton's division, and late in the day, in one of the fierce onslaughts at the farmhouse of La Haye Sainte, Simmons was desperately wounded. A musket ball struck him in the side, crashed through two ribs, traversed the liver, and lodged under his breast-bone. He was carried into the building, laid on

some straw, the ball cut out, and first attention given by a brave surgeon.

"Sergeant Fairfoot was also here wounded in the arm. He got me everything he could, and said he would go and knock some French prisoner off his horse for me in order to get me off. He got me a horse. They tried to lift me upon it, but I fainted; some other officer took it. In consequence of a movement the French made with all their forces, our people were obliged to retire. If I stayed I must be a prisoner, and being a prisoner was the same as being lost. Poor Fairfoot was in great agitation. He came with another horse. I remember some Life-Guardsmen helped me on."

More dead than alive, he rode twelve miles to Brussels. "The motion of the horse made the blood pump out, and the bones cut the flesh to a jelly" (p. 375). Yet he was nursed back to some degree of health by skilful surgery and the unflagging devotion of the good family in which he was billeted. He still served thirty years before he was retired as a Major, and Sir John Kincaid, in sketches of the heroes of the regiment, includes "George Simmons, with his riddled body held together by a pair of stays, though his was no holiday waist which naturally required such an appendage lest the burst of a sigh should snap it asunder, but one that appertained to a figure framed in nature's fittest mould to 'brave the battle and the breeze.'"

It would be hard to find anywhere a picture of a soldier's life in war so faithful, so true, so simply vivid as this. With all his sufferings, this officer was fascinated with his career, relished the adventures and the excitement, forgot his pains when his sturdy constitution put him on his legs again, and without a whimpering word went forward in what he honestly believed was a holy war against universal despotism in the person of Napoleon.

*Masques and Mummies: Essays on the Theatre of Here and Now.* By Charles Frederic Nirdlinger. The DeWitt Publishing House. 1899.

There is much entertaining and pertinent matter in these collected theatrical essays and criticisms, which are the work of a man possessing a considerable knowledge of his subject and the full courage of his opinions. There is also a good deal of shallow, flippant, pretentious, and ill-considered writing, but the assaults upon some of the current theatrical shams and abuses are delivered with excellent directness and effect, and with an independence which atones for many minor shortcomings. Mr. Nirdlinger's theories, it must be admitted, or rather the arguments with which he endeavors to buttress them, are not always particularly new or valuable. One of them is that acting has no just claim to be accounted an art—a proposition that has been debated pretty frequently by much more able controversialists. On some points the author exhibits curious misapprehension. He says that acting requires none of the greater faculties essential to other arts. But surely it does. It may not demand the manual dexterity of the sculptor, painter, or musician, but it requires great power of imagination, a comprehension of all the moods of nature, with ability to express them, a special intelligence to grasp the significance of great poetic and dramatic conceptions, a fine sense of relation and proportion, and, in its best estate, an extraordinary faculty of self-repression. There are successful performers, a good many of them,

who possess these qualifications not at all, or only in a slight degree, but they are not actors. Mr. Nirdlinger even goes so far as to assert that intelligence is not essential to the actor, whereas it is the one characteristic which distinguishes the real actor from the pretender.

In what he says about the facility with which children can be trained to play a part, he simply shows that he fails to appreciate the difference between acting and mere mimicry. From Master Betty downwards the failure of child prodigies to fulfil in later years the promise of their youth has been notorious. When he quotes the cases of certain popular favorites as examples of the truth of his contention, he invites an obvious retort, but it is only necessary to say that his selections are peculiarly unfortunate. He is on very much surer ground when he inveighs against the vanity, the absurd egotism, the false pretence, the greedy commercialism, the hunger for notoriety, and other deplorable and contemptible manifestations which afflict and degrade the contemporary theatre; and his comments upon accidental success and the advantages of personality are perfectly sound. It is curious that he does not perceive the fatal bearing they have upon his main theory. He tells some wholesome truth, too, in his denunciation of the prevailing "mummer-worship," as he calls it, which certainly is one of the meanest and silliest of modern idolatries. One of his most vigorous articles is that on "The White Sow in the Theatre," which deals with the contempt for common decency recently exhibited in some of the principal theatres; but it would have been more effective with less elaboration. The evil, however, is one that calls for loud protest. It is a pity that Mr. Nirdlinger does not lay the responsibility for it where it belongs, upon the shoulders of the men who have profited by it.

The chief defects of Mr. Nirdlinger as a writer are due to a lack of the sense of proportion and of the relation of things. He is apt to be over-enthusiastic in his praise and too headlong in his condemnation. In the ardor of his admiration for "thesis plays," and his contempt for those who deem the subjects of some of them too rank for enjoyment, he seems to maintain that purpose—didactic, moral, social, or scientific—is a sufficient excuse for whatever may be the character of the detail. This, of course, would leave the road open to abominations of every sort. No intelligent observer has any objection to the thesis play as such, but the stage is not the place for the discussion of morbid or obscene topics. The public interest in them is not intellectual—a fact which our author perceives clearly enough in the case of pieces like "Zaza," which he scores as they deserve. His judgment is clear, too, on "The Christian," but his generalizations are much too rash and violent, and he wastes great quantities of critical ammunition upon plays and persons of no significance.

His comparison of Duse and Bernhardt is acute and just, and he gives good reasons for assigning superiority to the great Italian actress; but in doing so, he demolishes very effectually his earlier contention that acting is not an art. He speaks, moreover, of the "elaborate art" of Henry Irving, adding (very truly) of the latter that his intelligence lifts his "gifts into the very highest realm of intellectual endeavor." Slips of this sort emphasize the virtue of consistency,

and the danger of reprinting occasional essays, side by side, without careful revision. The book is of uneven quality, but the best parts of it are marked by ability and honesty, and it is written with fluency and smartness.

*L'Éducation Politique de Louis XIV.* By G. Lacour-Gayet, docteur ès lettres. Paris: Hachette & Cie. 1898. 8vo, pp. x, 472.

The book before us consists of two parts: the first treats of the political education of Louis XIV. during the life-time of Mazarin, "surintendant of his Majesty's education" by appointment of Anne of Austria; the second analyzes the theories concerning royal power which were current in France during Louis's reign. Each part, while complete in itself, marks also one stage in the production of a higher unity, which will be completed by the later publication of a work to be entitled 'Les Idées Politiques de Louis XIV.,' the author's goal. His present object is to furnish an answer to the question, hitherto practically neglected, What was the state of the political preparation of Louis XIV. when, at the age of twenty-two years and a half, he instituted his system of personal government?

Part I. is a study of the conditions under which Louis XIV. received his political education. The eight chapters of which this part is composed discuss first of all the appointment, character, work, and method of the young King's formal instructors. Then follows an analysis of the works, official and unofficial, employed, not employed, or even officially condemned, which were adapted or composed with a view to his instruction—works of the most varied quality, ranging from the solid productions of Péréfixe, Louis's preceptor, or the valuable 'Maxims' of the court's opponent, Claude Joly, to the emptiness of a second edition of Rivault's translation of the 'Remonstrances' of Basil the Macedonian, a treatise originally composed for the edification to perfection of a prince who ascended the throne of the Eastern Cæsars in the year 886! In the list are found works of the most varied character, ranging from the dry manuals of La Mothe le Vayer, the associate of Péréfixe, to the curiosity-provoking 'Codicilles de Louis XIII.,' a ponderous tome of more than one thousand pages, the exact date of whose composition is unknown, as is also the name of its author, his religion or irreligion, sanity or insanity. In the same catalogue are enrolled tragi-comedies, romances, picture-books, and even games with cards—not unlike our game of authors—in which illustrious and noble kings of France are invariably upon the winning side, while *les rois faibles* and wicked as invariably lose.

The third chapter discusses at length the numerous charges of neglect and incompetency brought against Louis's instructors by St. Simon and others, and in his later years indirectly supported by Louis himself, who thought he had been deprived of forms of knowledge which *un honnête homme* should have. In view of the fact that the King's pride would naturally lead him to represent his greatness as self-acquired, and that the courtiers, to flatter the King and at the same time to vent their bitter hatred of Mazarin's memory, would humor the idea, our author rejects the charges, and, resting on the positive evidence of extant themes and exercises in Louis's own handwriting,

asserts that it does not follow that his instructors voluntarily neglected his education, but that his education was essentially not a bookish one. Elsewhere is given a complete vindication of the personal activity of Mazarin.

Succeeding chapters deal with topics of no less interest and of even greater historical importance. It is shown that no influence over Louis's youth was more deep and lasting than the Queen-mother's. She developed the religious side of his nature, inculcating for holy things and religious practices a respect which was never shaken. She treated her son with a deferential tenderness which servile courtiers were prompt, in their own behavior, to debase into slavish obsequiousness. This, and the Queen's frequently expressed desire that he should reign as uncontested master—a desire enforced in practice by the passion and vindictiveness with which, in the days of the Fronde, she defended the independence of the crown and her son's authority—naturally led the King to magnify his rights at the expense of his duties. And so the boy who had one day written in his copy-book "L'hommage est dû aux roys, ils font ce qu'il leur plaist," tended more and more to adopt the maxim as a rule of life and power.

The influence of the Queen-mother and the court was supplemented by the practical teachings of Mazarin. He taught his aspiring pupil the lessons of statecraft and the art of ruling. At actual sessions of the council Louis was trained to solve actual problems of gradually increasing intricacy. The characteristic advice of the dying minister simply summarized the teachings of those daily private conferences to which, for years past, Cardinal and King had accustomed themselves: the King was to be sole minister, in all affairs of state he was to take unceasing personal action, he was to be King in function as well as in title. Mazarin had been dead a quarter of a century when the Venetian Ambassador wrote that "the spirit of Mazarin was still alive, that the minister was ruling from the depths of his tomb as formerly from his cabinet." On the whole, our author concludes, Mazarin was not unworthy of the glowing tribute of Péréfixe: "In truth, Monseigneur, I believe that there is nothing finer or more glorious for your Eminence; and I am mistaken if those who write the history of your life will not have trouble in finding a particular which better merits their eulogies than this."

Louis's mother had taught him piety and pride of place; Péréfixe, his preceptor, had bidden him rule as a second Henri IV.; Mazarin had given him political insight and practical training; the King's natural endowments made him a most apt pupil, and his personal experience, particularly during the wars of the Fronde—a topic to which M. Lacour-Gayet devotes a very valuable chapter—helped to repeat and emphasize their lessons. The whole drift of the times after the Fronde was towards absolutism. Louis's political ideas were of slow growth, it is true, but at the time of Mazarin's death they were fixed and were henceforth unchangeable.

Part II. is a very successful attempt to determine the elements of the political atmosphere of the epoch in France, as created by illustrious theologians, philosophers, and students of public law. Justice is done to the effect on the formulation of political

theory of the Fronde, the revocation of the Edict of Nantes, and the political revolution of 1688. Among the myriad of interesting and important facts which fill M. Lacour-Gayet's pages, there is one which should receive especial mention as of great interest to English readers—the effect of Hobbes's philosophy upon contemporaneous French thought. So far as we are aware, this topic has not yet been treated, at least with any fulness, by any author using an English pen. In general, we have here the result of solid scholarship, based on documentary sources inaccessible to the most part, to all except those who pursue their researches in the Bibliothèque Nationale. The work abounds in skilful analyses and appreciations of contemporary authorship; and the diligent student can no more afford to neglect it than to pass over a recent English publication of a somewhat similar nature, in part—Mr. Gooch's 'History of English Democratic Ideas in the Seventeenth Century.' We await with interest the appearance of the additional work promised by the author.

*The Merchant Prince of Cornville: A Comedy.* By Samuel Eberly Gross. Chicago: Rand, McNally & Co. 1899.

If originality consists in setting at defiance the elementary principles of any art, and in missing the purpose which a literary composition parades in its preface, "The Merchant Prince of Cornville" must indisputably be given a high place among the most original of recent dramatic productions. Without some such assumption as this in the popular mind, the presence of the words "Fourth Edition" on the title-page remains an unsolved enigma. It is the avowed intention of the author "to present the poetic and ideal in dramatic contrast with the materialistic and commonplace spirit"; in the execution of which design a tender maiden, when on the point of being sacrificed to a capitalist by her recklessly speculating uncle, is saved by a lucky turn in the stock market which enables the guardian to restore the squandered dot, and the girl to cleave to her ideal. A Philistine would promptly conclude that the victory is really won by the ideal—*plus* money. Thus much for materialism. As an offset to the positive and vulgar reality represented by capital with science and letters in its pay in the shape of a professor and a journalist, a poet (ideal) is introduced in order to prove that "the love of a high-minded and refined woman can be gained only by appealing to her poetic fancy and finer sensibilities." The heroine of the play is, in this respect, singularly easily satisfied, unless we assume that ideal is keeping back the best of his poetical treasures, for what maiden under the blue skies was ever successfully wooed with anything resembling such pipings as these?

"Give me the wings of yonder lark,  
Soaring into the perfumed dawn  
Beyond the chimney's beckoning spark  
That, blackening, strews the beaten lawn.

"For I, within this tree immured,  
With fervent glances scan the ships  
That sail and sail until, obscured,  
The ivory fleet the ocean dips;

"While swarms of white-winged memories,  
Like mimic-bearing doves, arise  
From out the pure pallid seas,  
And float above these orchard skies."

Truly, the poet seems here to have taken his inspiration from Swift's "Love-song in the Modern Taste," or Macaulay's "Tears of

Sensibility." What conceivable *sequitur* can connect a rhymester's uncomfortable (but voluntary) concealment in a hollow tree, and his desire to soar skywards on the wings of the lark? And from the last stanza he who reads may run.

The announcement of a play as a comedy usually prepares its readers for at least a minimum of comic effect. Now, though we readily admit that the sense of humor varies in quantity and quality with age, place, sex, and occasion, the triumph of the pun, cheap or labored, has never yet been deemed among the worthier efforts of the playwright. But "The Merchant Prince of Cornville" fairly bristles with puns. "This tree hath no tell-tale bark, and I'll stay here" (p. 15). "Oh! put me in a pillory, but put no pill in me. . . . Caesar was stabbed by the iron daggers of the conspirators, but I am slugged by an iron bolus from the hands of my friends. This is ironical. Alas! I am a pundit; for as a typical representative of the pun, e'en while the iron was in my heart I have doubly punn'd it" (p. 38). "To see a flea, you must flee the sea—unless perchance you may see a deep-sea flea, such as I have at the bottom of my basket" (p. 56). Here and there, the characters strive after somewhat deeper-seated mirth than this. Thus, positive science is ridiculed in the professorial explanation of laughter as resulting from "the juxtaposition of two incongruous yet contemporaneous images in the mind, simultaneous with contrasting and varying pressures upon the electrically charged nerves"; the modern merchant, masquerading as a knight-errant, describes his feelings as those of a "rooster in an iron nightgown"; and the duellists in a "word combat," characteristically invented by the journalist, pepper each other with such explosives as "impecunious porcupine" and "hypothesized buzzard."

But, as comedy often professes to utter opinions on the realities of life and conduct, an occasional aphorism is thrown in by way of showing how far wisdom and truth have progressed in Cornville: "Dreams do not end but oft begin at dawn" (p. 22). "A child that never ventured in the field may know a blossom when it sees it" (p. 28). "Man is like a reversed vegetable that has swallowed its roots and walked off on its branches" (p. 46). "Romance that is not perpetual, but goes by fits and starts, is not worth the reality it feeds upon" (p. 51).

" . . . While love is true,  
Two doubles come, both blent in one, in love's  
Bright mirror; but when falls the endearing bond  
Of selfishness, the passions, then two natures  
Rudely clash therein, and love sees double,  
Like to an eye disordered" (p. 79).

It was from this play that the author of "Cyrano de Bergerac" was lately charged with having taken the suggestion for some of his most brilliant scenes.

*Old Clocks and Watches and their Makers.* With 400 illustrations. By F. J. Britten. London: B. T. Batsford; New York: Charles Scribner's Sons. 1899.

Horology is here secondary to the ornamentation of time-pieces, including mechanical marionettes and the like. The illustrations are interesting and may be useful. The general history of the art is a good compilation of no extraordinary accuracy. For example, we read, "The earth performs its revolution round the sun in 365 days, 5 hours, 48 minutes, 49.7 seconds. No account was

taken of the odd hours till the year B. C. 45." The time given is the tropical year, not the period of revolution of the earth. The second sentence should read: *Among the Romans no regular account was taken of the difference between the year and 365 days, etc.* It would be easy to give other examples.

One of the main features of the book is a list of some three thousand former clock and watch-makers, with brief notices of them. Here also faults abound. A brief cursory turning of the leaves has brought to notice the following: The Neguses of New York and the Bonds of Boston are overlooked. Jürgensen is uniformly printed without the umlaut; and the first watchmaker of the family, Joergen, is omitted, as well as Jules Frederik and Jørgen Urban Frederik. Louis Urban is said to have been born in 1790, when (according to a right statement just above) his father was but fourteen years old. The true date is 1806. Heinrich Johannes Kessels, as eminent a clockmaker as Holland ever produced, is omitted. The celebrated Jobst Bürgi is entered thus: Bürgi, J. (De Bürgi or Burguis), Prague. The "Burguis" is evidently a corruption of the Latinized Byrgius. His much longer residence in Cassel is ignored. One of the familiar names of French horology is, in its place of entry, thrice printed Bréguet, though elsewhere correctly. The date of birth of the first Breguet is wrong, and the information about the last head of the private firm is very insufficient. That his nephew passes unnoticed is not a matter for complaint. Ferdinand Berthoud is said to have been born in 1745, instead of 1727, and Louis Berthoud is omitted. Jodin is called Jean, instead of Pierre, and a posthumous Paris reprint of his chief book is referred to where the Geneva original should have been cited. Both the dates attached to the name of Oronce Fine (printed Finé, by a common error) are wrong. Bourgeois, the maker, if not the inventor, of Vaucanson's duck, is not on the list, where we need hardly say that such names as Frasse and Steiner would be sought in vain. Of J. A. Lepante there is a nearly correct account, but no mention of his distinguished wife, brother, and two nephews. The authorship of the 'Mathematicæ Clavis' is attributed to Benjamin Oughtred, instead of to William, who was not a watchmaker. Sir G. B. Airy is said to have been appointed Astronomer Royal in 1855, when he had really occupied that post for nineteen years.

It is a pity the list should so swarm with faults; but they are almost insignificant compared with its positive merits. For London names, the records of the Clock-makers' Company have enabled Mr. Britten to make a close approach to completeness, although we are bound to note that we have met with one omission and one error in the account of an eminent family of London watchmakers. He seems to have diligently searched the London and Edinburgh Gazettes, and to have examined an incredible number of old time-pieces with unwearied assiduity. If the exercise of greater care to avoid errors would have had the effect of preventing the publication or even of greatly curtailing the list, we ought to be thankful for the carelessness, for facts substantially new are certainly more valuable than minute corrections of facts already collected, while one little correction will oftentimes involve an amount of labor that might, in a fresh field, have

been utilized for the collection of ten facts quite unknown. How much easier it is to learn that there is a sun in the heavens than to ascertain its precise diameter in seconds, and how much more important that easily acquired knowledge!

*The Story of Rouen.* By Theodore Andrea Cook. Illustrated by Helen M. James and Jane E. Cook. London: J. M. Dent & Co.; New York: Macmillan. 1899.

This book irresistibly recalls Ben Jonson's line, "In small proportions we just beauties see," a saying which applies to products of the press as well as to human lives. When travelling, we visit a hundred towns, and by residence in a few of them gain some touch of the *genius loci*. Then we leave them, and in the course of years our first delightful impressions become a recollection rather than an active pleasure. But now and then we meet with a sympathetic sketch or description which brings back to us the old charm in something like its freshness. Many are the towns whose streets and towers cry aloud for a genuine historian and find him not. Fortunately, Rouen is no longer one of these. The little volume before us, by the skillfulness of its composition and the beauty of its illustrations, no less than by its association with a striking subject, makes the past live once more in fair or sombre but always vivid forms.

Rouen at once suggests Normandy, and Normandy in turn suggests the eleventh century, when warriors went forth from the lower Seine to conquer the Sicilies on the one hand and England on the other. Knowing as we do the fondness of the Normans for erecting monumental buildings, we should expect, *a priori*, that they would have decorated their capital with castles and cathedrals like those which they built under the shadow of Monte Pellegrino and in the great Palatine earldom of the north. But the architectural paradox is that the minor towns of Normandy still possess finer examples of the Norman Romanesque than Rouen itself. In leaving the régime of John for that of Philip Augustus, Mr. Cook says: "From a short survey of the town alone, no one who had never seen Caen or Coutances would imagine that he was in the duchy which possessed a school of architecture that was developed into Notre Dame in the Île de France, and into Durham . . . in England."

And yet for its buildings Rouen stands in the forefront of European towns. Who has not heard of its cathedral and the glorious St. Ouen and the Rue de la Grosse Horloge? Not only does it abound with Gothic churches, but also with the houses and mansions of the Renaissance. Mr. Cook, whose interests are at least half architectural, traces affectionately the origin of every prominent building in Rouen down to the beginning of the nineteenth century. After that time he finds "so little of distinction and so much of average merit that my story languishes beneath a load of bricks and mortar." In the last clause the author does himself scant justice, for at no point can the story be said to languish. Where architecture is not the ruling motive, history comes to the rescue, for the annals of Rouen are set thick with pieces of rapid and crowded action.

Although we are unable to give a detail-

ed analysis of this beautiful volume, we must nevertheless reveal (so far as we can) the cause of its success in a few words. One element in the result may be brought out through the word of recognition which Mr. Cook pays to those veterans before him in the field, M. Floquet and M. Charles de Beaurepaire. "Both were scholars in the École des Chartes, the only school of accurate historical instruction in the world." Perhaps such a tribute is too terse for scrupulous accuracy, but it shows that Mr. Cook has proper standards, and when, immediately afterwards, he adds that his guides to "the principles of organized research" have been M. and Mme. Darmesteter, one can still further understand why his preliminary investigations have been so full. His style, too, is one of real literary merit, enriched by a wide range of reading, and alive with an attractive enthusiasm. Thirdly, we must mention the drawings of Mrs. Cook and Miss James, which have been reproduced in excellent illustrations. They recall the designs of M. Gaston Coindre for 'Mon Vieux Paris,' though they are, we should say, even more delicate than his.

From force of habit rather than any special sense of duty, we record one or two misprints, *e. g.*, p. 40, the date 1108 for the assembly at Lillebonne, and p. 104, the date 1141 instead of 1143 for the death of Ordericus Vitalis. On p. 80, Robert of Belleme occurs instead of Belesme, as Mr. Cook, in accordance with general usage, ordinarily writes. We conclude by applying to this admirable sketch of town history (for it is in no sense a guide-book) a maxim of Rouen itself. The arms of the town are a lamb bearing a banner and with one of its front feet raised. Hence has come the local proverb, "L'Agneau de la ville a toujours la patte levée," which means that the Normans are great travelers. This municipal device should have been stamped on the cover of the book to signify that it deserves a wide circulation.

*The Chronicle of the Discovery and Conquest of Guinea.* Written by Gomes Eannes de Azurara; now first done into English by C. R. Beazley and E. Prestage. Vol. II. With an Introduction. London: Printed for the Hakluyt Society. 1899. [No. C.] 8vo.

The Hakluyt Society's hundredth volume contains the concluding chapters, 41-97, of the translation of Azurara's 'Chronicle of the Discovery and Conquest of Guinea.' To the ordinary reader it is interesting, not so much for the information given as for the naïve way in which the chronicler describes deeds of purest savagery. Though Prince Henry's aim in sending out these expeditions was to found a commercial and colonial empire for Portugal, his captains were chiefly bent on getting plunder and slaves. Azurara, however, sees in them God's agents in rescuing souls perishing in heathenism. Each successful raid on some wretched African village is regarded as a cause for devout thankfulness, while of those who were so fortunate as to escape from their brutal assailants he says, in one instance, "Oh, if only among those who fled there had been some little understanding of higher things. Of a surety I believe that the same haste which they showed in flying, they would then have made in coming to where they might have saved their souls and

restored their affairs in this life." In his summary of the results of the voyages narrated by him, that on which he lays the chief stress is that 927 slaves have been brought to Portugal, of whom "the greater part were turned into the true path of salvation." The arrival of some of the caravels at the mouth of the Senegal, believed by the navigators of the fifteenth century to be one of the mouths of the Nile, is the occasion of some chapters full of curious lore in respect to this river.

The chronicle is rendered into excellent English. The notes are largely based on those of the Viscount Santarem. An introduction by Mr. Beazley is a scholarly account of Prince Henry's part in the exploration of the West African coast and of the maps and scientific geography up to and during his life. It sketches, besides, the history of Mohammedanism in Northern Africa and the status of that religion at the time of these voyages. The index would have been more useful had it contained references to all proper names, as Tider, Ergim, etc. There are reproductions of two interesting mediæval maps and a view of Prince Henry's statue at Belem.

*Yale: Her Campus, Class-Rooms, and Athletics.* By Lewis Sheldon Welch and Walter Camp. Boston: L. C. Page & Co. 1899.

Accepting the truth of the proverb that a little folly is relished occasionally by the wisest men, we may commend this book to Yale graduates. Every one knows the sentiment felt by students towards their college—a product of youthful enthusiasm, generous appreciation, venerable tradition, prevailing opinion, and subtle association. We know how deep it is and how shallow, and that its effusive display may be as sickening as its genuine outburst is exhilarating. We confess that we do not enjoy the high key in which this account of Yale is composed. To read page after page of strained laudation and glorification is wearisome to the most loyal graduate, if not to the more youthful student. It is well to be devoted to the alma mater, and at the proper time to express devotion; but to print a volume of this devotional matter is not in good taste.

Aside from form, the matter here presented is an epitome of college life. The customs, old and new; the follies, new only in their accidents; the local traditions and associations, are set forth here in interesting detail. There is a long account of the cultivation of athletics, with many columns of records of interclass and intercollegiate contests—figures as fascinating to many, no doubt, as they are repellent to others. There are chronologies of the different schools or colleges, tables of attendance, lists of donations, records of appointments and publications. Perhaps the most useful part of the book is that entitled "The Yale Class-Rooms," in which particular accounts are given of buildings and of the curricula therein pursued. Much information is here compacted, and some of it well prepared and arranged. In short, the book is a kind of encyclopædia of Yale, containing much that her sons will take delight in reading, omitting somewhat of matter worthy to be recorded, and suffering from the inevitable corpulency attending the encyclopædic habit. But the printers and binders have done their work well, and the blue and gold of the cover makes a brave showing.

## NEW BOOKS

## Industrial Cuba

Being a Study of Present Commercial and Industrial Conditions, with Suggestions as to the Opportunities Presented in the Island for American Capital, Enterprise, and Labor. By ROBERT P. PORTER, Special Commissioner for the United States to Cuba and Porto Rico. With 62 illustrations and 4 maps. 8vo. 438 pages. \$3.50.

"It is an able work by an able man, who possesses an unusually complete equipment for economic investigation, and rejoices in the presentation of statistics in a manner that is at once forceful and interesting."—*Philadelphia Press*.

"It touches upon almost every possible question that is necessary to a proper understanding of the situation. There is a vast fund of information in the book for all those who would thoroughly understand the Cuban question and who desire to discuss it intelligently."—*Pittsburg Times*.

"Mr. Porter's book is not only worth reading the second time, but is worthy of study, and any one wishing to know the real condition of things in Cuba or who is interested in the future of the Island will do well to put it among his reference books. It is far and away the best book on Cuba yet produced, and is likely to remain so for some time to come."—*Philadelphia Telegraph*.

IN THE STORY OF THE NATIONS SERIES.

## No. 57. The Story of China

By ROBERT K. DOUGLAS. Fully Illustrated. Large 12mo, 456 pages, \$1.50; half leather, gilt top, \$1.75.

The author of this book has drawn his information not only from the great series of official government histories—which are records of the court and camp—but also from the vast number of miscellaneous books which show forth the life and the progress, such as it is, of the Chinese people. No history is more dramatic, more picturesque, and less widely known than the history of the Chinese. Mr. Douglas understands the peculiarities of the people, and is competent to deal philosophically with its achievements and defeats.

## The Week.

The feeling among the volunteers who have been serving in the Philippines is made clear enough when a detachment of them escapes the region where the censorship prevails and reaches this country, as did the Nebraska regiment and the Utah artillery on Sunday. All the dispatches from San Francisco agree that the soldiers express the greatest dissatisfaction with the management of the campaign by Gen. Otis, and the warmest satisfaction at escaping from further service in the war of conquest. Col. Mulford, commander of the Nebraska troops, is quoted as saying that "just one man in the entire regiment re-enlisted," while Lieut.-Col. Eager of the same regiment is represented as believing that "it will take at least twenty years to entirely pacify the Filipinos," and as stating that "all the men think the price we are paying for our new possessions is far in excess of what they are worth." It is a serious matter for the Administration when each returning regiment distributes in a host of communities men who know from experience what the war in the Philippines really is, and who hold such views as these about it.

How the Philippine censorship worked in actual practice is lucidly explained by the *Evening Post's* Manila correspondent. It was designed to keep the Filipinos in ignorance of what was going on; but those really kept in ignorance were the people of the United States. It was the American press in Manila that was censored; the Spanish papers published what they pleased. News to and from the United States was suppressed or cut down to a meaningless nothing; but the Filipinos, by means of cablegrams from Hong-Kong in Chinese, got all the information they desired. All the American military plans were known in advance, so it would seem; at least they were steadily frustrated in their main intention of shutting in and capturing large bodies of insurgent troops. All told, therefore, the censorship led to the ridiculous result that it deceived those who should have been enlightened, and enlightened those whom it aimed to deceive. As the correspondent points out, the army officers on the spot had all along a view of the situation radically different from the official view at Washington, and it is the army view which the event has shown to be the correct one.

It is an interesting question whether

the Washington authorities were misled as regards the condition of affairs in Luzon, or whether they deliberately closed their eyes to the truth. The Hong-Kong *Telegraph* of June 8 attributes the successive failures in the Philippines to "the ignorance of the Americans with respect to the Filipinos." It refers particularly to the terms offered by the President in his original proclamation, and later in the peace negotiations, and says that they were simply "farfical" from the Filipino standpoint. Under Spanish rule the natives had enjoyed rights of local government greater in some important respects than those the self-styled liberator, McKinley, was magnanimously proposing to give them. The Filipinos, says the *Telegraph*, "are right to reject them," if they are not yet reduced to unconditional surrender. It goes on to say that the American Government "requires enlightenment upon the subject of the Philippines and the Filipino people," and that it is time for it to realize that it is not dealing with "a rabble of uneducated savages," but with leaders at least who are "accomplished and civilized." It is, we say, difficult to make out whether our high and mighty Imperialists at Washington had misleading information about people and country, or loftily waved aside facts they did not like. We know that the President's circumstances last December and January were not such as to inspire in him a humble desire to know the unpleasant truth. He was flattered to the top of his bent. He was exalted by his toadies to a pedestal so lofty that it is no wonder if he could not believe that a set of wretched Filipinos would dare to resist his nod. But even if he then had the excuse of ignorance, he has it no longer. Everybody can now see how we blundered in the Philippines. But is there any sign that the President, with new knowledge, is taking a new attitude? No man knows except Mr. McKinley, and he will not tell. Otis appears to have clapped the censorship on him also.

Senator Burrows of Michigan served public notice, in an interview on Monday, that the Republican party cannot stand the long continuance of the war in the Philippines without risking the loss of the next Presidential election. Here is the explicit language which he uses:

"It is my judgment that, if the war in the Philippines is still in progress next year, and the end is not then in sight, the situation will be to the disadvantage of the Republican party. The only hope for the party and the country, I might add, is in a speedy change of conditions in the Philippines. Unless the war in the Philippines speedily ends, it will become an important political factor, and its continuance will make the outlook for Republican success uncertain, to say the least."

The remainder of the interview does not count for much. Mr. Burrows says: "If I could have had my way, we would have simply taken a coaling station or a base of supplies in the island of Luzon, we would not have paid a penny to Spain, and we would have our foothold in the East without the sacrifice of life and money." He thinks that "the President is acting wisely in endeavoring to restore peace and order in the Philippines by sending an increased army to assist Gen. Otis," and says that "it is to be sincerely hoped that the fresh troops will be able to establish the authority of the United States"; but he declares that, if the additional troops sent cannot restore peace, "Congress will have to deal with the problem." Of course he has no wisdom to contribute to the solution, although he goes so far as to admit the possibility of finally surrendering the islands.

The Hon. Steve Elkins comes to the point in the business of Alger's removal with a blunt directness equal to Foraker's. He says that the deposed Secretary had endured a series of "undeserved assaults," and had stood up manfully under "abuse which might otherwise have been thrown at the President." Yes, so Alger himself has said all along; so Mr. McKinley himself said for month after month. "Why, my dear sir," he would say to one troubled protestant after another, "to attack Mr. Alger is to attack me." That majestic answer should have stopped the assaults at once; but as it did not, and the carping went on, the President let dignity go hang, and dismissed Alger for having rendered, as he himself put it, "faithful service." Never was there so overloaded a scapegoat as Mr. Alger, and it is very doubtful if he succeeds in carrying off the sins of the Administration into the wilderness of Michigan. Indeed, he is broadly intimating that he does not mean to try to, but is going to leave on the White House steps several neat bundles of political sins, carefully addressed to their rightful owner within.

There is a good deal of pricking up of imperialistic ears over the disturbances in San Domingo and the dispatch of war-ships thither, but not as much as there would have been two years ago. We have now such a full line of imperial "responsibilities" that even our most greedy empire-builders are willing to wait a bit before assuming more. Still, there is one fetching argument which they say they are unable to resist. If "anarchy" should prevail in the island, then we should have to step in and take it (including the government

of Hayti, too, apparently). We are now the greatest suppressors of anarchy in the world. We do not want to meddle, but the sight of anarchy fires our blood, and we are off at once to extinguish it. That is what took us to the Philippines, and the world sees how anarchy disappeared the moment we showed ourselves there. It is, of course, only foreign anarchy that rouses us. We can see our own cities turned over to mobs, and Judge Lynch holding court in large sections of the country, with equanimity, but anarchy anywhere abroad we regard as a call for our immediate appearance on the scene. So if any of the Dominicans want to be annexed, all they have to do is to act like a set of turbulent anarchists, and we will instantly mark them for our own. Our appetite for anarchy is insatiate.

"The late Colonel Monroe" put in an appearance at The Hague on Tuesday week. Our delegates filed a solemn warning that the United States must be understood as adhering to their traditional policy of having nothing to do with European quarrels, and allowing Europe to have nothing to do with American quarrels. The other Powers did not ask, as they might have done, "Then what are you here for?" or "What are you doing in the Philippines?" They silently acquiesced in the American tribute to the now very much departed Monroe. It was a little piece of humbug which deceived nobody, and therefore did no great harm. Uncle Sam with his clutch on the Philippines, all in the name of no interference with European questions, and renewing his cry, "You stick to your continent and I'll stick to mine," is a slightly comic figure. But the decorous delegates seem to have done all their laughing in their sleeves.

Cynical people cannot be blamed for remarking on the contrast between the fervid advocacy of arbitration by England and the United States at The Hague, and the persistent refusal of each to arbitrate the only serious international difference it now has on hand. Great Britain says it cannot arbitrate its dispute with the Transvaal, since it does not become the suzerain power to arbitrate with the vassal state. But, after all, in all that relates to its internal government, the Transvaal is an independent state. This has had recent international affirmation. England addressed a note to the Italian Government, and perhaps some others, asking that the shipment of arms to the Transvaal be stopped. But the polite answer was that the Transvaal, as an independent state, not at war, could buy munitions of war wherever it chose. And as the main quarrel of England with President Krüger turns on the proper interpretation of the London Convention, it

would seem to be a case where the decision of impartial jurists could be most properly and happily sought and accepted. But England, away from The Hague, feels insulted at the suggestion. In our own dispute with Canada, we have not refused point-blank to arbitrate, but we have insisted upon a manifestly unfair arbitrating tribunal. To demand only South American arbitrators is practically to demand prejudiced arbitrators, since our Government has officially declared our will to be law on all this continent. If Canada were to submit her case to South American jurists, how could she tell that they would not be under the spell of Mr. Olney's famous "flat"?

A fuller report of the proceedings at The Hague, when explosive or expansive bullets were under discussion, throws a somewhat better light upon the attitude of the English and American delegates. The resolution offered by a Russian military expert was distinctly aimed at the English Dum-Dum bullet. This was pointed out by Capt. Crozier, our military attaché, who proposed the adoption of a rule couched in broader terms, so as to exclude any bullet making an unnecessarily cruel wound. He intimated that several countries were experimenting with rifles designed to give a twisting or rotary motion to the small-calibre steel bullets, and said that their tearing through a man would be worse than being hit by a Dum-Dum. He therefore offered an amendment to the rule so as to prohibit any missile more destructive than absolutely necessary to put a man *hors de combat*. This, however, was voted down by the Continental delegates; whereupon the English and Americans refused to vote against expansive bullets, and also declined to sign the convention prohibiting them. Their consistency or wisdom in doing so is not very clear; but they are at least able to say that they advocated a more comprehensive rule than that finally adopted by the majority of the Conference.

It is announced on both sides of the water that a treaty of reciprocity between France and the United States has been negotiated, by virtue of which we shall obtain the same privileges in French markets that are enjoyed by England, Germany, Switzerland, and other countries which are under the conventional or minimum tariff. France keeps two kinds of tariff "in stock," one with relatively high duties, that is applicable to all countries with which she has no commercial treaty, and the other adjustable at lower rates, and applicable to countries which make lower rates for the admission of French goods. We borrowed this device in framing the McKinley tariff, and it was repeated in

somewhat different terms in the Dingley bill. In fact, it was repeated twice in the latter measure. Section 3 of the act seems to have been specially designed for an arrangement with France. It authorized the President, without the concurrence of the Senate, to enter into an agreement with any country producing and exporting brandies or other spirits, champagne and other sparkling wines, still wines, vermouth, paintings and statuary, whereby the duties on those articles shall be reduced in exchange for like concessions by the exporting country in favor of the products and manufactures of the United States. An agreement thus made is to go into effect by the issuance of the President's proclamation, and to remain in force during his pleasure. This provision, so obviously intended for France, has not been availed of in the negotiation which has now been concluded.

Section 4 of the same act authorizes the President, by and with the advice and consent of the Senate, to make treaties of reciprocity with any country in respect of any kinds of goods, wares, and merchandise, by reducing the duties on the same by not more than 20 per cent. for a period of not more than five years. It is under this clause that the present treaty has been negotiated. Consequently, it cannot go into effect until ratified by the Senate by a majority of two-thirds. It requires ratification by the Senate of France also, and there are already loud mutterings of discontent in that quarter, and predictions that it will not be ratified. Exactly what the objections on the French side are is not stated, since the details of the treaty have not been made public. It is probable, however, that some articles of both manufacture and agriculture have been put on the list which have excited the apprehension of French producers of similar articles, and it is not improbable that they may be strong enough to prevent ratification. France is eaten up by the protective dogma. The masses are a prey to the classes in the most approved republican fashion, and it is pretty safe to assume that nothing can pass the ordeal of ratification against which any considerable class interest is arrayed. It would be useless to speculate on the fate of the treaty on our side of the water until we know what it contains. It is announced that champagne is not included in its terms, although Congress evidently contemplated that it should be. We cannot say that this is a defect, since the drinkers of champagne are not usually in need of relief, while those who are so can obtain it by not drinking champagne.

The agitation of last spring against the Baggage Abuse has resulted in the organization of the American Travellers'.

Defence Association, an extremely strong body. The object of the Association is the repeal of the \$100-limit clause of the Dingley act; and, in accordance with this purpose, branch organizations will be formed in various cities of the country to get signers to petitions to Congress requesting such action. The recent contention, that the language of the clause limiting its application to "articles purchased abroad by such residents of the United States" virtually deprives it of much of its force, since it cannot be made to apply to presents or articles purchased by some other person than the one in whose possession they are, will be of material assistance in securing the repeal. The law was odious before this discovery was made, and was virtually a failure also, since the amounts collected under it were absurdly small as compared with the claims made by its advocates at the time of its enactment as to what it would bring in if it were to be put in force. If, now, even these amounts are to be made still smaller, and the law itself is to be made ridiculous because of its blundering phraseology, its repeal ought to be a comparatively easy matter.

Some commotion has been stirred up in the Populist and Silver Republican ranks by a reported declaration of Gov. Stone of Missouri, the chairman *pro tem.* of the National Democratic committee, in the following words:

"The Democratic party henceforth must maintain its individuality. If other parties desire to build a parallel line alongside the Democratic tracks, no objection can be raised, but a consolidation under the terms of which the Democratic party will surrender in part control over its own organization, or place any of its affairs in the hands of those who do not fully accept its doctrine and disclaim allegiance to all other parties, is not to be tolerated under any circumstances."

There is very good reason to believe that this is an authentic deliverance, that it represents the views of the Democratic leaders, and that the policy which it foreshadows will be carried out in the convention of next year. There will be no Tom Watson encumbrance on the next national ticket. The Populists are a disappearing faction, and the Silver Republicans have already disappeared. The next Democratic ticket will be composed of two Democrats, and there will be no assistants outside of the party. Probably Mr. Bryan has influence enough with the Populists to bring most of them into the Democratic party, and the remainder—the Middle-of-the-Road men—will hardly be numerous enough to nominate a separate ticket. Probably the chief aim of Gov. Stone's out-giving is to get rid of an element which will insist upon making silver a prominent issue in the campaign of next year, and thus dragging the party to inevitable defeat. The present is the right

time to notify the silver fanatics to flock all alone by themselves. If Mr. George Fred Williams insists upon flocking with them, the Democratic party in Massachusetts will be the gainer.

The boycott now going on in the city of Cleveland seems likely to add a new terror to the business world. A strike has been in progress on the part of the employees of the Big Consolidated street-car line. It took the usual course. When new men were found to take the strikers' positions, the old hands resorted to violence. Then the military were called out to protect the company's property and the lives of their new workmen. After a week of turmoil and some bloodshed the riots were quelled. Then the old employees gave orders to the community not to ride on the cars of the Big Consolidated Company under penalty of the boycott, and they stationed men at various points along the line to take down the names of persons who disobeyed the order. These persons, if engaged in business, were to be inscribed on a certain list of names, and no purchases were to be made at their shops. This is the ordinary form of boycott, but it has been reserved for Cleveland to introduce a new variety. An order was sent out that nobody should sell anything to any person who was found riding on a car of the Consolidated Company. The Company, on its part, is not idle. It has sent boycotted men to buy articles at stores which have been notified not to sell, and it intends to bring suit against those who refuse to sell. Private citizens have already begun suits against merchants who have refused to sell, and naturally the city is all upside-down in a business point of view. It is impossible to suppose that such a condition can last long. Nor can the Consolidated Company afford to yield to this new attack. It might better run all its cars empty and levy assessments on its shareholders to pay operating expenses, since yielding to the boycott is the same thing as surrendering its property.

The tax-rates for the different boroughs of the city reveal to the property-owners of old New York the full meaning of the phrase "Reaping the fundamental advantages of consolidation." The rate for the old city is 47 points above that of last year, and 34 points above that of 1897. The Comptroller is of the opinion that we have reason to rejoice that it is not 20 points higher than it is. Brooklyn, on the contrary, has the lowest rate of all the boroughs, and the lowest for thirty years. Whatever reason the old city may have for regretting consolidation, there can be no question that Brooklyn has gained immensely, for the burden of taxation upon her shoulders has been perceptibly light-

ened by the simple process of transferring a large part of it to the shoulders of taxpayers on this side the river. The fact, which was as certain as fate when consolidation was under consideration, has become fate now, namely, that the chief source of income from which to defray the expenses of improving and developing the new city is the old city, for that section alone has in its capacity for increased taxation. Other forecasts as to the working of the new charter are also coming true too quickly.

The refusal of Esterhazy to testify in the Dreyfus court-martial, although he was assured of safety in doing so, is the tribute of a scoundrel to common decency. It is something like a blush. Esterhazy has a large endowment of "cheek," but to ask him to stand up before a jury of his fellow-officers and acknowledge that he committed forgery and perjury in order to send an innocent man to life imprisonment or to the scaffold is, in his opinion, asking too much. Under these circumstances everything which depended upon Esterhazy's testimony in the former trial falls to the ground. But, for that matter, everything else incriminating Dreyfus fell to the ground a long time ago.

The new Minister of War in France, Gen. Galliffet, is taking hold of the French army problem with splendid audacity and vigor. He is punishing talkative and insubordinate generals right and left, from the highest to the lowest, in a way to prove that he meant what he said when he took office—namely, that he did not desire it, but that he would discharge its duties without fear. That the army has been terribly demoralized through its prominence in the public life of the nation during the past few years is certain. It has apparently lost the root idea of discipline in an army under a free government, which is, strict subordination to the civil authorities and silence in political matters. So inflated have the officers become by all the flattery showered upon them, that they have taken to talking in public as if that were the chief duty of a soldier. Accustomed in their barracks and clubs and in their cafés to speak contemptuously of the *pékin* civilians in charge of the government, they insensibly drift into blurring out their sentiments on public occasions. So Gen. Zurlinden did in Paris not long ago; so Gen. Négrier did at Auxonne the other day. The latter has been promptly disciplined for his indiscretion, and it is said that some signal mark of displeasure is shortly to be visited upon Zurlinden. If the peasant President succeeds in teaching the French army to know its true place, he will have done much to hold the republic to its true course.

## THE INSATIATE REFORMERS.

Secretary Gage begins his article in the *Forum* in defence of the President's civil-service order by saying that it "has been the occasion of much misunderstanding and misrepresentation." He must have been confirmed in this opinion when he read the letter of the Secretary of the Civil-Service Reform League, published on Monday. But he will have to confess that a good deal of the misunderstanding and misrepresentation is his own. The categorical refutation from the official records of many of his assertions of fact, and the exposure of certain concealments or evasions in Mr. Gage's statement of the law and practice, show that either he or some subordinate of his was deceived or attempting to deceive.

"Very few" removals of any kind have been made in the Revenue Service, asserted Mr. Gage. Mr. McAneny cites official figures to prove that 50 per cent. of the entire service has been removed since March 1, 1897. Is 50 per cent. "very few"? In all the removals made, continued Secretary Gage, there had been "strict conformity" with the President's rule requiring "the filing of charges and the opportunity for defence." The records of the Civil-Service Commission show case after case of collectors defying this rule, alleging "verbal instructions" from "the Department," and upheld by their superior officers in their open violation of the law as regards both removals and appointments. Mr. Gage declared that the Civil-Service Commissioners themselves recommended the exemption of deputy collectors from the classified service. Yes; but why? Because, says Mr. McAneny (and, of course, he speaks by the card), "they preferred absolute exemption to a continued state of disregard of the law." If Mr. Gage was to appeal to the Commission at all, he should have stated the whole truth about it. If he had done so, he would have admitted that it recommended only 1,000 exemptions, instead of 10,000, and that so far from being unable, as the Secretary of the Treasury asserted, to furnish eligible lists, it "was prepared to furnish as many eligibles as might be needed, at the shortest notice."

We will not pursue the matter in detail. The defence which Mr. Gage made in his own name and the President's has been so thoroughly riddled, in both its facts and its implications, that anything further from the same source will have to be accepted with great suspicion, unless buttressed by official statistics. Mr. McAneny's general conclusion is that the net result of the President's order, and of his tolerance of violations of the law on an enormous scale by his subordinates, is to restore the spoils system in spirit and in effect. Few impartial men will doubt this. The evidence is too overwhelming. At the very moment

when Mr. Gage is making his virtuous protestations, the dispatches from Baltimore tell of the Collector of Customs there openly defying the Civil-Service Commissioners and the law, and being upheld in his course by the Secretary of the Treasury. The mischief is done. The idea has gone abroad through the whole service that the "civil-service-reform nonsense" is over. What the Ohio and Kentucky Republicans said in their platforms, is being translated into act. Encouraged, not restrained any longer, by their superior officers, the collectors and heads of departments are openly looting the Federal offices the country over. The heart has been taken out of the reform by the weak connivance of Secretary Gage and President McKinley.

It is a melancholy business, but on one aspect of it we must say a word further. It is declared again, in certain namby-pamby quarters, that the civil-service reformers are unreasonable. They ask too much. In spite of all that the President can do for them, they go on grumbling. They wanted Mr. Gage, and he gave them Gage; yet here they are repudiating their own man. "Are not their attacks," inquires the flabby-reform *Review of Reviews*, "calculated to shatter faith in human nature, and to promote the very cynicism that lies at the root of so much that is bad in our public and social life?"

Now, to this we say, in the first place, that Mr. Gage was approved as Secretary because he was expected to establish the gold standard. He was, of course, a reputed civil-service reformer, and that was a minor reason for rejoicing over his selection, and it distinctly was not expected that he would make up for failure to establish the gold standard by consenting to see the civil-service law made a mockery. But there is one point about all this which politicians and other silly folk always overlook. It is that reformers never guarantee to support even one of their own friends in office unless he deserves support. It is no answer to say to them that they are attacking "their own man." If he does not live up to their and his own professed principles, then he is not their man. In fact, they are bound to be even more severe with one of their own men than with an outsider. When they urge a candidate for office, or hail his appointment to it, they by no means pledge themselves to keep still about his delinquencies. They will rather cry out the louder if they find him adding personal recreancy to official misconduct. They are bound to do so, and that is the reason why they can never be "placated" by having an appointment made to suit them. They are implacable except by perfect honesty in office and complete devotion to the public good. Are they then insatiate? Yes, they are; but so is truth, so is honor. A man who occasionally lies cannot satisfy a lover of truth.

A base action only once a month is enough to make a man out dishonorable. So it is the lapses of so-called reformers in office which show that they have not the root of the matter in them, and which call for their stern arraignment, as Mr. Gage has been arraigned by the men who were prepared to be his most enthusiastic supporters. And if anybody has "shattered faith in human nature," it is surely the man whose acts belie his professions, not the man who feels compelled to call attention to the fact.

## THE MCKINLEY WAY.

What is likely to make a painful impression upon average good citizens, in connection with the spoliation of the civil service by President McKinley and Secretary Gage, is the deceptive and underhanded way in which the thing has been done. There has been nothing open and above board about it. What has been done has been done, for the most part, secretly and behind closed doors. To honeycomb the administrative service in the interest of spoils, while ostentatiously protesting that the edifice was only being renovated and improved, seems to have been the policy of the Administration; yet so shrewdly and cunningly has the work been carried on that, but for the vigilance of civil-service reformers, most of the illegal appointments and removals, so remorselessly set forth by Mr. McAneny, would probably not have been known by the general public at all.

It is clear enough, however, that all this is quite of a piece with the general method of the present Administration. Since McKinley came to the throne, frankness and transparency have ceased to prevail. The ordinary conduct of public affairs has been surrounded with a strange secrecy, as if business of the utmost moment were being transacted. On no subject whatever has President McKinley yet made a clear and simple statement of his opinions, or purposes, or hopes. With all his pretence of doing so, he has never yet taken the public into his confidence. What he has done has been to go about with a dignified and serious air, delivering himself from time to time of platitudinous phrases as of one who, if he would, could reveal unutterable things. To keep himself right with the dear people, however, that they may vote for him at the next election, he has allowed it to be given out that he is in favor of everything good, and opposed to everything evil, considered by his party managers to be worth favoring or opposing at the present moment. In the meantime, while thus facing the voters with an earnest front, and bespeaking their confidence while he performed in silence the great work laid upon him, he has quietly allowed his subordinates to violate both the letter and the spirit of

the civil-service law, and has himself made some of the worst appointments recorded since that law went upon the statute-book.

The same combination of mystery and double-dealing attended the conduct of the war with Spain, and continues to characterize the management of affairs in the Philippines. No reasonable person, of course, would be foolish enough to ask a commander-in-chief to publish beforehand the details of his proposed campaigns, or to set no bounds for the omnipresent reporter. But the McKinley secrecy is not of this sort. Its use is, rather, to cover up and gloss over maladministration, incompetency, or fraud. When the soldiers before Santiago were threatened with annihilation because of the inefficiency of the War Department, the official news bureau curtailed its operations, pending "important developments." When the public were ready to take the President at his word, and express an opinion on the question of keeping the Philippines, a pall fell upon the negotiations at Paris, in the alleged interest of "diplomacy." When our troops in Luzon began to grow impatient of severe fighting in an unworthy cause, a censorship was established at Manila, and edited dispatches from Washington took the place of authentic news. In each case, the veil of secrecy and mysteriousness was said to be necessary because of the important work that was being done, or the delicate nature of the negotiations being carried on; yet, as time has gone on, and occasional glimpses behind the veil have been obtained, it has quite often been seen either that nothing whatever was going on, or else that advantage had been taken of the darkness and retirement to push on some questionable scheme.

Students of European politics know how much of the business of government and diplomacy is carried on behind guarded doors, and how important papers, on matters of great public interest, are often years in seeing the light. It may be that the present Administration, eager to give the United States a "standing" among nations, has thought it needful to imitate some of the methods of European statesmen. There is this very important difference, however, between the secrecy and evasiveness of men like Gladstone and Bismarck and that affected by President McKinley. The former, however much their methods might be open to dispute, were nevertheless actually engaged upon business of international importance, and upon constructive work in itself part of a definite and far-reaching policy. With President McKinley, on the contrary, the primary aim is immediate personal and party success. If he has either principles or policy, dissociated from the mandate of his party, the country is yet to be informed of what they are. In adopting

European methods, he takes the form without the substance. Secrecy, with him, becomes underhandedness; skill degenerates into trickery; wisdom changes to deceit.

#### RELATIONS OF CIVIL AND MILITARY POWER.

One matter of grave concern, in the settlement of affairs in our new possessions, is the relation of the military to the civil power. At present all the islands, in the absence of Congressional action, are virtually under military rule, the President governing them as military head of the nation and commander in a conquered territory. In the Philippines, especially, there is likely to be a disposition to maintain for some time a considerable body of troops, ostensibly, at least, to uphold the authority of the United States. Assuming the cessation of the present war, and the establishment, by Congress, of a form of civil government for the Philippines, by which the civilized inhabitants are given some effective voice in the conduct of their affairs, what will be the relation between this Government and the army and navy?

Theoretically, of course, the question offers no great difficulty. The legal relations between the civil and military powers, under our constitutional system, are well defined, and are hardly any longer matter of dispute. In time of peace the military arm is wholly subordinate to the civil authority, having, so far as the operations of civil government are concerned, no right of independent initiative, and not even a presumption in its favor. As an agent of the civil authority, and subject to its direction, the army may be used to repress disorder and put down domestic violence; but it cannot lawfully interfere with the ordinary conduct of affairs, or take action of a political character, save to defend a lawful government from overt attack. For the employment of a military force to attain political ends, or to uphold civil authority when the latter is able to stand alone, there is no sanction in the Constitution nor in the system of law erected upon it. So far as the United States is concerned, the maintenance of the militia and a standing army looks only to the remote contingency of foreign war, or to such a condition of internal disturbance as the sheriff and his posse cannot control.

The trouble will come in the practical application of the legal theory. Once the Philippines are really, as well as nominally, under our dominion, and warlike operations are no longer carried on by either party, the continued presence of an American army in the islands will be defended, doubtless, on the ground of danger of foreign invasion, and the necessity of keeping order and protecting life and property. If we could be as-

sured, beyond peradventure, that the use of the troops would be limited to the attainment of these ends, it would contribute much to peace of mind. But with a party "policy" to be carried out, with a form of government established by statute, and a corps of officials on the ground to set things going, there will unquestionably be great temptation, in case of difficulty or opposition, to call in some soldiers to straighten matters out. And there *will* be difficulty and opposition, of course. It is idle to think that we can give the Filipinos, or anybody else, representative or republican government, and yet escape the complications and disputes with which that form of government seems always to be attended. There will surely be disputed elections, and, quite likely, rival local governments. The United States, as lord paramount, will be appealed to to take sides and settle the controversy. With a powerful force at its command, how is it likely to act? Will it allow a solution to be found by the peaceful and educative, but slow, methods of discussion and legal procedure, or will it yield to the desire to "do something," and interfere with rifle and bayonet to bring about peace?

We have had in this country, within the memory of the present generation, a conspicuous illustration of the employment of military force to uphold and assist civil government. For ten years after the close of the civil war, the experiment was on trial in the South. The conditions, to be sure, were anomalous: The unsettled condition of the States lately in rebellion, the sudden enfranchisement of some millions of negroes, and the apparent necessity of so reorganizing the State governments as to insure acceptance of the political principles settled by the war, were the grounds on which the extraordinary action of the dominant party was defended. How dark the page is which records the events of the reconstruction period, is only too well known. The troops did, to a degree, secure peace and order. They did make life and property comparatively safe. They did enable government to be set up and maintained in places where, but for their presence, a measure of anarchy might, for a brief time, have obtained. But the more the inner facts of the situation were revealed, the clearer it became that the main use of the army was to support arbitrary and partisan political methods, and that, so long as the troops remained, democratic government must be only a shadow and a dream. It was not so much to pacify and restore the South as to get control of its political machinery for the Republican party that the soldiers were chiefly used; and it was the recognition of this fact that eventually led even the friends of the policy to condemn it.

It is the repetition of such occurrences in the Philippines that ought, in the in-

terest of national honor, to be avoided. The Republican party, again in control of the government, is essaying to deal with a situation as difficult as that which confronted it at the close of the war of the rebellion. It boasts of its perfect organization, its aggressive policy, and its ability to carry affairs, if necessary, with a high hand, and not lose votes. It proposes to crush the rebellion in the Philippines, and to set up and maintain a government. From the party standpoint, this is well enough. But the people of the United States, it should remember, have no love for military rule. Whatever their views as to the civilization of the Filipinos, they will not patiently see political institutions of any sort forced upon the islanders at the command of an army officer. If the Filipinos are to have self-government at all, the American spirit requires that they be left free to work out their own salvation without the help of the army and navy, and that their inevitable blunders and mistakes be not seized upon as ground for forcible interference. There are two ways in which a country like the United States can establish republican institutions among alien and subject people. One is by forcibly uprooting discord and opposition, and arbitrarily imposing the new forms and methods upon the unwilling inhabitants. This sometimes brings temporary success, but its inevitable end is war. The other is by the slow and painful process of education, in which only open violence is repressed by force, and soldiers and marines do duty chiefly as a spectacle. There can be no question as to which of these two ways the United States owes it to itself to follow.

#### THE NEW PENSION RAID.

The instigator and leader of the G. A. R. movement to get Mr. Evans out of the Pension Bureau is "Corp." Tanner, claim agent. He is behind the various Encampment complaints of Mr. Evans's methods, and behind the appeals which veterans are making to the President to have Mr. Evans transferred to some other branch of the service. Ever since he was dismissed in disgrace from the office of Commissioner of Pensions, Tanner has struggled to make his successors odious by forcing upon them policies revolting to their common sense and patriotic instincts. His efforts have been made mostly through the medium of veterans' meetings of one sort and another. Such gatherings are composed of ninety per cent. of men who know nothing about the hidden machinery used for working up their "sentiment," and ten per cent. of skilled engineers. The meetings go where the machinery sends them. Just now Tanner appears to be intent on getting endorsements for a demand that the Commissioner of Pensions shall recognize as binding the

ratings recommended by the medical examining boards.

What this means will be better understood in the light of the fact that there are some fifteen hundred such boards scattered through the country, each with its own ideas of the extent of the disability involved in this and that ailment. Compare the findings of a dozen such boards in any State, and you have Babel. It is on record that one board found an applicant suffering from seven separate disorders, like rheumatism, indigestion, etc., none of which presented any surface symptoms; it recommended that he be paid \$30 a month for each of six, and \$10 for the seventh, making a total of \$190 a month. With a million pensioners on the roll, and others still coming, how long it would take to empty the Treasury at this rate can be figured by the rule of three. All examining boards are not of so generous a type, but they are virtually named by members of Congress and other representatives of the party in power who are not above playing for the "soldier vote." Once yield to Tanner's impudent demand, and there is no telling where the thing would end. Under the present practice of requiring the medical boards to send in diagnoses, and letting the awards be made by the central authority in Washington, the pension-roll is costly enough; but if the boards, politically appointed, and subject to local influences, were left to make the final decisions, the American taxpayer could save time by putting up his shutters at once and moving out of the country.

In fact, with the law in its present condition, the only protection to the Treasury rests in the honesty and firmness of one or two men. The Commissioner of Pensions passes upon a case in the first instance; and in a dispute over the construction of a law, the Secretary of the Interior, usually by the hand of an Assistant Secretary, makes a ruling to govern a whole class of cases. Corrupt or inefficient men in these offices can do more damage in four years than the best of their successors can undo in twenty. Raum's notorious "Order 164" furnishes a case in point. As long as that stood unchallenged, shrewd attorneys could rig up a case for an applicant by showing that he had a dollar's worth of dyspepsia and a dollar's worth of neuralgia, and a dollar's worth of each of four other complaints, and thus procure for him a six-dollar rating, which was enough to put him upon the roll. Once there, he was not only practically sure of staying, but his attorney was a slow fellow if he could not work in an examination for a rating and a higher pension with every change of personnel in the nearest medical board. Of course, the claim agents had all the business they could do for a while, and the relics of their work are still a tax upon the Govern-

ment, though it is now six years since Hoke Smith revoked the order.

How the claim agents will fight when attacked is shown by the Long case, which is not dead by any means, though now so generally forgotten. Commissioner Lochren found Charles D. Long, a Justice of the Supreme Court of the State of Michigan, drawing a pension of \$72 a month for "total helplessness, requiring the regular aid and attendance of another person." Looking up the record, he found that Long had suffered a wound of the hip-bone, for which a pension of \$50 had been granted in the regular way, but Tanner had raised the \$50 to \$72 without a medical examination. Meanwhile, as a magistrate, with a salary of \$7,000 a year, Long was daily performing duty which he could not have performed if the constant attendance of another person had been necessary. Lochren, after trying in vain to bring him before the doctors for examination, suspended the unlawful pension. All attorneys who had been getting favors by irregular methods saw in this an assault upon their prestige, and Tanner set about collecting a fund to carry the case into the courts and test the right of a Commissioner to revise a pension once granted by a predecessor. The bad faith of such a contest was plain from the fact that nobody used to question a Commissioner's right to order all pensioners of doubtful status before examiners once in two years, to see whether their disabilities continued, and this practice was dropped only after the roll had grown so large as to make it impracticable. The Circuit Court for the District of Columbia, on application for a mandamus for Long's restoration, decided that Lochren had acted clearly within his right. An appeal was taken to the Supreme Court of the United States; but Lochren went out of office before it could be reached, and, as the mandamus was to be directed to him personally, the case was dismissed. It is liable to be revived at any time, however, by a move upon the present Commissioner.

Of course, Tanner's reason for choosing this particular case as a subject for his test was the political and social prominence of Judge Long; for, at the first blush, the sympathies of the public would be likely to go out to a man of his high standing. Yet, studied critically, from the points of view both of common sense and of sentiment, no case could be more unhappily chosen as illustrative of the working of our pension system. It is true that Judge Long had been a good soldier; but, on the other hand, the war had made him. He went into the army a country lad, with no career open before him. When he came back a cripple, he was an object of special interest to all his old neighbors. His incapacity for active work of the sort most of them were doing had

him to prepare for the bar. His army record was a distinct aid in bringing him both clients and political preferment. If, therefore, our pension system were in practice what it is in theory, Judge Long, with his enviable rise in life and his assured private income, would have received only a modest pension if any, and the surplus would have gone to help some less fortunate comrade out of the depths.

It would be hopeless now to attempt to change our pension legislation for the better, beyond correcting a few glaring incongruities. All the plans for codification during the last two Congresses have stopped short at that point. The question resolves itself into keeping men of conscience and force in charge of the system, and uniting honest citizens everywhere for their support when they try to do right in the face of heavy pressure. Either a Lochren or an Evans, when they come to the front, must be loyally sustained, or we must throw open the vaults of the Treasury to an army of claim agents under the lead of Tanner and Dudley, and the shade of the departed Lemon.

#### A SAMPLE OF CROKER RULE.

We commend to the attention of all persons who are inclined to the belief that Tammany rule is not so bad as many people declare it to be, the revelations concerning Mr. Croker's treatment of our Health Department and its vital statistics. No better example of the great man's ideas as to the proper uses to be made of a ruler's powers has ever been presented to the public attention. The evolution of events which led up to the final step was very simple and natural. Mr. Croker discovered, after he came into full possession of the city government in January, 1898, that he needed a headquarters of some kind suitable to his state. He decided upon a club as the most appropriate form, and began to look about for a building. Finding an empty club-house in Sixth Avenue, he purchased that without paying much attention to either the price or the location. He forgot for the moment that the new style of living which his prosperity had enabled him to adopt could not find suitable field for display in Sixth Avenue. Even the Tammany Boys who had either bought or hired the court dress which the boss insisted upon, saw the incongruity of wearing it in such a plebeian locality.

No sooner was the mistake discovered than it was rectified. Mr. Croker found a suitable house for his club in Fifth Avenue, and had it enlarged and refitted with appropriate luxury and elegance. This left him with the Sixth Avenue house on his hands, but it was soon announced that he had found a purchaser. Shortly afterwards it was announced that the city authorities had

taken a lease of this building for a term of ten years, and that the Health Board was to be moved into it from its quarters in the new Criminal Court Building. The members of the Board protested on various grounds, including that of inconvenience to the public, but their protests were unheeded. Go they must and did, for the boss decreed it, and the city government, with the Mayor in the lead, enforced the decree. What had public or official convenience to do with it, anyway? If Mr. Croker could sell his club-house by promising its purchaser that he should have the city for a tenant, at a handsome rental, was not that reason enough for the change? It seems a hopeless task to endeavor to make some people comprehend the nature of the government under which we live, notwithstanding the fact that Mr. Croker himself has said in the plainest manner several times that the primary objects of the government are his pleasure and pecuniary profit.

Having moved the Board of Health up town, with President Mike Murphy at its head, it became necessary to remove all the records of the department with it. The President himself went with the greatest reluctance, and, after arriving there, he found himself so annoyed by the proximity of the elevated railway that he instigated at once a plan for its removal, on the ground, his enemies said, that microbes were at work upon its foundations. He was so much absorbed in this work that he seems to have paid no attention to a far more serious injury to the city and thousands of its inhabitants which was being perpetrated under his official notice—that is, the removal of all the records of marriages, births, and deaths from a fireproof building to a veritable firetrap. If he made any protest against this step, or if he realized that it called for a protest, the public had no knowledge of his action.

The removal of these records was anything but a subject for merriment. Nothing more criminal in the way of wilful official negligence has ever been done, even under Tammany government. It is impossible to conceive how an intelligent official could sanction such a step. To all foreign-born citizens and their descendants in this country, the preservation of these records is of the greatest importance. No son or daughter of such parents, born in this country, could gain possession of an inheritance or a legacy in a foreign country without producing a certified official transcript of the record of marriage and birth. This fact alone is sufficiently momentous to lead to loud protest against the present dangerous location of the records. To native American citizens the consequences of destruction are scarcely less serious. No American child can be admitted to schools in Germany, France, or Italy without a certificate of the parents' mar-

riage and the child's birth, and no American can be married in some European countries without a similar certificate. Then, too, the heirs of an estate cannot get money out of banks without transcripts from the official records of deaths.

Not one of these invaluable records would be saved if a fire were to break out in the building in which they are now placed. In one hour every official trace of every birth and every marriage which has occurred in this city for nearly half a century would be wiped out, and of every death for a full century. All these records are of inestimable value in a thousand ways. They are duplicated nowhere, for parish records are not kept in this country, as they are in Europe. Churches are demolished and their records are untraceable, but even if they were preserved they would not be complete. To take a single chance of the destruction of such invaluable data is an official blunder which amounts to a crime, and this is so obvious that one would suppose that even this Croker-ridden community would rise in protest. Read the description given of the "vault" in which some of these precious documents are stored, and then reflect upon the intelligence of the extraordinary horde that is ruling over us. Read the accounts, also, of the structural qualities of the building, and then reflect upon the intelligence and character of our extraordinary Mayor, who fights so furiously for a City Prison Building erected under the expert Tammany guidance of Horgan & Slaterry, and who will trust no other architects than those professional bankrupts with the construction of city buildings. Where was his zeal for safe public buildings when he insisted upon this Health Board removal?

#### PREPARATORY INSTRUCTION IN HISTORY.

Mainly under the influence of the colleges and universities, whose interest in admission requirements followed logically upon the growth of the elective system, the work of the preparatory schools has held nearly, if not quite, the first place in the educational controversies of the last decade. First, awakened zeal for physical science forced a battle with the classics, and compelled the latter to modify—though much to their ultimate advantage, as the event proved—their extreme claims to educational value. Then came the modern languages, insisting upon their claims—literary, philological, and practical—to a distinct place in any well-framed scheme of secondary instruction. The work in mathematics has been overhauled, and the traditional order of subjects turned inside out. And now, latest of all, comes history, whose pedagogical claims receive, in the recently published report of the Committee of Seven of the American Historical Association (Macmillan), detailed examination.

The high standing of the committee, and the weight that will naturally be attached to their opinions, make it worth while to summarize, though as briefly as possible,

their conclusions and recommendations. As a thorough and systematic scheme of study, the Committee recommend a four years' course, beginning with ancient history and ending with American history. The four "blocks," or annual periods, are:

"(1.) Ancient History, with special reference to Greek and Roman history, but including also a short introductory study of the more ancient nations. This period should also embrace the early Middle Ages, and should close with the establishment of the Holy Roman Empire (800), or with the death of Charlemagne (814), or with the treaty of Verdun (843).

"(2.) Mediæval and Modern European History, from the close of the first period to the present time.

"(3.) English History.

"(4.) American History and Civil Government."

Anything less than the full four years' work will, in the judgment of the committee, be inadequate. When, however, less than four years must suffice, the committee think it better, on the whole, to omit one of the "blocks" altogether, rather than to attempt a compression of the whole scheme; although they think some such combination as that of English and American history may be practicable. No "short course" in "general history" is recommended, for the reason that such a course must deal either with the dry bones of the subject, or else with broad generalizations too dangerous for immature minds.

In regard to methods of teaching, the committee favor the use of text-books, as pretty certain to give a better presentation of the subject than the average teacher is likely to originate; but they urge the free use, in all grades, of collateral printed material. There is a favorable word for note-books and maps, and an earnest plea for adequate school libraries. The so-called "source method," however, "in which pupils have in their hands little more than a series of extracts, for the most part brief, and not very closely related," is distinctly disapproved. Finally, in the matter of college entrance requirements, the committee, bearing in mind the different prescriptions and different forms of statement of different institutions, make the following recommendations — the "unit" meaning an historical course occupying five periods a week for one year, or three periods a week for two years:

"(1.) If a college or a scientific school has a system of complete options in college entrance requirements—that is, if it accepts a given number of years' work, or units, without prescribing specific subjects of study (as at Leland Stanford University) —we recommend that four units in history be accepted as an equivalent for a like amount of work in other subjects. Likewise, that one, two, or three units in history be accepted.

"(2.) If a college or a scientific school requires a list of certain prescribed subjects, and also demands additional subjects, to be chosen out of an optional list (as at Harvard University), we recommend that one unit of history be placed on the list of definitely prescribed subjects, and that one, two, or three units of history be placed among the optional studies.

"(3.) If a college or a scientific school has rigid requirements without options (as at Yale College and the Sheffield Scientific School), we recommend that at least one unit of history be required for entrance."

In the fourth class of institutions, of which the University of Michigan is a type, where distinct college courses, leading to different degrees, have corresponding sets

of entrance requirements, the recommendations of the committee are, for the so-called classical and Latin courses, one unit of history, consisting of any one of the four "blocks" or periods previously mentioned; for the scientific course, two units, freely chosen; and for the English course, three and, if possible, four units, thus making history one of the central subjects in this course.

Such, in condensed form, are the recommendations of this long-awaited report. Their significance, obviously, does not lie in their novelty, either of form or of content. Nearly all the points touched upon have been the subject of frequent discussion in educational circles, in recent years, and their general bearings are not unfamiliar. What gives the report its especial importance is the fact that its conclusions embody the mature judgments of representative historical scholars and teachers, speaking for the American Historical Association, as to the amount and kind of history that should be taught to American youth. The doctrine of the report will not, of course, be accepted without question even by those best entitled to be heard in the matter; but the straightforwardness and restraint with which it is expressed will certainly go far to commend it.

The feature of the report least likely, we think, to meet with approval is the recommendation of mediæval and modern European history as one of the four "blocks" or periods. For a boy or girl, of average high-school age and powers, to get, in a single year, a helpful view of the history of Europe from A. D. 800 to date, seems a large undertaking; and even the committee have to admit that "it is necessarily . . . a matter of considerable difficulty to determine the best method by which the subject may be handled." They feel, indeed, the necessity of securing "unity and continuity," and suggest that this can be done either by treating broad general movements, or by centring attention mainly on the history of some one nation, preferably France; but their exposition of the possibilities in this direction is not very convincing. The order of events in time is not the necessary order of youthful apprehension of them. The scheme of the committee rather suggests that, having wisely concluded that the history of Europe ought not to be wholly neglected, they finally decided upon a cursory view of the whole of it; thereby virtually reproducing, in their second "block," the main characteristics of that "short course in general history" which they elsewhere condemn. With the utmost deference to the carefully considered views of the committee, we must still think that, for American secondary schools, the fruits of nine months' study of European history for a thousand years will not be that clear, balanced and understanding view of events which the committee hope for, but, rather, either a dry and lifeless store of names and dates, or else an uncertain notion of "movements" and "tendencies," chiefly distinguished as being essentially untrue.

The report suggests two reflections. The first is, that such a course of instruction as is here recommended is obviously impossible without specially trained teachers. On this point the language of the report is both clear and emphatic. The present situ-

ation is certainly lamentable. As a rule, history is still committed to the tender mercies of teachers whose strength lies in other directions. Until, then, the secondary schools are organized on the basis of specialization in the teaching staff, educational plans, such as are here outlined, must wait for adoption. The second reflection is a query whether there is time for all this work. The courses of study in our schools are packed and stuffed with a great variety of subjects, until one wonders how one small brain can be expected to grasp more than a round third of them; yet the days and hours somehow do not lengthen, and the capacity of the youthful mind to absorb knowledge changes little from year to year. We do not see how the average curriculum, as at present made up, can find place for such an historical course as is proposed by the Committee of Seven. Here, then, is the problem. The friends of Greek, and German, and physics, and history have studied the educational situation, and told us what they want. What we need now is a thorough-going expert study of the school curriculum as a whole, in the light of all these departmental programmes, to determine the extent to which the wealth of suggestion can be actually adopted. Such an inquiry, already partially undertaken, is not a task lightly to be attempted; but its appropriateness and necessity such reports as that of the Committee of Seven certainly do much to demonstrate.

#### A NEW ARCHÆOLOGICAL LAW FOR GREECE.

ATHENS, June, 1899.

There is a widespread conviction in Greece that she has outgrown the archæological law of 1834, under the operation of which her museums have been filled with priceless treasures of ancient art and history, and Athens has become one of the important centres in Europe for the study of art and archæology. It can scarcely admit of question that it was an eminently wise thing at the time to prohibit absolutely the exportation of antiquities. The spoliation of the Parthenon by Lord Elgin had taught Greece the sacredness of her monuments, and she could do no less, as a self-respecting nation, than to discountenance utterly all trafficking in the remnants of her ancient glory. But for such a law, she must have been despoiled long since of many of the unique remains which now adorn her museums and attract visitors from all parts of the world. It is doubtful if the foreign societies would have been content to expend so much money and labor in excavations in return for the right of publication alone. While the policy of dividing the spoils of excavation would certainly have stimulated popular interest in classical archæology in other lands, as is well illustrated in our own country by the flourishing condition of the societies which contribute to the Egyptian Exploration Fund, the interests of archæology at large would scarcely have been furthered by such a plan, and Greece would have been impoverished, as Egypt has been, in proportion as the rest of the world was enriched.

But the effective enforcement of this provision of the law has grown increasingly difficult. The demand for Greek antiquities has become so strong, and the prices in consequence so remunerative, that the business of smuggling such goods out of the country has reached enormous proportions. The Athenian

dealers in antiquities have representatives in the principal capitals of Europe. They do business directly with the management of museums on both sides of the Atlantic, and openly claim to be able to fill orders for almost every variety of Greek antiques. This has long been known to the authorities at Athens, but they profess to be unable, under the present law, to check the traffic. I have heard responsible persons in Athens even express the belief that persons high in authority connive at it. However this may be, the business of collecting and exporting antiquities has become so extensive, and is so openly conducted, that ignorance or indifference on the part of the Government is no longer possible.

In May, soon after I reached Athens, the papers announced the arrest of a well-known forwarding agent on the charge of having shipped as "personal effects" a large consignment of antiquities to Berlin, fortunately intercepted there by an agent of the Government. At the same time, additional troops were being hurried to Tanagra and Eretria to put a stop to the extensive night operations which had long been in progress there, hundreds of graves having been opened within the past few months. A few weeks later, when visiting the Austrian excavations on the site of Lusol in northwestern Arcadia, I found an admirable illustration of the facility and security with which this underground business is carried on. The directors of the excavations had been greatly disappointed in having found so few objects in bronze and terracotta, which they knew had once been very plentiful on this site. Searching for an explanation of this phenomenon, they learned that, the year before, a considerable force of men from the neighboring village of Soudena had dug over the whole site under the safe direction of one of the gendarmes stationed there! Many a peasant's cottage in the neighborhood had a better collection of bronzes than the authorized explorers! This is the state of affairs pretty much all over Greece. The Athenian dealers have stimulated surreptitious digging everywhere, and valuable objects which should be in the museums are daily taken out by travellers or exported for sale.

On the ninth of the present month (Old Style), the Minister of Education, M. Eutaxias, laid before the Boulé a series of measures designed to put a stop to "this scandal, which has confounded all Greece," to use the phrase of the speaker, and at the same time to put all the archaeological interests of the kingdom on a better footing. In the preparation of the following account, I have depended upon the reports of the sitting given by the Athenian press, and on a sketch of the proposed measures which appeared in the *Neologos* of May 27 (O. S.). The *Neologos* states that M. Eutaxias was assisted in drawing up these bills by M. Kabbadias, the well-known Ephor-General of Antiquities, and by M. Byzantinos.

M. Eutaxias explained, in his introductory remarks, that the defect in the old law to which the growth of the illicit trade in antiquities may chiefly be attributed, next to the practical difficulty of preventing exportation, is its recognition of the common ownership by the State and by the property-holder of all antique objects found in Greece. The proposed law, on the contrary, declares that all objects of antiquity are exclusively the property of the State. It recognises, however, the claim of pro-

perty-holders to some compensation for objects found on their land, in providing that they shall receive one-half of the value of such objects, this value to be determined by a committee of three, on which both interests are represented. This compensation is forfeited if the property-holder fails to give notice to the Ephor-General within five days of the discovery, and the delinquent is liable also to fine or imprisonment. The amount forfeited is to be paid to the one who gives information of such failure to comply with the law. The committee of appraisal may declare objects to be undesirable for the museums, in which case the objects remain in the hands of the property-holder, and may be disposed of at will. Any one who is found in possession of antique objects must show that he is lawfully possessed of them; otherwise he is liable to a heavy fine or imprisonment, and the objects are confiscated.

Antiquities from other countries are allowed free entry into the kingdom, notice thereof being given to the proper officials. Such objects may not, however, be sold or otherwise disposed of without permission from the Minister of Education. If they are exported from the country, a tax of 20 per cent. ad valorem must be paid to the State. Objects found in Greece which have been declared "unsuitable for the museums" may be exported. Exportation of all other classes of objects is absolutely forbidden. Those found guilty of illicit exportation are to be imprisoned for not less than three months or more than five years. The manufacture and sale of imitations of antique objects are also forbidden.

Under the old law, antiquities found on private property might be acquired by the State on payment of one-half of the appraised value. The proposed law, therefore, differs from the old, in this point, only as regards the technical matter of ownership, and, it must be acknowledged, does not seem to be very consistent with itself. But it is believed that it will prove more effective than the old law, by reason of the heavy penalties fixed for failure to announce promptly the discovery of ancient remains, coupled with the reward offered to informers, as well as by the prohibition of unauthorized digging. Besides, the people will soon learn that their one-half share, fairly appraised, would amount to more than they might expect to receive from the dealers, who obtain their wares at ridiculously low prices. But, even so, many articles would doubtless find their way into the hands of the dealers. The peasants are very secretive about their hoards of ἀρχαία πράγματα, and the business of informing against one's neighbors is always disagreeable. The Government must depend, after all, upon a more efficient and honest administration of its laws. This is provided for, except in the matter of honesty, by another bill, to which I shall refer later on. It is also possible that private collectors and the buyers for museums would prefer to obtain their Greek antiquities legally, when once the exportation of a certain class of objects is allowed. There can be little doubt that it is the intention of the framers of the bill to give a liberal interpretation to the phrase ἀρχαία ἀνὰ τὰ μνημεία. Objects that would add nothing to the collections of Greece would be eagerly sought for by museums in other countries.

Not less important for the interests of archaeology are the further provisions of this

bill with reference to the right of excavation on private property. Every society which has conducted excavations here has encountered enormous difficulties in acquiring the right to dig. Exorbitant sums are demanded for the right to excavate on ground that is almost worthless, and often the land must be bought outright at high values, even though it is well understood that the former owner will resume possession after the excavations are concluded. The Greek Archaeological Society is at present unable to continue the extensive and important excavation of the north slope of the Acropolis of Athens, because the owners of the huts there demand Wall Street prices for their miserable holdings, and this in spite of the desperate attempt of the Society to reduce their demands by the circulation of a report that the walls of the Acropolis are about to fall! This situation is met in the bill by giving the Ministry of Education the right to conduct excavations on any private property by condemnation. The property-holder's usual share in the value of objects found is forfeited if he offers opposition. At the same time no one may dig for antiquities, even on his own land, except by the consent of the Ministry and under the direction of one of its archaeological officials. For violation of this article the punishment is to be imprisonment for from six months to three years.

A second bill proposes the organization of a graded archaeological service under the Ministry of Education. The number of Ephors is to be increased and better salaries paid them. Each Eparchy of the kingdom is to have a Superintendent, and a large number of guards is to be appointed for the care of the museums. The Ephors and Superintendents are to be trained archaeologists. Guards are to be selected by examination, but soldiers wounded in the late war may be appointed without examination—an exception of especial interest to us Americans. To meet the increased expenses entailed by these reforms without burdening the budget, a separate branch of the Treasury is to be established, whose revenues are to be derived from (1) the lottery, (2) admission fees to the museums, and (3) the sale of casts. The Archaeological Society, relieved of the management of the lottery, will devote itself to exploration and research, supported by a subvention of 70,000 drachmæ per annum. The Numismatic Museum will receive 10,000 drachmæ yearly, and the Christian Archaeological Society a like sum. It is believed that the fees of admission to the museums will amply cover the increased expenses. Although one cannot but regret that Greece should recede from the unique position which she has hitherto held, all of her museums being now absolutely free to the public, yet, in view of the heavy cost of maintaining all her monuments and collections, the pressing need of arranging and cataloguing, and the demands of future excavations, the wisdom and even the necessity of this step will be acknowledged. Free admission will be given to professional archaeologists, teachers, and students.

M. Eutaxias also presented a bill for the establishment of a Practical School of Archaeology, the details of which have not yet been announced, and at the same time intimated that the Archaeological Department of the University is to be reorgan-

ized and enlarged. It is clear that he is determined to effect, if possible, much-needed reforms and improvements in every branch of the archaeological work of Greece. In this effort he seems to have the support of the leading archaeologists of the country. Greece has already, by her enlightened policy and the recognized ability of her scientific men, contributed largely to the building up of the science of archaeology. If the proposed measures are passed by the *Boulé*, we may confidently expect from her still greater services in the future.

EDWARD CAPPS.

#### THE ISLE OF MAN.

DUBLIN, July 15, 1899.

There are many anachronisms in the constitution of the British Empire. Among the most striking are some near the centre—the political status of the Channel Islands and of the Isle of Man. Both are unrepresented in Parliament, and have Home-Rule institutions and laws of their own. The Channel Islands are all that remain to England of her French possessions. It is indeed their boast that they do not belong to England, but that England belongs to them; that they are a portion of the Normandy whence issued the race that conquered her. Speaking French, and within but twelve miles of France, while they are sixty from England, they are enthusiastically loyal to the British crown, and were, through the French Revolution and the Napoleonic wars, never shaken in their fealty. Their area is about that of Greater New York, and they support a population of 90,000.

It is, however, of the Isle of Man, whence I have just returned, that I now mean to write. It is smaller than the smallest Irish county (still thrice the extent of the Channel Islands), and has a resident population of 55,000. It is situated midway between England, Ireland, Scotland, and Wales, which countries are visible from its heights on a clear day. It consists of heath-covered mountains in the centre, rising to 2,000 feet, from which valleys, and pretty wooded glens, and undulating pastures tend down to the sea—except at its northern extremity: there is a level tract, probably gradual accretion thrown up by the fierce tides of the north Irish Channel. The occasional discovery of remains of the Irish elk, with the absence of toads and snakes, leads to the supposition that the island remained connected with Ireland long after its severance from Great Britain.

In early times it was an appanage of the Kings of Wales. Then came three centuries of Norse rule. During a century and a half England and Scotland contended for its mastery. Except for a short period during the Commonwealth, the Stanley and Athol families held it as their private possession for over four centuries. Only so late as 1829 did it come fully under the British dominion. The Dukes of Athol, whose ancestors were granted the island in return for a "cast" of hawks, presented upon each recurring coronation at Westminster, received back in all £500,000 in quitance of the family claims. The island's peculiar armorial bearings, practically the same as those of Sicily, may have been brought by Crusaders. The island was peopled mainly from Ireland. Kelly is the prevailing surname. In the "Callisters,"

"Cannells," "Kernegans," "Faraghers," Irish originals are recognizable, while "Christian" and many similar names show traces of Norse dominion. Most of the ruined churches are called after Irish saints; yet the island accepted the Reformation. The small proportion of churches continuously in use suggests that religion was probably at a low ebb from the Reformation to Wesley's evangelical revival. If statistics privately furnished me are reliable, sexual morality stands as high as in Ireland. The Manx language, now spoken only by elderly people in remote districts, is essentially the same as Irish. The Irish settlers did not, however, carry Irish letters with them. When writing became necessary, they used the English alphabet. The letters j, k, v, y, absent in Irish, are strikingly prominent in Manx. The inhabitants neglect the use of dotted letters, and, in following syntactical changes in the beginnings of words, alter the spelling in accordance with the pronunciation, so that the relationship of words is not so easily traced as in Irish. Manx music does not appear to be as rich as that of neighboring Gaelic peoples. Some of it is strikingly Irish in character.

The agricultural prosperity of this little country rests largely upon a revolution effected in land tenure in 1703, by which leaseholders were turned into perpetual tenants at low quit-rents. Till that period, the unearned increment of improvement was confiscated by the lords of the island. Since then it has been the property of the tenant. The quit-rent was in 1703 fixed at £1,500. The present valuation is £100,000 per annum. The principle of "betterment," the application of which is so ardently desired by reformers in other parts of the empire, is there accepted. Where improvements are made at the public charge, a tax is laid on contiguous property benefited.

Smuggling was once the best trade of the island. With but slight import duties, it became a station whence dutiable goods could be easily transmitted to Great Britain and Ireland; and with low taxation, and consequent cheap living, added to freedom from arrest for debt on British warrants, the island was even till recently the *Boulogne* of the Three Kingdoms. All this is now changed. Free transit, without customs delays or difficulties, has become indispensable to the prosperity of the place. Excise and customs duties have therefore been brought almost up to the British level. Abolition of imprisonment for debt in the United Kingdom has rendered such an asylum unnecessary. (I believe such imprisonment is still resorted to in the island itself.) Living is still, however, cheaper than in the neighboring kingdoms. There is no income-tax, or death duties, and but slight stamp duties. After smuggling, came fishing as the staple industry. In the church service of the island, following the prayer for the "kindly fruits of the earth" is one for the harvest of the sea. Manx fishermen are noted for their fine qualities: their boats are fit to sail anywhere. Lately, fishing has not been as profitable as formerly.

The "tripper" or tourist industry, is now the great staple. As the north of England operatives and factory hands have improved their circumstances and become more intelligent, their ideas have expanded, and they have begun to find better use for their savings than in drink, and better occupa-

tion for their many holidays than in lounging round public-houses and indulging in vicious amusements. The Isle of Man is their great playground. Lines of steamers, some carrying 1,500 passengers, ply from Liverpool and other ports to the island. Some 350,000 souls arrive in the course of the year. At Douglas, the principal port, it is said that three passengers land for every two that land at Dover. There is hotel and lodging-house accommodation for as many more persons as the normal population. This influx has almost doubled within the past ten years. Building is proceeding on all hands. Property has increased immensely in value. Every material interest benefits. Douglas has now magnificent piers and landing-stages, a crescent sea-wall and promenade stretching two miles, backed by terraces of ornamentally built, four-storied lodging-houses and hotels. It certainly does not add to the dignity of a country that it should become to such a degree a playground, nor can it be to ultimate advantage that the hotel and lodging-house interest should be so predominant.

The thousands of visitors lounge and bathe, listen to music, make driving and railroad excursions, and in the evening disport themselves on the esplanades, at variety entertainments and dancing "palaces." There are too many licensed bars; but during my few days' visit I saw no signs of intemperance, and was favorably impressed with the prevalent order and good conduct. From the gallery of one of the prettily decorated, spacious, brilliantly lit dancing halls, I looked down at the crowds of decorous young people enjoying themselves. The master of ceremonies told me he sometimes had as many as 5,000 waltzers on the floor at once; and that on Sundays, when semi-sacred concerts are given, there are 10,000 present. Dancing ceases at eleven o'clock. At a variety entertainment proceeding in an adjacent hall, there was little that could be called vulgar. What most struck me was the vociferous applause with which was received the intertwining of the Stars and Stripes and the Union Jack as "Yankee Doodle" and "The British Grenadiers" were played. Trips to Man are among the many influences tending to elevate the manufacturing population of the north of England. The specimens I saw there of this class contrasted most favorably with their progenitors as I remember them fifty years ago—then but emerging from a state of semi-civilization.

These visitors congregate principally about Douglas; they constitute one of the interests of the place, and do not mar the picturesqueness of the island. A fine coast surrounds much lovely scenery—bosky dells and rushing streams. It is easy to lose one's self on roads bordered with wild roses and honeysuckle and amidst shady "bo-reens." The view from the mountains will repay ascent. An electric railway has been constructed up Snaefell, the highest. At villages on the west coast the sea breezes are fresh and invigorating, and quiet lodgings may be found. Any one who has read 'Peveril of the Peak' will explore Rushin Castle and the romantic remains on Peel Holm. Rushin was the only place where I saw one of the tailless cats (a species more curious than beautiful) peculiar to the island. She was a friendly creature, which accompanied me through the ancient pile,

and peered over the highest battlements as if she had a certain proprietorship in the underlying old capital of Castletown. The novels of Hall Caine will attract some to Man. I caught sight of him at the Tynwald, more strikingly like his portraits than many other celebrities.

The institutions of the island, however, interested me most. I went over specially to attend the annual meeting of the Tynwald or Parliament. The island is ruled by a governor (the representative of the sovereign), by a council of eight, consisting of the Bishop, Deemsters or judges, and others appointed by the crown, and the House of Keys,\* consisting of twenty-four representatives elected upon a franchise more restricted than that prevailing in the "neighboring islands." Spinsters and widows have votes. The assent of both chambers is necessary for the passage of laws. They are then sent to the Queen (really the Government of the day) for approval. Occasionally modifications are suggested. There is no modern instance of veto. The power of the House of Keys tends to become dominant. After receiving the Queen's signature, laws before being operative must be proclaimed in English and Manx from the Tynwald mount. I can recall no more curious survival of old customs, one which we generally think of only as in use amongst our northern ancestors a thousand years ago.

The Estates of Man pay £10 per annum to the Imperial Government, as their share of Imperial charges. The rest of the taxes and imposts levied on or in the island are applied to internal purposes. Ireland pays nearly twice as much in proportion to her population, besides having to support costly establishments imposed upon her. The most patent benefit the Isle of Man enjoys from its home rule is the facility and cheapness with which railway and other private bills can be considered and passed. Church and state are there closely joined. Non-conformity does not take an aggressive form, and tithe is freely paid. As often in Protestant countries, the chief religious difficulties are with Catholic sentiment. A new cemetery has just been opened. It is the general determination that the whole should be free to all, each sect consecrating the ground as desired. The Catholics, however, are dissatisfied without a certain portion exclusively set apart for themselves.

The 5th of July, Tynwald Day, is kept as a general holiday. It was glorious weather, and thousands in their best poured out by rail and road to St. John's, situated upon a central eminence commanding extensive and beautiful views. A tent was erected over the old mound. A gravel path, strewn, according to immemorial usage, with rushes, led about two hundred yards to the Church of St. John. The surrounding green was gay with booths, at which cakes and the usual trifles were sold. Volunteers, with their band, naval reserve men with their guns, gave additional life to the scene. The church, a modern cruciform structure, is seated for two or three hundred. The privileged, of whom I was one, were admitted by ticket. The Council took their seats at a red-cloth-covered table in front of the Communion rails. The "Keys" were accommodated at oak tables farther down. The Governor, Bishop, and other officials entered in

\* The name is perhaps significant of their power or authority.

state, the choir singing "God Save the Queen." Through the general harmony, peace, and order I could not but feel how materially happy it is for a people when their religious convictions fall in with those of the government supreme over them. Morning service proceeded, little different from that used by the churches in England and Ireland, except that "The Legislature of this Isle" was prayed for instead of "The High Court of Parliament under our most religious and gracious Queen at this time assembled." A procession was then formed, and over the path kept by volunteers and the navy men we proceeded to the mount. It accommodated but a limited number; the rest collected round within a roped barrier, such as in a less orderly land would have quickly been invaded by the surrounding thousands. After a few quaint swearing-in ceremonies, we returned to the church, the Governor and the Legislature resumed their places, and business proceeded on a small scale as at Westminster. We now learned why the six acts named on the agenda had not been proclaimed: the Governor had not received them back from London! Accounts and reports were laid on the table, questions were asked and answered, motions made, and taxes were authorized. The whole proceedings were interesting. The ordinary meetings of the Estates of the island are held in the Government buildings in Douglas. In next appearing newspapers the maledictions on the Governor for the delay of the acts were loud and deep. This was the second time during his régime that such a disappointment had occurred. A special meeting of the Tynwald would have to be held for their promulgation.

I may as well draw these notes on the Isle of Man to a conclusion with an extract from the latest and best book on the history and constitution of the island, by Spencer Walpole, a recent Governor:

"This [the island's] virtual independence may be denounced as an anomaly and an anachronism; constitutional writers may succeed in demonstrating that dependent legislatures are likely either to become inconvenient or to break down; but anomalies and anachronisms, when they are attended with no evil consequences, have a tendency to survive; and autonomous institutions, at any rate in the Isle of Man, may display an increasing capacity for work."

A visit to the island, especially at Tynwald time, would amply repay any one interested in peculiar and ancient institutions, and prepared to enjoy lovely, though by no means sublime scenery.

D. B.

## Correspondence.

CYRANO DE BERGERAC'S TRANSLATORS.

TO THE EDITOR OF THE NATION:

SIR: The preface to Lovell's translation (1687) of Cyrano de Bergerac's 'Voyage to the Moon' begins with these words: "It is now Seven and Twenty Years since the Moon appeared first Historically on the English Horizon." In the 1899 reprint of this translation, the editor, Dr. Curtis Hidden Page, remarks in a note: "This evidently refers to an earlier translation. The present editor will be greatly obliged to any one who will put him on the track of a copy of this or any other early translation from Cyrano." Dr. Page knows Der-

rick's translation (1754). In the British Museum Library I have recently examined all three translations, and take pleasure in giving some particulars concerning the earliest. Its title-page reads as follows:

ΣΑΗΝΑΡΧΙΑ. Or, The Government of the World in the Moon: a Comical History. Written by that Famous Wit and Cavaleer of France, Monsieur Cyrano Bergerac: And Done into English by Tho. St Serf, Gent. London, Printed by J. Cottrel, and are to be sold by Hum. Robinson at the three Pigeons in Pauls Churchyard 1659. [There are about two hundred pages, unnumbered.]

This is twenty-seven years earlier than Lovell, and is evidently the translation that he refers to. Moreover, a comparison reveals that he was largely indebted to his predecessor. In many passages the wording in the two translations is very similar, Lovell having merely corrected mistakes and sometimes simplified the style. A few examples will show this:

(a) *St. Serf*: The explication of the other two Motions, are less knotty: for pray consider a little.—At these words the Viceroy interrupted me. I had rather dispense with you for that trouble (for I have read some Books of Gassendi upon that Subject).

*Lovell*: The Explication of the other Motions is less perplexed still; for pray, consider a little—At these words the Vice-Roy interrupted me: I had rather, said he, you would excuse your self from that trouble; for I have read some Books of Gassendus on that subject.

(b) *St. Serf*: I approacht him, feigning to perceive some motion, and protesting to the assistants that he was not yet dead.

*Lovell*: I drew near him, pretending to find motion in him still, and protesting to those who were present, that he was not dead.

(c) *St. Serf*: The morning beams had not wakened me, before they propitiously had lighted my guide to my chamber.

*Lovell*: Next Morning by Sun-rising my Spirit came into my room.

(d) *St. Serf*: The Damned . . . crawl up against the vault, and so turn the Earth, as a turn-spit Dog doth when he is shut up in a wheel.

*Lovell*: The damned . . . scramble up to the Vault, and so make the Earth to turn, as a Turn-spit makes the Wheel go round when he runs about in it.

(e) *St. Serf*: Charon makes use of no other candles.

*Lovell*: Being the only Candles Charon uses.

This last is, as Dr. Page shows on p. 97, a misunderstanding of the French *Car on ne se sert*, etc.

Part of *St. Serf*'s interesting "Epistle Dedicatory" reads as follows:

"To the Right Honorable, the Lord George Douglas, and Lieutenant-General Andrew Rutherford, and to all the Noble Officers in those two Renowned Regiments of Scots, the service of the most Christian King of France.

As for my self and Book (I call it mine, though I be but its Translator) I made particular choice of this, as well for the subject-Matter, as for the Author. I see the world so shuffled here below, that I thought it safest to present the Government of a World above, drawn by the hand of Monsieur Bergerac, who was not only of your Profession, but also of your Army."

The British Museum also contains the 'Satyrical Characters and handsome Descriptions in Letters. . . . Translated out of the French by a Person of Honour. London, 1658.' This book contains thirty-eight "satyrical letters," and eight "amorous"; pp. 174. Dr. Page has quoted the title with substantial but not with absolute accuracy (p. 1). One of Cyrano's letters ("D'un Songe") was the basis of a pamphlet with this title: 'The Agreement; A Satyrical and Facetious Dream. To which

is annexed The Truth. . . . Printed in the Year, 1756.' The preface contains the following:

"It may be thought strange, that I know not whether to call this ensuing Dream my own Performance, or a Translation: In the general Scheme; and in many Particulars, I have followed the Guidance of Cyrano de Bergerac, a French Writer. I have taken care to avoid a servile copying him."

I trust that these notes will be of interest, and perhaps of value. The earliest translation of the 'Voyage to the Moon' is certainly little known. Morley, for instance ('Clement Marot, and Other Studies,' II., p. 163) speaks of Lovell's translation as the earliest. KENNETH MCKENZIE.

LONDON, July 18, 1899.

#### AN AMERICAN TRANSLATION OF VONDEL'S LUCIFER.

TO THE EDITOR OF THE NATION:

SIR: Ignorant of Mr. Noppen's enterprise (noticed in your issue of July 20), another lover of all that's Dutch made a translation of Vondel's 'Lucifer' in August and September of 1897, save part of Act I., which had been done in January. The manuscript was submitted to a small publishing-house in Boston, and was rejected on the ground of lack of interest. (This firm later forwarded to the translator a prospectus of Mr. Van Noppen's work.)

The fact, however, that this work, never attempted before, should now be done twice at the same moment, would seem to indicate a "revival of learning" in that direction. It would certainly be a benefit, for, notwithstanding a certain radical tastelessness at times, corresponding to that found by critics in the art of Vondel's countrymen, there is in Dutch literature a world of strength, truth, and color not found elsewhere. Even Dumas falls in this field. Compare his 'Tulipe Noire,' the feeble exotic, with the tales of Van Lennep, the Dutch Walter Scott. Just so, a Frenchman cannot paint Holland. He carries his French greens there.

This translator, anxious to render just what there was in 'Lucifer,' felt amply equipped in the fact of never having read 'Paradise Lost,' and speedily recognized the only sentiment therein known to her in 'Lucifer's'

"En liever d'eerste Vorst in eenigh laeger hof,  
Dan in't gezaght licht de tweede of noch ein minder;"

literally:

And rather the first Prince in some lower court  
Than in the blessed light the second or still less,  
rendered:

And rather foremost Prince in some domain that's  
lower,  
Than in the blessed light to wield the second power.

The translation was begun in the metre of the original (a thirteen-syllable couplet alternating with one of twelve), and this was fairly well preserved until the work was dropped in January. When it was resumed in August, the vein had failed or "the charm of the female rhyme" had palled. The long couplet could not be sustained without padding, and consequent loss of the directness and simplicity which mark the original. Hence it was dropped except when a thirteener came our way. This may not be poetry, but the writer does not claim to be a poet, and hence *could* claim some indulgence for presenting in the conflict

not always rhymes, but "the nearest we have," as they say in the shops. Enough of Vondel's metre is preserved, it is hoped, to give some idea of the sonorous original, and the songs are exact. That at the end of Act. I. has the movement and change of a great bell:

Thou wert, Thou art the Never-Ending.  
Thou changest not. All angels' song  
Of praises faint, uncomprehending.  
Can do Thy majesty but wrong.

It seems the song of "La Triomphe," the mellow-throated monster of Bruges.

H. M.

GLOUCESTER, MASS., July 28, 1899.

## Notes.

The "Yale Studies in English," edited by Prof. Albert S. Cook, and heretofore published by Lamson, Wolfe & Co., have been taken over by Henry Holt & Co.

R. H. Russell will soon issue 'The Treasures of the Metropolitan Museum of Art,' with sixty half-tone illustrations, and text by Arthur Hoeber.

'The Temperance Problem and Social Reform,' by Joseph Rountree and Arthur Sherwell, will be published in this country immediately by Thomas Whittaker.

Josiah Flynt's 'Tramping with Tramps,' and 'Where Angels Fear to Tread,' nautical stories by Morgan Robertson, will be among the fall issues of the Century Co.

A primer on Dante, by E. Garratt Gardner, will form one of the Dent-Macmillan "Temple Primers" in preparation. The deservedly successful Temple Shakespeare is to be reissued in a form suitable for the library rather than the pocket, and Mr. Gollancz will revise both text and notes, and add in the twelfth volume a Life of Shakespeare. A new feature will be a gallery of Shaksperian contemporary portraits.

The Werner Co. of Akron, O., announces an 'Encyclopedia of Omens and Superstitions,' edited by Mrs. Cora Lynn Daniels.

Lemcke & Buechner send us the prospectus of a work issuing in parts by Th. Schröter at Leipzig and Zurich on the lower Rhine country—'Die Rheinlande von Mainz bis Koblenz: die Thäler der Lahn und der Nahe,' by Dr. M. Schwann. In this small folio the 150 illustrations in half-tone will form a leading attraction, to judge from the samples.

The new Year-Book of the Holland Society of New York is graced by portraits of our worthy Mayor and more worthy Governor, and of the young Queen of Holland. President Krüger figures in a letter. The speeches and addresses at the New York and Albany and some minor banquets are given at length. Of most permanent worth is the alphabetized record of burials in the Dutch Church, New York, filling upwards of seventy pages.

The documents contained in volumes xlii.-xli. of the "Jesuit Relations" (Cleveland: Burrows Brothers Co.), while consisting mainly of the annual reports and the diaries of the fathers at Quebec, present a good range of topics and embrace several interesting letters, which are taken from personal correspondence. Altogether they cover a term of five years, and belong to the period of transition from pioneer to colonial life. Exploration has already resulted in many great discoveries, as the Oreuxius map of 1660 shows, but new routes are being constantly opened up. At the same time the coming of Bishop Laval in 1659 has a marked bearing

on the purely colonial aspect of French contact with the St. Lawrence valley. Take, for instance, one case which runs through Laval's whole career in Canada—his opposition to the sale of spirits among the savages. Many churchmen before him had condemned this evil, but, during the first half-century from the founding of Quebec by Champlain, the fur-traders, who had no interest in the country as legitimate colonists, used in traffic whatever goods they chose, regardless alike of humanity and of the true welfare of the settlement. In other words, the "Jesuit Relations" have now reached a point where the routine occupations of the *Habitants* are a noticeable feature in the narratives. Farms are perhaps not yet so much esteemed as beaver skins, but they are growing more valuable, and life is complex enough for questions of church *versus* state to arise. Over against Laval we shall presently have Frontenac. Several striking episodes in Jesuit annals and several illustrious deeds of valor may be found in the four volumes. Chief in the former class is the failure of the Onondaga mission, and, in the latter, Dollard's encounter with the Iroquois. But, for the fight at Long Sault, the Jesuit Relation of 1659-60 yields place to Dollier de Caron, upon whom both the Abbé Faillon and Parkman have drawn largely.

Eight years ago, Ernst Dückershoff, a German coal-miner, was, mainly on account of police surveillance because of his trades-union principles, induced to leave his own country and seek work in the north of England. He has since contributed his life experiences, and his estimate of the differences in the modes of life between German and English workingmen, to the Dresden *Volkswohl*. These have been translated, and are now published by King & Son of London, under the title, 'How the English Workman Lives.' It is an eminently readable and suggestive little book, and worth purchase by all interested in working-class life and problems. "His booklet displays the painstaking attention to detail no less characteristically Teutonic than the tendency to fault-finding." It gives a favorable impression of the condition and possibilities of the Northumbrian workman as compared with his Continental brethren, and of the good feeling and equality between different classes in the district where he has worked. The absence of police interference in the affairs of life especially impresses him. He evidently considers that the workmen's wives in England have an easier life of it than in Germany.

For those who are interested in the course of events in France we may mention three works that are suggestive. M. Jean Jaurès expounds, with eloquence and earnestness, the propaganda of the Radicals, under the title 'Action Socialiste' (Paris: Georges Belais). Émile Faguet discusses 'Questions Politiques' (Paris: Armand Colin & Cie.), and Léon Poincard reviews the political, fiscal, and social situation in a series of studies bearing the gloomy heading 'Vers la Ruine' (Paris: A. L. Charles). These writers address Frenchmen, but there are many resemblances between the United States and the French Republic. We are fond of dwelling on our English institutions, but the spirit of Democracy tends to modify them, and the changes now taking place are generally in the lines that the French have followed. Their example has more instruction for us than is commonly understood.

Under the title 'Les Chinois chez eux,'

(Paris: Colin), M. E. Bard, ex-President of the municipal administration of the French "Concession" at Shanghai, has compiled and written an interesting account of the Chinese of to-day. His twenty-seven chapters, in three hundred and sixty pages, treat of the ordinary themes of standard interest. A dozen good half-tone pictures enliven the well-printed pages. It is curious to note that in this author's treatment of Chinese characteristics our own American writers, Chester Holcombe and Arthur Smith, are frequently quoted. There is little that is fresh in the chapters on social and religious life, but M. Bard's study of contemporaneous journalism, of money and finance, of industry, commerce, poverty, and socialism, shows the firm hand of one long familiar with the struggle for life in this over-populated empire. He is not frightened at the spectre raised by Kaiser Wilhelm: it will be long before China can industrially menace Europe. M. Bard believes, furthermore, that the yellow will conquer the brown, that the Japanese are precipitate, while the Chinese are long-headed and patient. In the end, the Chinese, though likely to be politically disintegrated, will be able to hold their own in the world's industrial competition. Interesting chapters, rich in late and carefully scrutinized statistics, deal with the question of "concessions," custom-houses, and foreign commerce. A useful abridgment of history and a somewhat one-sided chapter on Christian missions, or rather French Catholic missions, conclude a readable monograph packed with what is, for the most part, trustworthy information.

From the same Paris house we have a picture of the temperate zones in the third volume of the 'Album Géographique,' edited by MM. Dubois and Guy. The different countries are treated in sixteen chapters. A short sketch of their physical features, people, and characteristic industries and buildings, introduces some thirty reproductions of photographs illustrating these topics. Each picture, too, has a few descriptive lines, not always correct, since it is said of the Scotch Highlands that certain peaks are "couverts de neige et de glaciers." In the introduction to the chapter on this country (together with Canada) it is amusing to find it stated that the object of the war with Spain over Cuba was to compensate for our deficiency in tropical products such as tea, coffee, and sugar. The editors volunteer the further information that, "in spite of this beautiful appearance of two chambers and a President elected by popular suffrage, one seeks in vain for justice and equality in this republic of Anglo-Saxons, where positive interest rules everything, where the *club des millionnaires* exploits the masses *sans défense*, and imposes its will on the government." It would be easy to criticise the selection of views in some instances (there is none of Niagara, for instance); but as a whole the volume is an interesting one, though the pictures, with a few exceptions, are not of much artistic value.

The "Monographs on Artists" published in Leipzig by Velhagen & Klasing (New York: Lemcke & Buechner) carry on the series of English translations with Knackfuss's Rembrandt, and the German with Eduard von Gebhardt, a strictly contemporary religious painter, born in 1838, a professor in the Düsseldorf Academy, and a

technician of no slight merit. Numerous studies for his principal works are here reproduced, and are full of interest, in themselves, and for a sort of mediæval selectiveness. These may be instructively compared with similar studies for Munkacsy's religious paintings in the succeeding volume of the series, by F. Walther Ilges. The portraits of this Hungarian artist at various ages are very striking, while his portraits of well and less-known personages rival his more famous compositions in value. To the companion series of "Land und Leute Monographien" has just been added 'Norwegen,' by Sophus Ruge, which is beautifully illustrated with half-tones from grand landscapes. An excellent folding map of Norway and Sweden accompanies the text.

The *Architectural Record* (New York) for July contains an interesting piece of information for those who have studied the question of curvature in classic Greek design. Mr. W. H. Goodyear, who has carried his researches further than any other student, and has demonstrated a great variety of curves even in mediæval construction, calls attention to the intentional convexity given by McKim, Mead & White, architects of the Columbia University Library, to the steps and platform by which this classical building is approached. "The curves are arcs of circles, that of the lower flight of steps having a rise of eight inches in the centre," and "were intended to counteract the apparent deflection in horizontal surfaces and lines of great extent" (here 327 feet). The unfinished colonnaded University Hall, by the same firm, will show a curve also in its entablature. Mr. Goodyear considers this the first modern experiment with horizontal curves on so large a scale. He wisely remarks, apropos of what Mr. Penrose calls the "dryness" of modern copies of Greek temples, that "no consideration of the distinctions between ancient and modern classic architecture is satisfactory which stops at the curves," and does not embrace irregular dimensions of all kinds, as, leaning verticals, deviations from the parallel, irregular intercolumniations, etc.

Albania and the Albanians are described appreciatively by the Rev. H. Callan in the *Scottish Geographical Magazine* for July. Though it is a "dangerous and dreadful" country to travel in on account of brigands, starving soldiers, and the prevalent internecine feuds—"one village or clan or one division of a town against another"—he went last year from Durazzo to Previsa with no other weapon than a riding-switch, and often with no other guard than his native follower, also unarmed, without molestation. Albania is unquestionably in many respects the most interesting corner of Europe, from its wonderfully picturesque scenery and varied vegetation, and the primitive dress and customs of the people. They believe themselves, not without some show of reason, to be the descendants of the ancient Pelasgi, and are "physically and psychologically, both men and women, a credit, in point of health, strength, and beauty, to humanity." The Albanian is "fierce, reckless, revengeful, but truthful, faithful, virtuous, hospitable. He has the quickness of the Greek without his instability, the solidity of the Slav without his boorishness." Signs of dissatisfaction at their backward condition in comparison with the neighboring lands are not wanting. In one place a Mohammedan expressed a

longing for national schools, of which there are none. A sketch of early exploration in northwest Canada, with special reference to the Yukon region, by Alex. Begg, closes with a statement of the Canadian boundary claim.

It is a sign of the times in which civilization has not abandoned her bad practice of getting "forrid" sometimes upon a powder-cart, that the United States Industrial Publishing Company of this city will soon issue the *Automobile*, "an illustrated monthly magazine devoted to the interests of horseless traction." The editors will be Sylvester Baxter and E. E. Schwarzkopf.

The opening, a few years ago, of the *École des Beaux-Arts* to women has resulted in the experience that coeducation is, for the time being, impracticable in Parisian art circles. The young men did not extend a decent welcome to the students of the other sex. From rudeness they passed to flirtation, or, as "a grumbler" expresses it in a recent number of *La France de Demain*, "the growls of wild animals were succeeded by sweet murmurs behind the canvases or at the foot of white statues." In consequence, it has been necessary to open special courses for young women, and of these the one in architecture was attended by only one student, and she a foreigner. Hence, complaints are being heard at the "scandalous" waste of money, and fault is found, not with the ill-behaved youths whose ungentlemanly conduct has brought about the present condition, but with the authorities who, from "ignorance" and "sentimentality," opened the portals of the *École* to women.

In a previous note on the noble efforts of Mme. Marie du Sacré-Cœur in behalf of a more modern and advanced education for Catholic girls in France, we referred to the lack of support accorded to her projects by the majority of French bishops. In spite of this obstacle, it is now reported, she intends to carry out her plan of founding a new educational institution, having received the Pope's paternal sanction and sovereign authorization during a recent visit to Rome. The aim of the institution in the new establishment will be to give to France women who, while penetrated with the Christian spirit, shall be capable of following the intellectual movement of the age, and thus able to exert an intelligent influence in their future homes and to direct as long as possible the education of their own children.

Miss Adelaide R. Hasse, of the Astor Library, has performed a valuable service in compiling her 'Reports of Explorations Printed in the Documents of the U. S. Government' (Washington: Government Printing Office). This "contribution towards a bibliography" is classified by explorer, subject, and locality, and fills some ninety pages.

Alexander Agassiz's monograph on the 'Islands and Coral Reefs of Fiji' constitutes volume 33 of the Bulletin of the Museum of Comparative Zoölogy at Harvard College. It embodies the results of a cruise in the *Yaralla* during the winter of 1897-98. A brief review of some of the literature of coral reefs and a discussion of the theories of their formation are followed by a detailed description of the islands, atolls, and barrier and fringing reefs composing the Fiji group. Mr. Agassiz's observations tend to confirm his belief that "there is no general theory of the formation of coral reefs, either of barrier

reefs or atolls, applicable to all districts, and that each district must be examined by itself." He maintains that Darwin's theory that atolls and barrier reefs can be formed only on regions of subsidence fails to account for conditions met with in the Fijis. He is inclined to think that the corals of to-day had no part in shaping the circular or irregular atolls among the Fijis, or in building the substructure of the barrier reefs which encircle wholly or partially some of the islands. Their influence has probably been limited to the formation of fringing reefs; the recent corals upon the outer margin of the reefs constituting only a crust of moderate thickness upon the underlying base. This may be the edge of a submarine flat, or of an eroded elevated limestone, or of a substructure of volcanic rocks. The volume is illustrated by 120 plates, including more than 20 maps. The heliotype is from photographs by Dr. W. McM. Woodworth and Mr. Max Agassiz, and are of great excellence.

Capt. C. H. Davis, U. S. N., Superintendent of the Naval Observatory at Washington, in anticipation of the coming total eclipse of the sun on May 28, 1900, has arranged with the Secretary of the Treasury to admit free of duty the instruments of foreign astronomers who may visit this country to observe the eclipse. All such are invited to notify Capt. Davis of the probable date of their arrival, with the name of the port at which they purpose disembarking. The Navy Department will then forward to the consuls of the different countries to which these observers belong, stationed at the United States ports where they are expected to arrive, letters stating the purpose of their expedition. Such papers, on being countersigned by the consul, will be presented to the Collector of the port, as proof of their identity; upon which he will extend all proper facilities for the speedy delivery of the instruments in question, free of duty and charges. The Superintendent further suggests that notice should be conveyed through the regular diplomatic channels to the local authorities of the city or town selected as a post of observation; and he will be glad to hear from each of the proposed expeditions, in order that he may render such assistance as lies in his power. All observers of eclipses in foreign lands who have suffered every species of vexatious detention in passing the customs with their delicate apparatus, will appreciate the complete arrangements made by the forethought of Capt. Davis.

—There are some interesting glimpses of Virginia contained in the volume on the manuscripts of the Duke of Buccleuch and Queensberry recently published by the English Historical Manuscripts Commission. They are to be found in the letters to Ralph Winwood, the diplomatic agent of England in France and Holland in the first part of the seventeenth century. In December, 1609, the Earl of Salisbury wrote of Sir Thomas Gates's intention to go to Virginia, and his wish to remain in the good graces of the States-General. "He is not retired from their service for any private occasions of his own, but for an enterprise of plantation in the Indies, where I am persuaded they [the States] would be glad the King of England and other Christian Princes might have a settling as well as the King of Spain." More than a year later Salisbury wrote again on

tion ~~and~~ especially depend upon his personal assistance, being a man well experienced, and otherwise very capable to manage and direct such an enterprise, his Majesty, favoring the good success thereof, for Religion's sake, for his own honour, and for the benefit of his subjects," wished the States to grant a leave of absence of three years. Winwood was, in 1611, made a member of the Council of Virginia, and a very interesting paper from the Council was sent to him, urging the English officers in the Netherlands ports to join the venture, which had received "many disastrous impediments by the factiousness and insufficiency of sundry the Governors and others in Virginia," but was now in good train through the endeavors of Lord Delaware. A lottery was set on foot to aid the plantation, but the details are not given. Apart from these American letters there is much of interest in the Winwood papers. The death of Overbury is described at length, and the straits of the founder of the Bodleian Library in his obtaining money to complete the foundation are suggestive.

—An ancient settlement in the southwest of the Barony of Corkaguiney, County of Kerry, Ireland, is the subject of a memoir by R. A. Stewart Macalister, published as part 7 of the current volume of Transactions of the Royal Irish Academy. It treats of an interesting and important group of remains lying along the seacoast between Ventry Harbor and Dunmore Head, near Dingley, which appear to have hitherto received less attention than they deserve. The "settlement" covers four townlands and verges upon three others, the ruins clustering thickly both upon the lower part of the mountain, which is cultivated, and in the wild moorland of the upper portion. They consist principally of "clochans," or dwellings of one or more chambers, built of stones that "oversail" from the first so as to approach until a space is left sufficiently narrow to be spanned by lintels, being in effect all roof. There are also "scuterrains," or chambers "in the thickness of the wall," made by leaving out a sufficient number of stones to form a recess roofed in by a stone of proper length. Besides these are sculptured crosses, inscribed stones, ring-mounds, and other ruins. Although the structural remains are abundant, evidence bearing upon dates and other questions is meagre. No human remains have been discovered, but, from the appearance of the structures and from objects found in and among them, some particulars may be inferred as to the physical characteristics of the ancient inhabitants of the district and their mode of life. That they were small of stature is indicated by the fact that their scuterrain chambers and clochans are never more than five feet in height; while their great physical strength is shown by the weight of the stones used in their constructions. They kept sheep and goats, eating the flesh and spinning the wool for clothes. Shell-fish formed an important part of their diet, and they cultivated grain, grinding it in both hand and water mills. Their standard of comfort was low and luxury was unknown. An interesting question arises as to the origin of the two "duns" or fortified headlands at either end of the settlement, and their relations to the other buildings. Neither of them can be regarded as of any use in protecting the settlement, and Mr. Macalister be-

lieves them to have been entirely independent of it and to have been built at a prior date. He thinks that they are two links in the long chain of headlands fortified by earthen mounds that stretches along the coast of Ireland. These forts are regarded as the work of an ancient race which vanished, leaving no other trace.

—Something like authoritative information respecting the higher education of women in Germany is furnished by an address, delivered by special invitation at the recent National Social Congress in Kiel by Dr. Kate Windecheid of Leipzig, the first woman graduate of Heidelberg and a leader in the propaganda. Among other things, she drew attention to the fact that, in the development of the higher education of women, Switzerland made the beginning, while in Germany Leipzig and Göttingen early opened their lecture-rooms to women as guests. The greatest need at present is the establishment of more girls' gymnasia. Four of the great States that compose the German federation, namely, Prussia, Bavaria, Saxony, and Württemberg, now permit women to apply for the *Abiturienten* examination, i. e., the test admitting to the universities. At twenty of the universities of the Fatherland women are permitted to attend lectures as "hearers." During the winter semester of 1897-98 there were 365 women in attendance at these institutions, and in the winter semester of 1898-99 in Prussia alone there were 414. The desire that these women be admitted to the full rights of students is being fulfilled first by Gießen, in accordance with a Senate resolution passed in January of the current year. Four of the German universities give the doctor's degree to women candidates. Admission to the medical examination is a matter of greatest importance, without which female physicians have no official standing. Women who have been in attendance at the universities are now engaged in two callings, namely, the medical and that of teaching. The women physicians in Germany number ten, five of whom are in Berlin. The higher education of women in Germany has come to stay. One important obstacle is yet to be overcome, namely, the fear of the "emancipated women." Dr. Windecheid, after replying to the current objections to the admission of women to the professional callings, closed with the statement that the modern woman can bid farewell to the nineteenth century with the full conviction that the dawning century will open up to her new and still greater spheres of usefulness.

—The Greek Government, which has long been agitating the introduction of the modern Greek pronunciation in the study of the classical Greek in the schools of the Continent, has again taken up the matter, and this time officially. The authorities have addressed a communication to the educational departments of the leading European governments, informing them that, according to the best modern scholarship, there can be no doubt that the neo-Greek pronunciation was, in general, current in ancient times, and asking them to investigate this question anew on the basis of the recent work of the Greek savant Papadimitrocoulos. Recognizing the fact that the prevalence of the Erannean or Continental method is chiefly due to the supremacy of German educational ideas, a special request, in the sense of the general circular, is addressed to the Cultus Ministry of Prussia. In Germany

the Erasmian method is firm in the saddle, the problem having been regarded as practically settled by the thorough investigations of Friedrich Bloss. Nor has the pronunciation so strongly favored by the Greek Government made any advances. Russia adopted the pronunciation favored by the Germans, and an attempt to introduce the rival method in Hungary signally failed. The work of Papadimitroscopulos does not seem as yet to be known to Western scholars, but it is generally understood that the Prussian Government—there is no Cultus or Educational Department for the Empire as such—will appoint a special commission to investigate the matter.

—In No. 2 of the *Mittheilungen* of the German Orientgesellschaft, the leader of the Babylonian Expedition sent out by the Society, Dr. R. Koldewey, describes the first fruits of that enterprise, and presents data which make it possible, for the first time in more than two thousand years, to test the correctness of the claims put forth by Herodotus and Diodorus to the effect that the wall of the city of Babylon was so wide that several chariots could drive upon it side by side. The German expedition has begun its work by digging a wide trench directly into the heart of the great Kasr mound from the east, and has made it possible to measure the famous wall. This "gigantic bulwark" consists of an outer wall, 7.25 metres in thickness, built of burnt brick bearing the stamp or impress of Nebuchadnezzar, and an inner wall 13.10 metres thick, while the filling between the two is 21.5 metres, making the enormous total of 41.85 metres. As yet, the diggers have penetrated only 17 metres into this mountain of ruins, but it is thought that now the palace walls themselves have been reached. The Society proposes to expend as much as a hundred thousand marks per annum for the next five years at least in this undertaking. A little brochure descriptive of the work, entitled 'Babylon,' to be issued at once, will contain an address by Prof. Friedrich Delitzsch, delivered in March, in the presence of the Emperor and Empress of Germany, who last year gave 20,000 marks to the association. It will also give a chart of the ruins. The publisher is Hinrichs of Leipzig.

#### RECENT NOVELS.

*The Fowler.* By Beatrice Harraden. Dodd, Mead & Co.

*The Market-Place.* By Harold Frederic. Frederick A. Stokes Co.

*Sand 'n' Bushes.* By Maria Louise Pool. Chicago: Herbert S. Stone & Co.

*Richard Carvel.* By Winston Churchill. Macmillan.

*Mistress Content Cradock.* By Annie Elliot Trumbull. A. S. Barnes & Co.

*The Awakening.* By Kate Chopin. Chicago: Herbert S. Stone & Co.

*The Sixth Sense, and Other Stories.* By Margaret Sutton Briscoe. Harper & Brothers.

*When the Sleeper Wakes.* By H. G. Wells. Harpers.

*An Incident, and Other Happenings.* By Sarah Barnwell Elliot. Harper & Brothers.

*Rachel.* By Jane H. Findlater. Doubleday & McClure Co.

*Two Men o' Mendip.* By Walter Raymond. Doubleday & McClure Co.

*By Berwen Banks.* By Allen Raine. D. Appleton & Co.

Miss Harraden's novel gives one the uneasy feeling of disproportion that an enlarged print of a small photograph does, in which the fine lines have become blurs and the shadings are blanks. The foundation idea is a good one, and would have made a good short book, had Miss Harraden been wise enough to leave to the imagination that which, by detailing, she has dissipated. The character of the Fowler—the little man who obtains intellectual ascendancy over women, distorts their views of life and duty, and withers their enthusiasm—is so possible that he is made unreal by forcing him. Sitting in gardens with girls, and poisoning their joyous atmosphere with his cynicisms, he is a promising feature for a story, even for a sermon. But developed into a villain who keeps an autobiographic journal of his own fiendishness, he ceases to charm or to preach.

The minor characters suffer from similar treatment. The English landlady cheerfully tending three generations of "ancestors" at her fireside, and bullying her persistent lover, is amusing for a few pages, but not for many chapters. The frivolous, kindly trained nurse; the history-writing hero; the organ-playing, Persian-studying father; the British-Museum-haunting readers, the artistic and blighted book-binder—are well launched, but not well sustained. Even as it is, the book is not uninteresting, being written in Miss Harraden's ever-pleasing, clear, and unmannered style, and breathing her natural atmosphere of modern thought united with old-fashioned sanity. For our personal liking there is a glut in her word-market of "galant" as applied to the heroine, and "quaint" as applied to everything; and if any one must "furrledge" among papers, we wish it might be one of the villagers and not the historian.

'The Market Place' is as powerful in its way as 'Theron Ware' was in a differing line. Whereas the earlier story was a relentless exploitation of a theologic field and the movers therein, this later one is a dissection—a vivisection, one might say—of financial operation in its most bold, bad form. The unpunished rascal is growing to be a familiar figure in fiction, to the sorrow of the old-fashioned novel-reader, but few will complain that Mr. Frederic has made his fraudulent Rubber King an attractive example. Very subtly is the effect produced of the ugliness in a dishonest success—the hideousness of a man who feeds on his fellow-beings; for the novelist contrives that the more thorough the success is, the more hateful it appears; the more the man enlarges his aim, the more monstrous he shows forth; when we leave him about to "stand London on its head" in philanthropic reforms, we find him less justified and less tolerable than at any previous moment of his unjustifiable and intolerable career. He is depicted with amazing cleverness, his brutal nature (touched with occasional tenderesses) dominating every page. The leaves of the book turn as by electric cyclone. The hero's sister, as hard as himself and as scrupulous as he is the reverse, stands out well among the lesser figures. An American girl, steely, disillusioned, all-perceptive, looks out alive. The titled heroine is perhaps less real. The various men of business, victims or

colleagues, make a Balzac-like group of figures in their differing and harmonized tints. It is a book of real force, and causes one to ask what heights its author might not have touched, with a longer life.

To take a walk on horseback down the length of Cape Cod, to breathe air more salt than that of mere sea, to feel the spell of bayberry wastes and sand dunes, to hear about the symptoms of Sarah Ramsey that married a Portuguese—poor house-bound Sarah, whose view over the sand is kind of hindered by the new standpipe—this it is to read Miss Pool's 'Sand 'n' Bushes.' So reading and sharing the adventures of native and visitor, one wishes that the same pen might have described all the odd and fascinating crannies of the earth.

It would have been a great pity had Richard Carvel's autobiography been withheld from the public. Here is the scion of an old stock, reared in the province of Maryland, growing to manhood at the time when the war-cloud of the Revolution is beginning to darken the sky. He is the favorite and heir of his grandfather, the pet of his fellow-townsmen of Annapolis (excepting the uncle-villain), the beloved of the two heroines, the pride of the miller, the joy of the coachman, the glory of the boatmen, the observed of Washington. When he goes to England, he becomes the darling of John Paul Jones, the admired of Horace Walpole, the rival of Chartersea, the crony of Fox and the turning-point in Fox's career—his tale of the colonies making more impression on Fox than even Burke's. He calls upon Garrick in the green-room of the Drury Lane Theatre in company with Lord Carlisle, visits Vauxhall in the society of Lady Sarah Lennox, wears Lady Carlisle's red rose, has snuff offered him by Lord Sandwich, talks horse with Lord Baltimore, and is among the gentlemen to whom Mrs. Clive directs witty remarks from the stage. Such are his friends; his adventures correspond. The windmill arms that he rides, the mobs that he quells, the pirates whom he escapes, the stallions that he tames, the duels that he fights, the sea-fights that he survives, are they not written in the book of 'Richard Carvel'? Even of the two requisite blackguard foes does not one at last, coming to betray, remain to laud? Thus steeped in prestige, the hero carves his dramatic way through well-nigh five hundred and fifty pages, to which it is high tribute to say that the story is throughout interesting.

It is avowedly not so much history as a picture of Annapolis and the Eastern Shore, in Maryland's stateliest days, and of London when George the Third was blundering out his reign; when "macaronies" were betting and gambling all night at Brooks's, and the colonies were slipping away from their mother. The portrait of Fox is full of fascination, that of John Paul Jones equally so. The battle between the *Bonhomme Richard* and the *Scraps* is the crowning point of the romance. Wounded by a pike after the surrender, Richard Carvel is nursed by his one and only lady-love into life and happiness ever after. The "semblance of reality" which Mr. Churchill has aimed at giving to his Colonial picture has been attained. If we have found it over-long and the hero over-illustrious, it is still good, clean, spirited reading in all its phases. To keep sustained the language of a hundred and twenty years ago

leads a writer into strange places, yet we may hope that an "ode abounding in orrery" hath a score to settle with the printer. A copy of the text might with advantage have been furnished to the illustrator.

Yet another book of colonial times, 'Mistress Content Craddock,' carries us farther north and a century and more earlier. We are on the more often described Massachusetts coast, attended by the more familiar Puritan figures of New England. The day of Mary Dyer is at hand. Cromwell's star is in the ascendant. Roger Williams is the idol of the bolder thinkers of the Providence and Massachusetts Colonies, and the admired despair of them of straiter ways of thought. Elliot is working his benefactions among the Indians. The lace ruffles of the Royalists are setting the colonies by the ears. The story is slight, but suffices to set off the background of old New England which is the real book. Even did it not bear its accomplished author's name, it would carry, on internal evidence, the proof of her affectionate knowledge of her subject.

'The Awakening' is the sad story of a Southern lady who wanted to do what she wanted to. From wanting to, she did, with disastrous consequences; but as she swims out to sea in the end, it is to be hoped that her example may lie for ever undredged. It is with high expectation that we open the volume, remembering the author's agreeable short stories, and with real disappointment that we close it. The recording reviewer drops a tear over one more clever author gone wrong. Mrs. Chopin's accustomed fine workmanship is here, the hinted effects, the well-expended epithet, the pellucid style; and, so far as construction goes, the writer shows herself as competent to write a novel as a sketch. The tint and air of Creole New Orleans and the Louisiana seacoast are conveyed to the reader with subtle skill, and among the secondary characters are several that are lifelike. But we cannot see that literature or the criticism of life is helped by the detailed history of the manifold and contemporary love affairs of a wife and mother. Had she lived by Prof. William James's advice to do one thing a day one does not want to do (in Creole society, two would perhaps be better), flirted less and looked after her children more, or even assisted at more *accouchements*—her *chef d'œuvre* in self-denial—we need not have been put to the unpleasantness of reading about her and the temptations she trumped up for herself.

Miss Briscoe's stories steadily grow in grace. They are written with a now rather old-fashioned minuteness. After Mrs. Chopin's crisp handling, for example, her considered style seems almost diffuse; yet her stories never reach the flagging point in motion or motive. She has usually something quite new to say, and says it pointedly and well. Love-problems, life-problems, eccentric portraits share her attention equally, and in every instance provide for the reader a delicately devised spice or sweet.

Mr. Wells's weird fancy finds ever more weird food to batten upon. From man-eating orchids and such simple pleasures he passed to militant Martians who froze the young blood. In his latest and most knotted and combined tale, he shows the vision that has been revealed to him of the world as it is

to be two hundred years hence. This has happened to other prophets, but Mr. Wells, with his *flair* for the infinite possibilities of machinery, has seen so deeply into the details of the future that, instead of a socialistic or scientific fairy tale, we have a machine-shop; for naturally the world of two centuries hence is mainly a thing of machinery. The thirty-three millions who inhabit London "have cleared their minds of formulae," mental and moral, and have no particular tastes, sentiments, or ideas. They refer "to the England of the nineteenth century as the figure of an idyllic, easy-going life." More human misery had been inflicted on the world during the twentieth century by financial convulsions and tariff wars than by the war, pestilence, and famine of the darkest days of earlier times, "because the wretchedness was dreary life instead of speedy death." An unlovely, cable-laced, electric-ridden place is the London of two hundred years to come, with cliff-like buildings reaching in honeycombed layers to the dome of St. Paul's; with moving roadways, with a phonographic press, with a Bedlam of metallic din, with incubator-bred babies, and "psychic surgery" supplying memory or forgetfulness as education may require. Most revolutionary of all, the flying-machine has been perfected; a foreign cohort can be summoned into London at an hour's warning. A certain sleeper awaking after a two hundred years' trance finds himself practically owner of this clanging, brawling, tramping world. Political bosses have dreaded the awakening, but the masses of men look to it as the signal for their redemption. "When the sleeper wakes" has become the class watchword. For the masses the millennium is still remote. Out of the Salvation Army, among other organizations, has been reconstructed a business company which trades in labor and drives hard bargains for it. The sleeper burns to help them, inspired by the lofty counsels of a girl. The culmination is his single-handed fight in a flying-machine against an aerial navy that is bringing a hated negro police force from Africa into London to crush the toiling millions. Thus opens a new field of fiction! Let imitators beware—imitators who do not possess Mr. Wells's peculiar gift. What will become of us if Hope, Weyman, and their ilk fight all their battles o'er again in the sky?

There is more than the timely choice of a theme to make the title-piece, 'An Incident,' chiefest among the short stories of Miss Elliot's volume. Apart from questions of artistic value, the world is interested in a Southern woman's presentation of the lynching problem. But it is not the least proof of the author's skill that she relies so slightly on the adventitious; that, in reading, one is able to forget, until recalled by the feebleness of the final paragraph, that the problem is of the present. In its severity of outline, swift movement, sinister suggestion of more than meets the eye, the sketch shows qualities which should make for its endurance though all our negroes were deported to Africa or exterminated like Filipinos. There is promise as well as performance in the "Other Happenings" which make up the volume. These studies, for the most part of Southern types far removed from the mountaineer and negro who have more than borne their part in fiction, point hopefully to a larger work in this direction. Southern writers have appeared to stand in need of the Gilbertian injunction, "Spurn not the

nobly born," so careful has been their avoidance of the higher social orders. Miss Elliot's observations show the sympathy of one who is part of what she describes, yet they are as evidently made with clear eyes not sealed by tradition. The field before her is a rich one.

The author of 'Rachel,' unlike Meredith, does not preface the story of the tragic comedians with her acknowledgments to history, but it is impossible to doubt that through her pages moves one figure that has "breathed stouter air than fiction's." In outward incident, at least, the life story of Michael Fletcher closely paraphrases that of the "simple-hearted giant," Edward Irving. Rachel herself bears little resemblance to the other actor in the real drama, save that her wit and charm awaken the love of the strangely gifted young divine who, in profound ignorance of his own heart, had pledged himself to marry another. There was no Miss Martin of Kirkcaldy to be dealt with, and Rachel's common sense would have made no problem of the situation; but Michael's character, his pitying irresolution, provide his inexorable Fate. He goes to Edinburgh to free himself. He returns to fall weeping at Rachel's feet, confessing that he has married Ellen. Then drags the afterward. Michael has prophetic gifts. He leads a new sect, the Foreseers; he is called to London and becomes the sensation of the hour. Inspiration failing him, he resorts to charlatan tricks to fill his church. Health and reason totter. Before the final crash, with his head bowed in his hands, he cries out, "One woman I knew who might have saved me from myself with her brave wits and her dear sharp tongue." It was Mrs. Carlyle who said there would have been no gift of tongues if she had married Edward Irving. It is truly a furrowing lesson in life that is thus read to us. The consequences of that immoral morality, a loveless marriage, are more often traced in their relation to a woman's life; that men escape them as little this fact-woven fiction pitifully reminds us.

'Two Men o' Mendip' is a tale of Somersetshire in the grim days when a man's life went for a sheep's in Merry England; when the stream of human passion, undeterred by eddying modern complexities, ran swift and straight. The tragedy which casts its shadow over the story from the beginning has nothing malignant about it; it is rather the working out of a retributive fate, involving, as even justice often must, the suffering of the innocent. Little Patty Winterhead, caught in the relentless sweep of consequences, was spared the worst, for she met death at the side of her murdered lover, all unknowing that her father's hand had stricken him down, or that his own shedding of human blood had brought this vengeance upon him. When John Winterhead gave himself up to the law for the doom which his honest soul demanded for himself, the debt of blood was paid, but the reader is left curiously sympathizing with two murderers, one of whom dealt death to the other. Everything in the telling of the story is well in keeping with the time and place of the events, and the setting of country freshness, of simple, hearty Somerset speech, gives relief to the hard deeds that were wrought in Mendip.

'By Berwen Banks' distinguishes itself from the multitudinous romances of its class by its background of Welsh scenery, an occasional Welsh phrase, and the more

than common fatuity of its heroine. This young woman allows her good name to be blighted and her child's paternity to be left a matter of surmise, through her sublime adherence to a promise not to reveal her secret marriage. The absent husband wonderfully foresees some of the possible difficulties of his wife's position, and absolves her from her inconvenient obligation in a letter which could not fail, in a book of this sort, to miscarry. A blow on the head then deprives him of the small sense with which the author has endowed him. Unconscious of his own identity, he wanders for a year or so in a strange land, while the wife hears nothing and suffers many things. The harrowed reader of all this may find consolation in the final felicity of the tried and trying twain.

#### LEIBNIZ REWRITTEN.

*La Nouvelle Monadologie.* Par Ch. Renouvier et L. Prat. Paris: Armand Colin & Cie. 1899. 8vo, pp. 546.

The nature of things would seem to have a screw loose if the powers of a Renouvier are not to be of service to the race. When we see a man far advanced in the eighties producing, albeit with a collaborator, a great volume of metaphysics, terse, clear, and well-oriented, it is certainly not on his shoulders that we can lay the blame if his industry should teach the world nothing. The principles of Renouvier's philosophy were published in the earlier years of the Second Empire, with the disadvantage of a too modest title. It was mainly other causes, however, that at first prevented the work from being as much studied as it deserved to be. Of late years it has in France been, perhaps, more studied than it deserved to be; but it has not been as well studied as it deserved to be. The author belonged to that group of schools in which the ideas of Kant were still paramount. Those schools never fully ripened their fruit, because the attention of the strongest men was turned away to the rich conceptions that the mechanical theory of heat and the Darwinian hypothesis about that time suggested. None of the Kantians had more thoroughly learned their master's great lesson than this Frenchman—the lesson that metaphysics can be solidly founded only upon the science of logic. Unfortunately, Kant, though a logical Samson, had yet treated that science with what we can but call, in view of the importance he attributed to it, inexcusable levity; and his followers had always accepted his logical dicta most uncritically, just as they have ever since continued to do. The ailment contained in De Morgan's and Boole's studies had not been assimilated by anybody; nor had mathematical reasoning taken on its modern exactitude. What was meant, in that *Quarterly Review* period, by good logic had for its principal ingredient a forcible and imposing style of writing. Renouvier was, and is, not only an able logician in that sense, after the best French models, but even according to the more scientific standard of medieval Paris. But now, fifty years after his acme, if we demand that he shall satisfy the requirements of the exact logic which has since grown up, it is not surprising that we find he falls so far short of it that his conclusions as a whole can no longer be accepted. At many points his well-elaborated thought would be extremely valuable

if some modern logician of the first strength would take the trouble to disentangle it from other elements with which it is interlaced. It is lamentable that such a labor is not likely to get performed, since M. Prat has not proved adequate to the task, and yet one does not find where to lay the blame for its non-performance unless it be upon the logic of events and the nature of things.

The present work undertakes the noble task of rewriting the so-called 'Monadologie' of Leibniz, and of more fully developing its philosophy after indispensable corrections. The doctrine is very nearly the same as that of his first philosophical treatise from which he at one time seemed to be wandering. The 'Monadologie' is rewritten in a Kantian spirit; and as time increases the distance from which we survey the Kantian philosophy, its affinities with that of Leibniz appear closer than they formerly did.

We cannot give much idea of what has been packed into these five hundred-odd pages, further than to say that they discuss most of the usual problems of metaphysics and much besides. The main doctrine is that of Leibniz, that the universe is composed of units, indivisible and endowed with consciousness. The doctrine of pre-established harmony is retained—that the monads do not act on one another in any other sense than that while each one follows out its own destiny in the succession of its modifications of consciousness, these have been arranged so as to harmonize and to amount practically to actions upon one another. But here the authors bid farewell to Leibniz. The law of sufficient reason is hardly mentioned in the book, but is practically rejected in every aspect of it. Of course, with this law the bottom of optimism falls out. In place of Leibniz's principle of the identity of indiscernibles, that things other than one another must differ in some qualities, Scotus's doctrine of hecceity (substantially that of Kant) is adopted—that individual existence is no general character, but is an irrational act. An important departure from Leibniz is the rejection of all actual infinite multitude (and hence, of all continuity) as self-contradictory. Kantian nominalism is carried to an extreme, every conception of intellectual value (space, time, etc.) being regarded as untrue of substances. Kant himself allows us to surmise that there is some unintelligible root from which each special appearance springs, although all that makes them intelligible is our own embroidery. But in this monadism the nakedness of the thing in itself is laid bare, and it plainly appears that nothing exists but monads and their harmonizing dreams. A single monad, we are told, transcends the limits of possible experience, although some finite collection of them is cognizable.

The position of Renouvier concerning determinism has excited enough curiosity to make it worth defining. Five opinions on this subject are current to-day. The common one, which may be attributed to Boyle, is that nature is a machine working according to exact laws (like the differential equations of dynamics), while the conditions to which those laws apply (like the constants of integration) are entirely arbitrary. Or, this may be expressed by saying that Nature syllogizes in her action; the ultimate major premises being laws, and the ultimate minor premises irrational facts. There are two opinions more deterministic

than this. The first is that even the initial conditions of the universe are perfectly regular. This opinion still leaves room for accidents, such, for example, as that a number of bodies should at one instant come into symmetrical positions. The extreme of determinism, held by Leibniz, supposes that every aspect of every fact is subject to reason, so that there is a special Providence in the fall of a sparrow. There remain two opinions less deterministic than the common one. One of these, which has been called Tychism, is that there are minute departures in nature from any general formula which can be assigned, so that there is a certain element of absolute chance. This is the position maintained by C. S. Peirce a few years ago in the *Monist*. It had already been held by Boutroux, quite incidentally, however, and not as a prominent feature of his argument in favor of the contingency of natural laws. But this is not the opinion of Renouvier. He holds that all causality is exact and produces its component effect, but that, in addition, there are component influences which spring direct from the arbitrary action of the monad. Perhaps Boutroux had in mind something like this when he spoke of "une sorte de jeu laissé aux cadres logiques." These actions, though arbitrary in the sense of not being rational functions of preceding events, are all provided for in the pre-established harmony, and thus duly produce their component effects (or quasi-effects) upon other monads.

Three critical questions are apposite to the new monadism. The first is, Supposing we were to grant all its propositions, how far would it constitute a satisfactory philosophy? What is it that philosophy ultimately hopes to accomplish? It is, if we mistake not, to find that there is some intelligible truth, some absolutely valid reasonableness, to ascertain how far this reasonableness governs the universe, and to learn how we may best do its service. It may be this hope is not destined to be realized, although, being reasonable, it acts to strengthen itself. It may be that reasonableness essentially requires an element of unreason, a brute force, on which and with which to accomplish itself; but in that case we hope that this unreason may turn out capable of becoming infused with reason. There must be nothing hopelessly and finally unreasonable, or in so far philosophy is to no purpose and its hope is vain. But the new monadism presents many such irrational features. What possible reason can there be for the existence of the precise finite number of monads that there are, rather than for one more? Since the monads do not metaphysically act upon one another, what rational purpose is subserved by the real existence of so many? The mere dream of them by one would do as well. Why should each monad have the three peculiar characters of intelligence, passion, and will, or why should any phenomena be as they are? In short, the absolutely inexplicable pervades the whole system, while one supremely anti-rational nominalism is supreme over the whole. Continuity is nothing but that modification of generality which is proper to the logic of relatives; and generality is of the essence of rationality. Yet this new monadism makes all continuity a false illusion and all generality equally so. Persuade him that this is true, and what is there for a philosopher but to hug a delusion

to his heart as being, by virtue of its reasonableness, infinitely more real than the wretched abortion that the world of reality would so turn out to be? Rather hope that some corrected Hegelianism is the truth, or, better still, that, as the elder James taught, the Reasonable One sets off over against himself an irrational phantom upon which his warmth and light may be brought to pass.

The second question is, how far the reasoning of this work is sound. The opening section sets forth that conception of a simple substance which is the very cornerstone of monadism, without which the whole erection would crumble. Nobody is unaware that most thinkers now reject any such idea. The subject of an attribute, they say, is nothing but a group of phenomena differing from a metaphysical substance in not being permanent, like that old jack-knife. Even Kant declared the conception of substance has no validity beyond possible experience. It was incumbent on our authors, then, to begin by proving that there is any substance other than the universe as a whole. Instead of this, they so naively take the matter for granted as to give a definition of substance which would make it a mere way of thinking. They parade a pretended demonstration that a contradiction is involved in supposing a substance to be infinitely divisible, or, what is precisely the same thing (though they do not so treat it), in supposing an infinite multitude of substances. We will not stop to point out the glaring fallacy of that "demonstration." Modern logic enables us to show that it is absurd to say there is a contradiction in supposing an infinite multitude of substances. There is certainly an infinite multitude of finite whole numbers. True, these are only possibilities, not substances. But according to the principle of hecceity, admitted by the authors, mere substantial existence is no general character and cannot create a contradiction. In other words, what is possibly possible is possibly actual.

How far can this work be regarded as the natural perfecting of the philosophy of Leibniz? Leibniz had more sides than one. If we consider him as above all else an extreme nominalist, and expunge from his celebrated paper all that tends in the opposite direction, the development of what would remain might not be very different from the *nouvelle monadologie* minus its free-will doctrine. But if we deem a man to be best represented by that one of his ideas which shows most prepotency, it is in the direction of the differential calculus that we must look for the genuine Leibniz, and in philosophy we must regard the law of continuity as most Leibnizian. This principle would at once do away with the isolated monads, and render the extravagant and unverifiable hypothesis of preestablished harmony superfluous by directly solving the riddle of the transitivity of causation, while it would form the basis of a philosophy in deepest unison with the ideas of the last half of the nineteenth century.

*Old Cambridge.* By Thomas Wentworth Higginson. Macmillan Co. 1899.

We have here the initial volume of a series of "National Studies in American Letters," edited by Prof. George Edward Woodberry. The general scheme saves Mr. Higginson's book from any suspicion of his

attempting to improve on Lowell's 'Cambridge Thirty Years Ago,' with which unavoidably he competed in his 'Cheerful Yesterdays' to some extent, and convinced us that Lowell had not "taken up the road behind him," as goes the country phrase. Mr. Higginson's book treats of Old Cambridge (meaning by that the Cambridge whose history is already made) from a predominantly and almost exclusively literary point of view. He is very generous in attributing to all the Cambridge boys of fifty years ago his own early knowledge of the Cambridge tradition of learning and patriotism. It is, however, probable that he was a distinct example of that precocity which was, he says, "an essential part of the atmosphere of Old Cambridge," and to which Margaret Fuller and Dr. Hedge contributed notable illustrations. Dr. Hedge being fitted for college at eleven, and having read at least half of the whole body of Latin literature before that time. The extent to which Mr. Higginson is able to avoid the matter used in his 'Cheerful Yesterdays' and yet write so charmingly is highly creditable to his memory and to the fulness of his reminiscent mind. The repetitions are comparatively few, and generally are frankly introduced as old acquaintances.

The literary productiveness of Cambridge from its foundation up is piously affirmed, and proved by many happy illustrations. No youngsters sat on the sepulchral slabs of the old churchyard more joyously than Mr. Higginson dwells upon the elaborate inscriptions of those slabs, and on the weight with which they pressed on the poetic minds of Longfellow and Holmes and Lowell. President Uriah Oakes would be invaluable as a writer of headlines for the sensational journals of our time. Witness the title of his sermon for the Artillery Election of 1874: "The Unconquerable, All Conquering, and More than Conquering Soldier." The mention of Levi Hedge, who became Professor of Logic and Metaphysics in 1810, brings to mind an anecdote from which Mr. Higginson has tenderly refrained. George William Curtis introduced Mr. Blaine and Dr. Frederic H. Hedge to each other at the Concord celebration of 1875. Mr. Blaine, with the exuberant self-consciousness of the man saying the right thing at the right moment, said, "One hardly needs an introduction to the author of 'Hedge's Rhetoric,'" and Dr. Hedge, making himself as tall as possible, answered, "I am getting to be an old man, Mr. Blaine (he was just seventy), but I am not yet old enough to be my own father." Such things will sometimes happen in the best regulated minds.

An interesting point is that made with reference to the literary families of Cambridge—the correlated and persistent literary habit shown by several of these. Mr. Higginson cannot resist a few reminiscences less purely literary than the rest, as that the boys of his generation swore "By Goffe-Whalley," the regicides whose names, as Mr. Higginson said, in his oration on the 250th anniversary of the settlement of Cambridge, were "the objects of malediction throughout one continent and the vehicle of it in another." Lowell's "humorous enjoyment of the under side of human nature" is mentioned and illustrated with a fine story of his going down to East Cambridge jail to release an early playmate for "the glorious Fourth," at the solicitation of another who happened to be out of jail at

that particular time. The mutual good will of the Cambridge literary set is dwelt upon. It was not inconsistent with frank mutual criticism like that of Dr. Holmes on the incongruity of the New England setting of "The Vision of Sir Launfal." Lowell's attack on Margaret Fuller in the "Fable" is not forgotten; it is several times returned to. Mr. Higginson wishes that Lowell had, on second thought, omitted it as he did the passage on Prof. Bowen. It is not quite fair for Mr. Higginson, in his persistent blame of Lowell's treatment of Miss Fuller, to omit the fact that Lowell had meant to leave her out altogether, but that "even Maria thought I ought to give her a line or two."

Mr. Higginson's second chapter has for its subject "Old Cambridge in Three Literary Epochs." These are the epochs of the *North American Review*, the *Dial*, and the *Atlantic Monthly*. The endeavor, successfully carried out, with some slight forcing of the note, is to show how lively the connection was between the Cambridge literary set, from generation to generation, with these periodicals. The *North American* is named as the lineal successor of the *Monthly Anthology*. We had supposed that this distinction belonged to the *Christian Examiner*, with the *General Repository* and *Christian Disciple* for connecting links. The dates of their several beginnings seem to prove as much. It would be interesting to know on what grounds Mr. Higginson assigns Dwight's unique poem "Rest" to his Divinity School days—before 1836—seeing that it was originally published in the first number of the *Dial*, in 1840, at the end of a sermon. It is true that the Divinity students produced many good hymns, if not much good poetry. The history of the *Atlantic Monthly* is carried back to 1853, four years before its first public appearance, and in a very interesting manner. Two letters from Francis J. Underwood to Mr. Higginson in 1853 tell the story. It was the project of Mr. Underwood, "who desired to enlist the leading authors of New England in the crusade against slavery." Jewett was to be the publisher, but his business failure, notwithstanding the success of 'Uncle Tom's Cabin,' called a halt, and, when the project was taken up again, it was by Phillips & Sampson, who had refused to publish 'Uncle Tom's Cabin' because it was an anti-slavery book.

There are three chapters, devoted respectively to Holmes, Longfellow, and Lowell, in which Mr. Higginson blends criticism and recollection in a delightful manner. Holmes is contrasted with Lowell as beginning conservative and afterwards joining the revolt, while Lowell, barring the class-poems, began with radicalism and became conservative. Mr. Higginson thinks he had little interest in the anti-slavery cause in the middle fifties; but then, during that period, for some reason or other, the tide of life was slack with him in every way. Mr. Higginson prints a letter in which an eye-witness vividly describes the scene which cost Lowell his rustication in the last weeks of his college course. The name of the writer has been given elsewhere, and puts the nature of the episode beyond a doubt. One of Lowell's best letters is reproduced from 'Letters of R. W. Griswold.' It describes, with many other things, the starting of the Town and Country Club. Alcott suggested "Olympians" as a good name, but, meeting with a head wind, tacked and proposed "Pan." As there was

to be a café annexed, Lowell thought "Coffee-pot" would be better, or "Patty-Pan." Hence, possibly, Emerson's description of Brook Farm: "a perpetual picnic, a French Revolution in small, an Age of Reason in a patty-pan."

The institution of the *Atlantic* meant a new birth for Lowell as well as for Holmes. Concerning the latter we have what certainly appears to be an Hibernicism. In the "Autocrat" Holmes is said to have struck out "a wholly new career"; and then we read, "This is all the more remarkable from the fact that he had begun a similar venture long before without attracting much attention." There is an extremely interesting comparison of Lowell's style with that of Holmes, to the former's disadvantage. "Lowell was always liable to be entangled in his own wealth of thought." Curious examples are given; in the "Ode to Happiness" half-a-dozen metaphors tumble over each other in less than a dozen lines. Lowell's taste also is impeached, his lack of self-denial when he was tempted by an unseasonable pun. "The Cathedral" furnishes a striking instance, and thereby hangs a tale which Mr. Higginson ignores. It is that Lowell omitted the whole passage containing the pun (nineteen lines), and, making no other change, left a pronoun which at first referred to the "two Englishmen," to refer to "the flies" who shared his dinner at the pea-green inn.

The chapter upon Longfellow was sure to be less humorous than the others, but it has all the mellow kindness of the man whom it describes—if "suggests" would not be the better word. Rowena Pratt, the Village Blacksmith's wife, was Mr. Higginson's nurse in his infancy, so that if he did not imbibe the poetry of Longfellow with his mother's milk, he came very near to that. The degree to which Longfellow foresaw the literary career that he looked back upon from the summit of his years, was certainly remarkable. So was his kindness to people of all sorts, friends and enemies. Many novel incidents could have been spared better than the well-worn story of the unspeakable bore of whom Longfellow said, "Who will be kind to him if I am not?" There was something better than his best poem in the spirit of those words.

*Letters from Japan.* By Mrs. Hugh Fraser. The Macmillan Co.

Many pairs of eyes have looked upon the Mikado's empire from many points of view, but few spectators have enjoyed both the inward and spiritual as well as the ocular power of seeing, joined to such abundant and unique opportunity as Mrs. Fraser, the wife of the late British Envoy to Japan. She had an American grandfather, heard early of Japan from our own Townsend Harris, lived long on this continent and in China, and by experience and culture was well prepared not only to see but to enjoy Japan. Having already a practised pen and fine literary ability, as shown in a novel or two, she has given us a brace of volumes which are delightful for their style alone. Arriving in Tokio in April, 1889, she lived three years in the imperial capital, and wrote these letters, following no method beyond that suggested by the interests and the fancy of the moment. She attempted no detailed description of the empire, its history, customs, or philosophy. Yet these chapters show that the fine art of letter-

writing is not yet wholly lost, while the subtle charm of the work arises from the fact that here was a disciplined and cultivated woman in presence of a people "simple to frankness, yet full of unexpected reserves, of hidden strengths and dignities of power never flaunted before the eyes of the world." Having the liberty to "visit any spot and remain in it for any length of time," she became gradually aware of the many-sided and complex character of the people. With reverence, delight, and appreciation, she made herself acquainted with the mental soil out of which have grown the poetry, the legends, the history, the ideals, and the conventionalities of the Japanese. She saw that not only in peace but in war time the two highest virtues of their national life, love of country and sense of duty, had been growing deep and strong in the heart of the race. The years of her stay were those which will count in history as the first of Japan's majority, for these followed the proclamation of the Constitution.

The letters describe the places dear to tourists, such as the Inland Sea, Atami, Miyano-shita, Enoshima, Kamakura, Nikko, Karuizawa, and other places within a hundred miles or so of Tokio; but with the sparkling descriptions and spicy adventures are given also the old legends and fairy tales put into exquisite English. And, since the British envoy's wife could command the best interpreters and scholars, both ladies and gentlemen, native and foreign, we find in these pages a firmness of touch, a brilliancy of color, a satisfying accuracy in the stories here so charmingly reproduced, not usual in other books. The descriptions of Japanese social life reveal these Oriental men and women as people of great refinement not only, but of deep and tender feeling. Whereas writers whom we might name show the Japanese spirit and temperament from the standpoint of the philosopher, or with the animus of those not altogether in love with Occidental methods of life and thought, Mrs. Fraser speaks with an artlessness that simply shows how her sisters act in joy and grief. We get behind the screens. Or it may be that hers is the consummate art which conceals art, when we are told how the Empress, on hearing of the injuries to the Tsesarevitch, walked the floor all night in a storm of grief, less in sorrow because of the humiliation of her country than of sympathy with the young man's mother, who might hear of the wound and flowing blood and not know how slight the injury was.

There are not a few valuable hints as to the inside history of politics during this time, when treaty revision was the burning theme and assassination was in the air. In faith a Roman Catholic, the author's sympathies are broad and deep. It would be hard, we imagine, to find more appreciative interpretations, not only of other phases of the Christian faith, but also of the religions which furnish spiritual nourishment to the Japanese people. The same earnest desire to understand the social orthodoxy of Japan is manifest on every page. We have in these two volumes a running and readable commentary on the thoughts and ways and art of the islanders.

The publishers have given these letters an attractive setting in two volumes of nearly four hundred pages each, with large type on heavy paper. The illustrations, 250 in num-

ber, evidently selected with great care, enrich and illuminate the text. To the increasing number of those who seriously study the Japanese people, these "letters" cannot be reckoned as ephemeral literature, but, besides being the solace of leisure hours, must take their place with those luminous commentaries on Japanese life and character which our countrymen, Knapp, Bacon, Lowell, Hearn, Lafarge, Gordon, and others have already furnished.

*State Trials of Mary Queen of Scots.* Sir Walter Raleigh, and Capt. William Kidd. Condensed from the State Trials of Hargrave and Howell, by Charles Edward Lloyd. Chicago: Callaghan & Co. 1899.

At the recent Exposition at Omaha, the Department of Justice displayed among other things copies of the State Trials in Great Britain, and the custodian of these volumes, having looked into them, conceived the idea of making them accessible to the public. This volume is the first of a proposed series, and it will scarcely be possible in those which are to follow to present matter of such romantic interest as is here set forth. Men will never tire, apparently, of the story of Mary Stuart; nor has the ill fame of Capt. Kidd waned with the lapse of time. The fate of Raleigh, also, has a perennial power of arousing both indignation and pity, and the final collapse of the empire of Spain gives a present interest to the career of one of her most formidable assailants.

The trial of the Scottish Queen, however, has been narrated with more dramatic effect than is produced by the rather bald record here given. We can construct the drama from these materials, but they are somewhat dry and meagre. So of Kidd's trial; it has a technical interest for lawyers, but all the glamour of piracy, such as Stevenson created in "Treasure Island," has vanished. No better argument, however, for the exemption of private property from capture at sea can be imagined than the history of this regularly commissioned privateer, whose misdeeds lay in not regarding what flag was carried by his prizes. Raleigh's trial bears a striking resemblance to the proceedings in the Dreyfus case, and suggests that, as great improvement has been made in judicial procedure in England, there may be hope for France. The behavior of Coke in this case has been often denounced, but it is well enough that his outrageous language should be quoted in full. No other condemnation is needed. Raleigh was to be sacrificed, and Coke carried through the business with fiendish malignity.

"The most masterly marshaling of the British arguments against Russia which has appeared for a long time. The author has had an inside view of Russian methods, or else he is extremely clever in collecting detailed information about them. His information is brought down to date, and his passages on the Manchurian railway agreement show that he can see near things as vividly as far things. His review of the present state of Russia's southern boundary in Asia is striking and sums up a great deal of history."—*Boston Transcript*.

## Story of the Nations.

New numbers. Fully illustrated. Large  
12mo, each \$1.50; half leather, each \$1 75

No. 58. The West Indies. A History of the  
Islands of the West Indian Archipelago, to-  
gether with an Account of their Physical  
Characteristics, Natural Resources, and  
Present Condition. By AMOS KIDDER FISKE,  
A. M.

Nov. 54 and 55. The Story of the People of  
England in the 19th Century. By JUSTIN  
MC CARTHY, M. P. In two volumes.

No. 56. The Story of Austria. The Home of  
the Hapsburg Dynasty, from 1282 to the  
Present Day. By SYDNEY WHITMAN.

No. 57. China. By R. K. DOUGLAS.

G. P. PUTNAM'S SONS,  
27 & 29 W. 23d St., New York.

## Throne-Makers.

By WILLIAM R. THAYER, Author  
of "The Dawn of Italian Independ-  
ence," "Poems," etc. 12mo. \$1.50.

They are a combination of pen-portrait, biography,  
and history. The first four sketches have for their  
subjects, Bismarck, Napoleon III., Kosuth, and  
Garibaldi; the other four, entitled "Portraits," are  
about Carlyle, Tintoret, Giordano Bruno, and Bryant.  
The brief reviews of lives and personalities of these  
great men are in every respect first class. The au-  
thor's literary style is terse, polished, and picturesque;  
and he betrays a thorough knowledge of the subjects  
about which he writes.—*Hartford Courant*.

HOUGHTON, MIFFLIN & CO.,  
11 East 17th St., New York.

# The Nation.

NEW YORK, THURSDAY, AUGUST 10, 1899.

## The Week.

The Republicans of Iowa, in their State Convention on Wednesday of last week, pronounced an encomium on the Gold Democrats. "As Republicans," they said, "we make recognition of the loyalty and exalted patriotism of the Sound-Money Democrats, and men of all parties, who put aside partisanship in order to maintain the good faith of the nation, and, in resistance to the Chicago platform and its candidate, to secure the welfare of the people." Signs are not wanting in other quarters that the attitude of the Democrats who supported Palmer and Buckner in 1896, and of those who voted directly for McKinley in order to make their votes "count double" against Bryan, is becoming a matter of much interest among the Republicans. In proportion as the latter grow uneasy respecting their position on expansion and the war in the Philippines, they are inclined to fall back on the Gold Standard and make that issue once more the chief stone of the corner. On the other hand, the Bryanites, thinking that they see victory within reach on other issues than that of "16 to 1," are taking steps to win the Gold Democrats back to their old allegiance.

Fortunately for such an effort, as regards domestic policy, the things which the McKinley Administration is most concerned about have been those most calculated to offend its Democratic and independent allies. It passed a most offensive tariff bill, the details of which gave rise to the suspicion that it was part of a pre-election bargain for which cash had been paid into the campaign fund. In the interest of spoilsmen, it reversed the policy of civil-service reform—in defiance and contradiction of its own national platform—a policy which had received the sanction and support of every other Administration, Republican or Democratic, for fifteen years. Moreover, as regards the one issue which led the Gold Democrats and the Independents to give their aid to the Republicans directly or indirectly (the establishment of the gold standard), they have as yet done nothing, and it is still uncertain what they will do if anything. It is true that they have not hitherto had control of the Senate. They could not have passed any measure through that branch of Congress, but, in fact, they did not make any attempt to pass anything, not even the slight measures looking to the maintenance of the gold standard which President McKinley himself recommended. They

gave no sign of interest in the subject until it dawned upon them a few months ago that they might want the votes of their gold allies next year, especially since their policy of expansion and war against the Filipinos had not been an unmixed success. Added to these acts of omission and commission, which are sins in the eyes of nearly all of their allies of 1896, they are now talking of a new ship-subsidy bill, to enable another lot of rich men to get their hands into the public treasury. Such a measure would alone repel four-fifths of the Palmer and Buckner Democrats and of the Independents who supported McKinley in 1896.

The Iowa Republican platform dodges the whole question of civil-service reform and of the President's action regarding it. It does not commend Mr. McKinley's "backward step," as did the Kentucky Republican platform, but simply ignores the subject, while holding him up in general terms as a pattern of wisdom and discretion. This was the easier in Iowa because the Republican politicians of that State have never professed much interest in the reform, and nothing was said about it in the resolutions adopted when Gov. Shaw was first nominated. The real struggle for the platform-makers will come in such States as Massachusetts, where heretofore there has been sincere support of the reform. In the convention of 1897, for instance, the Massachusetts Republicans congratulated the country upon the fact that "we see a Republican President, under severe pressure for place, not merely maintaining, but wisely extending, the merit system in our civil service." What shall be said in 1899, when the same President has yielded to this "pressure" and dealt a staggering blow at the merit system? The embarrassment of this situation is going to increase as the time for the Republican national convention of next year approaches. Heretofore, ever since the civil-service act of 1883 was passed, the Republican party has declared its belief in the reform, advocated the extension of its scope, "pointed with pride" to the record of the party in championing the merit system, and "viewed with alarm" the prospect of intrusting it to the hostile hands of the Democrats. What is going to be done in 1900? It will be ridiculous to promise support of the reform and extension of its operations if the candidate for President shall be the man who has let down the bars in 1899. It will not do to endorse the backward step. It will be humiliating to ignore the question.

Gen. Alger's victorious home-coming

must have made the air at Lake Champlain seem decidedly chillier to the President. There was, of course, a good deal of the "favorite son" and "distinguished citizen" in the enthusiasm at Detroit. This proud and jealous local sentiment is something that we in Eastern cities find it hard to comprehend. In the West, citizens of all parties and creeds will turn out to do honor to a fellow-townsmen who has won distinction of any kind—most of all, political distinction. But while pride of locality undoubtedly had much to do with the demonstrations over Alger, resentment at President McKinley's subterranean way of getting rid of his Secretary of War, when he found it inconvenient any longer to carry him, was also clearly ablaze in all the proceedings. It was not only Gov. Pingree who spoke of the President's "insult to the State," and of the "conspiracy" to which he had lent himself. The Mayor of Detroit referred pointedly to the fact that the great outpouring of the people signified their "love of justice and fair play." Who had been guilty of injustice and underhand methods? Why, of course, the gentleman in the White House who had weakly yielded to "slander." With all Michigan cheering Alger, and prominent Republicans sending checks to the reception committee as an expression of their "contempt for McKinley," the bewildered sojourner at Lake Champlain must have asked where the political profit he expected to reap from dismissing Alger is coming in.

One of the many faults in the administration of the War Department to which Mr. Alger made no reference in his public apology, he quietly corrected on the very eve of his retirement. We refer to his rehabilitation of the Inspector-General's department. This had been all torn to pieces during the war. Though presided over by one of the most accomplished officers in the army, his functions and powers were so curtailed that his work was practically reduced to a nullity. The testimony given before the War Investigating Commission showed how this essential service—army inspection—had been broken down and ruined by Alger's orders affecting it. To this fact were partly due the enormous scandals of the military camps and the transports from Santiago. Now, Inspector-General Breckinridge has secured a restoration of the department to its old status and usefulness, with the distinct understanding, in addition, that army transports shall be subject to his inspection. It was gravely stated in the official bulletin announcing the change, that it was owing to "the exigencies of the war" that "certain duties" had been taken away from the Inspector-General's

department which were now given it again. This is an excuse which condemns. When, if not during the exigencies of war, is the safeguard of rigid inspection most necessary?

Light is gradually dawning on the Tallulah lynching case. According to the latest information, Dr. Hodge, for assaulting whom five Italians were lynched by the inhabitants of the town, was able to walk home from the scene of the assault, and has not been good enough to die in consequence of his wounds. It is pretty well established, also, that three of the five men lynched were Italian subjects, and, therefore, entitled to whatever protection the kingdom of Italy can give them. The provocation to the lynching and the justification of it are supplied in a rather remarkable article in the *Daily States*, which is styled the "official journal of the city of New Orleans," from which it appears that the doctor's assailants ought to be thankful that they were not burned alive. The *States* not only defends the lynching, but defies the federal Government, and tells Italy to "go to hell." The language it employs must raise the inquiry in all civilized communities, what kind of catastrophe a State or community which tolerates such ideas, expressed in such brutal terms, is rushing forward to.

That Gov. Candler of Georgia can express sound ideas on the subject of lynching was shown early last week, when he issued an appeal to the people of the State, declaring that they "must away with the mob; must reënthrone the law." In this proclamation he urged all officers of the State to do their duty in bringing to justice violators of the law, "whether it be the negro who commits rape, or the white man who kills him for his crime"; all lawyers to exert their influence in discountenancing mob rule, and aiding the courts in bringing accused parties to speedy trial; and all good men to coöperate with the officers of the law in their efforts to prevent crime and suppress mob violence. Two days later the Governor showed that he can act as well as he can write. A negro who had attempted a criminal assault in Coweta County, and had been lodged in jail, was in danger of being lynched. The Governor instructed the Sheriff to organize a posse, arm his men, and protect the prisoner at all hazards; when the excitement continued to increase, he ordered out a company of militia; finally he went himself to the scene of trouble, took personal command of the situation, and brought the prisoner under a strong guard to Atlanta, where there is no danger of violence. If every Governor will treat every case of threatened lynching in this fashion, the practice will soon be effectually checked.

The censor at Manila ought to keep from the natives the statement which Gov. Bradley of Kentucky has just issued, explaining why he does not maintain order in the mountain regions of that State. The substance of it all is that the executive cannot accomplish anything under existing laws to put an end to the terrible feuds which prevail, and that the legislators will not pass any laws which would be more effective. This is one of the most extraordinary confessions ever put forth by the head of a community which professes to be civilized. Kentucky is one of the oldest States in the Union, but its Governor admits that he is powerless to stop the reign of lawlessness over whole counties. Outsiders may not be qualified to decide whether Gov. Bradley is right or wrong in saying that he has done all that any executive could do under the conditions which exist, but every American must feel a sense of shame when such a revelation is made as to any portion of the Union, at a time when our nation has sallied forth to "enforce law and order" in distant parts of the world.

No wonder that the Manila censorship refused to let through the dispatch which came on Tuesday by way of Hong Kong. It records one of the most shameful horrors of our shameful war in the Philippines. A town of which the residents supposed they were under a guarantee of American protection, was suddenly shelled without warning by the commander of one of our gunboats. One child was killed, buildings were destroyed, and the terrified inhabitants fled to the hills, doubtless with new love for their American liberators. Such an act—the shelling of an unfortified town without notice—is contrary to the laws of war. If we were making war against a civilized nation, the civilized world would exclaim in horror at our barbarism in doing such things. But as it is only "niggers" whom we are trying to assimilate, no protests will be heard. But why are no steps taken to end such atrocities? The dispatch says "the authorities express great regret" at the occurrence. But why did they try to keep from us all knowledge of it? And what is the Christian gentleman at Point Bluff doing to put an end to a situation which is bringing disgrace upon the American name and civilization?

To say that American citizens feel direct personal responsibility for the administration of the affairs of Samoa would be so grotesque a perversion of the truth as to bring a smile to the face of the most serious expansionist. Taking the country through, it is doubtful if half of its inhabitants know anything of Samoa but its name, and most of the remainder could not find it on the map if they cared enough about the matter

to look. Lovers of Stevenson alone, we might say, have any understanding of the nature of the controversies in which our Government has taken part, and they certainly feel no responsibility for the slaughter of the natives committed by our forces. Outside of Stevenson's readers, we should be surprised to learn that a hundred American citizens could be found who would conscientiously assert that they knew enough about Samoan affairs to favor any measure for which they could be held responsible. The whole business is in the hands of Government officials, and they are unmoved by public opinion, because there is and can be no intelligent public opinion in so great a country as this, concerning such remote and insignificant affairs. Hence, it would be idle to comment on the new agreement determining the destinies of the Samoans, although we may at least express our satisfaction that they have consented to stop fighting, and to accept the rulers set over them by England, Germany, and the United States.

The decision of Secretary Gage to resume the issue of gold certificates in denominations of \$20 and upwards will meet with general approval. Perhaps this step ought to have been taken earlier, but it would be superfluous to discuss such a question now. The law, ever since 1863, has authorized and directed the Secretary to receive deposits of gold coin in the Treasury, to give certificates of deposit in exchange therefor, and to hold the gold for the redemption of the certificates on demand. An amendment of this law, passed in 1882, provided that whenever the gold in the Treasury, held for the redemption of greenbacks, should fall below the sum of \$100,000,000, the Secretary should suspend the issue of such gold certificates. In 1893 this contingency came to pass. The greenback-redemption fund was reduced below that sum, and Secretary Carlisle suspended the issue of certificates. A little later, in consequence of a public loan, the gold in the Treasury rose above \$100,000,000, and the Secretary resumed the issue of certificates, but when it again fell below the limit, he again suspended the issue and did not resume it during his term of office.

The amount of paper currency is limited by law, but the available gold is limited only by the products which we have to sell and which foreigners want to buy. It is fortunate that we have the means of converting gold in any amount into a convenient form of paper currency. Very likely we shall see few of the new gold certificates in circulation, but they can be used for bank reserves, and all the greenbacks now held for that purpose can be liberated and sent anywhere to facilitate the movement of the crops. It would be more convenient if the law

allowed the issue of gold certificates of the denomination of \$10, but there must be a large field for notes of \$20, even outside of bank vaults. The Bank of England issues no notes of less denomination than \$25, yet its circulation is nearly \$250,000,000 at the present time. The gold certificates of the Treasury, the issuance of which it is now proposed to resume, are of very nearly the same nature as Bank of England notes. These notes, although identical in form, are of two different kinds as regards their origin. There is an issue of about £16,000,000 sterling against Government securities held by the Bank, and about double that amount against gold deposited by private persons. The amount of its issues of this second class is without limit. It is required by law to issue its notes for gold, either coin or bullion, in any amount, not merely to all Englishmen, but to all persons who bring it. It is not required, as our Treasury is, to keep this gold on hand at all times to redeem the notes with. The general solvency of the Bank is the only security for the depositor.

A deficit of \$8,506,000 is reported by the Treasury for the month of July. But the existence of a deficit is less remarkable than the fact that the deficit is the smallest recorded in July during the last five years. Interest and pension payments, during that month, are almost always sufficiently in excess of other months to create an excess of federal expenditure. But last month's excess not only is nearly \$22,000,000 smaller than that of the month of July, 1898, but falls two to five million dollars below the same month in either 1897 or 1896. So far as concerns the public finances, this improvement is matter for congratulation, especially since it foreshadows a surplus for the autumn months, after the Treasury's heavy midsummer dues are paid. But, as usually happens when the Treasury's position alters, there arises at once the possibility of embarrassment in the money market. During July, notwithstanding the general deficit in public revenue, the Treasury drew something like \$8,000,000 net in cash from the New York bank reserves—this at a time when the banks' percentage of reserve to liabilities was the lowest in six years. Apparently, the Government will have even larger automatic power to draw away and lock up cash a month or two hence, when all the country's circulation will be needed for the autumn trade.

The official Tammany rejoinder to the revelations made by the ex-magnates of Tammany Hall, Sheehan and Crimmins, is that they are both "sore-heads." Sheehan was deposed from the position of head distributor of plunder—therefore his bitterness against the man who sup-

planted him. Crimmins used to be the favored Tammany contractor; now the business goes to other firms; hence his sudden discovery of the monstrous conduct of Tammany in organizing companies to control all city contracts. This may all be true, and yet all that Sheehan and Crimmins allege may be true also. A sore head is no bar to truth-telling; in fact, it is one of the greatest provocatives to speaking truth known to man. Many a politician has displayed, along with a sore head, a mind working with uncommon lucidity and frankness. Sore-headedness has even been known to stir unsuspected dregs of conscience in some men. It really ought to take the place of wine in the proverb about "veritas." The real question is not whether Sheehan is a disgruntled politician, but whether his detailed and specific statement of Croker's attitude and actions during the mayoralty campaign of 1897 is accurate. There is much corroborative evidence to show that it is.

Croker had been "out of politics" for three years. He came back from Europe in 1897 to look the ground over and see if it was worth his while to set up again as Tammany boss. For some weeks the prospect was not inviting, and he continued to talk of himself as a permanently retired statesman, and spoke of Sheehan as the leader of Tammany Hall. But suddenly there came a change. Croker asserted his dictatorship. The time was, as Sheehan explains, shortly before the election, "when it seemed certain that Van Wyck would be elected." Why was it certain, and why did Croker so confidently take the helm? Sheehan did not explain this, but everybody knows what made the Tammany outlook roseate. It was Platt and his tool Tracy, in their control of the Republican organization and their refusal to endorse Mr. Low's nomination. Boss Platt said, by actions, what his indiscreet lieutenant, Lauterbach, actually blurted out in words, that he would much prefer Croker to Low. It was the political situation thus created by Platt which filled Croker's head with visions of fresh power and wealth. But he still needed one thing more; he needed funds. That he got money for the campaign in enormous quantities is certain; and most people can give a shrewd guess who furnished it. One of Mr. Moss's questions expressed the general suspicion. He asked if the Metropolitan Company had not subscribed \$750,000 or so to the Tammany campaign fund. If it did not, the mystery of its since acting as if it "owned" the city, and getting for nothing privileges in the streets worth millions prospectively, is deeper and darker than ever. But from one corporation or another—probably from several—Croker got his huge corruption fund, and then the battle was over. Platt held the stirrup, corporations desirous

of buying illegal privileges from the city gave a boost, and there was Croker in the saddle again.

Horgan & Slattery have filed a petition in bankruptcy, in order to get rid of liabilities to the amount of \$191,392. The most interesting thing brought out in the proceedings is the statement that "the firm has had no place of business during the last six months." This covers the period of its greatest activity and largest success in getting work from the municipal authorities; the period in which, by their own admission, Horgan & Slattery have become "the peers of any architects in the United States." This was the last touch needed to complete the wonderful picture of Tammany architecture—the revelation that the official architects of the city have no office except "the Club," where they meet the heads of departments in the evening and receive orders from "old friends," like Commissioner of Correction Lantry, who agree with their view that they are "peers."

Newspaper reporting fairly wreaked itself upon the first day's proceedings in the new Dreyfus trial, and did its best to turn its simple yet intense dramatic interest into melodrama. The exaggerated emphasis given to every accessory—the columns about the way Dreyfus looked, whether his voice and bearing were those of an innocent man, and all that sort of reporter's supernatural insight—only serve to show how little that was new or striking came to light on Monday. Clearing away all the fine writing, what appears is that not a particle of fresh evidence against Dreyfus has yet been produced to take the place of the discredited mass of forgery and perjury used to condemn him before; and that his own testimony, on cross-examination, was clear and straightforward and apparently conclusive as against every old charge and new insinuation. The court is now sitting behind closed doors for a few days to consider the famous "secret dossier." This was pretty thoroughly riddled before the Court of Cassation, according to the *Figaro's* reports of the sessions of that tribunal, and shown to be little more than a gigantic mare's nest. But so many diplomatic mysteries are supposed to be among its addled eggs that the court feels bound to look at them in secret. After that, the prosecutor will produce what evidence he has against Dreyfus, if he has any. For that we must wait with as open minds as possible, though the former case against the unfortunate officer was such a compound of malice and credulity and false swearing and irregularity, and has been so thoroughly broken down, that any fresh proofs offered will necessarily be under strong suspicion from the start.

## THE NEEDS OF IMPERIALISM.

One of the commonest arguments in favor of imperialism represents the United States as a great nation, destined to play a large part in the world's history, and therefore under moral obligations to extend to the utmost its influence and power. Much stress is put upon the necessary abandonment of our policy of "isolation," whose continuance, it is said, is quite inconsistent with our acknowledged importance in the world's eye. We have passed out of infancy and youth into manhood. In population and wealth we are become great. Our people buy, sell, and get gain in every quarter of the globe. More significant still, other nations are getting in the way of consulting us, or seeking for our support, or inviting us to take a hand in their games. All these things, we are told, show unmistakably that we are a "world power" and "international force"; by which is always meant that we are to go into the business of acquiring colonies and dependencies and join with Great Britain or Russia in partitioning China.

Unquestionably, argument of this sort, appealing primarily to the imagination, has a subtle fascination for many people, especially for such as rarely think much of consequences and results. It should not be forgotten, however, that, in politics as well as in private concerns, those who would do things in a large way must have a large type of mind. Nothing can be clearer than that, if we are to go in for imperialism on the scale marked out for us by enthusiastic advocates of that policy, we ought, in the interest of consistency, if nothing more, to make some radical changes in our political and governmental methods. We cannot go on in the happy-go-lucky way that has so often characterized us, overlooking abuses, shutting our eyes to patent evils and defects, and good-naturedly putting up with conditions we are too lazy or indifferent to remedy, and yet expect success in a field strewn with difficulties and dangers, and in which the competition of training and acuteness is intensely keen. We cannot step out into what is invitingly called a large place, and maintain ourselves there, without conducting our affairs in a correspondingly broad way.

At whatever point an imperial policy is examined, there stands forth this necessity of a broad view. Take the civil service, for example. For an imperial administration, a clean and sound civil service, inaccessible to partisan influence, comes near to being the beginning of wisdom. We need also a stable system of finance, beyond the tinkering of demagogues, and remote from the "issues" of a Presidential campaign. We need a renovated and reorganized diplomatic and consular service. Further, we have got to devise a form of govern-

ment for our colonies or dependencies. There can be no question that at this point the difficulties are many and serious; but there can also be no question of our duty to build for the future. May we confidently hope that the large view will prevail here? Or have we to fear progress along selfish and narrow lines? Are we to see Hawaii, Porto Rico, and the Philippines organized and manipulated in the interest of the dominant party in the United States, or with an eye solely to their healthy and prosperous development through coming generations? Shall we industriously seek for knowledge of local needs and conditions, on which to base our action, or go ahead on the theory that an American Congress can succeed at anything it chooses to turn its hand to? Shall we open their trade freely to all nations, or keep up the Spanish scourge of protective tariffs and discriminating duties? Shall we give away valuable franchises and concessions to men with a "pull," or administer them in the interest of local needs? Shall we send to the islands as our official representatives men of character and experience, chosen for their business ability and administrative capacity, or shall McKinley telephone to Platt or Hanna or Quay whenever a colonial governor is to be appointed, in order to get the approval of some powerful American boss?

These are real problems of imperialism, as the question presents itself to-day to the people of the United States. There can be no doubt as to the course most in accord with the American spirit, or most certain to win on the narrower ground of party policy. From the beginning, material success in this country has been the result of skilful and far-seeing adaptation of means to ends. We have never gone ahead blindly, following the ways of our fathers, attacking material difficulties and obstacles in pursuit of a vague and uncertain end. Our prodigious development has been the result of painstaking thought and persistent effort, working always towards a definite end; and we can hope for similar results in our political life only as we set about the work in the same spirit. As a matter of party policy, too, it is the broad view that will win. Political parties are now on trial before the country on this issue of imperialism. They are expected to declare and defend their policy towards our new possessions; and the party in power must be prepared to show its faith by its works. The party that temporizes with the situation, or allows inefficiency and corruption to get a foothold in the colonial administration, has nothing before it but repudiation and defeat.

It is worth while remembering, also, that what we have called the broad view is the only one which will win approval in the judgment of the world. We have had to take a good deal of disparage-

ment at the hands of European critics. They have sneered at our culture, condemned our political morality, taunted us on our devotion to money-getting, and reminded us of our remoteness and our youth. They are now watching to see how we succeed in managing colonies and playing the game of "world politics." We may depend upon it, therefore, that, to a considerable degree, our standing as a nation is at stake, and that failure in our new undertakings will go far, with many, to justify the worst that has been said about us. If we feel called to build an empire, surely we have here at once the opportunity and the duty of ridding ourselves, once for all, of the spirit of localism and indifference so often characteristic of our political life, and placing our whole system of policy and administration on solid and permanent foundations, broad and deep, in every way worthy of the best we think and know.

## THE SHIPPING-SUBSIDIES PLOT.

One of the curiosities of the Iowa Republican platform last week was a vaguely worded plank in favor of "legislation" (*i. e.*, subsidies) for American shipping. The strange thing about it was that it had to be explained that this plank was adopted by "special request" of Senator Allison. No wonder the Iowa farmers wished to wash their hands of a job put up in the interest of shipbuilders and shipowners on the Atlantic and Pacific coasts. Not only has the shipping-subsidies bill (which failed in the last Congress only because Speaker Reed put his heavy foot upon it) all the marks of a job, but all the circumstances attending it justify us in describing it as a plot. The "special request" of Senator Allison simply shows that he is in it.

What was the shipping-subsidy bill? It was a bill enabling shipowners and shipbuilders to enter into twenty-year contracts with the Government. The consideration for the Government was a certain vague right to take over steamers in case of war. This naval-reserve feature of the bill proved utterly worthless in the Spanish war; the Government found that it had to buy ships on their owners' terms, just as if no such stipulation existed. For the party of the second part the consideration was a bounty out of the national Treasury. What the total would amount to was variously estimated. The majority report put it at \$3,000,000 a year; the minority at \$8,000,000. It was a question how many ships would take advantage of the act. But what was not disputed was that the bounty would amount yearly to about 8 per cent. of the cost of a 14-knot steamer, and to 10 per cent. in the case of a 20-knot steamer. In other words, the International Navigation Company, for example, would get from the Government in twenty years

twice the original cost of each of its fast steamers! And it would get it by a hard-and-fast contract, which no subsequent Congress could annul without seeming to repudiate a legal debt. It is that modest proposal which Senator Allison specially requested the Iowa farmers to tax themselves to carry out.

The bill was certainly an extraordinary example of effrontery. As the minority report on it in the House asserted: "The bill is in almost the exact form and grants to a penny the bounties demanded by the gentlemen who are to receive them." But what is the evidence that the bill was not only brazen, but in pursuance of a corrupt agreement? Only circumstantial evidence, of course, but very significant. It has been openly asserted, by David Lubin, for instance, who has talked with Mr. McKinley about his project of really protecting farmers by an export bounty, that Mark Hanna threw over the farmers, and promised the shipowners legislation in return for campaign contributions. If this were the case, and if the shipowners had been pursuing Hanna to make him pay up, the course of events could not have been different from what it has been. In the first place, Hanna made the President come out for ship-subsidies in his message to Congress. Then he pulled the wires to get Republican conventions to endorse the scheme. Then he himself introduced the bill. He put his own name on it, as the hall-mark of a regular Republican job. In the Senate report he actually apologized for not having lived up to his bargain and introduced the bill in the previous session. "The war prevented it," he said. But he pointed out that he had brought forward the bill "at the earliest practicable moment" in last winter's session. But Hanna did not get up early enough to take in Speaker Reed, and his bill died. The plan is now to move heaven and earth to pass it in the next Congress.

We are not going to argue the subsidy question with the Hanna syndicate. Something is to be said on both sides, undoubtedly. England and Germany pay subsidies, and have an expanding merchant marine. France pays \$10,000,000 a year in bounties, and her tonnage is steadily decreasing. That fact is fatal to the argument that big bounties will create big fleets. Moreover, the lapse of time has put the seal of absurdity on much of the reasoning set forth by the Hannaites. What they said could not be done without subsidies, is done—*solvitur ambulando*. American ship-yards were never so prosperous as at this moment. They have orders to keep them busy for from one to three years. American ships' plates are sold to Belfast at a profit. These are some of the facts which would enter into a serious discussion; but no serious discussion with the Hanna plotters is called

for. They know no argument except greed, and the opportunity unblushingly to fasten themselves like leeches upon the national Treasury during this their brief day of power.

Not to the front of brass of the Ohio Senator does the appeal lie, but to sober Republicans, to the farmer Republicans of the West, to Speaker Henderson, and to all who would be alarmed to see their party lend itself to such a selfish scheme of rich men. Look at the admissions of the President of the International Navigation Company. He did not deny that his business was profitable at present. "We make some money at the end of the year. We are enabled to live at present." Then what did he want of a bounty? To pay a "dividend to our stockholders." Only about \$50,000,000 of Government money in twenty years did this retiring man ask for to distribute among his company's stockholders. Talk about Trusts! Talk about rich men using the Government for private gains! The shipping-subsidies bill is a masterpiece of selfish greed, compared with which the worst monopoly alive looks like a children's aid society. To pass it would go far to justify the worst that any agitator has said of the Government's being sold body and soul to the Hanna syndicate. It is not to be believed that it can pass the next House, with its narrow Republican majority. Speaker Henderson cannot desire to have his term turned into an orgy of extravagance and corruption. But his attention and that of all conservative Republicans cannot be called too early or too sharply to the shameless and dangerous nature of the shipping-subsidies plot. Senator Allison's special request that the Republican party execute it is only a special request that it commit suicide.

#### EXPELLING HUMAN NATURE.

The article on Anti-Trust Legislation contributed by Gov. Sayers of Texas to the current number of the *North American Review* is extremely disappointing. When in Congress Mr. Sayers had the name of being an able man, as well as an honest one, and he was regarded as a sound lawyer. But his present contribution to the solution of the most important problem in our internal policy brings us no further light. He gives a summary of the provisions of the Texas statute, but he does not attempt to offer the slightest proof that great combinations of capital are theoretically pernicious, or are, as a matter of fact, injurious. He asserts that such combinations are encouraged by protective duties, which no one disputes; but he also maintains that they are caused by the existence of the gold standard of values, which will be generally thought absurd. His condemnation of the "Trust" as "arrogant, unscrupulous, and

merciless in the exercise of its powers," is justified only hypothetically. "If," he says, "the cost of production and distribution is being reduced to the minimum; if the output is being so regulated as not to exceed a given quantity, and its selling price determined by the Trust exclusively; if the small dealers are being put under duress as to those from whom and as to what they may buy, and as to how they may sell; if individual effort be no longer able to compete successfully with corporate power and corporate advantage; if young and weak industries are being strangled to death and the establishment of new enterprises prevented," legislation is at fault, and the State of Texas will do what it can to correct its errors.

As to part of this hypothesis, it may be said at once that the reduction of the cost of production and distribution of goods is almost as pure a blessing as can be imagined. It is synonymous with economic progress, and the incidental sufferings of a few individuals are offset by the improved condition of mankind. Whether or no the price of anything is "determined by the Trust exclusively" we are not informed, but, if so, the public can hardly complain unless the price fixed is unreasonable. Our railroads fix the rates for transportation, but it would be hard to make out that they are often unreasonably high. The Standard Oil Company is the typical "Trust," but it is quite obvious that the competition of electricity and gas prevents any "exclusive determination" by it of the price of oil. All that remains of Gov. Sayers's hypothetical indictment is that individuals cannot compete with corporations, that feeble industries are strangled, and that small dealers are put under duress as to their buying and selling. The difficulty encountered by individuals, however, in contending against great corporations is a result of the accumulation of capital, not of the existence of "Trusts." The only substantial accusation relates to the duress under which small dealers do their buying and selling.

That such grievances exist, however, and that they ought not to, we may admit, but there are some patent reasons why it is vain to legislate against them. The Texas law forbids every human being to agree with any other on the price of anything whatsoever, to sell anything below its cost of production with the intent to get the advantage of a competitor, or to deal in anything that has been produced by any one or sold by any one in violation of these restraints. Such a law is totally incompatible with present economic conditions. It might possibly be enforced in one of the village communities in India described by Sir Henry Maine. Some hundreds of years ago legislation of this kind was thought desirable in the interests of the trade-guilds of Europe. But in those

ages the aim was to prevent competition, while Gov. Sayers asserts that his aim is to encourage competition. His theory of trade is that every one must ignore the existence of competitors. The grocer must not reduce the selling price of his wares because he finds the grocer across the street is selling cheaper than he. The natural consequence of such a step on his part would be to injure his competitor, and the law presumes that a man intends the natural consequences of his acts. But it is by precisely such reductions of price that the régime of competition is maintained. Smith observes that Jones is selling groceries at prices that return him large profits. Smith thinks that he may as well share in these gains, and he sets up a shop where he sells at lower prices than Jones in order to get Jones's customers to trade with him. He has no animosity towards Jones, but in legal diction he intends to injure him, and no doubt he does injure him. Jones has to lower his prices and content himself with smaller gains. Smith and Jones may be actuated by the meanest motives. They hardly pretend to be acting from any disinterested concern for the interests of the public; but the public is on the whole benefited by their competition.

To attempt to change all this is to attempt to expel human nature from daily life. In the city of Cleveland a great many thousand people are engaged in a general boycott. They come squarely within the purview of the Texas statute. They are conspiring to injure men engaged in legitimate business. Yet these very people are doubtless to a man in favor of "anti-Trust" laws. They favor them because they think they will apply to other people, and not to themselves. But the very difficulty with such laws is that, unless they are applied universally, they are unjust and consequently ineffective. For this reason they cannot be partially enforced, and if the attempt were made to enforce them universally it would fail, unless human nature underwent a sudden change. That it has undergone such a change in Texas is altogether improbable, and it is safe to predict that Gov. Sayers's statute will produce nothing but confusion, corruption, partiality, and injustice.

#### FOREIGN TRADE OF GREAT BRITAIN.

For many years the fact that the exports of Great Britain have been of much less value than the imports has given concern to numerous writers. The mercantile theory, although long since exploded, still influences the views of business men, and much of the language of trade implies that the theory is valid. A more serious cause for apprehension has recently been discovered in the decline of these exports as compared with the exports of other countries. It has been maintained that this decline indi-

cated that the glory was departing from English commerce, that the supremacy of English manufactures was threatened, and that the country was on the verge of commercial decay. The industrial progress of Germany and the brilliant achievements of the United States have created genuine alarm, and if the prosperity of these countries endangers that of England, the situation may well be regarded as critical.

There are many reasons, however, why it is unnecessary for Englishmen to worry over the state of the commerce of their country. In spite of the fact that the balance of trade has long been against them, they have succeeded in prospering to a wonderful degree, and there are no tangible evidences that the relative decline of their export trade is arresting their prosperity. Nor, if we take a broad view of the situation, is there any reason to hold that such a decline should even in theory be disastrous. The accumulation of capital in England has for more than two generations been prodigious. Under the influence of internal peace, freedom of trade, moderate taxation, and the development of the mechanical arts, wealth has increased with leaps and bounds. Even in the beginning of this century Col. Torrens wrote that England had acquired "a species of property, a vested interest, in the industrial products of all the regions of the earth," and this process of acquisition has been steadily going on ever since. Until quite recently, it has been on the whole a peaceful process. As Mill said, industry rather than war was the natural growth of power and importance to Great Britain. Trade did not follow the flag, but preceded it, and it flourished more before the Jingo period than it has done since. And if anything shall ruin British commerce, it will more likely be the new policy of sustaining it by immense military expenditure than anything else.

For, as is pointed out by a writer in the *Contemporary Review*, the possessions of Englishmen are largely in the hands of foreigners. In 1865 an article, attributed to Mill, called attention to the rise in the rate of interest that had taken place, and showed that it was due to the investment of English capital in other countries. This process was regarded as not a temporary movement, but a permanent tendency. It was due to "fundamental and permanent changes in the relation of the aggregate of English capital and foreign demand." Mill held that this outflow of English capital was the principal means by which the decline of profits in England had been arrested. He declared that "the mere continuance of the present annual increase of capital, if no circumstance occurred to counteract its effect, would suffice in a small number of years to reduce the rate of net profit to 1 per cent." England depended no longer upon the

fertility of her own soil to keep up her rate of profit, but on the soil of the whole world. The fleets that her abundant capital enabled her to construct brought to her shores the food products of the remotest regions, and at little greater cost than the expense of production in those countries. Just as the dwellers in great cities now enjoy the produce of the farms at as low rates as dwellers in the country, so the people of England are cheaply fed by the people of the rest of the world.

The simple explanation of this is that Englishmen own, literally or metaphorically, the land and the instruments of production everywhere to such an extent that they may be said not to need to work so hard as formerly for a living. London is crowded with companies whose business lies in other lands: land companies, mining companies, mortgage companies, railway companies, water companies, gas companies, etc. Australia is perhaps owned more by residents of England than by its own inhabitants. Canada is in a literal sense a British possession. The United States has been for years a favorite field for English capitalists. Their money has built many of our railways and is invested in many of our factories. The amount of British capital invested in Argentina has been estimated as high as £200,000,000. The securities of every government on the face of the earth are held in London.

Taking British investments in India and Australia and Canada, and adding to them the sums invested in foreign countries, we see that the revenue regularly coming from abroad to people living in the British Isles must be enormous. It might well be thought that their exports represent merely new investments of their capital in other countries, and that if they ceased altogether the income of the existing possessions would be sufficient to keep them in prosperity. Some Englishmen pull long faces at the sums which they say are paid to foreigners for butter and meat and grain. But, as the writer in the *Contemporary* says, it is the foreigner who is paying his rents and the interest on his mortgages in the shape of these commodities. If, as this writer conjectures, the value of the property of the inhabitants of the British Isles lying beyond their own confines is £5,000,000,000, they may contemplate some decline of their exports without uneasiness.

#### THE FRENCH BUDGET.

PARIS, July 26, 1899.

The French budget was long kept below the sum of two milliards (2,000 millions of francs); when it attained that sum, M. Thiers is said to have told the Chamber: "Bid it good-by; you will never see it again." He was right; the sum of two milliards rose gradually to three, and now we can bid an eternal adieu to this last sum.

The reign of Louis-Philippe was the golden age of our finances; it was an era of economy, and at the same time of useful expenditure; it was the period of the first development of railways, of many industrial enterprises, of the creation of important banks. The Revolution of 1848 brought about an interruption of this prosperity; the Second Empire had very flourishing finances again, but spent very large sums in wars. It was a period of great financial extravagance, but also of great industrial developments. In 1869, the last normal year of the imperial régime, the ordinary expenses of the state amounted to 1,737 millions of francs.

In 1870 came the war. Its consequences, in a financial point of view, were disastrous. France had to pay to Germany, for the ransom of the occupied provinces, a sum of five thousand millions. The money was found and placed in the hands of the Germans with a celerity which seemed incredible at the time. The secret of it lay in the fact that France was then a very large holder of foreign securities, which were sold, chiefly in London; and the ransom was paid by instalments. Many French people were flattered in their misfortune by the thought of the great wealth of France, forgetting that France had to issue a loan of five thousand millions. This was simply added to the long list of her debts; it has not yet been paid. After what may be called the liquidation of the war of 1870, when its permanent effect was felt in the finances of the nation, in 1894 the total of the ordinary expenses had risen to the sum of 2,623 millions of francs. The difference between this and the last budget of the Second Empire was therefore no less than 886 millions of francs; and this yearly sum may be considered as the result of the unfortunate war of 1870.

As long as the Constituent Chamber was in session at Versailles, there was a great cry for the reform of the finances, for retrenchment in every department, for a diminution in the number of office-holders. For all administrative matters the influence of M. Thiers was excellent; he was a good financier if he was not always a good statesman and a good economist. But France had to reorganize her army, and this involved enormous expenses, which have never been interrupted to this time. When the question of the form of government was finally settled, the consequences of a democratic and republican government were felt by degrees in the financial sense. If the Republicans had preserved the *scrutin de liste*, or vote by general ticket, which is a party rather than a personal ballot, these consequences might perhaps have been delayed; but, with the present system of the *scrutin d'arrondissement*, the Deputy becomes a sort of local agent for a very small division of France, and he can secure his reelection only by gifts of all sorts to his *arrondissement* and to all personal and local interests. As a whole, the Chamber speaks invariably for retrenchment, while every one of its members is working incessantly for some object which represents directly or indirectly an addition to the budget of expenditure. This tendency is one of the great evils of a democracy; general considerations have to give way to private interests. The increase in the number of offices and office-holders is one of the effects of the omnipotence of Parlia-

ment. Each Deputy, in order to keep his seat, is obliged to provide offices for some of his influential electors, his sons, his relations. As soon as a law is passed for the protection of labor, of children, or for any other democratic object, a number of inspectors are appointed with a view to securing the execution of the law. The Chamber has a complete initiative in the matter of expenses, and every member can ask for a new credit. This omnipotence is destructive of all budgets prepared by the administration.

M. Thiers made, after the war, a provision of 200 millions a year for the sinking-fund; and for a few years this sum was deducted from the 2,623 millions of the budget of 1874. The 200 millions has been reduced in 1899 to 95. The difference is 105 millions, and, if we take note of it, we find that the real difference between the two budgets of 1874 and 1899 amounts not to 851 millions, but to this sum augmented by 105—that is to say, 956 millions, nearly a milliard. This melancholy comparison will all the more strike a financier because the rate of interest has greatly changed since 1874. M. Thiers issued the great war loan in five per cents; in 1883 the French rentes were converted from 5 to 4½ per cent.; in 1894 the conversion was continued, and the state now gives its creditors only 3½ instead of 4½. These successive conversions have allowed the state to effect a saving of no less than 108 millions a year, adding which to the sum of 956 millions we arrive at a grand total of 1,064 millions. This is really the augmentation which has taken place in the ordinary expenses in the course of twenty-five years; the French budget of expenses has increased regularly by 42 million francs a year.

This progression is truly alarming, all the more so because it is constant and regular. Many people ask themselves whether France, rich as she is, will be able to bear such a burden long, especially as the population is nearly stationary. The enormous taxation, which is a consequence of the growing expenses, weighs heavily on the earning power of the nation; it is an obstacle to the industrial development, as is clearly shown by the amount of French exports from year to year. In 1874 France exported 3,701 millions of goods of all sorts; in 1899 she exported only 3,503 millions, a difference of 198 millions. These figures compare unfavorably with similar figures in England, Germany, Belgium, and the United States.

I said above that the number of office-holders, of public functionaries, is alarmingly on the increase. I have not their exact number, but it is proportionate to the amount of pensions paid by the state to those who have left the public service on account of age. This, in 1869, at the end of the Empire, amounted to 85 millions; in the budget of 1899 it comes in for 237 millions, an augmentation of 152 millions. It can, therefore, be fairly said that the number of pensions has tripled under the Republic.

France has made and is making enormous sacrifices for her army and navy. The Chambers, since 1870, have invariably voted all the credits necessary for this increase. Our army, the active and the territorial included, and the reserves, would amount, in time of war, to nearly four millions of men. Such a war instrument, in the opinion of the

best judges, would be too unwieldy, notwithstanding all the efforts which might be made for its mobilization; it would certainly be too costly. It has been calculated that the expenses of the national defence in the war of 1870-1871 amounted to ten millions a day; the army then numbered at its maximum 600,000 men, reckoning in this number all the levies made in the provinces by the Government of the National Defence. The expenses of a new war, with the present dimensions of the French army, would be much higher; they would rise perhaps to twenty, perhaps to thirty millions a day. It is frightful to think of such outlays if the war lasted any length of time. A national loan, to an enormous amount, would immediately become necessary; it would undoubtedly be subscribed, but at what rate of interest? That depends upon many circumstances, and particularly upon the credit of France at the moment war is declared. Those who have not abandoned the idea of revenge and of the reconquest of Alsace-Lorraine, ought, therefore, to take the greatest care of the credit of the country; but this preoccupation does not seem to have much weight with the Chambers, and they allow the debt of France to grow to the most alarming proportions.

In 1870 the funded debt and the redeemable debt amounted to about 13 milliards of francs; and it was not without some difficulty that the Government of the National Defence issued in London the loan of 250,000,000 which goes in France under the name of the Morgan loan. The Bank of France was obliged to lend about 700,000,000 to the State. At present, the public debt of France reaches nearly 35 milliards of francs. In case of war, in order to maintain the country on a war footing, and to bring all its forces into action, it would be necessary to find from twenty to thirty millions of francs a day. Such a perspective is truly grave, and ought to impress our legislators with the necessity of funding as much as possible of the present debt, of avoiding all unnecessary expenses, of practising seriously a policy of retrenchment, of refusing to create new offices, and of leaving to private efforts and enterprise as much as can be taken away from the work of the state. We hear, on the contrary, constantly of plans for the management of the railroads by the state, or of the mines, which are now worked by private companies. The Socialist school would, if it could, suppress all private enterprises, and make the country an immense state establishment. It is safe to assert that no system could be more ruinous, and at the same time more destructive of those individual forces in which must lie, on the whole, the strength of a civilized and progressive state. Democracy is costly enough, but what would not Socialism be?

#### WASHINGTON'S VISIT TO BARBADOS IN 1751.

GEORGETOWN,  
BRITISH GUIANA, July, 1899.

"No, sir, I don't believe George Washington ever visited Barbados!" Such was the declaration recently made, in all candor, by an American gentleman to a British colonist who had referred to the only journey Washington ever took outside of that country of which he became the Father. It is, however, a fact that, as the companion of his invalid

elder brother, Lawrence, then in a rapid consumption, George Washington sailed from Virginia on the 28th of September, 1751; arrived at Barbados on or about the 3d of November, and sailed thence, on his return to Virginia, on board the *Industry*, on the 23d of December. His passage, each way, was a rough one, and prolonged to five weeks. The methodical young Virginian kept a Diary during his trip, extracts from which were published by Jared Sparks, in his 'Writings of George Washington' (vol. II., pp. 424 to 426).

On their arrival at Bridgetown, the capital of Barbados, the Virginia brothers would in ordinary course take up their quarters at a tavern, which in those days took the place of a hotel. A hundred and fifty years ago, however, as in our own time, the people of Barbados were much given to hospitality; or, to use Washington's own words, "Hospitality and a genteel behaviour are shown to every gentleman stranger by the gentleman inhabitants." Accordingly, there is this entry in the Diary, on the 4th of November:

"This morning received a card from Major Clarke, welcoming us to Barbados, with an invitation to breakfast and dine with him. We went—myself with some reluctance, as the small-pox was in the family. We were received in the most kind and friendly manner by him. . . . After drinking tea we were again invited to Mr. Carter's, and desired to make his house ours till we could provide lodgings agreeable to our wishes, which offer we accepted."

The "reluctance" to accept Major Clarke's invitation, on account of the presence of smallpox in the family, was justified by subsequent events. The Major Clarke who welcomed the Washingtons, and who showed them much attention during their stay in the island, was Major Gedney Clarke, who for years filled the post of Collector of Customs at Barbados, and was a member of Council. He and his family were much concerned in the colonizing of Demerara, then under the Dutch, but now forming a part of British Guiana.

On the 5th, Dr. Hilary, "an eminent physician recommended by Major Clarke," passed a favorable opinion upon Lawrence's case. In the cool of the evening, accompanied by Mr. Carter, the brothers rode out to seek lodgings in the country, as the doctor advised. They "were perfectly enraptured with the beautiful prospects which every side presented to their view—the fields of cane, corn, fruit-trees, etc., in a delightful green." They were, however, unsuccessful in their search for lodgings. On the 7th, they dined again at Major Clarke's, where they met the Surveyor-General and the judges. After dinner, which in those days was taken early in the afternoon, the whole party went with the Washingtons on a hunt for lodgings, this time with success. "We pitched on the house of Captain Croftan, commander of James's Fort. He was desired to come to town next day to propose his terms." On the 8th, Captain Croftan made known his terms, which were fifteen pounds a month, exclusive of liquor and washing, "which we find ourselves." Washington's frugal mind characterized these terms as "extravagantly dear." Lawrence was, nevertheless, obliged to accept them. The brothers moved into their quarters that evening. Of the prospect from their residence, the Diary records: "It is very pleasantly situated near the sea, and about a mile from town. The prospect is extensive by land and pleasant by

sea, as we command a view of Carlisle Bay and the shipping." Carlisle Bay is the harbor of Bridgetown.

Again, on the 9th, came "a card" from Major Clarke, inviting the brothers to dinner on the 10th, this time as the guests of the Beefsteak and Tripe Club, which was to meet at Judge Maynard's. This club was instituted by Major Clarke himself, and met at the houses of the several members. The entry in the Diary on the 10th of November will give some idea of the heartiness of the welcome accorded to their Virginia visitors by the Barbadians with whom they became acquainted. It runs as follows:

"We were genteelly received by Judge Maynard and his lady, and agreeably entertained by the company. They have a meeting every Saturday, this being Judge Maynard's day. After dinner there was the greatest collection of fruits set on the table, that I have yet seen—the granadilla, sapadilla, pomegranate, sweet orange, water-lemon, forbidden fruit, apples, guavas, etc., etc. We received invitations from every gentleman there. Mr. Warren desired Major Clarke to show us the way to his house. Mr. Hacket insisted on our coming Saturday next to his, it being his day to treat with beefsteak and tripe. But, above all, the invitation of Mr. Maynard was most kind and friendly. He desired, and even insisted, as well as his lady, on our coming to spend some weeks with him, and promised nothing should be wanting to make our stay agreeable. My brother promised he would accept the invitation as soon as he should be a little disengaged from the doctors."

On the 15th, Washington was "treated with a ticket to see the play of *George Barnwell* acted." Of the acting he observes that "the character of Barnwell and several others were said to be well performed." On the 17th of the month, the future hero was "strongly attacked with the small-pox," which had probably been incubating since his first visit to Major Clarke's. Until the 12th of December his illness kept him within doors. Dr. Lanahan was constant in his attendance upon the patient, and Major Clarke's family visited him in his illness, and "contributed all they could in sending him the necessaries which the disorder required." As soon as he was able to get abroad, Washington called upon the Clarkes, to thank them for their kindness. Leaving his brother Lawrence at Barbados, whence the invalid two months afterwards sailed for Bermuda, vainly seeking for better health, Washington sailed out of Carlisle Bay at midday on the 22d of December, 1751.

Washington wrote down the general impressions he had received on his visit to Barbados, as well of the people as of the country. Of the physical features of the island, the young land-surveyor noted:

"There are several singular risings in this island one above another, so that scarcely any part is deprived of a beautiful prospect, both of sea and land; and, what is contrary to observation in other countries, each elevation is better than the next below."

Of the fruits he found many delicious, but none pleased his taste so well as the pine. His practised eye led him to note that "the earth in most parts is extremely rich, and as black as our richest marsh meadows." After instancing the productiveness of the soil, he philosophizes thus:

"How wonderful that such people should be in debt, and not be able to indulge themselves in all the luxuries as well as necessities of life. Yet so it happens. Estates are often alienated for debts. How persons coming to estates of two, three, and four hundred acres (which are the largest), can want, is to me most wonderful."

Of the conditions of the inhabitants he observed that there were few who might be called middling people. "They are very rich or very poor, for by a law of the island every gentleman is obliged to keep a white person for every ten acres, capable of acting in the militia, and consequently the persons so kept cannot but be very poor." Washington's soldierly eye noted the bearing of the militia. He held them to be "well-disciplined." Moreover, there were large intrenchments cast up wherever it was possible to land, and "as nature has greatly assisted, the island may not improperly be said to be one entire fortification."

Thoughtful and grave, far beyond his years, the young colonist from North America, then only in his twentieth year, placed on record his observation that the islanders of Barbados had a political grievance. His words ran:

"They are, however, very unhappy in regard to their officers' fees, which are not paid by any law. They complain particularly of the provost-marshal, or Sheriff-General of the island, patented at home and rented at eight hundred pounds a year. Every other officer is exorbitant in his demands."

The friendly relations that existed between the colonists of North America and those of the West Indian islands is well exemplified by the kindness with which the Washingtons were received, when they visited Barbados. How close were the connections subsisting between the Virginians and the Barbadians may be gathered from the fact that no less than thirty-three persons in Virginia are named among the subscribers to the Rev. Griffith Hughes's 'Natural History of Barbados,' which was published in London in 1750, the year before Washington's visit. Among those subscribers were Lord Fairfax, and the Honorable William Fairfax, John Robinson (President of the Council), William Newton, and the Rev. William Dawson, D.D. (President of William and Mary College); Col. Carter, Burwell, Thornton, Fitz-Hugh, Fry, Beverley, Lunden Carter, Blande, Braxton, Carter Burwell, and George Lee; Majors Dangerfield, Monroe, and Wayener; Thomas Nelson, James Reid, Beverley Whiting, Stephen Dewey, Edward Pendleton, Lumford Lomax, and John Lee. Some idea of the whereabouts of Major Clarke's house may be gathered from a statement in the 'Natural History of Barbados' (p. 6). Referring to the position of the Indian Bridge, which in the early days crossed the stream that ran into Carlisle Bay, Hughes says: "The above-mentioned Bridge was placed over that part of the creek, or narrow neck of the Bay, which divides Major Gidney Clark's House from Colonel John Fairchild's." It should be an easy matter to trace the position of Capt. Croftan's house by an examination of the records in the Colonial Secretary's Office, at Bridgetown. Of the numerous Americans who now take holiday trips to the West Indies, perchance some may have the inclination to locate the spot where Washington dwelt when he sojourned in Barbados.

## Correspondence.

THE SECONDARY SCHOOLS AND THE COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: The comments which I wish to make

upon the recent report on historical teaching are with reference to some of its most general features; I feel, therefore, that there will be no injustice in making them before I have examined the report itself. School men have known for some time what, in general, would be its conclusions. In so far as they are likely to meet with general approval, they are of a rather obvious character.

Secondary school men must often in their hearts pray to be delivered from their friends. Our good champions, the collegians, have done much for us, but it is a question whether the limit of their service is not now nearly reached. When we reflect that we cannot possibly accept all the authoritative views of all the authorities, perhaps courage may be plucked up to assert a somewhat more manly independence in the discussion and settlement of problems purely internal in character.

It has for a long time been agreed, in a general way, that the studies below college grade should not substantially differ in the case of young men intending to enter college and in that of those who will not do so. The evident conclusion from this agreement is that secondary curricula must be planned with reference chiefly to previous, not subsequent, work, and that the aim of these secondary curricula is to complement and supplement the elementary study. The pressure on the part of the college men becomes, however, increasingly heavy upon the secondary school, and an emphasis is placed upon the term *preparatory* which is, in my judgment, highly mischievous. The dilemma is often presented to the secondary school of sacrificing, either really or apparently, one of its two classes of students.

There would be something grotesque in the spectacle of a conscientious and not too intelligent school principal sitting down with the final judgment of the specialists in each department and endeavoring to construct a school programme. The historians have just insisted upon four full years for them; Greek demands three; Latin five or six; Science insists upon three or four; the mathematicians have never contemplated any reduction in the time allotted to them; French and German are insisting upon not less than four years, and English is equally grasping. Each department, with the possible exception of Greek, insists that every student shall take all of its work. There is a ridiculous aspect to all this, but there is also a more serious one. Is it too much to ask from our men of widest culture and deepest insight that they shall steadily hold in view all interests and all needs? Or must we resign ourselves to mere partisanship even here?

Similarly, in the judgment of the writer, the wholesale condemnation of the year course in general history shares in this quality of partisanship and partial survey. It can scarcely be open to question that, for many students and in many cases, the single-year course in general history, plus some work in American history, is the best that can be planned. Let our college friends spend some energy in giving us the best possible text-books for this work, and we will ask no more. It is true that such a course finds little space in private academies, or in the course of students who will enter college; in our public high schools, however, a thorough study of outlines and some

knowledge of the great landmarks of the world's progress are all that thousands of young people may hope for. Shall we serve their interests well if we inform them thoroughly as to the constitution of Cleisthenes and leave them quite ignorant as to Calvin and Chaucer and William the Silent?

I am, sir, yours very truly,

FREDERICK WHITTON.

MICHIGAN MILITARY ACADEMY, August 4, 1899.

## Notes.

Doubleday & McClure Co.'s fall list of publications includes a translation, by R. C. Long, of Jean de Bloch's 'The Future of War,' to which is accredited the idea of the Peace Congress at The Hague; 'Miscellanies,' by the late Henry George, and his Life by his son and namesake; 'Nancy Hanks,' the story of Abraham Lincoln's mother, by Caroline Hanks Hitchcock, and a Life of Lincoln by Ida M. Tarbell; 'Heroes of Our Early Wars,' by the Rev. Cyrus Townsend Brady; 'The Boys' Book of Invention,' by Ray S. Baker; 'Tales of the Telegraph,' by Jasper Ewing Brady; 'Nature's Garden,' an aid to our knowledge of wild flowers, by Nellie Blanchan; 'Sketches in Egypt,' by Charles Dana Gibson; and a Kipling Calendar for 1900. In connection with J. M. Dent & Co., this firm will undertake a "Temple Edition" of Dickens in forty volumes—good news to all who know the meaning of this trademark.

The Century Co.'s "Thumb-nail" series will be continued with 'Rip Van Winkle and the Legend of Sleepy Hollow,' with an introduction by Joseph Jefferson; and the 'Meditations of Marcus Aurelius,' newly translated by Benjamin E. Smith. They announce, too, 'Maximilian in Mexico,' by Mrs. Sarah Yorke Stevenson.

Prince Kropotkin's 'Reminiscences of My Life'; 'The American in Holland,' by the Rev. W. E. Griffis; 'A Dividend to Labor,' by the Rev. N. P. Gilman; 'How Much is Left of the Old Doctrines' by the Rev. Washington Gladden; and 'The Little Fig-Tree Stories,' by Mary Hallow Foote, are in the press of Houghton, Mifflin & Co.

Ginn & Co. have in preparation 'An Introduction to the Methods and Materials of Literary Criticism,' by Prof. Charles Mills Gayley and Fred Newton Scott, of which two volumes will be ready next fall; and 'Ways of Wood Folk,' by William J. Long.

'On General Thomas's Staff,' a story for the young, by Byron A. Dunn, is in the press of A. C. McClurg & Co., Chicago.

The tenth volume of the sixth series of the Massachusetts Historical Society's selections is unequally divided between an index to that series and a selection from Sir William Pepperrell's papers in the Society's possession (by gift of Dr. Jeremy Belknap). These documents, which centre about the siege of Louisbourg, have been freely availed of by historians, but have only partially been printed. This is especially true of the private letters which make up the bulk of the present reprint, and which satisfy all reasonable curiosity as to a military and naval enterprise of great significance in our colonial history. Two plans accompany the papers, which have been judiciously annotated. An appendix contains a roster of the troops engaged.

Mr. Cecil Headlam has added to the "Medieval Towns" series (Macmillan) a volume on 'Nuremberg' which well deserves its place beside Mr. Cook's 'Rouen.' Comparing the two books, we find evidence of deeper historical research in 'Rouen' and a greater regard for the needs of the tourist in 'Nuremberg.' The municipal and artistic activities of Nuremberg were both so strongly marked that they afford a rich store of topics to the author and of interests to the traveller. Probably no town in Germany, outside the great capitals is more frequented by Americans than the red-roofed city on the Pegnitz, and few persons are fortified with the local knowledge which will enable them to neglect in safety this sketch of its origin, progress, and leading citizens. Commendation now as always must be given the beautiful drawings of Miss Helen James. They adorn any volume which they illustrate.

'Alfred the Great: Containing Chapters on his Life and Times' (London: Adam & Charles Black; New York: Macmillan) is a high-class advertisement of the national commemoration which will be held in 1901. The editor, Mr. Alfred Bowker, Mayor of Winchester, frankly points in his preface to a circular of solicitation which is given at the end; and the circular, in turn, asks for subscriptions to the fund of £30,000 which is being started by the Lord Mayor of London. "The International Committee organizing this Commemoration have considered it very advisable that a publication should be issued with a view to diffusing as widely as possible public knowledge of the King's life and work. This being the sole object, it became essential that the book should not be costly, but within the reach of all. Therefore, it was also necessary to restrict its scope; numerous subjects and possible illustrations of interest have been left for a full and complete biography of the great king." The volume contains eight essays written by contributors who are all prominent in English letters: Sir Walter Besant, Frederic Harrison, the Bishop of Bristol, Charles Oman, Sir Clements Markham, Professor Earle, Sir Frederick Pollock, and the Rev. W. J. Loftie. On the cover is a reproduction in colors of King Alfred's Jewel. Her Majesty has accepted the dedication, and the Poet Laureate furnishes a poem, entitled, 'The Spotless King,' which, among other characteristic lines, contains this one:

"And none are truly great that are not good."

The articles are all creditable to their authors, and show that, though the work is intended for the unlearned public, the business of composition has been taken seriously. We have found two papers particularly good, viz., Professor Earle's on "King Alfred as a Writer," and Sir Frederick Pollock's on "English Law before the Conquest." By reason of its purpose and of its own merits, the book should be widely spread.

Those interested in the tendencies of economic thought of the last twenty-five years will welcome Mr. C. W. Macfarlane's 'Value and Distribution' (J. B. Lippincott Co.). To many the "new economics" has been identified with the negative critical work of the Historical School; great emphasis on "induction" as opposed to "deduction"; and a weakness for "ethical" applications. That there is a mass of constructive work, some of

which is embodied in the publications of the Austrian group, much more of it scattered through various magazines and journals, is not so generally recognized, because no effort had been made to bring it together as a coherent whole. To give permanence to this scattered work, and to bring it, as well as that of the Austrian economists, into some sort of co-relation with the work of the so-called orthodox school of economists, is one of the purposes of the present volume. "Ethics" is avoided, and, in the problem of Distribution, the question of equity of the distribution of wealth has been consciously and purposely avoided, the author confining himself to a purely theoretic study of the laws of Distribution. In his criticism of the modern economists, as well as in the statement of his own position, Mr. Macfarlane shows his grasp of economic theory, and has made a valuable contribution to economic literature. Coming from outside the academic circle, the book is significant of the attitude of mind of the educated business man, and points to a more sympathetic relation between the University and the world of affairs.

It is hard to see what reason there is for the existence of Dr. E. C. S. Gibson's commentary on Job ("The Book of Job," Macmillan), except it be that the series to which it belongs (Oxford Commentaries, edited by Walter Lock, D.D., Ireland Professor of the Exegesis of Holy Scripture) stood in need of something of the kind. The pity is that the kind is so poor, and it is to be hoped that the succeeding volumes of the series will reach a higher level. This instalment makes no contribution to its subject; it fails to see the problems involved, and thus cannot even present the solutions of others. The series as a whole, according to the prefatory note of the general editor, is to be "less elementary than the Cambridge Bible for Schools, less critical than the International Critical Commentary, less didactic than the Expositor's Bible." The latter two minuses are easy of attainment, and are abundantly attained in this volume; with regard to the first, no one would ever choose this book in place of the golden little commentary by Davidson in the Cambridge Bible. We cannot see that it is less elementary, except for two or three pages on the versions, and Dr. Gibson certainly makes no approach to Davidson's exegetical tact and learning. Further, though much has been accomplished since Davidson's little book appeared, there are here few or no signs of advance. The almost solved problem of the original prose legend of Job and of the folk-tale about him meets with no allusion, and though there are references to the contributions of Budde, not the slightest account is taken of his last reconstruction—fantastic, it may be, but epoch-marking. Finally, so far as the present volume is concerned, the only advantage which this series has over the Cambridge Bible is that it uses the Revised and not the Authorized Version as a basis. It would be a cause for thankfulness if the Cambridge Bible would follow this most reasonable example.

In "Through Armenia on Horseback" (E. P. Dutton & Co.), the Rev. George H. Hepworth, sent out by the N. Y. *Herald* to look into the Armenian massacres, describes his journey of investigation. As he had such full permission from the Sultan that he was even provided with an escort of Turkish officials, we cannot help fearing that many unpleasant facts may have been kept

out of his way, and we are not reassured by his manner of operating or by many of his comments, which suggest that one of Mr. Hepworth's characteristics is a certain naïveté not exactly suited to the difficult and delicate task he had in hand. His reflections are at times almost childishly commonplace, his style is generally trivial, and his rather lumbering attempts at gayety are apt to be exasperating. On the other hand, if not keen in detection nor profound in insight, he did not shut his eyes to obvious truths, however painful, or allow himself to be led away by the specious explanations of those who had been personally kind to him. Thus, although he travelled with specially appointed companions, and was hospitably entertained by the local officials, he did his best to hear what he could of the Armenian question from the other side also, and it is that other side which convinced him. If he tries to explain the massacres, he does not attempt to palliate them. His conclusions are pessimistic enough. He believes that the future of the Armenians is hopeless, and meanwhile they are in continual danger of fresh slaughter; that the Turks are incapable of reform; that "I cannot name the root of the difficulty, but I feel sure that it is political rather than religious, and that not all the Powers of Europe can make Turkey other than it is, a moribund nation with a fatal disease for which there is no known remedy."

'De l'Influence Française sur l'Esprit Public en Roumanie: Les Origines,' by Pompliu Eliade (Paris: Leroux), is a study of the intellectual awakening of Rumania at the end of the eighteenth and the beginning of the nineteenth centuries. The author, a native who has studied in Paris, ascribes this awakening almost entirely to the direct or indirect influence of France, whether in the form of the enlightenment of the "philosophes," the ideas of the great Revolution, or the stirring glories of Napoleon; whether brought in by wanderers and émigrés, or introduced as a fashion in literature and society by Greeks or Russians. He exaggerates, perhaps, the share of French influence in all this, but not, we think, to any great extent. Writing soberly and carefully, he has given us in accessible form an account of the forces that have aided in transforming a barbarous Oriental dependency into a small but interesting modern state, proud of its Latin language and the descent it claims from the Romans, and in intellectual as well as political community with the rest of the civilized world.

'Les Colonies pendant la Révolution,' by M. Léon Deschamps (Paris: Perrin), is a continuation of his 'Histoire de la Question Coloniale en France,' published in 1891. He now explains the colonial policy of the Constituent Assembly, telling only enough of the story of the troubles in the colonies to make his explanations clear. This is the first time the subject has been studied adequately in the documents themselves. In his introduction, the author has furnished an excellent bibliography of all the sources he has used. The most curious phase of his subject is the long conflict in the legislative conscience between "philanthropy and 5 per cent."—in other words, between the principles of 1789 and the old colonial system; particularly, the ambitions, jealousies, and interests to be served by the main-

tenance of the privileged position of the planters. It is diverting, as well as instructive, to observe the shifts to which men like Barnave were put to satisfy these planters, and, at the same time, to show a proper regard for the Declaration of Rights. They solved their problem by deciding that such noble principles were not suitable for export to the colonies. Their changing and hesitant attitude upon the status of the mulattoes and free negroes, due largely to the agitations promoted by the Hôtel Massiac, was responsible, thinks M. Deschamps, for the worst mischiefs in the West Indies. With this exception he criticises favorably the scheme of control devised by the Constituent, believing it far ahead of any system then in existence.

Among the numberless articles on the "Affaire" with which the Paris newspapers regale their readers every day of the week, there are not a few which aim at something higher than to satisfy curiosity or to nurture party and race animosity. Such a comparative study of the administration of military justice in the principal states of the Continent, for instance, as recently appeared in the *Matin*, raises the hope that the great harm done by the whole Dreyfus affair may, in the course of time, be in a measure neutralized by profitable lessons. The writer in the *Matin* shows that in Germany, Austria-Hungary, and Italy military courts are never exclusively composed of soldiers, but always in part of professional jurists of experience and high standing. In France, on the contrary, no such safeguard exists.

A little treatise, 'Die richtige Aussprache des Musterdeutschen,' by Dr. E. Dannhelsner (Heidelberg: J. Gross), is to be recommended to the many earnest students of German in this country who are striving, often with an excessive scrupulosity, after the best pronunciation. It is brief, simple, and practical, and may be advantageously used by itself or in connection with any German grammar.

The *Nineteenth Century* has an article on the International Council of Women, by the Countess of Aberdeen, and the *Fortnightly* discusses the same subject by the pens of Gilbert Parker and of Mrs. Sewall. *Nature* also reports the proceedings of the scientific section of the same congress, which was presided over by Mrs. Ayrton, astronomy being represented by Mlle. Klumpke, head of one of the departments at the Paris Observatory, geology by Miss Raisin of Bedford College, chemistry by Miss Dorothy Marshall of Girton College, bacteriology by Mrs. Percy Frankland, and botany and zoölogy by Miss Ethel Sargent. Miss Ayrton, in the course of her interesting and able address, pointed out that there is an important outlet for the work of women at the present time in the manufacture of electrical instruments, the demand for them being so great that manufacturers are not able to cope with it. The various papers contributed are stated to have been worthy both of their subjects and their authors.

M. Camille Flammarion contributes to the July number of the *Revue des Revues* an article apparently called forth by statements published in many French and foreign papers, to the effect that this eminent scientist has retracted what he formerly published on matters of physical research and occultism. He declares such assertions to be erroneous, and announces

that he has nearly ready for publication a work entitled 'L'Inconnu,' which will be devoted largely to a scientific analysis of occult phenomena. The article reports a large number of cases which are certainly curious and, to M. Flammarion, seem sufficiently interesting and authentic to deserve serious consideration.

The publisher of the Imperial Free Economic Society of St. Petersburg informs his subscribers that the issue for December, 1898, has been hindered by the Government censor, but will be sent out as soon as the prohibition has been set aside. The word "free" in the name of the society does not seem appropriate.

The preparation for the celebration in 1900, on a grand scale, of the five hundredth anniversary of the birth of Gutenberg, is being energetically pushed by the authorities at Mainz. The scientific 'Festschrift' will contain contributions on Gutenberg and the art of printing, from the best specialists of Germany and elsewhere, and will be an international document of permanent value, edited by Prof. Dr. Velke; while a more popular volume, with especial reference to the history of printing in Mainz, is being prepared by Dr. Bockenhimer. Academic festivities, banquets, historical processions, concerts, public games and plays, and the like, will constitute the chief portion of the public exercises. The German Emperor and the Duke of Hesse will take part in the exercises.

—The "Midsummer Holiday Number" of the *Century* appropriately devotes itself to out-of-door interests. Those who stay in cities may follow Jacob Rills and Police Board President Roosevelt on a Feast Day Pilgrimage through New York's "Little Italy." The lover of wild nature may listen to the birds about Mr. Burroughs's cabin in the woods, the traveller may drink tea all along the Yangtze-Kiang with Eliza Scidmore, visit the Churches of Auvergne with Mrs. Van Rensselaer as guide, live the life of a nomadic Lapp with Jonas Stadling, or, if desirous of a more stirring vacation, may invade India with Alexander the Great under the leadership of Prof. Wheeler. Well-timed, too, for midsummer use are an account of the Kirksville tornado by Mr. Musick, an eye-and-ear witness; Prof. Abbe's brief deliverance on tornadoes, with its appeal for "untouched" photographs; short articles on "Powerful Electrical Discharges," by Prof. Trowbridge, on "The Protection of Electrical Apparatus against Lightning," by Alexander Wurts, and on "Needless Alarm during Thunder-Storms," by Alexander McCabe. An interesting account, by Marion Haskell, of "Negro Spirituals," or religious songs composed by negroes, and Paul Leicester Ford's paper on "The Many-Sided Franklin," make further agreeable August reading. Most striking, if least agreeable, in the account of Franklin's diversified thrift is the evidence of his traffic in indentured servants and slaves, through the medium of his newspaper. Two short papers by Major-Gen. Wood and General Manager Howard furnish expert views on administrative and industrial matters in Cuba. Mr. Crawford's novel proceeds at leisurely pace. "The Transit of Gloria Mundy" is the sincerest of all tributes to Kipling-and-Dooley, the latest American hybrid. The poetry is of a midsummer calibre: the trail of the languid hammock is over it all if we except Meredith's fantastic

"Night Walk" and Herford's delicious verses on the Mole.

—In the *Atlantic* Mr. Rills and Mr. Burroughs are met again, but indoors. The former writes of "The Tenant," and avows his persuasion that the trades-union label and the colonization of the Jew, whether as a farmer or in manufacturing colonies (experiments already promisingly initiated in New Jersey), are to be the sweat-shop's strongest antidote. Mr. Burroughs preaches agreeably against preaching in art. Mr. H. D. Sedgwick, jr., rallies his affections and quotations about Macaulay with a zeal which proves that his scorn of Thackeray did not proceed from the pride of the un-Philistine. Dr. Cunningham writes somewhat half-heartedly of the Peace Congress as an agent of disarmament, but hopefully of "changes in political aims and ambitions" as "doing away with the occasions of international conflict," and calls attention to the dangers arising from "national vanity" and "irresponsible meddlers," whether individuals or sections of a community, "who try to jerk the reins of government at a critical period." The prevention of strife, he concludes, is the key to immunity from concern as to ways of allaying it; and he points to England as leading the way by showing "a genuine unwillingness to take offence." Prince Kropotkin's tenth paper brings him out of prison into England; tells of his connection with the International Workingmen's Association, of the work of that body, including its division after the war of 1870—a division brought about by the "conflict between the Latin spirit and the German Geist." He shows portraits of several of his fellow-workers, and a particularly interesting one of Turgeneff. "His Brother's Brother" is the late Mr. John Holmes, and T. W. Higginson bestows on the reader a brief glimpse of that rare spirit.

—In the March number of the *Zeitschrift für Assyriologie* appears a most interesting paper by Prof. Martin Hartmann of Berlin on the efforts being made to raise the spoken dialect of Egypt to a written language, and to advocate for its expression the modified Latin alphabet invented by Spitta and used by him in his invaluable 'Grammatik des Vulgärdialectes von Aegypten.' We have already noticed this movement, which emanates from Florence (The Landi Press), New York, and Cairo, and the present article shows with what energy it is being carried on and what chances of success it has. The need is clear. In Egypt, as in all Arabic-speaking countries, there are at least two languages. The one, written after a fashion by educated men and spoken in sermons and on public occasions of weight, attempts to reproduce classical Arabic; the other is the spoken language of the people, and is beginning to appear in different forms of popular literature—plays, songs, jests, etc. For the first, the Arabic character is a fairly adequate medium; to the expression of the second, that character, with its lack of vowels and hampering traditions of classical forms, is utterly unequal. Yet the only chance of spreading education in the mass of the people is through the tongue which they speak; and how hopeless it is to attempt that with the Arabic alphabet, will be felt at once by any Arabist who will attack one of the modern plays of Othman Gelal so written. European students of old Arabic require to be equipped with elaborate transliterations and translations to make

such skeleton texts—misleading enough in their bones—intelligible to them.

—Prof. Hartmann regards the undertaking as by no means hopeless. The bigoted Muslims of the towns will have little to say to it; but the far less bigoted peasants who, under English rule, are leading a quiet and prosperous life and learning things about and from the unbeliever, will be won over much more easily. The Jews, too, and Coptic Christians will accept it. Curiously enough, he thinks that the Bedawi and semi-Bedawi floating population can be reached with comparative ease. They, as opposed to the Fellahin, are fanatical Muslims, but their religion is not bound up with a written tradition to the extent that holds of the population of the towns. But, for their use, the alphabet will need to be extended, and characters added to represent sounds heard only in the desert. This opinion is of the greatest weight, for few Arabists know the local conditions of Egypt and Syria so well as Prof. Hartmann. And his subject has evidently touched him with enthusiasm; he looks for the movement to spread beyond Egypt, and he especially hails it as a veritable deliverance for those non-Arabic-speaking peoples who use the Arabic character. This last comes close to us; at least it is not so far below our national horizon as it was a year ago. Our wretched complications in the Philippines have brought us face to face with a Muslim population not speaking Arabic, yet using the Arabic script. To deliver them from that would mean almost as much as to deliver them from ourselves.

—Harper & Bros. present us, under title of 'The Letters of Captain Dreyfus to his Wife,' a translation of the collection which appeared in the French as 'Lettres d'un Innocent,' and which Zola solemnly adjured Prime Minister Briason to read in the company of his wife and children, and then say whether their author was not a martyr. They are undoubtedly moving, and, at this time, their publication cannot but increase the public sympathy for Dreyfus that has now become so strong even in France. Except as documents in a *cause célèbre*, however, they will not be likely to have any permanent value—they are at once too painful and too monotonous. Even as documents they have limitations, as they were written for official scrutiny, and tell little or nothing of the prisoner's life. They are filled with his protestations of innocence, his loyalty to the army and to France that had so foully wronged him, and a continual urging on his wife to clear his honor. Dreyfus's enemies, of course, say that this is all posing; his partisans, that it is all sincerity, and increases the presumption in his favor. With the latter view we concur. But it is curious to note his frequently expressed belief that there was a real traitor, somewhere, for whom he had been mistaken, and whose discovery was as essential as his own vindication—whereas, out of all the confused evidence so far published, proof of definite acts of treason between French officers and an enemy country seems alone wanting, while of domestic forgery, plotting, and general scoundrelism there is no end. The Dreyfus case long ago assumed an importance in French history so profound that the man about whom these passions were raging sank to an abstraction.

This book restores the personal element to the drama; and to the picture it gives of the victim's tortured spirit should have been added the photograph in *Harper's Weekly* of his wasted figure ascending the gangplank of the *Sfax*.

—Unless we happen to stumble upon Mezhov's bibliography with the titles of more than twenty thousand books and articles on Siberia, we hardly think of that country as one which has been much written about. However, with its recent rapid development, and the more frequent visits of western travellers, the available literature on the subject is becoming copious. 'En Sibérie' (Paris: Colin), by Jules Legras, is the tale of a journey along the usual route from Europe to the Pacific at Vladivostok, with a few side excursions; but the author, in spite of his modest disclaimer in the preface (in spite, too, of a little too much personal narrative), has given us more than the notes of a mere globe-trotter. He was charged with an official mission by the French Government to investigate the colonization of the territory he went through, and, although he has reserved the results of his labors for a later, more serious work, the present one contains not a little interesting information. The general impression we get from it corresponds with the one we had previously obtained from travel and from books. Siberia is a country with a rather unattractive history and character of its own, but its conditions and population are being rapidly changed beyond recognition by the flood of newcomers pouring into it, as well as by the opening up of its resources. Although it presents many obstacles of different sorts, its possibilities of development seem almost unlimited. As for the central government and local officials, they appear at one moment the indispensable agents of civilization and progress, at another as doing their best to hinder them. Mr. Legras writes with great frankness about what he saw and what, thanks to his knowledge of Russian due to a previous visit in the empire, he heard and understood as well as saw. His opinion of the Siberians is not complimentary; he finds them lazy, selfish, unlovable, and particularly untruthful. "If I put aside the friends who gave me faithful information, I could count on my fingers the men I have not caught in the act of flagrant deceit. Oh! the offensive and useless flood of lies. They lie behind my back, not suspecting that a mirror is betraying the impostor; they lie when by me, not suspecting that I have an acute sense of hearing and catch asides; they lie in my presence, not suspecting that in my hands are written proofs of their duplicity. They lie with naïveté, with subtlety, or with cynicism, as the case may be; they lie with a caress of their eyes and of their hand."

—At the opening meeting of the International Conference of Hybridization, held under the auspices of the Royal Horticultural Society, at Chiswick, Dr. Maxwell Masters gave an address on the artificial hybridization of plants. This was first practised in the early part of the eighteenth century by Thomas Fairchild, one of whose descendants was present as an American delegate. Fairchild produced a cross between a sweet-william and a carnation pink which is still cultivated. Reference was made to the singular prejudice against the practice, hybridists being accused of "contravening

the laws of Providence." This objection was met by Dean Herbert, who, having found in the Pyrenees a narcissus growing between two narcissi of similar character, proved it to be a hybrid. He produced a similar one, and asked why he should be blamed for doing what nature had done. Still, this remarkable prejudice persisted to such an extent that florists, rather than exhibit plants as hybrids, described those raised in their own nurseries as coming from "the Cape," or elsewhere. Another objection to hybridization on the part of some botanists is that it upsets their "systems" and creates confusion as to species and genera. There was a time when "species" was considered a sacrosanct thing, but the researches of Darwin and others have changed all that, and no definite line of demarcation between species, genera, or varieties can be drawn. Dr. Masters believes that the experiments of hybridists are not only advancing science, but adding to the welfare of humanity. H. J. Webber of the United States Department of Agriculture described, at the second meeting, some attempts to produce a hardier variety of orange, that would be less likely than the Florida orange to be cut off by frost. Experiments have been made to produce hybrids between the American orange and the Japanese, which begins to flower just as the blossoms of the cultivated kind are disappearing. It is hoped to produce a variety which will be retarded a little in flowering, and thus escape the spring frosts. Experiments are also making with the Tangerine orange, to effect a combination of its loose rind with the superior qualities of the American orange. Limes, lemons, and pineapples have been the subjects of experiments in hybridization, and the Department is trying to improve cotton by means of hybrids between the upland and the Sea Island kinds.

#### TRAVELS AND POLITICS IN THE NEAR EAST.

*Travels and Politics in the Near East.* By William Miller. Frederick A. Stokes Co. 1899.

The affairs of southeastern Europe have had a fascination for Mr. Miller, which found expression in his excellent work, entitled 'The Balkans,' in the "Story of the Nations" series, already reviewed in these columns. That complex of peoples and states whose shifting composition eludes the grasp and dazzles the eye of the observer, has found the closest of students in Mr. Miller, who has habituated himself to regard each feature in this bewildering panorama according to its intrinsic quality, eschewing the time-honored standpoint of the Englishman intent solely on unravelling the mysteries of the Eastern question with reference to the future prospects of Britain. Extensive journeys through the picturesque regions that constitute the mighty Ottoman Empire of old, combined with a vast amount of reading and intercourse with public men of various nationalities, have familiarized the author in a rare degree with this mosaic of the Near East, and, while waiting for the kaleidoscope to make another turn, he has given the public the benefit of his observations in a very charming volume of more than 500 octavo pages.

Of the fourteen chapters into which the

book is divided, Bosnia (with Herzegovina) and Greece each claim two, and one is allotted to each of the following subjects: Istria and Dalmatia, Montenegro, the Sanjak of Novibazar, the Albanian Coast and Corfu, Crete under the "Concert," Samos, Macedonia, Stambul, Bulgaria, and "The Great Powers in the Near East." The kingdoms of Servia and Rumania, it will be seen, are not specifically dealt with in these pages, but the former enters largely into the treatment of political and economic topics, and the latter is naturally not overlooked in the discussion of the Balkan question as a whole. Mr. Miller made four visits to the Balkan countries between 1894 and 1898, in three of which he was accompanied by his wife, and he extended his journeys into Asia Minor. Nothing appears to have escaped the ubiquitous range of his observation. He is equally master of his pen, whether depicting the wondrous charms of the Dalmatian coastland, or descanting upon the advantages of new and prospective railway lines, or portraying racial peculiarities.

Mr. Miller surveys his chosen domain with an impartial eye, not being an enthusiastic admirer, as he says in his preface, of any one Balkan race to the exclusion of all others. His pleasure at the release of Bulgaria from the Turkish yoke does not make him blind to the vices which stand in the way of her political advancement, nor does his detestation of the Turk as a ruler prevent him from appreciating his virtues as a man. The country whose condition has most favorably impressed our author is Bosnia (or, more properly, Bosnia and Herzegovina), which he styles the "model Balkan state." The twenty years of Austro-Hungarian occupation have wrought a complete transformation here. From the position of a semi-medieval Turkish province, groaning under oppression and rent by religious animosities (the Slavic Bosniaks are among the most zealous of Mussulmans), Bosnia has suddenly emerged into the light of civilization and become a well-ordered, prosperous, and contented country. As an illustration of the rate at which it is being modernized, we need do no more than refer to the statement on page 153, to the effect that the excursion trains running from Sarajevo to a neighboring pleasure resort have a special van for bicycles alongside of a car reserved for Mussulman women. The description which Mr. Miller gives of this lovely borderland between West and East opens up a delightful vista to the tourist in quest of virgin soil. Boundless praise is lavished upon Baron Kállay for his efficient administration of this region, and upon his charming wife, who has so zealously seconded his efforts.

Bosnia's little neighbor, Montenegro, to whom nature seems to have denied everything save her rocky fastnesses, is, in Mr. Miller's eye, a land not without signs of promise. He has faith in her simple and sturdy, though rude, mountain folk, who for five centuries have bidden defiance to the Crescent ranks; and he is above all impressed with the sagacity and patriotic virtues, not to say shrewdness, of Prince Nicholas, "even by the admission of his severest critics, the ablest of Balkan sovereigns." This "patriarchal autocrat," who "most emphatically knows on which side his bread is buttered," and who has seen himself and his little principality suddenly exalted through the marriage of his

daughter to the future King of Italy, is winning distinguished laurels as a Slav poet. Montenegro is advancing on the path of progress, a hilly road to travel, up which she is being helped by both Russia and Austria. The former extends a kind of godmotherly care over the tiny state, in which her calculating eye fondly sees an advance post of Muscovy on the Adriatic.

Much less refreshing than his account of Bosnia and Montenegro is the picture which Mr. Miller draws of the political condition of Bulgaria, a country resurrected from a bondage of five hundred years, and bidden by the Powers to move forward with the eyes of the world fastened upon her. This peasant state *par excellence*, as the author calls her, has run through a mad course of political evolution since its new machinery was set in motion. Already the theory of public spoils, the clean sweep, railroad jobbery, and all the concomitants of a representative system which has no roots in the past, have become firmly entrenched, while the methods and expedients of the executive power, as depicted by the unprejudiced pen of Mr. Miller, are worthy of the Spanish republics of the South. No wonder that, after inhaling the perfumes of the far-famed rose-gardens of Kazanlik, sixty ounces of whose distilled fragrance sells for a hundred pounds sterling, Mr. Miller cannot help exclaiming, "If only Bulgaria had no politics, that curse of the small Balkan States!" It is some consolation to be told that Prince Ferdinand, that accomplished trimmer, is thoroughly unpopular with his subjects. In Serbia, as well as in Bulgaria, parliamentary elections have been "reduced to a farce."

It is a strange irony of history that a people so long held in bondage as the Bulgarians should have such "fantastic notions of its own dignity" as our author had occasion to observe. The question of domestic servants, he tells us, is "far more acute in Bulgaria than even in London." "The natives are so independent that it is difficult to engage them to work for wages." All thoughtful people whom Mr. Miller met during his stay in that country "agreed in pointing out the danger of over-education for Bulgaria," the threatened result (the same as in the case of Greece, according to the writer) being "the growth of a class of professional politicians from among the briefless lawyers, hungry doctors, and discontented teachers produced by the Bulgarian schools." With regard to the amenities of travel, the "Bulgarian Switzerland" is anything but a tourists' paradise. The peasant innkeepers are "honesty itself," but they have nothing to offer in the way of food or cleanly comfort. The effect of new political conditions, however, and of the establishment of railroad routes is visible in Sofia and Philippopolis, which have blossomed out into modern cities.

The author was in Greece at the time of the recent war, and the chapters devoted to that kingdom, conceived in perhaps too journalistic a vein, will to many readers prove the most interesting part of the book. He presents us with a pretty picture of the reign of the spoils system at Athens. There is no country in the world, according to Mr. Miller, in which politics have such a fascination for the common people as in Greece. The Athenians are still the Athenians of old in their eagerness to hear what is going on. The very newsboys devour the political arti-

cles in the journals while hawking them about in the streets.

Mr. Miller's journeyings in the dominions of the Sultan have convinced him that the Turkish government is utterly and hopelessly rotten. He has nothing to say, indeed, against the character of the Turkish people. "The plain Turk of the country districts," he would have us know, "is honest enough; upon that all are agreed." In the concluding chapter we read: "No one can help admiring the devotion of the true Mussulman to his religion, a devotion which puts to shame many Christians. . . . He points out, sometimes with no little justice, that the simple life of the East is better than the degraded existence of many of our great cities." But the author finds no words of condemnation too severe for the official class (whose sins, he admits, belong rather to the system than to the man) and the methods pursued by the central Government. "The secret-service fund amounts to £2,000,000 a year, and from six hundred to seven hundred reports are sent in by spies to the Sultan every day."

In refreshing contrast to the pages devoted to Turkish maladministration is an account of a visit to Brusa, in Asia Minor, the capital of Sultan Orkhan, in the early days of the Ottoman Empire, which, according to Mr. Miller himself, is at least one oasis in this *gran deserto*, "an excellent example of what Turkey might be under a wise government." Speaking of the approach to this place from the Sea of Marmora, he remarks: "Here you might be in Southern Europe. On either side a rich and fertile land stretches out before you, a land of wine and olives, cultivated by a bright and cheerful peasantry, who greet the train as it slowly turns and turns on its way up the hillside." Brusa, through the energetic foresight of its governor, escaped the horrors of the Armenian massacres.

Mr. Miller enters into a minute analysis of the Macedonian question, "perhaps the most dangerous problem which the statesmen of Europe will have to face in the near future." Serbia, Bulgaria, and Greece are each waiting to pounce down upon this region, which presents a labyrinthine jumble of nationalities. There is also a Rumanian propaganda, based on the presence of a considerable Ruman, or Wallach, element in the Macedonian population; and even the Albanians appear to have started a separate organization in the region, a people who have hitherto been "content to remain subjects of a Power which did not interfere with their 'legitimate' occupation of cutting each other's and their neighbors' throats."

In the chapter entitled "The Great Powers in the Near East," which is the concluding section of the volume, Mr. Miller discusses in a vigorous but dispassionate manner the possibilities in the way of a settlement of the affairs of the Balkan Peninsula. He confesses that he has been weaned from the belief expressed in his recently published history, that a Balkan confederation might be a solution of the great problem that so persistently confronts Europe. His travels and talks have persuaded him that political rivalries and jealousies preclude such a consummation. The Serb has no love for the Bulgarian, the Bulgarian has no faith in the Ruman, and Greece is centred on herself. Albania is a stumbling-block in the way of

any settlement. The idea that a solution might still be found in the rehabilitation of Turkey, a Turkey regenerated by reforms, is dismissed after due consideration as an idle dream. "Of all the futile nostrums," says our author, "prescribed for the salvation of Turkey, that of 'reforms' is the worst." He sees no unravelment of this awful tangle until Austria-Hungary and Russia step forward and cut the Gordian knot. Russia will not rest until she obtains possession of Constantinople, and she will have to share the spoils with Austria by allowing her to reach down to Salonica and establish herself on the Ægean. This, the only conceivable solution in the author's eyes, is not put forward as by any means a satisfactory consummation, nor does he pretend to see how it is to come about. The inspiring spectacle presented by Bosnia and Herzegovina at the present time has completely won Mr. Miller over to Austria-Hungary, but the prospect of Russia established on the Bosphorus, intent upon the benevolent assimilation of the neighboring peoples, is to him far from a cheerful one. Not that he is in special dread of Russian power in the Levant—that fear, he admits, has been minimized by the hold that England has secured upon Egypt—but, to Mr. Miller, Russia is Russia still, and he doubts (page 507) whether the substitution of Russian for Turkish rule on the Bosphorus would be an advantage to the people governed. He does not think that Rumania would help Russia a second time in her march towards Constantinople, the Bessarabian steal of 1878 never having been forgiven; and as for Bulgaria, although Prince Ferdinand has thrown himself into the arms of the Czar, he has not succeeded in making his subjects overcome the aversion which the outrageous intermeddling of Russia in their affairs has excited. Altogether the picture drawn by our author, who is no pessimist, of the political condition and prospects of the Near East is not a bright one to contemplate.

Mr. Miller is convinced that the Ottoman Empire is doomed, but to say that its downfall is necessarily close at hand he believes would be a rash assertion. Europe will not plunge lightly into the seething vortex of the Balkan East; and, while the problems of the Far East and of Africa engage the Powers, no one can tell how long the death-agony of the Turk may be prolonged. The author hopes fervently that the great state whose destinies are bound up with those of the Balkan Peninsula may survive the perils that threaten its dissolution. He considers that no greater catastrophe could befall Europe than the dismemberment of the Austro-Hungarian Monarchy.

Mr. Miller denounces in unstinted terms the apathy which the English nation has displayed in recent years with respect to the course of events in the Sultan's dominions and the conditions affecting British trade in those regions. He is not afraid to let the world know that all respect for the British flag in the Levant is at an end. "Orientals," he says, "despise people who talk and do not act, and the threats offered to the Sultan, followed by absolute inaction, have enormously damaged our prestige in the Near East." The supineness of the British in the matter of their commercial interests is contrasted with the activity of the Germans, who appear to be ousting their competitors on every side. Mr. Miller is shocked, it is true, at the strange

lengths to which Germany is willing to go in her eagerness to gobble up the Turkish market, and he speaks of the Kaiser as "a commercial traveller whose journeys are utilized for the propagation of German trade."

The volume is profusely illustrated with reproductions of photographs, but we regret to say that they reflect but little credit on the half-tone process. There is a comprehensive folding map on the generous scale of twenty-five miles to the inch. The reader who does not familiarize himself with the short table of phonetic values in the preface and keep the equivalents constantly in mind, will stumble hopelessly over the pronunciation of the proper names. Our familiar "Maritza," for example, figures as "Marica." We shall take leave of this valuable book by pointing out a slip on page 365, where the capture of Salonica by Tancred is stated to have occurred seven centuries ago instead of eight.

#### FISHER'S MEDIAEVAL EMPIRE.

*The Mediæval Empire.* By Herbert Fisher. 2 vols. Macmillan Co. 1898.

Among the many good things in this important work, one of the best is a characterization of the discrepancies which existed between the *soi-disant* Roman Empire of the Middle Ages and genuine classical Romanism. Mr. Fisher is not content with recalling, in his first sentence, Voltaire's celebrated saying that the Empire was well named save in the three respects of being neither Holy, nor Roman, nor an Empire. In his concluding remarks he returns to the same idea, except that this time he is regarding the mediæval instead of the eighteenth-century state:

"The Saxon king of a rude race of peasants is required to conserve and to appreciate a conception of government moulded by the genius of the Latin races in a climate of Roman law and Roman religion, and saturated with the spirit of Roman autocracy, that last and most refined distillation of the aristocratic pride of a great city. A barbarian, living in a condition of affable equality with his fellow-tribesmen, is asked to posture as the descendant of Augustus, the masterful and subtle, as the coequal of those Greek rulers for whose elaborate court Constantine Porphyrogenitus wrote his massive and curious book upon ceremonies. Yet the difference between the courts of Constantinople and Tribur was as great as that between the court of Versailles, as it was known to the Duc de Luynes, and the Highland home of Fergus M'Ivor, as Sir Walter Scott describes it in 'Waverley'; and the idea of the Roman Empire as it was printed upon the Saxon brain of the tenth century, no more reflects the ancient classical conception than the Venus of Botticelli in the Uffizi Gallery renders the spirit of ancient Hellenic art."

Eventually the Hohenstauffen emperors grasped the autocratic, imperial idea, but that was only after Romanism, in an ecclesiastical solution, had been filtered through mediæval society for centuries, after legal studies had revived at Bologna, and after a close connection between Germany and Italy had been established.

Apart from an opening chapter on the "Survival of the Imperial Idea," Mr. Fisher's essay deals with the period between Otto I. and Frederick II. Had he entered at large upon the subject of Charlemagne's empire, it is possible that he would have found something truly Roman in the imperial progresses and in the institution of *missi dominici*. But beginning, as he really

does, with the rise of Saxon power and the restoration of 962, he must perforce deal with pure Teutonism masquerading in a Roman domino, until he reaches those sovereigns who cared more for Italian politics than they did for the broils of their own "yellow Germany." Altogether, the greater part of these two volumes is devoted to German affairs, though in the last 150 pages the Italian element is duly accentuated.

Coming rather more to detail, we can best indicate the scope of Mr. Fisher's treatise by comparing it with Bryce's 'Holy Roman Empire,' because the latter book now holds the field in English, and is thoroughly well known to all historical students. In purpose there is not nearly so much conflict between the two as one might suppose from merely glancing at Mr. Fisher's title. Being very evidently a man of sense, the later historian recognizes that nothing is to be gained by writing, after Bryce, a general sketch of the imperial theory and its results. He fills in for a single, clearly defined era (and that the distinctively mediæval one), the outlines which Bryce has rapidly but firmly traced. To secure clearness he treats Germany and Italy separately, considering Germany in its imperial aspects first. Here he begins by examining the state of the country at the outset of the tenth century, and then, excluding Lotharingia and Burgundy, proceeds to

"the problem created by the affinities and antagonisms of the four German races, with a view to discovering how far these antagonisms and affinities tended to obstruct and further the imperial mission. It then seemed best to consider the resources and work of the empire in Germany, its influence on law, on administration, on constitutional and financial growth; and, in order to exhibit its work in proper proportions, and to throw additional light upon the causes of its downfall, chapters are added upon the German nobility, upon the expansion of Germany, and upon the German Church."

Reaching in his second part Italian affairs, Mr. Fisher dwells chiefly upon imperial legislation and administration, upon "the relations of the emperors with the city of Rome," and upon "the reciprocal influence of German and Italian culture." In this brief epitome we have enumerated almost every leading topic which he presents, for each chapter is a special, self-contained study, and might have been printed in the *English Historical Review* without creating in one's mind a sense of incompleteness. Yet while each is a separate essay, the union of parts is so skillfully effected that a reader of the whole work need not complain of abruptness in transition. At only two points does Mr. Fisher invade Bryce's frontier, namely, in his opening chapter on the imperial idea, and in his chapter on the city of Rome. Nor can he be said ever to echo his distinguished predecessor. The praise which is due independent research, independent reflection, and strong writing, can and must be freely accorded to Mr. Fisher.

It may seem that we make a purely arbitrary division when we set the chapters of this work which relate to Germany over against those which relate to Italy. If we do so it is because the former portion is, in our judgment, the better of the two. In so far as he is indebted to modern authors—and his acknowledgments are generous—Mr. Fisher depends largely upon Germans even where his subjects are Ita-

lian. There can be, of course, no possible objection to this procedure when a just balance is preserved between original sources and recent literature. We have gathered, perhaps too hastily, that Mr. Fisher's familiarity with German *Quellen* is greater than with Italian. That he should use Ficker's 'Forschungen' for his account of Italian administration, Gregorovius for his chapter on Rome, and Gaspari for his notice of early Italian literature, is no more surprising than that he should rely on Schröder and Stobbe for German law, on Reizler for Bavaria, and on Giesebrecht for the mediæval empire at large. But our impression is incorrect if he has not devoted more attention to Pertz's *M. G. H.* than to Muratori's *R. I. S.* et al. Whereas at times we have felt a passage in the Italian division to be comparatively thin, we have found Mr. Fisher's disquisition on German subjects at once solid and mature.

Among German topics, those which have been approached most seriously are imperial legislation, the imperial court, and imperial finance. It is not too much to infer from an allusion at the end of the introduction that Maitland's stimulating writings directed Mr. Fisher's attention towards problems of mediæval law and administration. Wherever the influence of that great scholar takes root, it speedily becomes fruitful of thoroughness and of new ideas. We cannot better indicate the character of the three chapters named above, than by saying that they are worthy products of the Maitland school, or, in other words, that they are accurate and suggestive. A clear instance of the Cambridge professor's influence is furnished by Mr. Fisher's study of the law of inheritance as associated with the imperial court. We make no hint of undue subservience. The influence exercised is of that kind which an unusual scholar and thinker must always have over the most independent minds.

Such subjects as legislation and finance do not admit of picturesque or animated treatment, but the theme with which the first volume closes, viz., "The Empire and German Nobility," does. Here Mr. Fisher introduces several graphic touches, and indicts the mediæval *proceres* in severe though justly deserved terms. The anonymous biographer of the Emperor Henry IV., in an epigram worthy of Tacitus, thus satirizes the freebooting barons whom a state of enforced peace had brought to penury: "Mira res, nec minus ridicula; alii injurias suas injuriis vindicant, imperator suas pace vindicabat." It may well be doubted whether this particular Emperor maintained the public security thus perfectly, but beyond question what the mediæval noble of Germany most loathed was the strong hand which did justice and preserved order. Von Raumer's valiant and disinterested princes are for the most part figments of a fanciful or patriotic imagination, while Mr. Fisher's charges of scandalous selfishness are alike clear and damaging.

"The German nobility possessed a perfect genius for disobedience and treachery. They would ally themselves with Bohemians and Slavs, with Danes and Italians, as it might serve their turn. Restrained by no considerations of patriotism, softened by no tincture of culture, swayed by rudimentary passions, simple, violent, and gross, they would neglect all the higher calls of civi-

senship to serve their greedy ends. Only occasionally a great cause swayed them, and, fired with the pride of race or bowed to the mastery of a gorgeous dream, they spent their lives nobly in the arid highlands of Asia Minor, or in the malarious paradise of Italy, yet the thickest strand of their existence was woven with cruelty, and perfidy, and vice; and when the mailed heroes of Germany rode off to the Crusade, the monk and the peasant breathed a sigh of relief, and tranquillity returned to the land."

We have a small list of errors to bring against Mr. Fisher, although in reading his pages we have observed few serious misstatements of fact. Vol. I., p. 24, "the first letter of Stephen to Charles Martel in 752" is spoken of, and again on p. 44 the phrase appears, "letters such as Stephen III. wrote to Charles Martel." Doubtless in both these cases Pippin was intended for Charles Martel. Vol. I., p. 35, and again on p. 51, the date 842 is assigned to the Treaty of Verdun, on what authority we cannot imagine, for it seems very decisively settled that the Strassburg Oaths were sworn in 842 and the great partition of territory arranged in 843. Vol. I., p. 70: here once more a chronological slip appears, in the case of a Merovingian sovereign—"The Frankish king Chlotaire III. (620-660)." On pp. 101-2, vol. I., occurs a somewhat amusing error. "It might have been expected that the royal hold over Saxony would be relaxed as soon as a non-Saxon dynasty came to the throne. But it must be remembered that Conrad the Second, the first king of the Franconian house, was the great-grandson of the daughter of Otto the Third, and that he, like his predecessor, confirmed the Saxon law upon his accession." Vol. I., p. 136: a double mistake occurs in the account of the imperial election which took place on the death of Henry V.—"The Franconians murmured at the appointment of a Saxon, and attempted to substitute Conrad, the cousin of the late Emperor." Probably Mr. Fisher, when writing thus, had Frederick of Swabia in mind, not his younger brother, the future Emperor Conrad III.; but both of these important persons were sons of Agnes, the sister of Henry V. A few lines further on, the date of Conrad III.'s accession is given 1139 instead of 1138, contrary to the date correctly assigned in the chronological table of popes and emperors which is placed at the end of the first volume. A further instance of discrepancy between text and table is furnished on the same page, 1126 appearing in the text and 1125 in the table for the death of Henry V. Vol. II., p. 127: "Gregory the Great deposed an emperor, and struck hard at the two most ingrained abuses of German clerical life, simony and marriage." The title in question is applied to Gregory I., not to Gregory VII. Vol. II., p. 255: The line

"Ahi serva Italia, di dolore ostello,"

and the two lines immediately following it, are no part of "Sordello's cry to Dante," but an interjection of the poet's own, as may be seen from the succeeding tercet:

"Quell' anima gentil fu coal presta," etc.

Vol. II., p. 259: "Not a city but fabricates for itself some legendary connection with the ancient world. Padua shows the tomb of Antenor, Milan the statue of Hercules, Fiesole looks back to Catiline." The case of Catiline and Fiesole rests on quite a different basis from the other two cited. Finally, we quote a passage, vol. II., p. 271,

which seems to us quite singular. By way of illustrating the bitterness of the thirteenth-century *strenite*, Mr. Fisher makes an extremely apt reference:

"Barons of Lombardy and Rome and Apulia,  
And Tuscans and Romagnese and men of the March,  
Florence the flower which renews itself,  
Call you to her court.  
For she wishes to make herself King of the Tuscans  
Now that she has conquered the Germans and the Siennese by force."

"So," Mr. Fisher comments, "sung Guitone d'Arezzo after the Florentine victory at Montepertoso in 1260, with all his rough vigor." Waiving the point that Mr. Fisher's spelling of the battle is not one which Dante approves (*vide* Inf. xxii., 81, ed. Witte), his reference to the "Florentine victory" removes the sting from the *strenite*, leaving his quotation flat as decanted Apollinaria. This is not an ordinary slip, and we find difficulty in imagining how it crept into the text.

It is a reviewer's duty to register the errors which he observes, otherwise we should not have mentioned these, for Mr. Fisher's erudition and ability have impressed themselves upon us much more strongly than shortcomings of any kind whatever. Were this "a product of American scholarship" we could avow the fact proudly, nor should less grudging praise be accorded a work which shows the present vigor of historical studies at Oxford.

*The Break-up of China.* By Lord Charles Beresford. Harper & Brothers.

Ever since 1860, when a few thousand English and French troops exposed the military helplessness of China, but more particularly since 1894, when Japan annihilated the only real soldiers China had, the Middle Kingdom has given strong evidences of approaching dissolution. The signs multiply hourly that the "boneless giant" is more of a carcass than a body capable of self-protection. The eagles are flying from every land, and the symptoms found within, or the signs emanating from, the subject are all those of the moribund. Rebellions and disorders, an empty treasury, and approaching bankruptcy; utter lack of mental initiative on the part of China's statesmen, who cannot see what is coming; the concessions, loans, leases, and gifts of land under pressure of war-ships and armies; the fastening upon the national vitals by aliens who claim the land on which they have settled as virtual portions of distant sovereignties in Europe; the inability to purge out internal morbidity, or to shake off blood-sucking parasites, are all proofs of the hopelessness of the recovery of "the sick man in the Far East."

China, at least the China hitherto known to history, has apparently run her race. Yet Lord Charles Beresford, whom we all remember as the dashing naval commander at Alexandria, and who has seen Egypt become a virtual British dependency, did not go to China to be in at the death. Indeed, between title and text of his book there is paradox, if not contradiction. He believes, or professes to believe, that China can be saved and kept a unit. He went out as a representative of the Associated Chambers of Commerce of Great Britain, in an entirely unofficial character, to learn the actual situation in China. He arrived at Hong Kong September 30, 1898, and remained in China until January 9 of this present year, visiting every place where British

communities reside. He convened meetings and discussed the whole situation, asking and answering questions. He interviewed the leading magistrates, seeing six out of the eight viceroys of the great provinces. He entered the precincts of the Tsung-li-Yamen, where he sat at the table with a body of men who are probably the most profoundly erudite, and the most densely ignorant, of all the so-called statesmen in the world. With the exception of three military mobs termed "armies," he inspected the armed forces of China, and himself put the troops through various movements. He visited every fort and arsenal with one exception, all the naval and military schools, the ships of both Chinese fleets, and the one dock-yard which China possesses. On his way home he passed leisurely through Japan and the United States, to which he devotes some chapters. Between the British merchant who says "Speak out," and the British financier who says "Speak gently," Lord Beresford has uttered the truth as he believed it, frankly and without reserve. From the first to the last page, he urges that the policy of Great Britain should be that of the "open door." He contends vigorously always against the so-called "spheres of influence."

Lord Beresford's report makes a book of nearly five hundred pages of thick paper, with large print. He does not conceal his meaning and desire for an Anglo-American alliance. In the bright and gay stamp, upon the yellow binding, of the Stars and Stripes and the Union Jack, these two emblems stand staff to staff, with the yellow flag of China beneath, on which a four-legged, five-toed, red-bellied dragon is trying to swallow a red sun. Whether that sun-ball will be most easily digested if marked "open door," or "spheres of influence," remains to be seen, for China's dragon at present seems to be blind. Besides a voluminous appendix of reports of the various meetings in China, an index, and two portraits of the author, there are two maps, one showing the waterways and trade routes of China, and the other the proposed or completed railways, the location of beds of iron, coal, and minerals, with tables of the area and population of the provinces.

The report is in the brisk, straightforward language of a sailor and man of affairs. In his power to make commercial, trade, and statistical matters interesting, the author reminds us of Mr. Gladstone. The abundant information given is of the first order of value to one who would know the actual China of to-day. British commerce, once the only occupant of the field, has now to face competition and adverse political influences, yet sixty-four per cent. of the foreign trade of China still remains under the British flag. The merchants, as individuals and associated in Chambers of Commerce, were a unit in urging that the "open-door" policy ought to be maintained, and that it was the only one that would save the integrity of the Empire. On the other hand, when the author tells us about the Chinese and their rulers, and gives the results of his inquiries and inspections, we have a most pitiful and monotonous story of corruption, weakness, wantfulness, and inability to know the real needs of the nation, to read the signs of the times, or to understand the dangers, both internal and external. There is an apparent paralysis of the power of initiative. All foreigners agree with the author that China's first requisite is a good

police system for maintaining domestic tranquillity. Then must follow a reorganization of the military and naval forces to protect the country from foreign enemies. To show the difference between Japan, which, as to proportions of population and area of domain, is as a pigmy, but which in unity of purpose is an athlete, and China, which, though a giant, is a helpless hulk, Japan, with a population of 42,000,000, had a foreign trade last year of \$444,000,000, while China's foreign trade was only \$495,000,000. Yet the Chinese mandarins are still drawing large sums from the treasury to feed, clothe, and equip "armies" which are chiefly on paper, being in actual existence little more than skeletons. For dress parade and inspection, coolies are hired by the day to fill up the ranks. In the arsenals, equipped with costly machinery, the mandarins will have their way. They manufacture jingals instead of artillery of the latest model. The infantry are armed with rifles of a dozen different patterns. The use of bows and arrows is not only still warmly commended, but is in actual practice by soldiers who are expected to fight men with rifles that can kill at two thousand yards. In a word, it seems almost impossible for the average mandarin to rise out of the ruts of a thousand years.

While Lord Beresford intelligently urges the open-door policy—on which Lord Salisbury seems to have turned his back since the book was put in type—as the cure for the old Empire's troubles, he does not tell us how the Chinese character is to be made over or the tide of corruption stemmed. Who, or what, is to open the eyes of the Chinese, or give them moral stimulus or the power of mental initiative? We need a book that will satisfactorily answer that question. This, certainly, is the fact, that in Japan the man of letters was also a soldier. Furthermore, while the central idea in Chinese ethics is filial piety, that of the Japanese is loyalty. The Japanese are more than a race, they form a nation. That the Chinese do is more than doubtful. It is possible for China to become self-reformed, but with only her ethical system, from which the tap-root of aspiration was cut ages ago, it is hard to see how her regeneration can come, either under the "open-door" or the "spheres of influence." Something more than politics must save her.

*The Great Lord Burghley: A Study in Elizabethan Statecraft.* By Martin A. S. Hume. Longmans, Green & Co. 1898.

The present Bishop of Oxford says jocularly, in the preface to a volume of collected addresses, that he cannot imagine why he is printing them unless it may be because he has grown addicted to the reading of proof-sheets. Major Hume, too, must have had his share of revising proofs during the past three years, for in that time he has published five or six historical books. These we have welcomed with real pleasure, both for their mastery of Elizabethan and Spanish subjects and for the liveliness with which they are written. Nor would we hint that their author is now producing literature at too fast a pace. If we mention his prolific energy here, it is for the sake of drawing a comparison between the present biography and his other numerous works. We should probably go beyond the mark were we to call Burghley one of Major

Hume's heroes, but he holds the Elizabethan statesman in marked respect, and devotes to him the most elaborate study which, so far as we have seen, has yet issued from his pen.

One cannot deal with Burghley on a small scale. The materials which he left his biographers are enormous, and if Nares erred on the one side in producing a series of quartos which weighs sixty pounds, the shortcomings of the epitomist are almost equally glaring, though they may not be so ludicrous. According to the scale of modern memoirs—e. g., Lord Selborne's autobiography—the 500 octavo pages of Major Hume are indeed but a moderate book. For one surrounded as he has long been by the ample records of Burghley's time, verbal restraint must be difficult, even with a fresh remembrance of Macaulay's satire against the Brobdingnagian propensities of Dr. Nares. Considering that among the Lansdowne MSS. at the British Museum there are 122 folio volumes of Burghley's papers, and that Lord Salisbury's collection at Hatfield comprises 30,000 documents, any sketch of the man's career which can be contained in one volume is reasonably compact. Just as a life of Sir Robert Peel means interminable Hansard, a life of Lord Burghley means interminable dispatches.

The clearness which is characteristic of Major Hume's literary style is also noticeable in what he says concerning his attitude towards Burghley. He regards Elizabeth's Lord Treasurer neither as a "demigod," nor as a statesman of the highest class, nor as a high ethical example. He even professes that our modern moral standards are out of place in judging the acts of Tudor politicians. It was during Burghley's age that the majority of the English nation "cheerfully changed their faith four times in a generation to please their rulers," and therefore it would be

"absurd to hold up to especial obloquy a minister for having persecuted at one time a religion which at another time he professed. The final triumph of England in that struggle of giants was won by statesmen who, like their mistress, owed as much to what we should now call their failings as they did to their virtues. Their vacillation and tergiversation in the face of rigid and stolid opponents were main elements of their success. Cecil was by far the most honest and patriotic of them, but he, too, was a man of his age, and must be judged from its standpoint—not from that of to-day."

For purposes of this review, the domestic relations and even the social qualities of Burghley are largely negligible, but apropos of the vast wealth which he accumulated and of his other canny traits, we must cite Mr. Hume's estimate of his egotism when viewed side by side with his public duty. It is, that country came before family. "The first cause he served was that of the State, the second was William Cecil and his house. Through a long life of ceaseless toil and rigid self-control, these were the mainsprings of his activity and devotion." Moreover, we should emphasize the sense of personal dignity which, at a time of almost universal pilfering and blackmail, kept him above suspicion of bribery. When regarding the rights and wrongs of public questions, he showed the disinterested temper of a jurist, and under other circumstances he might readily have developed into a great judge.

As a royal councillor, Major Hume considers that Burghley checked much of Eliza-

beth's flightiness and created in her mind a salutary confidence. "When passion or persuasion led her into a dangerous course, as they frequently did, she knew that Cecil, sagacious, and steady as a rock, would advise her honestly." At the outset he had become a member of the advanced Protestant party surrounding Somerset, and though only by wariness he escaped his first patron's fall, and was often forced in later days to trim his sails, he clung to Protestantism for what it meant politically. On the other hand he dreaded France, however governed—even by the Béarnais—and inclined towards a Spanish connection whenever the religious issues which were respectively typified by the English and Spanish governments could be forced into the background.

Historically, Burghley's attitude towards France and Spain is very interesting, for it was not merely a personal fancy, or a prejudice which he had derived from his surroundings. He had inherited it as a tradition of statecraft from the early years of the fifteenth century, when England and Burgundy were arrayed against France and Scotland. Burgundy and Spain becoming connected by marriage, the latter assumed in Burghley's eyes the place of recognized ally. The rancor of Philip II. against Protestantism, and his position at the head of Roman Catholic Powers, made him a difficult person to negotiate with, but Burghley was always looking in the direction of a *rapprochement*. Just as Richelieu in the next generation sided with the Protestant princes of Germany while putting down the Huguenots at home, so the English statesman would by preference have sided with Spain against France while repressing Romanist activity in his own island. Major Hume quotes a saying of De Beaumont, the French Ambassador in 1598, that Burghley still heads "all the old councillors of the Queen who have true English hearts; that is to say, who are enemies of the welfare and repose of France."

As usual, we have only words of commendation for Major Hume's sound learning and entertaining style. We must, however, confess to some amusement at a passage in which he strikes a balance between divine and human elements of control in mundane affairs: "How England should emerge from the welter of the old tides and the new, depended to some extent upon providential circumstances, but more largely still upon the personal characteristics of those who guided her national policy and that of her competitors." But this graceful concession to Providence of a recognized though subordinate rôle opens up questions which it is no part of our function to discuss here.

*The Real Hawaii.* By Lucien Young. Doubleday & McClure Co. 1899.

*The Making of Hawaii.* By William Fremont Blackman. Macmillan. 1899.

*Hawaii Nei.* By Mabel Clare Craft. San Francisco: William Doxey. 1899.

Perhaps the most innocent way of exploiting our conquests is to write books about them. Even if the books contain much that is untrue, no great harm is done, for the fate of the countries is settled; while there is a faint hope that if the truth concerning them becomes generally known, their condition may be ameliorated. Doubtless the American public has grown a little tired of Hawaii, having had the affairs of

that region thrust upon its attention for some years; but as these affairs remain unsettled, we must still welcome information, and the three books before us furnish a good deal of it. Each has its purpose—one to prove that the revolution was justified, one that present conditions are the result of evolution, and one to arouse pity for the fate of the race that once possessed the islands. All, however, include much historical matter of sufficient authenticity, and many descriptions of persons and places and travels and customs. Mr. Young is more elaborate, Mr. Blackman more philosophical, Miss Craft more imaginative; but all have written well.

Mr. Young, who is an officer in our navy, participated in the original revolution, and defends it with much show of righteous indignation. His reasons are the wickedness of the Hawaiian people and their rulers, the practical ownership of the islands by foreigners, the diabolical designs of Great Britain, and the strategical advantages of the post. He tells us that while England maintains a seeming friendship towards the United States, "it is a moral certainty that the near future will draw Great Britain and the countries of Europe, by mutuality of interest, into an antagonism to the United States." Great Britain is preparing to treat us "as her greatest foe." She has drawn a chain of hostile ports around us, and the only missing link is Hawaii. Hence Hawaii "is second in importance to no other single point on the earth's surface." Its importance "is no more a matter of opinion than is a geometrical axiom. It is a primal, incontrovertible fact." This wisdom has of course not been hidden from the Britishers, and their insidious schemes are fully exposed by Lieut. Young. It is plain enough that if we look through his glasses, our country was not safe until the American flag was hoisted over the Government offices in Honolulu.

Prof. Blackman's work is a study of social, political, and moral development, or, we might say, decadence. The natives have been, after a fashion, Christianized, and after a like fashion civilized. The result is that most of them are dead and the rest are dying. They are almost universally licentious and diseased. Their place has been taken by a mongrel population, and the hope of the region lies, according to this writer, in the immigration of Teutons, who shall eventually find the tropics as favorable for their development as the temperate zones. Meanwhile Hawaii is ruled by a slaveholding aristocracy, who fatten on the products of Asiatic bondmen. It is vain to deny that slavery has been re-established under the American flag, although probably in a mild form. Whether the relations between masters and contract laborers are better than between our planters and their slaves, is an unsettled question. Prof. Blackman takes a hopeful view of the situation, but the evidence that he presents hardly supports it. At all events, his account of the islands and their people is remarkably free from bias and is marked by sobriety of statement.

Miss Craft's contribution is in some respects more superficial than the others, her book being made up largely of letters written to American journals at the time of the revolution. Nevertheless, she has the insight that comes from living on intimate terms with the natives, and it is

impossible not to share her sympathy with them. They mourn the extinction of their own government, but they are not of the stuff of which rebels are made. They have much to complain of, according to Miss Craft, whose arraignment of the missionary rulers is severe, but they are too few and too feeble to resist. A large part of her book is devoted to description of a somewhat flowery, and occasionally poetical, character—not bad of its kind. Altogether, by a perusal of these three books one may feel that he has a sufficient knowledge of the conditions, past and present, under which the history of the Hawaiian Islands has been and will be shaped.

*The Social History of Flatbush.* By Gertrude Lefferts Vanderbilt. D. Appleton & Co. 1899.

*History of the Town of Flushing.* By Henry D. Waller. Flushing: T. H. Ridenour. 1899.

From the heights of Prospect Park in Brooklyn one looks down on the hamlet of Flatbush, placed on a plain sloping gently to the ocean, and so hidden among embowering trees and shrubs that its pretty ancient name, Midwood, seems more fitting than its modern one—a corruption of two Dutch words, signifying level and forest. Midwood was one of the five little groups of farms clustered about the western point of Long Island, settled by colonists from Holland, who followed in the track of Hendrik Hudson, and chose for their home the fertile soil of Seawanhaka, opposite the Island of Manhattan. Descendants of sailors and soldiers, they left the turmoil of a struggle for life among the waves to seek new homes to be hewn out of the heart of a forest wilderness. Under the government and authority of the States-General, they bought their lands in fair bargain from peaceable Indian neighbors, and devoted themselves to diligent agriculture; the palisades required by law to be built around their houses being needed more for protection against small wild beasts than against savages. These five towns remained intensely Dutch, little disturbed by the streams of alien immigration mingling with the ancient stock which flowed so copiously among their neighbors of Manhattan. The author of the 'Social History' finds little to record in the short and simple annals of Flatbush except the tranquil progress of a pure domestic life, carefully nurtured by religion and common-school education. She draws with filial tenderness the picture of thrift and probity, and collects with faithful and minute detail such descriptions of the ways and lives of the inhabitants, their architecture, implements, dress, and customs, as compose a veritable museum of relics, reviving the memory of a civilization only two centuries old, yet ancient to us of this day.

About a score of miles eastward from Midwood, the town of Flushing, originally Vlis-singen, was established on the north shore of Long Island in 1645, under a patent granted by Gov. Kieft of New Netherlands. In its position, its original settlement, and its varied history, Flushing presents a strong contrast to its quieter neighbor. Though the source of its title and the form of its government were derived from Holland, not a Dutch name is to be found among the original patentees, who were all English. The claim of English dominion, established over

the western part of Long Island only after a war, gained validity in its eastern part by the force of events at an earlier date. The little village, when only two years old, was drawn into the dispute through a claim made by the agent of Lord Stirling, under a grant from the Plymouth Company. The agent, proclaiming himself Governor of Long Island, was promptly disposed of by Stuyvesant, who sent him as a prisoner to plead his case in Holland. The town was involved, too, in the quarrel between Connecticut and New Amsterdam over the boundary which had been settled in 1650 by an agreement, called the Hartford Treaty, which Holland ratified, though the English disregarded it, continuing their encroachments both on the mainland and among the Long Island towns. Some of these even petitioned the Hartford colony to cast over them the "Scurts of your government and protection." For a time, however, the quarrelling provinces agreed to exercise no authority over the Long Island towns, leaving them in an anomalous state of quasi-independence. They formed themselves into a "Combination" under the guidance of one Capt. Scott, an English adventurer. Both provinces soon set upon this unlucky chief, who was banished, and a sort of peace continued until the Dutch rule came to an end.

Among so sturdy and restless a community as that of Flushing, of course religious disturbances were likely to be as rife as political troubles were. Their first settled minister of the Gospel was Francis Doughty, the true type of an ecclesiastical adventurer, an Episcopalian silenced as a Nonconformist, who emigrated to Taunton, preached the heretical doctrine that Abraham's children ought to have been baptized, and was banished from Rhode Island. Thence he came, for liberty of conscience' sake, to Newtown, where he attempted to set himself up as a patroon, and was at last forced by Stuyvesant on the reluctant inhabitants of Flushing, among whom he remained till his church was closed for seditious preaching against the authorities, and he himself took refuge in Virginia.

The most interesting chapter in the religious history of Flushing is that which relates to the Quakers, who came first to the town in 1657. They were regarded by Stuyvesant as "a heretical and abominable sect," and severe punishment was inflicted on all who harbored them. This persecution called forth from the leading inhabitants a vigorous and noble remonstrance, followed by the arrest and imprisonment of many of its signers. Ultimately, the subject came under the cognizance of the Directors in Holland, who administered to Governor Stuyvesant that stern rebuke, famous in history, which ended for ever this single attempt at persecution known to New Amsterdam. It should be remembered, to the honor of this peculiar people, that they were the first among the colonists to confess the iniquity of slavery. The subject, first discussed at the annual meeting of Friends at Philadelphia in 1693, was considered at many of the meetings of the Flushing Quakers. An address published by one of their number, William Burling, in 1718, is one of the first productions of anti-slavery literature in this country.

Mr. Waller's volume is an unpretentious compilation of historic facts, without any attempt at teaching philosophy by example, and is enlivened by curious anecdotes and biographical sketches of several men of note

given by Flushing to the service of the State and nation, both before and since the Revolution. Attention is irresistibly drawn to the contrast between the annals of the Hollanders in New York and those of their kindred, the Boers, who emigrated under like auspices and about the same period to the wilds of Africa. Yielding to the course of events, the Dutch in this hemisphere blended insensibly with the conquering race, lending to the union their own peculiar virtues and qualities. The African colonists from the first resisted and to this day resist the spirit of the age. Agriculturists always, they were compelled by their position between savage enemies and civilized aggressors to become also hunters and warriors. Driven ceaselessly backward by the rising tides of commerce and conquest, they were forced by the English first westward from Cape Colony into Griqualand, thence, after stern resistance, into the region watered by the Orange River; and, at last, with obstinate resolution taking up another exodus, they trekked their long and painful way, with flocks and families, towards the heart of the continent, across the River Vaal. In the midst of this haven of rest a new danger suddenly arose. The discovery of gold inundated their chosen home with floods of alien and unquiet adventurers. True to the spirit of the age, these demand a share in the government, which would speedily grow into its control. The Boers, firm and stubborn as ever, persist in being an anachronism and an anomaly among the peoples of the earth. They stand at bay.

*Through Nature to God.* By John Fiske. Boston: Houghton, Mifflin & Co. 1899.

To watchers of the tides and currents of thought, just now setting decidedly against rationalism, the later turn of Mr. Fiske's philosophy is an interesting phenomenon, and none the less so where his argument seems insufficient. The present little volume, continuing the line of thought of the 'Idea of God,' has three disconnected parts, entitled, "The Mystery of Evil," "The Cosmic Roots of Love and Self-Sacrifice," and "The Everlasting Reality of Religion." Mr. Fiske's solution of the problem of evil is the familiar one, that evil is only relative, and that it is absurd to suppose good to exist without a correlative and reacting evil. Hardly more than a hint is afforded of how this thought is to be followed out, although it was developed at large more than a generation ago in James's 'Substance and Shadow.' In the second part, the author endeavors to show that "the cosmic process exists purely for the sake of moral ends"—quite too serious a proposition for so light a book. He has much to say of the prolonged infancy of man; but he does not attempt to refute the alleged facts that have again recently been put forth and tabulated, to show that the duration of man's infancy is related to the length of his natural life in the same way as that of all other mammals. We remark, too, the lack of any clear distinction between cerebral evolution taking place strictly by natural selection (the more cunning and, to some extent, the more good-natured individuals averaging in the long run the larger families) and intellectual development under the influence of tradition, which variations at birth can influence only so far as those individuals who are

congenitally suited to accepting established customs, are likely to produce more numerous progeny than those who are congenitally ill adapted to the traditional ideals.

If a "cause," in the sense of an active body of sentiments, can be damaged by an argumentative defence that seems at first sound, but is sure at last to be found worthless, then it may be doubted whether the third part of Mr. Fiske's book is likely to do religion more good or more harm. The nature of his reasoning is sufficiently shown by the following sentences:

"Now if the relation thus established in the morning twilight of Man's existence between the Human Soul and a world invisible and immaterial, is a relation of which only the subjective term is real and the objective term is non-existent, then, I say, it is something utterly without precedent in the whole history of creation. All the analogies of Evolution, so far as we have yet been able to decipher it, are overwhelmingly against any such supposition. To suppose that, during countless ages, from the seaweed up to Man, the progress of life was achieved through adjustments to external realities, but that then the method was all at once changed, and, throughout a vast province of evolution, the end was secured through adjustments to eternal non-realities, is to do sheer violence to logic and to common sense. Or, to vary the form of statement, since every adjustment whereby any creature sustains life may be called a true step, and every maladjustment whereby life is wrecked may be called a false step; if we are asked to believe that Nature, after having, throughout the whole round of her inferior products, achieved results through the accumulation of all true steps and pitiless rejection of all false steps, suddenly changed her method and, in the case of her highest product, began achieving results through the accumulation of false steps—I say we are entitled to resent such a suggestion as an insult to our understandings. All the analogies of Nature fairly shout against the assumption."

There is much more of this. But it is mere reiteration. Every reader will see how all this heat and "shouting" contrasts with Mr. Fiske's quiet way of pushing his reasons when he sees their force clearly, instead of only *feeling* something, he knows not quite what. To say that "the analogies of Evolution are overwhelmingly against any such supposition" is quite the reverse of the truth. According to accepted ideas of evolution, species do not become adapted to their environment in so far as that environment enjoys abstract "reality" (if that means anything), but only in so far as that environment affects the continued propagation of the species. Correct notions about ways of getting food and the like are developed because the species would die out if they were not. But Mr. Fiske will not be able to point to a single idea which evolution has rendered true in any other sense than that it is favorable to the continuance of the species. He himself, in his second sentence above, defines a "true" step as an "adjustment whereby any creature sustains life"—which is approximately, though not accurately, a good definition for the purposes of evolutionary philosophy. But, in that sense, the development of a wholly erroneous conception of the sun or moon, or of another life, or of anything else which in some respects cannot really influence the species, may be a "true step," provided it be stimulating or tend to sustain life. If Mr. Fiske would content himself with saying that Truth, in any other sense than that of a valuable adjustment, is unattainable, if not inconceivable (as his Pragmatist friends, James and Peirce, con-

tend), his reasoning would be considerably amended.

There are several passages in the book which remind us that Mr. Fiske is not a thorough-going evolutionist, but is a follower of Spencer, who holds that Evolution and Devolution ceaselessly alternate under the influence of an immutable law that knows no growth, no cause, no reason; so that not evolution, but immutability, according to his account of the matter, is the general characteristic of the universe.

*The Races of Europe: A Sociological Study.* By William Z. Ripley, Ph.D. With Supplementary Bibliography of the Anthropology and Ethnology of Europe. Two vols. D. Appleton & Co. 1899.

Dr. Ripley's book impresses one at sight as the result of great labor and painstaking. You need not be an ethnologist to discover that the author, the artist, and the publisher have done their best. The race and type portraits are most of them in front and side-face, to enforce the text. The graphic charts and maps of cephalic index, stature, color, etc., compiled from a hundred heterogeneous sources, are brought to a common, intelligible standard. The author says that most of these are the handiwork of his wife, so we take off our hat to her for the most interesting parts of the volume, which not only illustrate the text, but brilliantly illuminate it. The bibliographic supplement is both a collection of book titles and an alphabetic list of topics, under each of which the pertinent authors are given in chronological order. The Boston Public Library, with commendable generosity, has brought the books together at Dr. Ripley's behest. Any student past fifty will miss the name of almost every author at whose feet he sat thirty years ago.

Putting aside society, language, industries, fine arts, and religions as functional only, Dr. Ripley devotes himself to the term *race*, meaning blood, as applied to Europe, insisting always that the study cannot be divorced from the environment, in the fullest meaning of that term. Races of Europe and the map of Europe—that is the text. Head-form holds the first place as a characteristic of race; after that come color in the skin, the hair, and the eyes, and stature. On this basis it is inferred that there were three races in Europe, all secondary or derivative. By race the author does not, with Deniker, mean the biological groups now peopling Europe; much less does he hold the view of Agassiz regarding fixed types. As an evolutionist he holds that races are only ideals, inseparable branches of a common stem. The three ideal, fundamental races of Europe are:

1. *Teutonic*, a variety of the Cro-Magnon man, with long head and face, light hair, blue eyes, tall stature, and narrow, aquiline nose. Also called *Homo Europæus*, the Nordic, Kymric, Germanic, and *Reihengraber* race.

- (2.) *Alpine* (Celtic speech, Hallstatt culture, Asiatic affinities). With round, broad head, light chestnut hair, hazel-gray eyes, medium stature; broad and heavy nose. Also called *Homo Alpinus*, Lappanoid, Occidental, Aveyron, Dissentis, Sarmatian, Celto-Slavic race. Lineal descendants of the lake-dwellers.

- (3.) *Mediterranean*, earliest, with long head and face, dark brown or black hair, dark eyes, medium stature and broad nose.

Also called *Homo Mediterranensis*, Atlanto-Mediterranean, Ibero-insular, Ligurian, Iberian race.

In France all three races occur—the Alpine in isolation, the long-headed in the open, the Teutonic latest and most energetic. Remnants of the Cro-Magnon race still survive in the Dordogne valley. The Basques are not a physical type, but have been evolved from the Mediterranean by isolation and inbreeding. The Scandinavians had no early stone age. They are one with the Lithuanians, Finns, and Teutons, having an Alpine substratum. Germany differs little from France in race, being Teuton in the north and Alpine in the south. If they only knew it, they have no need of strife. Even the withering suggestion that the Prussians are nothing but Finns, anyhow, loses its force when you know that the Finnish head is as long as the Teuton's. Italy was originally peopled by Ligurian long-heads; the present Umbrian type is an overflow of the Alpine Celt. The Etruscans came upon the Umbrians as a mixture of Alpine and Tyrrhenian.

Beyond the Pyrenees, Africa! The Spaniard is Mediterranean, allied with Africa from the earliest prehistoric period. Switzerland is the home of the broad-headed Alpine descendants of the lake-dwellers, with long heads in the highlands and the valleys. Holland is Teuton in its highways and Alpine in its byways. The British Isles have the long head as the prevailing type, but the round-barrow man was round-headed, whether Celt or not. The Russians are mixed of long-headed Teuton, Finn, and Lithuanian, Lappish Mongol-Tartar, and Slav; these last are fundamentally Alpine, and entered Russia from the southwest.

The Jews have changed head-form in the historic period; nine-tenths of them being now short-headed. They are not a race, or a language, or a nation—they are a people. The Greeks were anciently long-headed, but the author has some excellent words about their present melancholy condition between the two brachycephalic millstones. Turks are physically allied to Mongols, and

are in Europe only to keep the dogs of war apart. The Magyar is one-eighth Finnic and seven-eighths Alpine. In the Caucasus the Iranian long-headed brunet is in rivalry with the Armenian short-head. Asia Minor is Mediterranean and Iranian at bottom, overlaid with Armenoid, Hittite and Turk.

A brief discussion of the later stone period and earlier iron and bronze period brings the author in his closing chapters to the serious consideration of race and environment in relation to the critical problems of modern life. Hereditary forces, both natural and selective, are allowed their just share in moulding men and manners, but, with much force, environmental pressure, both physiographic and human, is here accorded a large place in the programme. The chapters on urban selection and acclimatization cannot fail to awaken the liveliest interest just now. It is only fair to Dr. Ripley to say that he professes only to have coördinated a vast mass of material, and that he himself often balks before jumping to conclusions which the data do not now justify.

*Irish Life and Character.* By Michael MacDonagh. Thomas Whittaker. 1899. Pp. viii. 382.

The title of this volume is misleading. What is offered us is not a grave study of Irish life and character: it is an anthology—admirable, the best that has yet appeared—of Irish humor, repartee, and sarcasm, bulls, colloquialisms, and oddities; a collection such as might be made concerning most countries or peoples. In no country and with no people, least of all in Ireland, do such constitute the staple of life, or are they a conclusive indication of real life and character. It is a misfortune for any people not fully masters of their own destiny, when this side of their lives comes to be too much dwelt upon. "Nigger minstrelsy" has worked harm to the negro, as the Irishman of the music-halls has to Ireland. It is well for the people of India that the humorous side of their lives has not thus been exploited; it will be well for the Filipinos if theirs be not.

These considerations aside, Mr. MacDonagh has well executed his task, and his book may be taken as a standard on the subject. It would have been interesting if in footnotes or appendix he had stated the sources whence his examples were culled; and an index would have laid his readers under additional obligations. Very many of his staple pieces are old friends. One must bear in mind the extent to which the *ben trovato* prevails. The world would be a less pleasant place than it is if anecdotes, flowers of speech, and travellers' tales were passed on in the truthful nudity of their origin, as if reproduced by phonograph. We have no desire to throw the cold water of explanation or criticism over some of the author's most amusing passages. We must, however, protest against the thin end of the wedge of political controversy occasionally introduced, as where it is hinted that differences between North and South of Ireland, and between Irishmen and the rest of the world, are due principally to racial characteristics rather than to history and environment. The author's remarks on the reproduction of Irish dialect in writing are admirable, and should be taken to heart by all who purpose making incursions, verbal or written, in that field. Upon one important point we must differ, and our experience has been longer and perhaps wider than Mr. MacDonagh's—that is, the general joyousness of Irish life, and the openness of character of the average Irishman. We believe that Irish life, at least since the famine, is upon the whole more sombre than that of neighboring English-speaking peoples; and, as to openness of character, it is a myth. There is a *mauvaise honte*, a caution, even a suspicion (all the result of circumstance) in Irish intercourse, little prevalent elsewhere. The Irishman is apparently at first easier to become acquainted with and apparently open; but he guards his inner life, his thoughts, his real opinions, to a degree unknown among people who have had full control of their own fate.

Taking this book for what it really is, we can unhesitatingly recommend it.

**Daniels's Elements  
of Public Finance**

Including the Monetary System of the United States. By  
Prof. WINTHROP MORE DANIELS of Princeton. 378  
pp. 12mo, \$1.50 net.

A handy manual for general reader or student, describing the actual system in the United States, with some exposition and criticism of our monetary system. The author's standpoint is in the main conservative, favoring proportional as against progressive taxation and corporate initiative (under legal restriction) as against public ownership of most urban monopolies.

Nearly Ready.

**DESIDERIUS ERASMUS**  
(1467-1536), the Humanist in the Service  
of the Reformation. By EPHRAIM EMERTON,  
Ph.D., Professor of Ecclesiastical  
History, Harvard University.

Professor Emerton has laid the general public under a heavy obligation by producing a very carefully and, at the same time, brilliantly written study on the prince of the Humanists of the XVI. century. His book will prove its superiority to the other English books on Erasmus, when compared to them, by reason of its sanity and thoroughness.

PREVIOUSLY ISSUED:  
**Martin Luther (1483-1546), THE HERO OF  
THE REFORMATION.** By Henry Eyster Jacobs, D.D., LL.D.

**Philip Melancthon (1497-1560), THE PRO-  
TESTANT PRECEPTOR OF GERMANY.** By  
James William Richard, D.D.

## Maine Coast.

FOR SALE.—A compact tract of 400 acres of land in one of the most central positions on the mainland of Penobscot Bay. It has nearly four miles of bold rocky shore front, with beaches, coves, and beautiful headlands. The land runs to high elevations, and has great topographical variety: pine woodland; meadows and grassy slopes. There is a steamboat landing close by with daily service to and from Boston and the West. It is within half an hour by steamboat from Islesboro and Castine. There are several good farmhouses on the property, an ice pond, and a trout brook. Salmon are taken on the shore. The land everywhere commands broad and beautiful views of an archipelago of islands, the broad bay, distant sea, and mountains. The property is offered for sale as a whole at a low price per acre to settle a joint account. Photographs and further details may be obtained of

J. MURRAY HOWE, Trustee,  
28 State Street, Boston.

### Study and Practice of French in School IN THREE PARTS.

By L. C. Boname, 258 South 16th St., Philadelphia

A carefully graded course, meeting requirements for entrance examination at college. Practice in conversation and thorough drill in Pronunciation and Grammar. From Education, Boston: "A well-made series. Teachers and pupils will find the three books helpful and interesting."

### HAY FEVER IS NATURE'S REMEDY.

A French discovery, recommended by eminent physicians. Its action is to heal the inflamed membrane and restore the respiratory passages to perfect health. Dry-air inhalation. Inhaler inconspicuous. Bottle with glass dropper-stopper. Through druggists, or by mail, prepaid, one dollar. Full information gladly sent.

Bard Chemical Co. 55 Franklin Street,  
705 Fifth Ave., New York.

# The Nation.

NEW YORK, THURSDAY, AUGUST 17, 1899.

## The Week.

Whether for good or for ill, the people of the United States have assumed to govern the people of Porto Rico, and no better opportunity for proving our humanity can ever occur than is afforded by the disaster which has befallen that island. At present, it must be clearly understood, the entire administration of the government, central and local, is in the hands of our War Department. We have abolished whatever government heretofore existed and substituted our own. We have assumed the entire responsibility for the welfare of the island, and, according to some accounts at least, the people have welcomed our rule in the belief that their condition would be improved. Unless our enthusiasm for humanity was entirely exhausted in slaughtering the miserable Spaniards who were forced by their Government to serve as food for powder and yellow fever in Cuba, we ought to contribute most generously for the relief of the present distresses.

The *Herald* has an instructive dispatch from Iloilo, showing that conditions in several of the other important Philippine islands are ripe for troubles as great as we have encountered in Luzon. Near Iloilo the insurgents are strongly intrenched, and "considerable fighting may be expected in the fall." In Cebu, "the insurgents still hold their strong positions in the mountains. The majority of the population do not want to fight, but are hostile in spirit." But what the *Herald's* correspondent has to say about Sulu and its Sultan is particularly interesting. This is the Mohammedan ruler whom our Christian and missionary Administration is trying to subsidize, promising to leave him undisturbed with his system of polygamy and slavery if only he will fly the American flag over those institutions. Thus far, the Sultan has not accepted the terms offered. Apparently they are not high enough. He gives out a statement that he is "like a brother to the nation of Americans, and wants to know if they are the same to him." Evidently, this Mohammedan despot comes high as a brother, but we must have him.

How do the people feel about the situation in the Philippines, and about the question of expansion generally? We know the position of some prominent men—although not a few politicians of high standing have been non-committal; but how shall we discover

the sentiments of the great mass of voters? A flood of light upon the feeling of the "plain people" is thrown by a canvass which has been made by *Farm and Home*, an agricultural journal published at Springfield, Mass., and Chicago, Ill., and having a great circulation in both the East and the West. On the 1st of May this journal propounded to its readers a series of ten questions, all of them bearing on our new national problem, except one as to whether United States Senators should be elected by the people, asking them to put their replies on postal cards. It now publishes a summary of the replies which have been received—nearly 21,000 in all, of which about 10 per cent. came from New England, about 25 from the Middle States, nearly 40 from the Central West, and the rest almost equally from the South and the Pacific Coast. The first question was, "Should the Filipinos be held in subjection to the United States, or should they be allowed to form an independent government?" The answers from each of the five sections of the country were largely in favor of independence, the totals footing up 12,520 for independence to 8,416 for subjection. The majority was still greater for Cuban independence—13,199, as against 7,362 for annexation. On the other hand, a large proportion favor the annexation of Porto Rico to the United States—11,897, as against 6,004 for its independence, and 1,746 for its annexation to Cuba. Finally, not to go through the whole list, the expressions of opinion were most emphatic on the comprehensive question, "In general, should the United States adhere to or depart from its former policy of non-interference with nations beyond either ocean?" There were 15,624 replies in favor of adherence, as against only 3,887 in favor of the new departure.

Senator Burrows of Michigan wishes to have it distinctly understood that he did not mean anything uncomplimentary to the President, or hostile to the Administration, in his recent interview. But he reiterates his belief that, if the end of the war in the Philippines is not in sight when the Presidential campaign of next year opens, the fact will be used to the disadvantage of the Republican party. The feeling which Senator Burrows expresses is evidently increasing among Republican politicians, and the Administration shows some recognition of the situation by the announcements that the army will be reinforced, and that other steps will be taken to end the war soon after the close of the rainy season. Moreover, there are signs that Republicans who have kept quiet about this business hi-

therto are getting ready to go a good deal further than Senator Burrows went, and to say that a continuance of the war will not only be bad for the Republican party, but a reproach to the nation.

To those who look on all the nations of the world as of one blood, and whose humane feeling, therefore, has embraced Spaniards as well as Cubans, it seemed that the war might prove a blessing to the common people of Spain. The government of her colonies really bankrupted the country, and when that mill-stone was cut from the neck of Spain there was hope that she might once more prosper. That hope, we sincerely regret to state, is dispelled by an examination of the Spanish budget. The last budget figured the expenditure at about \$175,000,000; but the budget for the coming year estimates the expenditure at nearly \$187,000,000. This increase is explained as the consequence of the additional burden laid upon Spain by the loss of her colonies and the expenses of the war. So far from being a relief, the lopping off of these colonies is to overweight the load of Spain. Instead of cutting down the expenses of the navy—and for a navy Spain has now no use—the Government has increased them. Instead of reducing the army, it has enlarged it. Instead of reducing the pension payments, it has added to them. Had reductions been made in these expenditures and in the charges for the church and the royal family, the public creditors might have felt disposed to submit to the confiscation of one-fifth of the interest to which they were entitled; but, as it is, they have good reason to complain. But the rate-payers, who are called on to pay \$35,000,000 more than their average annual payments for the last ten years, deserve more sympathy. There is one thing, however, to be thankful for. The Government can no longer drag its wretched subjects from their homes to perish by pestilence in the tropics. It will continue to grind them to the most abject poverty by its exactions, but it can no longer inflict exile and death in addition to fiscal oppression.

The report of the Commissioner of Pensions contains the rather surprising statement that the number of pensioners at the end of June was actually more than 2,000 less than it was a year ago. In spite of the granting of 37,000 new pensions, the ravages of death among the old pensioners, with other causes, have decreased the total number. Death alone struck off more than 34,000 names from the roll, and other changes raised this number to 43,000. The Spanish war

is already responsible for nearly 17,000 claims, and as less than 300 of these have been allowed, the charge on this account has not begun to be felt. It will be heavy enough if our forces are to be employed much longer in the Philippines, and it is doubtful if the pension payments will not again exceed \$140,000,000. When it appears that out of 111,000 claims filed 89,000 were allowed, that nine-tenths of the applications of widows were granted, and that two-thirds of those for increase of pensions were acted on favorably, it seems difficult to believe that the present Commissioner of Pensions can be accused of lack of liberality. But when we find that during the year 63 attorneys have been disbarred, 10 suspended, and 2 dropped, and that the total number disbarred is now 1,163, we cease to be surprised at any evidence of rapacity and fraud in connection with our pension system.

Evidences of dissension, or perhaps we might say of independence, among the Bryanite politicians are multiplying. Even those who were apparently united in their approval of the Chicago platform fell out in a conference last week at Syracuse when it came to drawing up resolutions. Some of them thought that the platform should be reaffirmed, "with such modifications as changing conditions may render necessary." Others opposed this, and insisted on substituting "additions" for "modifications." The dispute over this point became so violent as to result in the secession of one faction, leaving the other to declare for Bryan and against monopolies and imperialism. While this particular conference may have been insignificant in numbers, it is yet an encouraging sign to have the shibboleth of the Chicago platform discarded. Whether we desire the success of the Democratic party or not, we desire it to have some rational principles to contend for. If the ignorant and crazy element which got control of the organization in 1896 should be broken up by its quarrels, leaders of more wisdom may assume the direction.

The meeting of the New Jersey Democratic State committee at Asbury Park last week made it very evident that the Democratic leaders in that State would be glad to see Bryan and his 16-to-1 platform eliminated from next year's Presidential campaign. A reason for this is easily found. With Bryan and his doctrine at the front in 1896, the State, long counted on as Democratic, gave McKinley the unprecedented plurality of 87,692. Last year, on a platform which ignored Bryanism, confining itself principally to State issues, the Democratic candidate for Governor kept the Republican plurality down to

5,499, the Democratic vote increasing 25,000 over the vote for Bryan two years before. With so simple a lesson in mathematics in evidence, it does not require a great deal of astuteness to convince a New Jersey Democrat that Bryan is no help to the party in his State. The "old-line" Democrats are, however, as usual, timid about taking a decisive stand against the Chicago platform, and this is probably the reason why one of the leaders who gave his advice at Asbury Park was so earnest in urging that the party should "put the young men on the firing-line." The Democratic record in New Jersey on State issues, as set forth during the last ten years, is not one which in itself would cause a very enthusiastic rally around the party banner.

If we may trust a report from Louisville, ex-Governor Altgeld has taken a different position from that of Mr. Bryan in regard to the quarrel over Goebel's nomination for Governor of Kentucky. Mr. Bryan is to take the stump in Goebel's support; but Mr. Altgeld says that his election would mean the triumph of "fraud, trickery, thuggism, and crime." It would mean that "political conventions, instead of being run by the people, and carrying out the policy and will of the people, will be run by men who betray the people, and will be controlled by those interests that plunder the country." This language certainly sounds as if it might have come from Mr. Altgeld, and if correctly reported it is of a good deal of importance. He intimates that he may go to Kentucky and make speeches against the Goebel ring, and if Mr. Bryan is to appear on the other side, the present relations between the two leaders cannot continue. However this may be, we can hardly look on Mr. Bryan's taking part in the Kentucky contest otherwise than as a political blunder. Even if not antagonized by Mr. Altgeld, he will arouse dangerous animosities.

Crocker is back again, and talking volubly, in his familiar rôle of a statesmanlike observer. He went away an advocate of expansion and an opponent of Bryan. He returns an admirer of Bryan as "one of the greatest men America has produced," and an opponent of expansion. Columns of space are given to the enunciation of his new views and to speculation as to why he has abandoned his old ones. The simple explanation is that he thinks the change of position a shrewd one. He will reverse himself again within six months if he shall conclude next winter that he has made a mistake now.

The Maset committee has adjourned for a month. Its work during the past

fortnight has been very fruitful. The chief features have been the exposure of police demoralization as it is shown in the rapid increase of thefts and robberies, and the proof of the reckless disregard of the public interests with which contracts are given out to favorites by Tammany officials, as in the making of the ridiculous Horgan & Slattery municipal architects, and in the grant of most valuable privileges to corporations by the Department of Public Buildings, Lighting, and Supplies. If the community were not hardened to such things, there would be an outburst of popular indignation at the testimony of Commissioner Kearny on Friday, viz., that he gave both the Metropolitan and the Third Avenue Companies the right to put in thirty-six underground ducts on each side of the streets which they use, without getting any return for the city, and although he well knew that they did not need any such number for the wires to operate their cars, and must intend to utilize a large proportion of them for the very lucrative business of furnishing electric power in various ways. It is a public service to bring out and put on the record such facts as these, even if nothing appears likely to come from it immediately.

The Commerce Commission of the State of New York is busily engaged in ascertaining the depth and width of various canals in this country and Canada. Information of this character is, of course, necessary to enable the Commission to understand the condition of the commerce of New York city. But it is to be hoped that the Commission will not lose sight of the fact that, no matter how much money is spent on the Erie Canal, the kind of government maintained in this city is ultimately decisive. If property becomes less secure here, if taxes are to continue to increase, and blackmail to become a necessary expense in every kind of business, the commerce of the port will probably decline. No natural advantages, no development of waterways, will counterbalance the drawback of misgovernment. These natural and artificial advantages have made New York the cheapest port for both exports and imports. Local extravagance and corruption, together with the tariff outrages concocted by Congress or invented by Appraiser Wake-man, are fast making it the dearest.

The shooting of M. Labori, one of the counsel of Dreyfus, at an early hour on Monday morning, while he was on his way from his lodgings to the court-room, is the most dramatic incident of the Dreyfus case so far, but, perhaps, not the most exciting that the trial will give rise to. The arrest of Déroulède and others on a charge of conspiracy to overturn the Government, simultaneous-

ly with the events at Rennes; the conflict of testimony between Gen. Mercier and ex-President Casimir-Perier, and the rising heat within the precincts of the court-martial, all point to something like a crisis in the history of the republic, but what will be the outcome no one can foretell. It seems quite certain that the parties desiring a change in the form of government have seized upon the Dreyfus case as a *pow st*o for overturning the republic. There has been no movement, since the government of Napoleon III. was abolished, when such parties did not exist, and when they were not conspiring to restore the Bonapartist or Bourbon or Orleans monarchy. Any kind of internal commotion or external complication plays into their hands, and nothing could serve them better than the passions aroused by the Dreyfus revision.

In his testimony on Monday M. Casimir-Perier denied flatly the statement of Gen. Mercier that in 1895, when Dreyfus was on trial, there was danger of a war with Germany, and the Berlin papers ridicule the idea of such a war. Why was it necessary to get up a war scare when the former court-martial was in session? Evidently to have an excuse for the secrecy of the trial. In a secret trial, where the judges were prejudiced against the accused, it would be possible to alter documents, to introduce new matter into them, to insert the name of Dreyfus in place of the letter "D," and to bring in a verdict of guilty based upon a medley of forgeries and inconsequential matter that the prisoner and his counsel were not allowed to examine. For such a dastardly purpose a war scare was the most appropriate means at hand. This was Gen. Mercier's last card in the former trial, and is played for what it is worth now, but Casimir-Perier's testimony trumps it completely.

There is abundant reason to give credence to the London *Times's* statement that the leading traitor in the affair for which Dreyfus suffered was Lieut.-Col. Henry, who while in prison cut his own throat, and that Esterhazy was his tool, sharing the proceeds of their joint perfidy. Esterhazy was a weak character, eaten up by vices, unenterprising, and incapable of carrying on an extended plot, although base enough for any crime. Henry was a man of hardihood and of no little adroitness, as is shown by the fact that he pushed his way to the head of the secret-service department of the French army, while efforts were making to find the culprit who was betraying his country by supplying information to Germany. It was while acting in this capacity that he was detected as the forger of a document to confirm the guilt of Dreyfus, who had already been condemned and

was at that time suffering punishment on Devil's Island. For this forgery he was arrested and imprisoned. His suicide was not quite explainable on the theory that he was merely seeking to keep Dreyfus in prison, but it was easily explainable if he were the chief traitor for whose crimes an innocent man was suffering. It is a safe wager that this will turn out to be the true solution of the mystery. The question whether there are not other officers, of higher rank than Henry, who had guilty knowledge of Henry's crime, if nothing more, now becomes one of exceeding interest.

It is at last positively stated by Lord George Hamilton, the Secretary of State for India, that the Government has deliberately concluded that the gold standard is required in the interest of that empire. No other conclusion could well be reached; nor will any disturbance be likely to occur in consequence of this decision. An expiring wail is extorted by the decision from Mr. Moreton Frewen, but, compared with his former truculent vaporings, it has a despairing sound. The worst of it, according to him, is that not 3 per cent. of the inhabitants of India have yet learned that their currency was tampered with in 1893. This suggests the appalling possibility that as the outrage inflicted on them has escaped discovery so long, they may never find it out at all, and 300,000,000 of people may thus, like patients disembowelled by surgeons while under the influence of anesthetics, not know that anything has happened to them. As is well known, the common people of this country did not really understand about "the crime of 1873" until about the year 1896, which was so late in the day as to make it impossible to convince the majority of them that any crime had been committed. At all events, no one can maintain that the present action of the Government will make the condition of the people of India any worse than it has been; and as the price of silver has an upward tendency, that condition, if in any way connected with the price of silver, may be ameliorated.

The currency of India is therefore to be established on a basis in some respects similar to that of France and the United States, but with important differences. No more silver will be coined at the mint, but there will be a gold coinage as well as a gold standard, and the British sovereign will be a legal tender. The silver rupee will have an arbitrary value, sixteen pence, or fifteen rupees to the sovereign. The rupee will continue to be a legal tender, but the Indian Government assumes no obligation at present to maintain the "parity" of the metals. Practically, one can exchange silver coins for gold at the offi-

cial agencies of the governments of France and the United States, but nothing of the kind is contemplated by the Indian authorities. It is not improbable, however, that the legal "parity" may be maintained in practice, because the price of silver is not likely to fluctuate a great deal, now that its demonetization as standard money has taken place throughout the civilized world.

Complaints of the conduct of English soldiers in India have been made from time to time, and a few days ago a long list of outrages committed by them against natives was read out in the House of Lords. The charges covered everything from robbery and assault to wanton murder. It was a pretty black showing for Tommy Atkins. The Secretary for War did not deny that the army in India had been disgraced by such crimes, and said that everybody must regard them with the "utmost reprobation." The War Office would do its best to see that the offenders were brought to justice. Still, he thought that there had been an improvement. The amount of crime committed by British soldiers in India had steadily diminished, as had the number of courts-martial. All that the discipline of the army could do to repress and punish acts of ill-usage of the natives was continually exerted; yet such things, admitted the Secretary, were inseparable from military life. He evidently needs to sit through a lecture by Gov. Roosevelt on the "strenuous life."

It is not surprising that Americans should look on the confederation of the Australian colonies as a normal step in their political evolution. The votes cast in the Australian colonies, however, indicate that very diverse views concerning the wisdom of confederation prevail there. In Victoria, South Australia, and Tasmania, the advantages of confederation were so clear as to make the vote for it overwhelming. But in New South Wales the case was very different, and as 80,000 votes were cast against confederation, to 101,000 in its favor, it is evident that some grave objections were believed to exist. One of these objections was that the taxes of New South Wales would be increased; but the most serious one was that the free-trade policy, so long established in New South Wales, can hardly be maintained. The Federal Parliament will probably be a protectionist body, and the establishment of intercolonial free trade will be a small compensation for the creation of a tariff wall against the outside world. The prosperity of Sydney cannot be expected to increase at its former rate, and the whole colony will probably find it has surrendered substantial advantages for those of a sentimental character.

## THE FILIPINOS TO THE POWERS.

On the subject of Aguinaldo's appeal to the Powers to bring influence to bear at Washington for the purpose of ending "the unjust war which is devastating the country," it may be instructive to imagine the substance of the remarks that might be made in the Cortes by that distinguished Senator and General, Don Valeriano Weyler.

"I take the floor [*pido la palabra*], Mr. President, to call the attention of the Senate and the Government to the request of the Filipino republic for recognition by the European Powers. Grave questions of international law and comity are involved in this matter, upon which it might be thought that I, a brusque soldier, should have no competence to speak. But your Señorías will not forget that during my administration of the island of Cuba these same questions were fully discussed in the Senate of the United States. It was my duty to take cognizance of what was said by the able jurists in the American Senate. The swords of the insurgents I could well despise, but who would not tremble before the tongue of a Frye, a Lodge, a Morgan? A mere child myself in all these niceties of international law, I sat at the feet of the Gamaliels in the Senate at Washington, and it is from them I learned the great principles regulating the attitude of one nation towards the colonies of another, and determining the recognition of insurrectionary forces. Simply using the word Filipinos where the learned American Senators said Cubans, I will show your Señorías that it is our duty, as it is that of all the European Powers, to interfere in the name of humanity and liberty to put an end to the cruel war in the Philippines.

"One of the dicta of the illustrious Lodge, Mr. President, was that there was something unnatural and abhorrent in the arbitrary control of an island, containing 1,500,000 people, by a country 3,000 miles away. What shall we say, then, of sending troops to subdue 8,000,000 people 7,000 miles away? Again, it was argued by the enlightened Morgan that recognition of the Cuban insurgents was due them because they were supreme in a large part of the island. What did it matter, he demanded, if Spain held the capital and all the seaports? The Cubans held the mountains and swamps in the interior—a larger area, all told, than that controlled by the Spaniards—and were therefore entitled to be known as the masters of the island. This is an overwhelming [*contundente*] argument for the immediate recognition of the Filipinos. They rule a far larger part of Luzon than the rebels did of Cuba. On the five-foot map of the Philippines, all the territory in the control of the Americans can be covered by a child's hand. If we heed the appeal of the Filipinos, we shall simply, therefore,

be executing the principles taught us by distinguished Americans.

"The prolonged and bloody nature of the war in the Philippines, Mr. President, is another reason for interference by neutral Powers. Gen. Otis's predictions of a speedy collapse of the insurrection have proved as illusory as those I used to issue in Havana. The Filipinos are fighting more stubbornly than the Cubans. There is no hope of subduing them except by exterminating them. Many American soldiers say that the natives will have to be killed off. But when I said the same thing of Cuban rebels, the American public cried out on 'Weyler the Butcher,' and Senators clamored for American interference to prevent the extermination of men who could not conquer, but would not submit. Is it not time for us, and for all civilized Powers, to say to President McKinley, as he said to Spain: 'In the name of humanity, this war must stop'?

"Point after point in the American argument for recognizing Cuban belligerency might be pressed, Mr. President, as conclusive reasons for our granting belligerent rights to the Filipinos. The latter have a larger army than the Cubans ever had. They have a fully organized Congress, composed of 100 men, who, writes one American observer, 'would compare in behavior, manner, dress, and education with the average men of the better classes of other Asiatic nations.' As for their fitness to govern themselves, we have the testimony of the victorious Dewey and the American General King, that they are far superior to the Cubans in that particular. An American correspondent wrote of Aguinaldo's government that 'he has made life and property safe, . . . made brigandage and loot impossible . . . and a woman's honor safer in Luzon than it has been for thirty years.' There is thus a far stronger and more promising republic in the Philippines than there ever was in Cuba. The American publicists who taught us that it was right to recognize the one, will be the last to complain if we recognize the other.

"Spain, your Señorías, has especial reason for moving in this matter. Several thousand Spanish prisoners are in the hands of the Filipinos—not only soldiers, but civilians, many women and children. Their sufferings wring our hearts. The United States undertook, by the Treaty of Paris, to secure their liberty, but has not been able to do so. Our country offered to ransom them for a great sum, but the Americans would not allow it. Aguinaldo now proposes to release the captives if we will recognize his government. How long would the Americans have hesitated if the case had been as flagrant in Cuba? They say of the Filipinos, as we said of the Cuban rebels, that they are bandits and savages. But let me read what a Frenchman,

M. Jean Hess, says of the Filipinos, after being long with their army. He is an impartial witness, and he writes in the *Figaro*: 'It is surely a marvellous thing, the resistance of these peasants, led into battle by generals of twenty years, only yesterday in college, beardless boys, young lawyers and doctors. These Filipinos are not the savages, the stupid brutes, that they are said to be in America. They are polite and devoted and courageous to an extraordinary degree.' If the Cubans deserved rescue from destruction, do not these young heroes?

"But it may be said, Mr. President, that for Spain to interfere would give offence to the United States, and might lead to war. Ah, your Señorías, let me tell you what I have learned from reading the debates in the United States Senate. In the speeches in that body it was clearly laid down, by its most influential members, that for America to recognize Cuban belligerency would really be an act of great friendship towards Spain; that Spaniards could not possibly resent it. Boldly commending their own chalice to their lips, let us, then, take the action in behalf of the Filipinos that the United States, for less provocation, took in behalf of the Cubans, and welcome this noble people, struggling against foreign oppressors for their liberty, to the rights and privileges of an independent nation. *He dicho.*"

## A PAROCHIAL PROBLEM.

The policy of annexing to the United States remote countries, inhabited by vast alien populations, has been conscientiously opposed, it cannot be too often repeated, because it is detrimental to our own interests. It is not a question of improving the morals of the Filipinos; it is a question of impairing our own. We may concede that if we could benefit other communities by undertaking to govern them, it would be our duty to assume the task, provided the government of our own community did not suffer. But it has been argued, and, in the forum where reason and experience are controlling we may say it has been demonstrated, that our government was so constituted by its founders as to be unfitted to rule over subject races. Government for the people and of the people cannot signify the government of one people by another.

Furthermore, our system of government has become infected with disorders so serious as to make not only its improvement, but even its preservation, a sufficient task for all the forces of reform. To undertake the civilization of millions of Asiatics when the continuance of our own civilization demanded all our energies, seemed, therefore, a policy fraught with disaster. The problem of the relations between white and colored citizens, so far from being solved, is assuming a more serious cha-

acter than ever. The problems arising from the multiplication of foreigners, ignorant of the elements of political ethics, in our great cities, are now of sufficient gravity to arouse general alarm. Such considerations, however, were lightly brushed aside as ignoble and petty. The very existence of these problems was denied, or, if they were recognized, they were described as parochial, and as, therefore, undeserving of the attention of a people numbering seventy millions. So great a nation, it was declared, had only to undertake to civilize the Malays, in order to develop sufficient virtue to correct the domestic abuses which had shown signs of being incorrigible. We had not succeeded in reforming ourselves; but if we undertook to reform others, we should incidentally work out our own salvation.

If we are not mistaken, this was the doctrine proclaimed by the Rev. Washington Gladden, and it is, therefore, significant to find him now expatiating, in the *Independent*, on the "Perils of the Public Schools." He declares that we have come to a critical period in the history of education in this country. "The administration of our schools is surrounded with grave dangers; there are many signs of deterioration; these are tendencies that must be checked, or the foundations will be destroyed." It is true, Mr. Gladden admits, that to tell the truth about the matter—and one may add about some other matters—is to run the risk of being called all sorts of opprobrious names. But he believes that the "shifty optimism" of Americans needs to be rudely disturbed. Our systems of public education are the sources from which our national life derives its vigor. But "poisonous or debilitating moral influences" are getting possession of our schools, and unless they are expelled, the doom of the nation will not be long delayed. Hitherto the moral influences prevailing in the public schools have been on the whole sound; the teaching force has been excellent. But it is now undergoing deterioration of a serious character, and the injury which assails and perverts it comes from the government of the schools. The persons who control the employment of teachers, the administration of the schools, and the courses of study pursued, are inferior, in intelligence and in reputation, to their employees.

This was formerly not true, nor is it now true everywhere; but, as a general rule, Mr. Gladden declares, it is true. The excellence of our public-school system has been due to the fact that until recently men of culture and character were intrusted with this duty. But it is "a melancholy and portentous fact that in many cities these places are falling into the hands of petty politicians, and are used by them mainly for the promotion of their inte-

rests." Hence, there is corruption in the purchase of sites, the erection of buildings, the selection of books, the purchasing of supplies. Teachers are even subject to "assessments"; they have to pay to get their places and to keep them, and Mr. Gladden cites many cases where prominent teachers have been dismissed because their opinions were displeasing to political bosses. It follows that "honorable and high-minded teachers are humiliated by the necessity of dealing with incompetent employers; to be put under such direction and censorship is degrading. . . . Pretenders and charlatans in the school-room are more likely to get credit and promotion than the conscientious teachers. The most capable young men and women halt and turn back on the threshold of the profession, because of the precariousness of the tenure and the annoyances of the associations."

Mr. Gladden's testimony hardly needs to be confirmed. Similar complaints are everywhere made, and the evils are so intimately connected with our system of party government that we should believe them to exist without positive testimony. Nor does Mr. Gladden exaggerate the seriousness of the evil, which he admits cannot be removed by legislation, but only by the aroused conscience of the people. But when we consider that this is only one of a number of intestine disorders, that the task of arousing the conscience of the people concerning even one of them is herculean, while to deal with them all is hopeless, and that the dominant element in our government looks on all such questions as too petty for our attention, we cannot envy our religious expansionists their feelings. They can offer no reasonable ground for expecting any reform in our system of government, even in the case of the public schools. They have seen the attitude of the Administration towards reforming the civil service, and they will be face to face with the misgovernment of our colonies as soon as their military administration terminates, if not before. Such light-hearted assumption of responsibilities for the discharge of which no preparation or competency exists, appears to us altogether unprincipled. It is properly attributed to the "shifty optimism" of our people, as Mr. Gladden calls it; and there is no commoner cause of failure to meet obligations that should have been assumed only after careful deliberation.

#### RAILROAD POOLING.

At a public dinner in Chicago last week, speeches were made by the Hon. M. A. Knapp, Chairman of the Interstate Commerce Commission, and by Mr. Paul Morton, General Manager of the Atchison, Topeka and Santa Fé Railroad, both of considerable moment, in view of the fact that, while differing on

many points, they agreed that railroad pooling ought to be legalized. The pooling privilege was taken away from the railroads by the Interstate Commerce act a long time ago. The main object of the law was to prevent unjust discriminations in rates; and all the powers of the Government have since been employed to enforce the law. The net result of these protracted efforts was recounted by Mr. Knapp in his speech at Chicago in these words:

"I undertake to say that if the worst enemy of the railroads whom you can name were elected President of the United States, and if he should pack the Interstate Commerce Commission with the worst Populists of the land, those men would never dare to do the reckless and indecent things which the managers of railroads themselves have done. Can you name any five men so ignorant, so prejudiced, so inimical to the common interests of the country that they would upset the commerce of the country and demoralize rates and business in the way the railroad men have done by putting in force the rates that now prevail to the seaboard by way of Galveston from the Missouri River? Would they let the Missouri River rate be as low as the Chicago rate? Would they allow flour to be carried from Minneapolis to the Atlantic cheaper than from Chicago? In such things the railroads are making a fearful misuse of their power."

Presuming that Mr. Knapp's statement is true—and there is no reason to doubt it—what does it teach to a real statesman? Apparently this: that Congress, obeying the behest of public opinion, set out to prevent certain abuses of railway management, but failed to adopt proper measures to that end; that the steps taken have rather aggravated the evils they were intended to cure; and that the time has now come for the adoption of more rational means to prevent the abuses complained of. A philosopher would go a little further, and say that since all the harsh punishments devised to prevent railway discriminations had failed, it would be wise to attack and if possible remove the motive for making the discriminations. Railway men do not discriminate without a cause. They do not incur the penalties of the law from any natural penchant for crime. They are in business to make money, and they would prefer to make it lawfully. It is easier for them, as well as safer, to sit in their offices and take traffic as it comes, instead of running and rummaging for it and getting it by secret, underhand, lying methods which subject them if detected to fine and imprisonment.

It is vitally necessary to the railway man that he shall get business. His official existence depends upon that. The law may fine him for the methods he adopts, but get it he must. His rivals and competitors will get it if he does not. Probably they are using the prohibited means for taking it away from him. In other words, they are probably cutting rates, gouging, cheating, lying, and discriminating wherever they can find a carload of freight of any kind. They are doing the same things he is doing, and they are denying it just

as he does. They may all be caught, and, after a long investigation followed by a long trial, punished, but the evil breaks out at another place immediately, and as soon as the backs of the Interstate Commerce Commissioners are turned, it breaks out afresh, with perhaps some variation of form or method, at the same place where the investigation and trial occurred.

In short, the Interstate Commerce law sought to expel nature with a fork, and it failed. Railway discriminations, although not so open as formerly, are as flagrant, as damaging, as disastrous, and more demoralizing than before—more demoralizing because they involve and necessitate more falsity and more perjury than before. The pooling system, which the law prohibited, was established expressly to take away all motive for discrimination in rates between individuals and localities. The vital principle of the pool is that the earnings of competing railways shall be placed in a common heap and divided among the competitors with a small percentage of gain based upon actual earnings—a percentage sufficient to keep them up to a certain standard of efficiency, so that no road may get a share of the money without doing a share of the work. This simple and philosophical safeguard against railway discriminations happened to run counter to the popular demand for competition in the carrying trade, and was sternly prohibited. Hence these twenty years of riotous discrimination, in spite of all the powers of Congress, of national commissions, of State commissions, of public sentiment, and of the public press. And now Mr. Knapp formally protests against “the error and inconsistency of a legislative policy which makes rate competition compulsory, and at the same time condemns as criminal misdemeanors the acts and inducements by which in other spheres of activity competition is mainly effected.” For this reason he advocates “the legal sanction of combination by rival carriers in the conveyance of passengers and property between competitive points.”

“This,” he continues, “is the one sensible and practicable plan, adapted to present conditions and suited to existing requirements. Such a policy would promote and invite the conduct of public transportation upon principles consonant with the nature of the service and beneficial to the people and the railroads alike. Legalized pooling would promote the public welfare, because it would give railways the opportunity now lacking to conduct their business by just and honest methods, and range their interest and influence on the side of law.”

Replying to the suggestion or thought that he might be here advocating the principle on which Trusts and combines are founded, Mr. Knapp points out the difference—that in commercial transactions concerning commodities in the market we want not uniformity of price but competitive prices, while in the transportation of property we want uni-

form charges without favor or discrimination. At all events, experience has shown that in the matter of railway management our choice lies between competition on the one hand and discriminations on the other—discriminations for the benefit of the few at the expense of the many. We cannot have railway competition and fair dealing at the same time. We can take whichever we like best; Mr. Knapp thinks that fair dealing and uniform rates are the desiderata of the present day. He would have the Interstate Commerce Commission vested with power to fix rates where they are unreasonable—a power which necessarily includes the fixing of all rates, since it depends upon the Commissioners to say what rates are reasonable and what are not. This seems to us rather a long stride toward absolutism, or socialism, as the case may be.

Mr. Paul Morton concurred with Mr. Knapp on the pooling question, and went a step farther toward enlarging the powers of the Commission. He said that he “would like to see all transportation, that which passes between two points in the same State as well as interstate traffic, declared subject to federal supervision and amenable to the national commission.”

#### THE TRANSVAAL TROUBLE.

The danger of war between England and the Transvaal is undoubtedly increased by the proroguing of Parliament. Mr. Chamberlain, in whose hands the management of the affair now practically rests, is an ambitious and not too scrupulous man, and might easily, when freed from daily questioning in the Commons, commit the country to some position from which there would be no escape except by an appeal to arms. He has greatly increased his prestige and power by his career as Colonial Secretary, and will not shrink from war—in fact, so we learn privately, tells his friends that he rather desires it—if he can see a good chance of thereby adding to his own and his country's glory. He is not a man, either, to be deterred by the hobgoblin of inconsistency. If he were, he might well have been staggered by the two extracts from his own speeches of only three years ago, which were thrown in his face by Sir Henry Campbell-Bannerman the other night. They are well worth reproducing. On May 8, 1896, he said in the House:

“A war in South Africa would be one of the most serious wars that could possibly be waged. It would be a long war, a bitter war, and a costly war, and, as I have pointed out already, I believe generations would hardly be able to blot it out; and to go to war with President Krüger to enforce upon him reforms in the internal affairs of his State, in which Secretaries of State, standing in their place, have repudiated all right of interference—that would be a course of action which would be immoral.”

And later in the same year, he said:

“What is the alternative policy which the

honorable member would have put forward? We know what it would be. He would have sent an ultimatum to President Krüger that, unless these reforms, which he would have specified, were granted by a particular day, the British Government would interfere by force, and then he would have come here and he would have asked the House for a vote of credit of £10,000,000 or £20,000,000—it would not matter which particularly—and would send an army of 20,000 men at least to force President Krüger to grant reforms in a State with which we have pledged ourselves repeatedly—not this Government, but previous governments by the mouths of successive Secretaries of State—that we would have nothing to do. That is his policy. It is not my policy, and it never will be.”

Mr. Chamberlain's view of the serious character of what would be practically a race war in South Africa is more than confirmed by a writer in the last *Fortnightly*. He is an Englishman, and describes himself as an Imperialist and Conservative; yet he declares, out of a knowledge gained by twenty-three years' residence in South Africa, that a war to gain the reforms sought in the Transvaal not only would be unjustifiable, but would “mean ruin and disaster for the territories south of the Zambesi.” Moreover, he presents figures to show how greatly the available forces of the Dutch, in all those regions, outnumber the British. If it comes to a race war, the Dutch can put 92,300 men into the field to-morrow, as against no more than 39,500 that could be mustered by the British. Of course, England could pour in troops and would conquer in the end; but her statesmen may well pause before entering upon a struggle which could not fail, says this writer in the *Fortnightly*, to “leave a legacy of undying hatred and distrust between the two white races.”

Yet British subjects resident in the Transvaal have great grievances, which it is undoubtedly the duty of the English Government to see redressed. The main trouble is the denial of the franchise and of representation to 90,000 British, who pay nine-tenths of the taxes of the country, and yet have absolutely no political rights, as against the 80,000 or 85,000 Boers who rule over them. This not only is an outrage in itself, but is in the teeth of what the Transvaal authorities promised when the London Convention was agreed upon. To show concisely how Krüger went back on his word, we will first quote his promises made at the time the Convention of 1881 was negotiated, and then show how he gave them the lie.

“The Commissioners were Sir Hercules Robinson (President), Sir Evelyn Wood, and Sir Henry de Villiers. They held several conferences with Mr. Krüger and other Boer leaders. At one of these conferences the following conversation took place:

“President—Before annexation, had British subjects complete freedom of trade throughout the Transvaal? Were they on the same footing as the citizens of the Transvaal?”

“Mr. Krüger—They were on the same footing as the burghers; there was not the slightest difference, in accordance with the Sand River convention.

“President—I presume you will not object to that continuing?”

“Mr. Krüger—No. There will be equal protection for everybody.”

"Sir E. Wood—And equal privileges?  
"Mr. Krüger—We make no difference, so far as burgher rights are concerned. There may perhaps be some slight difference in the case of a young person who has just come into the country."

Now how did Krüger live up to that agreement? At the time he made it, and also in 1884, when the second London Convention was framed, the naturalization law of the Transvaal simply required five years' prior residence. That was reasonable enough, and it applied to all. But in 1886 began the great influx of foreigners, when the Witwatersrand goldfields were exploited, and in 1889, when many of these immigrants were approaching burghership, the law was suddenly changed so as to restrict citizenship absolutely to Boers born in the Transvaal. Later the law was again modified, so as to admit to citizenship after twelve or fourteen years, and on very onerous terms; but in 1894 the rule of complete exclusion was restored. Nothing could more surely fix the charge of bad faith upon President Krüger.

But he is a very astute old gentleman, and is evidently preparing to make every reasonable concession in order to avoid war. In fact, he has already come very near to granting the entire British demand as formulated by Sir Alfred Milner. It is only a difference between a five and a seven years' residential qualification for citizenship, with all residents prior to 1890 enfranchised at a stroke. That difference is surely not worth a bloody war. If Mr. Chamberlain is patient, he will get all he ought to ask by means of moral pressure and renewed negotiations. His triumph would be all the greater if peacefully won. There is good reason to think it will be, and that, despite his truculent tone in the final session of Parliament, there will be no war.

#### COPYRIGHT IN SPEECHES.

A novelty in copyright is involved in the decision made on Thursday by Mr. Justice North of the English High Court of Justice. The case before him was curious. In the recent volume of 'Appreciations and Addresses,' by Lord Rosebery, were included five speeches taken almost verbatim from reports in the *London Times*. Lord Rosebery himself furnished the clippings to his publisher (John Lane), freely making over all his right and title to them. But the *Times* contended that he had no rights in the premises whatever; that its reports were copyrighted; and it brought suit to restrain publication of the volume containing the alleged infringements on its own copyright. The Court has now decided for the newspaper, and has granted an injunction against the publisher.

The case was argued on July 14, and from the views then advanced by learned counsel it is possible to infer the grounds on which the decision was based. It was agreed on both sides that

Lord Rosebery himself had no copyright in his oral address, as such. He might have secured it, by taking the steps indicated in the law of copyright to protect "lecturers," but he failed to do so. Therefore, his winged words became, the moment they left his lips, public property. The only question was as to the copyright of the report published in the *Times*.

It certainly seems, at first sight, a moral if not a legal absurdity that one man can so copyright the words of another that the latter has no right to reproduce them. The value of the speeches lay in the fact that they were Lord Rosebery's. The words were his. Is it not of the essence of copyright that it can be gained only by the author of original matter? Is the reporter to be given rights above the orator? Is the copy more sacred than the original? The defence made the most of this line of argument. But the plaintiff pressed home the single legal point which seems to have prevailed with the court. This was that there is no such thing as copyright of ideas; it is all a matter of literary form; and Lord Rosebery having abandoned his ideas and words to the use of the public at large, the reporter who gave them a certain form is entitled to exclusive control of that form. Some other report might be used without his consent, but that particular report is his own, the product of his own labor and skill, and cannot be appropriated by another. This was, in brief, the contention of the plaintiff's counsel, and Judge North has evidently upheld it.

The decision is no doubt good law, but it has its humorous features. Some of these were dwelt upon by Lord Rosebery himself the other day, before the case was decided. He was speaking to the boys at Epsom College, and apologized for the brevity of his remarks on the ground that "there is a question of the copyright of what you are likely to say." The only thing perfectly clear about copyright of a speech was that "the one person who has no property in it is the man who delivers it." For himself, therefore, he felt it would be almost criminal, until the question was settled, to "add to this species of indescribable property which is at this moment in the lost-luggage office of the law." It would prove a serious embarrassment to public speakers, he said, if what they uttered to-day might be decided to-morrow to be stolen goods.

Of course, the law of copyright has to rule out all questions of literary excellence. It knows nothing but a form of words. A furniture catalogue may be copyrighted just as securely as a poem by Swinburne. Railway time-tables or Stock Exchange reports are just as sacred in the eye of the law, just as deserving of protection, as a novel by Miss Wilkins or even by Laura Jean Libbey. Whether little or much brain and labor

has gone to the production of a given arrangement of words, whether their market value be small or great, are questions into which the law of copyright cannot enter. It simply undertakes to protect any literary form, no matter how or by whom wrought out; and it is only a legitimate extension of that doctrine to protect the reporter who has produced the form, though the ideas are another's.

One argument advanced in this particular case was that the reporter's work was analogous to that of a translator. Translations are copyrighted, though without a single original idea; so, it was argued, may be the report of a speech. We do not know how much legal effect was given to this contention; but we do know that reporters often are translators of an astonishing sort. They sometimes put an orator's words into such a shape that, far from wishing to assert any property in them, he freely and even indignantly repudiates any responsibility for them. On the other hand, reporters in the guise of translators have been known to do great service to orators—making their speeches read much better than they sounded on delivery. Dr. Johnson was the original reporter of this kind, taking care, he said, so to report the speeches in Parliament that the Whig dogs should not have the best of it. A modern instance is given in connection with the late Sir John Macdonald. He had given orders to the leading Ottawa paper that his speeches were always to be reported verbatim, as he prided himself on the perfection of his extempore style. But once, when he spoke after dining generously, the reporter's notes turned out so incoherent that the editor took fright, and sent the young man to get Sir John's own revision of his remarks. That statesman gravely corrected the reporter's literal transcript of what he had said, and as gravely remarked to him on taking leave, "Young man, let me give you a piece of advice, of which I fear you stand in need: never touch liquor."

#### ALASKAN NOTES.

SOUTHEAST ALASKA, July, 1899.

Four years ago I gave the readers of the *Nation* an account of the changes which I had observed to have taken place in Alaska since 1880, and also a statement of the conditions noted as existing in 1895. These records were made at a propitious moment, for, while they were being written, the steamer *Portland*, with her epoch-making cargo of Klondike gold, was actually on the way to Seattle. A few weeks later, a whole continent was rippled with excitement, which rose in many instances to a species of mania, and resulted in the Klondike "rush" of 1896. From all quarters of the world a horde of gold-seekers converged towards the passes at the head of Lynn Canal, with results which are known to all men.

The half-insane indifference to conditions

and limitations which has marked all recorded "rushes"—and which the climate of the Yukon rendered especially noteworthy in the present case—has at last subsided. Matters in Alaska and on the Canadian Yukon are assuming a business-like aspect. Men who have good claims are working them quietly; while thousands who rushed in without knowledge, experience, or means, are leaving a country which they should never have entered, or are pushing out as a forlorn hope into the still unexplored wilderness. I have heard it estimated by men familiar with the district, that six thousand persons have left or will be leaving during the present season, from the vicinity of Dawson alone, while the exodus from Kotzebue Sound and the Copper River basin promises to be complete. I cannot find that an ounce of gold has been obtained by any man in the district strictly belonging to Copper River, and many of those returning allege that none of the statements made by the agents of transportation companies in regard to this area has proved true. Yet some two thousand persons entered that domain of snow. How many have succumbed to scurvy, starvation, and the perils of the route, will never be known. The survivors are being gradually collected and aided to return to civilization by the Government of the United States.

It may be more convenient to review briefly the situation in geographical order, beginning in the southeast and proceeding northward and westward.

The condition of affairs at Metlakatla, or Port Chester, Annette Island, is very satisfactory. Mr. Duncan's community has evidently prospered; the number of cottages has increased; the church is finished and is a monument to the industry and skill of its native builders. It may seem paradoxical to speak of the melody of an Indian dialect, but the sermon in Tsimpsian to which we listened was certainly melodious and agreeable to the ear, while the hymns, sung in English, were not less so. The Klondike fever had drawn away the creatures who, under the pretence of mining, were endeavoring to establish a groggery on the south shore of the island, and they doubtless found a more congenial and profitable field of operations somewhere on the road to Dawson.

Much prospecting has been done in the Prince of Wales archipelago, and those engaged in the work speak very hopefully of the veins discovered. There are no placer mines in this district, and the development of the quartz leads is hardly far enough advanced to warrant an expression of opinion as to their value. The Sumdum Bay district is producing gold, and the quartz there, which promised so well in 1895, we were informed is now yielding satisfactory returns.

At Wrangell the boom resulting from the alleged route to the Yukon, via the Stikine River and Glenora, has collapsed, and the town presents no signs of life. A row of stern-wheel steamers, peacefully decaying on their skids, is more eloquent than any verbal testimony to the cessation of the river trade.

There is little change at Sitka. The Presbyterian mission seems flourishing, and, at the time of my visit, mine-owners were awaiting the melting of the snow on the mountains in order to introduce to their properties several experts who were await-

ing an opportunity to inspect them. At Juneau and Douglas signs of steady growth were visible; the latter already seems to exceed Juneau in the matter of houses and local population. The steady increase in the facilities for working the low-grade ores of the Treadwell lode has resulted in an aggregation of more than eight hundred stamps, which is confidently claimed by Alaskans to be the largest number on any continuous property under one management in the world, and which is exceeded, if at all, only by some of the South African mines in the Transvaal. The growth of the mining industry in all this region appears to have been on a business basis, the Klondike excitement having merely lured capitalists to look into the various properties sooner than they would have done otherwise.

Proceeding northwards, we come upon Skagway, the town of the future. This place has passed through its "storm and stress" period. The horde of adventurers who made it a bye-word for a time, are now scattered. The Yukon and White Pass Railroad, now completed to Lake Bennett, has its seaward terminus at Skagway. This railroad has recently come into control of the telephage line over the Chilkoot Pass, so that, for some time to come, if not permanently, the monopoly of the traffic over the passes is in their hands. We have heard much of the terrors of both passes, and the exaggeration has not been very great; but I do not remember having seen any extended reference in print to the scenery of these passes, which is remarkably fine. I suppose it will not be long before a ride to the summit will form a part of every well-conducted tourist trip. On the 7th of June we visited the summit, where the ice on Summit Lake was in a slushy condition, and saw what was perhaps the last sledge train depart for Lake Bennett. The ice was pronounced unsafe for further use, and now the railway is completed to Lake Bennett, connecting with lake and river steamers for Dawson, which can be reached from Skagway in six days. This seems to insure the future of the town, as, for a long time to come, fast freight for the upper Yukon will follow this route. Skagway itself is situated on a level gravel-flat, with room to grow and plenty of water-power within easy reach. Abundant wharfage is already provided, a pure water supply reaches the town in pipes, and the streets and building-lots have been laid out with forethought, though as yet but partially improved or cleared. Permanence in the output of the Upper Yukon placers will mean a steady growth and reasonable prosperity for Skagway.

Westward from the Sitkan archipelago, conditions are somewhat different; intercourse with civilization is more restricted and the mails less frequent. Prospectors have been everywhere, but there are few places where mining is actually carried on. The black sands of Lituya Bay and Yakutat occasionally afford rich returns to the gold-washer, but, like similar sands in Oregon and California, their occurrence and metallic contents are too capricious and variable to insure a permanently paying industry, or one which can be relied on to last in any particular locality for even a single season.

I have already referred to Copper River

and the total absence of gold, in a commercial sense, in its basin. At its mouth are beds of lignite and traces of oil and asphaltum. A party was reported as vigorously engaged in exploring the coal; but, since there is no harbor from which it could be shipped, even if a market existed, it seems unlikely that results of commercial importance will follow.

Prince William Sound is a picturesque sheet of water, surrounded by a fringe of fiords many of which still carry glaciers. In the southern part of the Sound copper pyrites have been found in large masses in several localities. If other conditions prove favorable, these deposits may become the seat of a new mining industry hitherto untried in Alaska. Surveys have been pushed by the officers of the army and the Coast Survey during the present season about the Copper River delta and in several of the fiords; a hospital for scurvy patients from the interior has been kept up, and many stranded prospectors who were able to work have been set at clearing trails until their accumulated wages would enable them to pay their way on the steamer out of the country. Invalids have been sent out at Government expense.

The effect upon the natives of the sudden influx of gold-seekers has been of two kinds. The energetic and hard-working native has prospered greatly, as his costume and domicile bear evidence. Those less sensible have fallen victims to the usual causes of mischief among the aborigines. Three years ago there were some 200 natives of Innuit stock in Prince William Sound. Now, I am informed on good authority, only 62 remain alive. A rapid diminution in the number of Indians in the Sitkan region is generally reported, and my own limited observations seemed to indicate that there is a foundation for these reports. The coming census enumeration will probably give more exact information.

In Cook's Inlet little change was to be noticed. The small area of placers near the head of the inlet and on Turnagain Arm have been worked as usual, and have paid a moderate return on the investment. The existence of large beds of glacial gravel on the Kenai peninsula east of the inlet led to unfounded claims of the presence of rich placers. A large number of people lost time and money in endeavoring to work these gravels, which are barren and are now wholly deserted. A large hydraulic outfit had been actually received, and, I am told, was abandoned on the beach without even being unpacked.

A new party has been prospecting the lignite beds of Kachekmak Bay during the present season, but we are not advised of the results. The former prospectors have withdrawn. Further to the westward, the Apollo mine, at Unga, is doing well, and, like the Treadwell, enlarging its plant.

Turning northward, the alleged discoveries at Cape Nome, on the north shore of Norton Sound, are the latest sensation. The region is without wood and the placer-ground of limited extent. Most of the ground is already claimed, and the general testimony is to the effect that the gold-bearing gravel is very thin; bedrock being reached, on the average, at a depth of two or three feet. Some gold has, no doubt, been obtained there, but it is probable that these diggings will prove of small importance.

From the Yukon, in Alaskan territory, superfluous and disappointed prospectors are

three to emerge. A certain number of others come with them, who have been at work, say little, and do not appear discontented. Those who fall in Klondike usually go down the river and swell the tide of emigrants from St. Michael's. It is difficult, from the flood of more or less conflicting testimony, to select that which is reliable; but the best evidence is to the effect that a change is taking place similar to that recorded of Dawson, reason reasserting itself, and matters coming down to a business basis, while monuments of folly are stranded along the river from the boundary to the sea. The rush into the Kotszebue Sound region appears to have been a duplicate of the Copper River craze, and, like it, has resulted in a large mortality, much suffering, and a failure to obtain gold. It is probable that the wild schemes which obtained support in the early days of the Klondike excitement have had their day, and that investors in future will not waste money on snow-locomotives, steam-dredges for bars where there is no fuel, and toy steamers which cannot stem the current of the Yukon.

The prosecution of the salmon fisheries of the Territory is going on with vigor. Numerous small canneries have sprung up, often with a fleet of small steamers to sweep every bay and cove within reach. The fisheries at the great sources of supply, such as Karluk River, are gradually exhausting the fish, each year showing a smaller pack; little if any attempt is made to replenish by hatching out the young fish, and there is no enforcement of the restrictive features of the fishery laws, so that the eventual destruction of the salmon, in a commercial sense, appears to be only a question of time. The codfisheries languish for want of a market for their product; a few vessels sent out by a couple of firms seem to be able to supply all that the inhabitants of the shores of the Pacific at present are ready to consume.

The trade in continental furs is reduced to its lowest terms. The extraordinary prices which the last London sales brought out are a sign of the exhaustion of the supply, which becomes more and more evident with each succeeding year. The fur trade, as a business by itself, may almost be said no longer to exist in Alaska.

The Arctic whaling fleet of the present year does not exceed ten vessels. The pursuit of the whales from Herschell Island has driven the survivors into the recesses of the Banks Archipelago, where this year two or three vessels will follow them. The rendezvous at Herschell Island is to be abandoned, and within a few years Arctic whaling will be little more than a memory. From all of which we conclude that when man is pitted against the lower animals, his energy, persistency, and cunning will prove, in the long run, invincible. Anything bigger than a sparrow will in time be exterminated if it seems to the average man that he can profit by killing it. If this tendency is to continue unchecked, we may well wonder what is to be left for future generations. W. H. D.

#### PROF. DICEY ON THE AMERICAN CONSTITUTION.

LONDON, August 1, 1899.

Prof. Dicey's first lecture before the Oxford University Extension meeting consisted

in a comparison of the constitutionalism of Republican America, as exhibited in the Federal or the State constitutions, with the modern monarchical Constitution of England. The constitutions of the thirteen colonies, he said, were English; the Declaration of Independence effected no material change. The common law of England and English statute law up to 1776 still applied as before. The men who carried through the American Revolution were, like the Whigs of 1689, "the least revolutionary of Revolutionists." Nowhere more than in America, whence the French had been triumphantly expelled, was there greater exultation in the freedom of the English people, as contrasted with other European peoples who lived under despotisms. Americans shared to the full a prevalent belief that the prosperity of England was due to its Constitution. The complaint of the colonists was that in their case the principles of the Constitution had been violated. Washington, like George III., might have termed himself "a revolution Whig." Kent has recorded the great impression made on him by reading Blackstone's Commentaries, which had in America a circulation quite immense for the time. Montesquieu, then widely acknowledged as an authority on the English Constitution, was admired by Burke as much as by the authors of the 'Federalist.' At the moment of separation, the English Constitution "seemed to every American the model of a free government." Moreover, the English colonists brought to the New World, with the common law, "all those conceptions of individual freedom and the proper relation of the Government to private citizens which had found expression in the Constitution of England."

Turning now to details and qualifications, feudal elements surviving in England naturally disappeared in America, especially in New England, where Puritan ideals prevailed. Montesquieu's influence emphasized the importance of the principle of the separation of powers; and "the necessity for substituting a written and rigid for an unwritten and flexible constitution" worked changes far greater than American constitutionalists probably realized. A like reverence for the rule of law obtains in America and England, as contrasted with a tolerance, as in France and elsewhere, of special rights and special laws for the Executive and its agents. In both countries, "the private rights of citizens to personal liberty" are "the foundation rather than the result of the Constitution." Universal suffrage was not more essential to the American Constitution as originally framed than to that of England in 1786. The supremacy of the Constitution in America, and the consequent function of the judiciary in disregarding laws inconsistent with the Constitution, whether of the State or of the United States, is a point of clear difference between America and England. This American provision results from Montesquieu's doctrine as to the importance of the separation of the three powers. Another specifically American arrangement is that of the non-parliamentary executive. The President has powers which may enable him, under favoring circumstances, "to balance or even to overbalance the authority of Congress." His Cabinet officers are "just such a Ministry as George III. would have instituted if he could." It has been well said by Mr.

Bryce that Abraham Lincoln was more powerful than had been any Englishman since Cromwell.

The subordination of Congress and the State Legislatures to the Constitution of the United States and of the several States was here dwelt upon, and the position of the judiciary was discussed. Suppose an English judge having to deal with a contract under the Gaming Act of 1892. If he holds that act to apply, he treats the contract as void, and his duty is done. It may be otherwise with an American, say a Philadelphian, judge, who may clearly see that the Pennsylvania act applies, and may yet have to disregard this act as in some definite way violating the State Constitution. In this particular an American judge has a duty not paralleled in the range of an English judge's functions.

Another peculiarly American constitutional practice is that of legislation by the people through a Constitutional Convention, which may be elected with the express purpose of limiting certain powers as exercised by a State Legislature. Such a convention differs materially from French constituent assemblies such as that of '48 or '71. The sovereignty of the French people is for the moment vested in such an assembly, which has more duties than that of framing a Constitution. The American Constitutional Convention is "the very best form of law-making by the people, for (1) it is not elected on party lines, (2) it may and does contain eminent men who would not, or could not, take part in ordinary political affairs; (3) its whole mind is devoted to constitution-making; (4) it is not distracted by national dangers or party considerations; (5) it cannot carry measures opposed to popular opinion."

Prof. Dicey's second lecture dealt with the working of the American Constitution. Briefly adverting to the fact that in his first lecture, a skeleton outline of the American Constitution, space had forbidden his doing justice to the Senate, the lecturer remarked that the building of a constitution was one thing and the working of it quite another. The latter depends upon the character and circumstances of the people who manage it. There were conspicuous merits in the working of the American Constitution. At the very outset it accomplished what was little short of a miracle in politics. There was a period between the Declaration of Independence and the final adoption of the present Constitution, which came after the Treaty of Paris and was therefore not a favorite subject of study for Englishmen. This period was characterized by a degree of political inefficiency on the part of the newly freed colonies that made its history a painful topic for Americans. To this period a term was set by the adoption of the Constitution, and the marvellous political success which the new order palpably organized and made possible served in large measure at once to account for and to justify the loyal enthusiasm with which Americans regarded their Constitution.

Three great and good results, among others mentioned by the lecturer, were impressively dwelt on. The Constitution had adapted itself to expansion of territory and population unparalleled in history. The area over which it is the ultimate and organising law is prodigious, and the population under it had grown in 1890 from that of Switzerland, or about three millions, to sixty millions. Over

this vast empire there prevailed such absolute freedom in matters religious as was elsewhere unparalleled in history. This was a great consummation, as was also the substantial recognition of the rule of law in every part of the Union. Furthermore, Americans had achieved in an incredibly short space of time the complete abatement of the worst sort of bitter feelings ordinarily so persistent and ineradicable after sanguinary civil strife.

As to the defects in the working of the American Constitution, these attached, said Prof. Dicey, partly to circumstances and in some degree to the Constitution itself. Circumstances had been most favorable at the outset, but the strain of a sort of world invasion had been sudden and severe, with results of mixed good and evil. A trend towards a somewhat exclusive interest in the greater concerns of the nation at large, to the neglect of local and State issues, had been accentuated unhappily by the unscrupulous naturalization of raw and ignorant immigrants, often of more than questionable antecedents. Then, also, there was the custom inherent in various constitutional provisions of requiring that a member, whether of Congress or of a State Legislature, or even of the city Boards of Aldermen, should be eligible only by his immediate neighbors. No Congressional district could be represented by a member whose residence was outside of the narrow limits of the district. Apply such a rule retrospectively in England, and that remarkable group of reforming Whigs who lived mainly in Edinburgh, founded the *Edinburgh Review*, and got themselves elected to represent various boroughs not in Edinburgh and many of them bearing the unsavory title of Rotten Boroughs, could never have come to the front, could never have carried through that programme of necessary reform upon which the present soundness of the English Constitution so largely depended.

Inherent in the Constitution of America were also several serious defects, which could be summarily connected with what might be called its unresponsiveness. Its wise framers, fresh from the abuse of power at their expense by George III., nurtured in traditions full of analogous abuses of power in the colonies by irresponsible and incompetent colonial governors and other emissaries under the prerogative, had devised a system of checks and balances which effectually hampered the various powers of their body politic. But, in the working out of their system, responsibility had disappeared along with all possibility of the abuse of power. Hence arose a situation in which the Government at Washington did not feel responsible for the acts of the Government of say Illinois, while in Illinois necessary acts of government in the local interest were hampered and suspended in a vague expectation of interference from Washington. In the matter of taxation, there was an entire lack of any provision making it any one's duty to consider the whole amount of taxation imposed upon the people. Congress dealt with Federal taxes, while the several States imposed such local taxes as they deemed necessary. The prevalence of lynching and the small proportion of actual convictions for murder, as well as the alarming frequency of homicide, were then adverted to in feeling terms. The lecturer closed by hinting that the one thing most indispensable for righting the most glaring wrongs now made possible by the working of the American Constitution, was

some modification of those constitutional provisions requiring those who receive political office by popular election to be actually resident in the district that elects them. The good men and true are there in America; let them but be brought to the front as they were when the Constitution was framed, and effectual remedies will not be far to seek.

## Correspondence.

### A HOME-MADE BATH-TUB.

TO THE EDITOR OF THE NATION:

SIR: Years ago there was a worthy lady among us who did much good and useful work through the news press of her day, heedless of the scoffing Philistines who sought, among other stupid and short-sighted methods of their kind, to cast ridicule on her reformatory efforts by mispronouncing her good Teutonic name of Swiss-helm as Swizzle'em.

One of Mrs. Swisshelm's press letters gave detailed instruction to those of her own sex whose only appliances for lavatory processes, outside of water and towel, were restricted to a basin, but who were nevertheless as appreciative of that condition which ranks next to godliness, and, though unversed in methods, as anxious to experience it in their own persons, as their luckier sisters, whose bath-room facilities were of the amplest and most expensive sorts. The good lady, being very minute in her instructions as to the best way, with very limited material, in which to apply the purifying element to the whole body, a fine opportunity was afforded for the wit which finds its more congenial field in salacious ruts than in lustral operations; but doubtless there were thousands of poor, hard-working women who blessed the writer and her medium of communication for putting them in the way of enjoying, in privacy, full baths at as little cost as that of washing their hands and face.

What has brought to my recollection Mrs. Swisshelm's good letter in the cause of cleanliness, and its accompaniments of comfort and health, is that there have just been placed in my hands some copies of a printed sheet, headed "Cheap Baths," which its author has arranged to have distributed gratis, on application to the office of the Newport (R. I.) *Mercury*, and which shows how Mrs. Swisshelm's minimum appliances can, at a cost of fifty cents, be extended to a sufficient substitute for the hat-bath which is every morning—or oftener—brought into one's bedroom or dressing-room, for the exclusive use of each sleeper, in the finest country houses in England, and is filled to the required height with water for the use of the bather. This is done on the theory that a bath-tub confined to one person, and used in one's own room (though it lacks what we are apt to consider the crowning advantage of providing for complete immersion), is preferred by most people on the other side to waiting one's turn with others—sometimes at a considerable distance from one's room—for the long, fixed tub of our bath-rooms. That this preference is not confined to transatlantic people is proved by the fact that one of the most recently built and one of the finest and costliest marine villas

in Newport does not possess a single bath-room.

The author of "Cheap Baths" has long been a recognized authority, in both hemispheres, on questions of the planning, construction, aeration, sunning, ventilating, and sanitation generally of congested urban districts; and the fact that he judges a home-made imitation, at nominal cost, of the house-furnisher's metallic or India-rubber hat-bath worthy his serious consideration, as in line with his prolonged, public-spirited efforts towards better housing and living, and that he has been at pains to give an elaborate description of and prescription for his invention, should, it seems to me, commend his sheet to reproduction or quotation, and to a good send-off at the hands of the press.

I enclose a copy. A. J. BLOOR.

BRONXINGTON, CONN., August 8, 1899.

### "YOUSE."

TO THE EDITOR OF THE NATION:

SIR: Permit me to say a word in reference to the communication of G. A. Leavens, in a recent issue of the *Nation*, which has just come to my notice, regarding the word "youse." He is wrong in attributing the expression to the "foreign Celt." After acquiring it by association with the American-born, the foreign Celt may use it; but he could not possibly bring it into the country with him, as the word is never heard in his native land. Nor is the "Chicagoan," to whom he refers, correct in saying that the word is used in the sense of "yours." The word "youse" is a corruption of "you," second person, plural number, nominative case, and is heard in the speech of the illiterate native-born in New York State. When the "foreign Celt" does not say "you," he says "ye."

Respectfully yours,

M. FITZ C.

ROCHESTER, N. Y., August 7, 1899.

## Notes.

The Funk & Wagnalls Co. announce a 'Standard Encyclopedia' companionable with and supplementary to their 'Standard Dictionary.' The size of the work is not estimated.

'The Vizier of the Two-Horned Alexander,' by Frank R. Stockton, with illustrations by Reginald Birch, and Paul Leicester Ford's 'The Many-Sided Franklin,' are among the fall publications of the Century Co., along with Mrs. Burton Harrison's new novel, 'The Circle of a Century.' Six of this author's books have been taken over from Lamson, Wolfe & Co. by the Century Co., as well as two of Mr. Charles F. Lummis's from their former publishers.

A. S. Barnes & Co. will shortly publish 'The Mind and Art of Poe's Poetry,' by Prof. John Phelps Fruit.

A. C. McClurg & Co., Chicago, will soon issue 'A General Survey of American Literature,' by Miss Fisher, author of 'A Group of French Critics.'

Special interest attaches to the announcement of Houghton, Mifflin & Co. that Mr. Walter H. Page has resigned the editorship of the *Atlantic Monthly*, and has accepted an invitation to take a prominent part in the direction of the literary work of the Atlantic

houses of Harper & Brothers and the Doubleday & McClure Co. His successor in the editorship of the *Atlantic* is Mr. Bliss Perry, the well-known novelist and essayist, lately appointed to the Holmes professorship of English literature at Princeton University.

Prof. J. Mark Baldwin's 'Social and Ethical Interpretations in Mental Development' (Macmillan), which we noticed at some length a year ago, has meantime been translated into French by Prof. Duprat, and appears as No. 18 of the "Bibliothèque Sociologique Internationale" of M. René Worms (Paris: V. Giard & E. Brière). In a new preface, which bears date of Princeton, January, 1899, Prof. Baldwin sets forth his relation to M. Tarde and to Bagehot in respect of views reached in common by these three thinkers, yet independently and by different routes. Some differences with M. Tarde are also touched upon. The French version fills almost exactly the same number of pages as the original.

One has only to read Mrs. Walworth's report on the convalescent camp at Montauk to recognize the value, as incidental history of the late war, of the statistical volume, 'Women's National War Relief Association,' just published in this city by the Board of Directors. While its numerous portrait illustrations (added to many others) make its aim seem partly monumental, it is a veritable "document," proving for the thousandth time, in Mrs. Walworth's words, "that war is tragedy; that war is hell." Above all, it is the mismanagement, misjudgment, and miscalculation or want of calculation manifested by the War Department which shine in these pages.

What such a publication as this, or the professional 'Medical and Surgical History of the Rebellion,' does to evolve a truthful image of war, the Medical Reports regularly issued by the Imperial Maritime Customs at Shanghai do towards revealing the mode of life of the Chinese. That for the half-year ended September 30, 1898, the latest to hand, contains Dr. Macdonald's report on the health of Wuchow—a city which, he says, "like all I have ever seen or heard of in Cathay, is an overcrowded, unsanitary slum, in which it would be futile for Europeans to attempt to retain health, and utter folly to attempt to rear their families." Its "execrable" state he exhibits in detail. "This is a joyless town," and "melancholy is emphasized by the custom of public wailing." "The people are not fond of reading; they attend no stimulating public meetings; they are profoundly ignorant and without resources. This is one cause of the opium habit."

We have received from the Kingsley-Barnes & Neuner Co. of Los Angeles, Cal., a volume entitled 'The Free Harbor Contest,' by Charles Dwight Willard. The contest was between those who wished to get a Government appropriation for constructing a harbor at San Pedro, and those who insisted that the money should be spent at Port Los Angeles. The latter port was favored by the Southern Pacific Railroad, which controlled the land approaches; and the manner in which its cause was maintained in Congress is told with much vivacity by Mr. Willard. In fact, his book is of value chiefly as showing how laws are passed and how appropriations are determined by Congress. Even after the victory was won by the advocates of San Pedro, it seems, Secretary Alger was induced to delay action until they trembled

lest their astute enemies might after all triumph.

'Otia Merselana' is the title of the first volume, generously printed, of an annual publication intended as the medium of the new Arts Faculty of University College, Liverpool (London: Th. Wöhleben; New York: G. E. Stechert). Ten papers, long and short, offer a variety suited to many tastes. The greatest space is accorded to two lectures, by R. Caton, on the Temples and Ritual of Asklepios at Epidaurus and Athens, with numerous interesting illustrations. Next comes Dr. V. H. Friedel's "Études Campostellanes," or study of the Codex Calixtinus, a "codex archetypus," preserved in the cathedral of St. James of Campostella. It would, he says, have been revised by a second visit to the archives, but for the return of the sick soldiers from Cuba, which made the province of Galicia very unsanitary. Another long article is that by E. H. Parker on the Population and Revenue of China, in which the enormous fluctuations in the number of inhabitants are to be noted. R. J. Lloyd's "Attempted Reformation in the Pronunciation of Ancient Greek"; Kuno Meyer's "Stories and Songs from Irish MSS."; R. Priebech's "Chief Sources of Some Anglo-Saxon Homilies," and John Sampson's "A Welsh Romani Folk-Tale [The Master-Thief]," are still other dishes in an excellent feast.

M. Jules Lemaitre has taken a hand in the anti-Masonic propaganda in France. In a little volume, 'La Franc-Maçonnerie' (Paris: M. A. Leret), he shows an astonishing familiarity with the doings of the secret order of which he, of course, is not a member. The harmful influence of the Freemasons, according to him, dates from the beginning of the present Republican régime, when they became a political agency and anti-religious sect. It was in consequence of this transformation that, in 1888, the American lodges broke off all relations with the "Grand Orient" of France. What the present propaganda is aiming at is the application of the existing law relative to secret societies to the Freemasons, and, furthermore, the right of association for all legitimate purposes. Another publication bearing the same title as the above (and the imprint of Perrin & Cie.), contains the results of a study of Freemasonry in France, by M. Georges Goyau, published last spring in the *Revue des Deux Mondes*. Its tenor is the same as that of M. Lemaitre's book, which it even surpasses in fulness of detail pertaining to the machinations of French Freemasonry during the last thirty years.

The comparison of the English and the French by M. Demolins (known to our readers), and now by a writer using the *nom de guerre* of "Anold," reminds one of a discussion between freshmen as to the relative merits of Homer and Shakspeare. Anold protests that, were it not for M. Demolins, a comparison between the two peoples would never have occurred to him; "for, in order to compare two individuals, it is necessary that they should have something in common." Nevertheless, he has chosen for his title 'À Quoi tient la Supériorité des Français sur les Anglo-Saxons' (Paris: Fayard Frères), and his register of Anglo-Saxon sins is quite as long as M. Demolins's catalogue of virtues. His conclusion is that in physical power and energy the Anglo-Saxons are superior to the French,

but are their inferiors intellectually and morally and, above all, in the realm of art. The writer indulges in much sarcasm, he is often flippant and sometimes silly, his judgment of conditions in the United States is incorrect, and in his fear and condemnation of all foreign influence he is a thorough *chavéris*. Yet his criticisms of M. Demolins are often well taken, and his book, as a source of information on contemporary France, is worth reading, more especially the second half, "Le mal dont nous souffrons," in which he is, in his own way, quite as severe as M. Demolins himself, and whose every page reflects the lurid political atmosphere hanging over Republican France.

Some idea of the proportions which the Dreyfus literature has reached may be formed from the fact that a single Paris publisher, P. V. Stock, has on his list eighty-eight publications on the *Affaire*, or bearing some relation to it. Some of these publications are pamphlets, but most of them are volumes listed at from one to twelve francs each.

M. James Hocart, a Frenchman by birth, a British subject, and at present a liberal Protestant pastor at Brussels, has published in a volume, 'La Question Juive' (Paris: Fischbacher), five lectures, in which he defends the Jews against the accusations of the anti-Semites, and more especially against the insincere and ill-founded attacks of Edouard Drumont. The book is written in a generous spirit, and the arguments—historical, ethnological, religious, and economical—are supported by the best of authorities. The writer recalls the fact that there are in all France, according to M. Leroy-Beaulieu, only about 80,000 Jews (Reinach puts the number still lower), while Drumont asserts that their number in Paris alone amounts to from 120,000 to 140,000, and in the provinces to 400,000.

Handy volumes of well-selected French popular songs are rare. Prof. Jakob Ulrich's 'Französische Volkslieder' (Leipzig: Rengersche Buchhandlung) will therefore be welcomed by students and teachers in that field. It was published to supply a want felt by the editor himself when delivering a course of lectures on French folksong at the University of Zürich. Ballads and romances form the majority of the selections, but the other species of popular songs are also represented.

A little lesson in French has been administered in Canada on occasion of a sonnet to Sir W. Laurier produced in Parliament on a hot day by C. A. Gauvreau, M.P. The *Montreal Revue* (June 3) took it up at various points, beginning with the first line—

"Il n'a rien affronté, lui dont le nom sans tache"—

which seemed to be contradicted by a later one—

"Il combattit pourtant, superbe et sans relâche."

This criticism had an echo in Parliament, when the Opposition taxed Sir Wilfrid, by confession of M. Gauvreau, with not having braved (*affronté*) anything, exposed himself to anything, looked anything in the face, combated. M. Laurier came to the rescue of his admirer, maintaining that the meaning which the poet intended for *affronter* was 'to deceive' (*tromper*); so that the first phrase should read, "Il ne s'est pas rendu coupable de tromperie." To this the *Revue* replies (July 8) that the dictionaries are unanimous in making 'deceive' an obsolete meaning, and that such an application in the sonnet would be purely fantastical.

An historical word-study of the term "pa-

gan," or, rather, its German equivalent, "Heide," of unusual interest, is found in the *Neue Kirchliche Zeitschrift*, No. 1, a. c., from the pen of Prof. Th. Zahn. He shows that the derivation of the word from "pagus," a village, in the sense that the villagers, accepting Christianity later than the city population, were early regarded as the representatives of paganism, cannot possibly be correct because it is in conflict with actual historical facts. Rather "paganus" is the opposite of "miles," the oldest conception of a Christian being that of a warrior, and the former term was often used in the sense of a non-military person. The "pagani" were accordingly those who were not soldiers of the cross. Zahn's study, which covers more than twenty-five pages, is a notably complete and exhaustive discussion. We remark that in the Oxford Dictionary the parallel sense of "rustic" for "heathen" is discredited, the difficulties alleged being both chronological and etymological.

The Berlin musical correspondent of the *Milan Persceveranza* (issue of July 18) writes of two attempts in Germany to make an opera of Hauptmann's 'Die Versunkene Glocke.' One, by Heinrich Zöllner, has already been performed, without giving satisfaction to the Hauptmannites, yet offering some interest to musicians. The absence of recitatives was felt, and the Bell itself was ineffective when it sounded. The general treatment was Wagnerian.

The *Annales de Géographie* for July opens with an article by Prof. W. M. Davis of Harvard, in which he defends his theory of the formation of the peneplain against the arguments of Prof. R. S. Tarr of Cornell. This is followed by an anthropogeographic study of Corsica, in which Prof. F. Ratzel attempts to show how its insular position has affected its history. Prof. Lévi of the Collège de France has an interesting sketch of a recent journey across Siberia by rail, steamer, and tarantass. He gives evidences of the energy and wisdom with which the Russians are developing the resources of the country. The Government grants very few concessions for mines in the gold district, for instance, fearing that the gold-fever, already very strong, might "compromise or ruin" the normal growth. Travellers are very numerous, and include, besides officials and engineers, many commercial agents. The railway, on account of its hasty construction, light rails, and weak roadbed, is deemed "a strategic instrument of doubtful value." There are also minor articles on agriculture in France, the maritime commerce of Germany, some illustrated notes on an Algerian plain, and on the economic value of Samoa.

In accordance with a resolution of Congress approved March 1, the United States Geological Survey publishes Maps and Descriptions of Routes of Exploration in Alaska in 1898, together with general information concerning the Territory. The folded maps are ten in number, one (general) showing previous routes of exploration during the present century.

The development of the regions within the Arctic Circle is not confined to Alaska or the Yukon. In an account of the Murmanian coast by F. Immanuel, which occupies the whole of the main part of the sixth number of *Petermann's Mitteilungen*, the story is told of the construction of a naval station and commercial port at Katharine Haven in the extreme northwestern part of

Russia. Here, on the shore of the Arctic Ocean, in an absolute wilderness, seven hundred miles from the base of supplies, is a town with Government buildings, church, schools, biological laboratory, telegraph, tramway, and electric lights. A dry-dock for large vessels is planned, and work has probably already begun on a railway which is to connect the port with St. Petersburg. The ceremonial opening of Alexandrovsk, which has been but three years building, was to have taken place in July in the presence of the Grand Duke Vladimir Alexandrovitch, for whom the town is named. Its great importance lies in the fact that, through the influence of the Gulf Stream, it is ice-free throughout the winter. This was known to Peter the Great, who first conceived the idea, which his successor has at length carried out, of making it a naval station. The commercial value of the coast lies mainly in the cod fishery, 963 vessels having been engaged in it in the summer of 1896. The Government is making serious efforts to improve the condition of the fishing folk by schools and loans for the purchase of boats and tackle.

A Danish northern-lights expedition has just left Copenhagen for Iceland. Its headquarters will be at Akureyri, a prettily situated little town on Iceland's northern coast—one not without social attractions, and having a small public library as well as several important trading establishments. The expedition has been for several months under preparation, and its members have been carefully practised in the use of the instruments, all of the latest construction, which it carries with it. While the headquarters will remain at Akureyri, an auxiliary station will be established on a high hill not far away, and the two stations will be connected both by telephone and by an optical telegraph. The Director of the Danish Meteorological Office, Dr. Adam Paulsen, is at the head of the expedition. He will test his own published theories on the aurora, as well as all the other late ones advanced by various scientists. Among the instruments to be used are photographic ones of great accuracy, and others of a novel character for the measurement of aerial electricity. Dr. La Cour and Dr. Jantzen are the two chief aids to Dr. Paulsen, while Count Harold Moltke is attached to the corps as its artist. The expedition will return in May, 1900.

From recent statistics of the vaccinations at the Pasteur Institute, in Paris, it appears that of 1,465 persons treated in 1898, all but three were cured. The mortality, which in 1886 was 94 per cent., has thus been reduced to about 20 per cent. In the thirteen years from the foundation of the Institute till the end of 1898, 21,631 persons were treated in Paris, and of these 99 died.

The bill for providing seats for shop-girls in Scotland has been rejected by the House of Lords after it had gone successfully through the House of Commons. The Parliamentary committee of the Scottish Trades-Union Congress had readily agreed to coöperate in promoting the bill, and it was at their instance that it had been brought forward by the Scottish members of Parliament. The extent of the outcry that has been raised against this action on the part of the Lords shows how near to the heart of the nation lie all questions of social legislation at the present time, and

how far the standard of moral responsibility has been moved up.

—*Scribner's* for August is avowedly a fiction number, and to that end contribute, among others, Richard Harding Davis, in a moment more or less *perdu*, Dr. Van Dyke in canoeing mood, Thomas Nelson Page with a well-told story of the South in the dark days succeeding carpet-bag rule, and Albert Vorse White in a clever sketch of New York's Italian Marionette Theatre, illustrated by a red right-hand. Space to breathe, how short soever, from fiction, is granted to a few papers. Senator Hoar's second one on Daniel Webster gives that statesman's impression of London in '39, when he visited the Parliament houses and found himself knowing more than his guide. Mention is made of Mr. Jeremiah Evarts as a devotee to the cause of the Indian, to which cause, indeed, he gave his life. He claimed to have had Webster's promise of support, but nothing more seems to have come of it than a memorandum in Webster's handwriting, evidently for a speech to be made in the Senate in the Indian's behalf. Mr. Hoar commends to the youth of the country, for careful study, Everett's 'Life of Webster' as on a par with the 'Agricola of Tacitus.' He quotes a letter of Lord Ashburton's to Webster as vindication, in its tone of esteem, of Webster's integrity in the Maine boundary settlement. From one sentence in the letter, "I do not pretend to be a free-trader for America," our Senator derives great comfort, wishing that "many of our English advisers and many Americans who have been prone to take their advice, had been as sensible." Robert Louis Stevenson's letters in this month's instalment embrace, among others, several to Mr. William Archer, whose criticisms of Stevenson the latter calls "very bright and neat, and often excellently true." The whole paper is, as Stevenson writes to Henry James of the 'Princess Casamassima,' "full of lineament." Two agreeable outdoor articles are Ernest Seton Thompson's "The Trail of the Sandhill Stag," blending natural history and poetry under a thin veil of fiction, and Theodore Wores's on "Japanese Flower Arrangement," both charmingly illustrated by their writers.

—In *Harper's*, one of the inevitable warlike numbers is by Lieutenant Calkins of the United States Navy, on the Filipino Insurrection of '96, made from a study of Spanish archives left in Manila. The story of Blanco's failure is thus summed up: "Spain's colonial policy could not be carried on by men who strove to be simple and loyal, hopeful and humane." Aguinaldo's career is followed dispassionately but admiringly, and modern conquest in the Philippines is declared never to have extended itself "many miles beyond the range of naval artillery"—a lesson which he who executes may read. Rear-Admiral Beardslee writes entertainingly of his share as a small and clandestine midshipman in an episode of the Taiping Rebellion. Dr. Wyeth relates with unction an incident in the career of the Confederate General N. B. Forrest, who, with an inferior force, captured Colonel Streight's bold raiders after five days of eventful pursuit. An Alabama girl of sixteen conducted Gen.

Forrest to an old ford across Black Creek after Streight's men had burned the bridge, and the fiery General's phonetically spelled note, "left on the bureau" for "Miss Emma Sanson," conveying his "highest Regards for his gallant Conduct while my forces was skirmishing with the Federals," gives local color to the picture, especially when from Miss Sanson's account we find that the sly dog had time while she rode behind him in hot haste to the ford to ask her for a lock of her hair. Most haunting and grim of all the echoes of war is Mr. Frederic Remington's story of a Reconcentrado, with his own characteristic illustrations.

—While the conclusion of the letter H by Dr. Murray in the Oxford Dictionary (New York: H. Frowde) is not that of volume v. (H—K), it is nevertheless a notable mark of progress in the mighty work and a subject of hearty congratulation. This section of the vocabulary, we are reminded, is, apart from some prolific Greek compounds, predominantly English. "H is not silent in any word of Old English or native origin"; and of all the native words from Ha- to Hu- inclusive, a very large proportion have come down from the earliest periods of the language. Hence, all along the line, the etymologies are obscure, and in the tract Horizontality—Hywe we are balked by *hovel*, *hoyden*, *hub*, *huckster*, *huddle*, *hug*, *humbug*, *hummock*, *hump*, and *husk*, to mention only a few. *Humbug*, a cant word, came into vogue about 1750, and directly, in 1751, it was shortened to *hwm*. The dialectal word *hub*, though occurring in print as early as 1649, first found dictionary recognition at the hands of Webster in 1828; and when, thirty years later, Dr. Holmes, in the 'Autocrat,' styled Boston State-house "the hub of the solar system," the town presently received the nickname of "The Hub," and the word acquired a universal literary currency in a tropical sense. The same edition of Webster first listed the American word *hydrant*, as useful a vocable as it is irregular in its formation. Marryat jotted it down in his cisatlantic diary in 1839, and it is now fully naturalized in his country. Indigenous are likewise our *hourly* (an omnibus), probably quite obsolete and perhaps always confined to Boston; *hostile* (an Indian on the war-path); *house-lot*; *how?* (for *what?*), one of Holmes's pet aversions; *hunker*, offspring of the forties, but of uncertain derivation; and *horse-sense*, not traced beyond 1870, when it appeared to be a Western neologism. The sense of 'coarse,' 'robust,' here attributed to *horse* in composition and often exemplified, is not allowed to *horse-chestnut*, in which we are bid see a connection between the animal and his food, as between him and his tormentor in *horse-fly*. Yet the corresponding German *Roskastanie* offered (p. 398) for comparison harmonizes with manifold uses of *Ross* signifying 'coarse,' as *Rossvetichen* (p. 397). However, the old botanical name, *Castanea equina*, appears decisive. The unscientific unit called *horse-power* practically overloads the beast one-third. Lincoln's phrase about swapping horses while crossing a stream, and Caleb Cushing's revolutionary vision of a "man on horseback" putting an end to this republic, have escaped Dr. Murray's readers or sub-editors.

—The perpetual struggle between the written and the spoken word is illustrated in the case of *housewife*, which has three

modes of pronunciation conceded to it, the first being as if each word were uttered separately; the next, "huswif" and "huzzif." Another century might have been added to the citations under *housewifely* if Cowper's "Poet's Cat" had been remembered:

"When in came, *housewifely* inclined,  
The chambermaid. . . ."

*Hullabaloo* has been a long time in finding its feet, orthographically; Southey wrote it "hallabaloo" in 1800, adding, "I never saw that word in a dictionary," and after 137 years it is "of still unsettled form." A like discord is observable in *Humcism* and *Humism*, *Hu'mean*, *Humian*, and *Hume'ian*—all relating to the philosopher. "*Humour* is now usual in Great Britain, *humor* in U. S.," and the English formations (e. g., *humoured*, *humourless*, *humoursome*) retain, with Dr. Murray, the *w*, while derivatives of a Latin type (e. g., *humorist*, *humorous*) drop the needless vowel. In this way a sort of poetic balance is maintained in Anglo-America. In defining humor it is said to be "distinguished from wit as being less purely intellectual, and as having a sympathetic quality in virtue of which it often becomes allied to pathos." The quoted definitions are noticeably sparse. Lowell's "Humor in its first analysis is a perception of the incongruous" is best, though it stops short. Some have found humor, as in the familiar conundrum, to be a perception of similarity in things unlike; wit, of differences in things like. We observe that *hydropathy* is stressed upon the *o* without an alternative on the *a*, which is often, perhaps oftenest, heard in this country (and so with *allopathy*, but not with *homœopathy*). All early words in English compounded of *hypo-*, we learn, were pronounced with short *y*, upon the Greek analogy. "The later tendency in the South of England has been to treat *y* in all positions except before two consonants as [long *i*], and, against etymology and history, to say *hyposulphate*," etc. This double usage is indicated throughout.

—The last volume in the series of public-school histories, that devoted to Winchester College and written by Mr. Arthur F. Leach, Assistant Charity Commissioner (New York: Charles Scribner's Sons), contains a good deal of new information, and will doubtless be valued, in the absence of something better, by the audience to which it especially appeals. But "those unfortunates who are not Wykehamists" will find it exceedingly dull. Unless they are already acquainted with the arrangements of the school, much that Mr. Leach says will be quite unintelligible. School patriotism is an excellent thing; and perhaps such a series as this appears in is not the place to look for any large or philosophic handling of the history of English education. A graceful style, again, is not so common that we can insist upon it; but clearness and correctness of expression we certainly have a right to expect. Headmasters' English is already a subject of scoffing; and this series of public school histories may end, if the editors do not take care, in furnishing one more argument against the system they eulogize. Yet the book deals with some topics which ought to be of interest to the general reader. Among them may be noticed the influence of the example of Winchester, the first of the great scholastic foundations, on the organization of Eton in the fifteenth century, and of Westminster

in the sixteenth (pp. 198 seq., 300 seq.); the thoroughgoing and apparently successful defence of London and Bedell, the two Visitors at the Dissolution of the Monasteries, damned by most modern historians, but taken under Mr. Leach's Wykehamical wing (pp. 247 seq.); the ridicule which Mr. Leach pours on the conventional belief that the Roundheads were hostile to learning (pp. 339 seq.); and the amusing assertion that Arnold's "real work" at Rugby "was to introduce more Winchester notions" (pp. 414 seq.). In reviewing lately Mr. Rouse's 'History of Rugby School,' we notice his desire to diminish Arnold's claim to respect as a reformer by insisting on the merits of his Rugby predecessors. We should like to know what he has to say to this Wykehamist version of Rugby history!

—In 'The Natural History of the Musical Bow,' a brochure of some 90 pages (New York: Henry Frowde), Mr. Henry Balfour, Curator of the Pitt-Rivers Museum at Oxford, discusses a subject which to many, even among musical, people will be no less surprising than new. Saturated, as we are, with the elaborate music of our concert-rooms, and accustomed to the sonorous effects of a hundred instruments played together, we can hardly conceive that any human being can find his highest musical ideal in the low twanging of a bowstring struck with a reed. Yet such is the case with countless multitudes inhabiting nearly one-half of one continent and considerable portions of two more, besides many islands of the sea. We are accustomed to regard the bow as something to play with; for them it is something to play on. A scant resonance is given to this unpromising instrument by pressing it against, or holding it in, the teeth; but it remains audible, at best, only a few feet from the performer. Yet the South African will sit for hours together pleasing himself with the few notes which he can produce by changing the form and size of the mouth-cavity, and which no one else is enjoying, or even hearing. It must not be supposed that this primitive type of the musical bow is the only one. In other regions we find it fortified by various contrivances to give it some little resonance. This is usually done by the aid of half a gourd, or calabash, attached by its closed end to the bow, or else set on the ground as a rest for the bow when struck. In all these forms of the instrument, however other arrangements may vary, the bowstring is almost invariably divided into two unequal lengths by a ligature which draws it inward toward the bow, sometimes to actual contact with it; and this ligature is, no doubt, the original of the bridge in our stringed instruments. But we must not anticipate Mr. Balfour's revelations. In a future work he promises still greater marvels—nothing short of the genesis of most of our stringed instruments from this simple monochord. And, indeed, when one thinks of it, what is a Hebrew *kinor*, or a harp of the ancient Assyrian or Egyptian type, but just such a bow strung with several bowstrings instead of but one? All this and more we hope to see thoroughly explained in the promised book. Of the present little work we can say that it is extremely interesting, easily understood, and, at the same time, of great value as a contribution to ethnographical studies; because, if we can trace one such primitive instrument in all its migrations from the place of its origin, we shall be greatly as-

sisted in determining the migration of mankind in those regions and the filiation of races. The pamphlet is copiously illustrated, has a good index, and is also furnished with an instructive map showing the "habitat" of the musical bow, so far as at present ascertained.

#### KNAPP'S BORROW.

*Life, Writings, and Correspondence of George Borrow (1803-1881). Based on Official and Other Authentic Sources. By William I. Knapp. Two volumes. Illustrated. G. P. Putnam's Sons. 1899.*

Mr. Birrell, who has several times made deliverances on the subject of Borrow, somewhere remarks that, while no biography has yet appeared, we need not regret the lack of one, since 'Lavengro' tells his own story so well. And he furthermore censures the rashness of the writer who shall put himself in the lists with such an autobiographer. We are glad that fear of this kind has not deterred Prof. Knapp from telling in a sober, unembellished way the tale of "El Gitano's" strange and rugged career. Goethe's title, 'Aus meinem Leben: Wahrheit und Dichtung,' inevitably suggests itself when one is reading the adventures which begin with 'Lavengro,' run through the 'Romany Rye,' and are concluded with the 'Bible in Spain.' "How much of this is truth, how much poetry or enlargement?" is a question not to be dodged by either the hostile or the friendly critic. It perplexed the early reviewers of the series, and although it may have stimulated the sale of the 'Bible in Spain,' it certainly deprived 'Lavengro' and the 'Romany Rye' of the immediate success which they deserved. Until the doubt be set at rest by careful, sympathetic, and honest inquiry, Borrowians must remain without the means of estimating the real character of books which constantly excite their interest and admiration.

Prof. Knapp has approached his task in precisely the right spirit. He recognizes that there is no need whatever of a fanciful or romantic biography. An ill-advised author possessing a great mass of Borrow's MSS. might have been tempted to work up picturesque incidents—the gleanings or débris of 'Lavengro'—and supplement Borrow's own narrative in an imitation of his style. But Prof. Knapp is kept by reverence for his subject (let alone by discretion) in the dependent relation which a good biographer should assume, and he properly selects for his function the detachment of fact from mystery. How necessary detective work is in a Life of Borrow, may be gathered from two illustrations. He constantly represents himself, in correspondence and in official documents, as being a good deal younger than he is; and during the "veiled period" of seven years which lies between the end of the 'Romany Rye' and the commencement of his connection with the Bible Society, he was devilling for publishers in London and Norwich, instead of wandering through Transylvania, the Levant, and Asia. He knew his own age quite well, but desired the praise of precocity, while pride in another form kept back any free confession of the miseries which he suffered after he left the road. Other similar tangles, wilfully constructed, baffle Borrow's biographer, besides the commonplace difficulties which are due to mere gaps in the record.

It is not probable that Prof. Knapp would confirm the statement that he has the same

feeling towards Borrow which Baudelaire had towards Poe. Still, when one confesses to an enthusiasm which has been maintained for fifty years, he discloses a profound depth of affection. In the case of Borrow as in that of Poe, many faults of disposition confront the casual acquaintance and pain the devotee. A capacity for bitter hatred, growing crabbedness of temper, suspicion of good friends, and an unsleeping pride are defects which no candid writer can conceal, and Prof. Knapp does not even make apologies for them. His attitude is: "In the end, when all the data lie before you, you will come to know the man. The only key to his methods, as to his heart, is sympathy." So much for the biographer's general tone. When we approach details, we find that Prof. Knapp—himself a well-known student of language—lays less stress on Borrow's philological attainments than on his genius. In the petulant appendix to the 'Romany Rye,' a singular claim is put forward on behalf of the "philological pearls" which 'Lavengro' contains; and whereas almost every reader will pass lightly over this smattering of polyglot words and phrases, Borrow undoubtedly considered that he displayed the most surprising erudition in all his books. Prof. Knapp, like other specialists, finds him versatile but somewhat inaccurate. "Il savait parfaitement son grimoire, but in writing he suffered from Babel." Character and literary genius rather than knowledge of tongues are Borrow's chief claims to his biographer's services and devotion.

Few authors have ingratiated themselves with the best judges of literary merit by writing solely about themselves, and among them is Borrow. Exceptional experiences, original reflections, or attractive traits must be possessed by the man who can so hold his readers that the egotism of his strain is not tedious or disgusting. In almost every case, too, where this success has been won, the magic of style is added to the other qualities. We admit that Borrow, towards the end, lost a large part of his audience; but among the remnant are some shining names. How did he recommend himself at the outset, and why, having reached such eminence as he enjoyed between 1843 and 1845, did he die forsaken and forgotten?

Borrow's claims upon the attention of a later age are at least two-fold and separate in nature. Had he never published ten pages, his personality would still be memorable, and then he could, at his best, write a fascinating story. Consider the physical prowess of our average man of letters in the present century, and imagine where he would have stood socially in the Viking Age. A large number of our modern scribes would, we fear, have gone to the wall in the ninth century. Not so Borrow. He, like Sir Richard Burton and Col. Fred. Burnaby, could have taken his part then or at any epoch, just as Isopel Berners does in 'Lavengro.' Six feet three, muscular, ready of speech in twenty or thirty languages, a good boxer, a life-saving swimmer, an accomplished horseman, dowered with striking features, and hair which wore from early manhood the silver of old age, what a figure was Don Jorge in his prime, and what a companion on English heath or Spanish deshabado! He felt keenly the intellectual cravings of the scholar and the physical power of the athlete or the fighter. A being thus endowed is seldom humble, and,

when he finds that the world will buy his books, what wonder if his self-confidence oversteps discretion?

Borrow suffered not so much from excessive as from misdirected pride, and we may discover the cause of subsequent calamities in the circumstances of his youth. He lacked regular training, by which we mean in part the discipline of teachers, and even more the discipline begotten by contact with one's fellows. His father was a captain who rose from the ranks, and his mother had been a supernumerary in a company of strolling players. He would not imply that his parents were of themselves unworthy or thoughtless of the boy's real welfare, but they had not the means of helping him forward in the best way. Prosperity at the start would have been everything to Borrow. It would have mellowed his temper, and made him less scornful of those who might be his peers in cleverness and well-meaning, although accident had given them the "advantages" of ancestors, wealth, and a regular education.

When one is conscious of a certain genius, and good fortune persistently turns her face the other way for thirty years, he must be gifted with an uncommonly sweet temper if he escapes without ugly traces of his early hardships. Borrow's disposition would probably have required careful watching in any case, and, so far as we can trace his boyish development, it received little or none. The privations born of poverty entered into his soul, and even after marriage had driven away the wolf their vestiges remained. Writing to his wife from London in 1854, he says: "My spirits are very low and your letters make them worse. I shall probably return by the end of next week; but I shall want more money. I am sorry to spend money, for it is our only friend, and God knows I use as little as possible, but I can't travel without it." And, again, four days later: "The money arrived safely, but whether it will be sufficient is a question. Perhaps you had better send another note, and I will bring it home unchanged, if I do not want any part of it. I have lived very economically as far as I am concerned personally; I have bought nothing, and have been working hard at the Museum. Our money is our best friend."

However one may account for Borrow's successive estrangements from his friends, and the increasing isolation which is so pathetic a feature of his closing years, there can be little doubt that the unfavorable reception of 'Lavengro' affected him most painfully and permanently. When the 'Bible in Spain' was rapidly passing through edition after edition, some of those who knew how unusual the ex-colporteur's life had been, encouraged him to publish other personal sketches. For instance, Richard Ford, the *Quarterly* reviewer, suggested a 'Bible in Russia,' and felt certain that the gypsy vein could be worked still further. Owing, perhaps, to such promptings, but in great part to his deep subjectivity, Borrow began the full narrative of his nurture as a student of languages. Fortunately he could enliven the tale with rare glimpses of wayfaring folk, and unfortunately he could make it an engine for directing certain flings at the Pope and genteel society. After long delays in the preparation, and after the public had been more than once led in vain to expect its appearance, the book issued from

Murray's press in 1851, just when the Ecclesiastical Titles feud raged fiercest and when the air resounded with shouts of No Popery. To be sure, the anti-Romanist part had been written long before, but the critics got a wrong impression, and, considering 'Lavengro' in the light of a foolish, hastily conceived attack on Wiseman's propaganda, handled it roughly. Borrow, who had designed something which should outdo the 'Bible in Spain,' became savage under the lash, assumed a bitter attitude towards the literary part of mankind, and through disappointment grew irritable, morose, and unhappy. At intervals a walking tour would restore his spirits for the moment, but between the publication of 'Lavengro' and his death in 1881 he enjoyed few days of settled calm. This mood of hostility or revolt also affected the springs of his literary impulse, and withheld him from making any further ventures on a large scale except the 'Romany Rye,' which concludes 'Lavengro,' and 'Wild Wales.' After his wife's death in 1849 he seldom saw any one, and, owing to his step-daughter's neglect, he actually died alone.

Borrow felt a great deal of affection for certain persons, especially for members of his own family, and he could be extremely generous, but one sees little of the romantic lover in him. He held high standards of decency and honor, resenting breaches of them in others whether he were directly affected or not. Indeed, his striving for robust, manly ends is what endears him to thousands who, through thick mists of prejudice, catch frequent glimpses of his sincerity. One is often staggered by petty misrepresentations contrived in the main for self-glorification, but the whole list of them would no more furnish serious ground for a charge of dishonesty than his hobnobbing with gypsies in the Peninsula would supply a charge of disloyalty to the Bible Society. He was clearly erratic, in his younger days a victim to mental disturbances or *Anfechtungen* which he called the Horrors, often on the verge of suicide, and always angular even when famous and relieved from money embarrassments. The great thing is that he should have ever emerged so triumphantly from gloom as to produce the scene with the gypsy hag at Merida, the fight with the Flaming Tinman, and the score of similar passages which will remain perennially delightful. When the clouds are off his soul, he has a strength and freedom which are precious enough to be reckoned a true gift of the gods.

The chief business of Borrow's biographer, we have already said, is to compare the episodes of the 'Lavengro' series with established facts, and thereby to help us criticise the autobiographical books for ourselves. Prof. Knapp fully recognises the need of holding fast to this purpose, and, after bringing together almost all the available data, he has reached a definite conclusion. He is convinced that Borrow confined himself to actual events at the outset of the composition, and, despite his statement in the appendix to the 'Romany Rye,' meant it for a strict autobiography. Take, for example, a characteristic exploit of Borrow's London days—*teste* 'Lavengro'—the hurried production of 'Joseph Sell.' Prof. Knapp says:

"We now come to the crucial test. If all the rest of 'Lavengro' is strictly true, why not this 'Life of Joseph Sell,' and the nomadic episode that is the resultant? So far

everything has been verified, and the date fixed by reliable records. Only names have been distorted or substituted—the *Oxford Review*, the 'Newgate Lives and Trials,' the 'Publisher's Philosophy'; but they have been identified. Tredinnock was put for Trethinick, Petrement for Perrement, Philoh for Philo, Ardry for Arden, Taggart for Bartlett, Joey's for Charlie's, Isopel for Elizabeth, Jasper for Ambrose, etc.; but registers, newspapers, and the autograph MSS. correct them. . . . Returning to the 'Life of Joseph Sell,' a great deal has been said and written to prove that it was an imaginary, an apocryphal book. It has been sought for, but in vain, because it was not a book at all, and the author of it never said that it was. It is expressly stated to have been a tale in a collection or series of such, written by various authors—Christmas stories possibly—that may have been issued with an advanced date, as the 'Bible in Spain' was—in this case, 1826. Mr. Borrow himself did not see the work, and knew not under what general title the 'Collection' was published. He sold the MS. and left town, and did not return to London in more than a twelvemonth. . . . I believe that Borrow wrote such a tale; that it formed part of a series, but under what name I dare not say, for the original autograph gives only 'Joseph Sell.'"

And, in his chronological bibliography of Borrow's writings, Prof. Knapp places 'The Life and Adventures of Joseph Sell' between the translation of Klinger's 'Faustus' and the 'Romantic Ballads.' Whether in the particular case cited his reasons will or will not seem sufficient to all may be doubted, but the passage shows his confidence in Borrow's credibility. We must add that he often settles beyond question the accuracy of strange things told in 'Lavengro.'

Much might be said concerning the Bible Society and its relations with its accomplished and vigorous agent. Prof. Knapp has been censured for not finding the correspondence which passed between Borrow and his employers, but the present secretary, who informed him that no letters existed, is quite as much to blame. From other sources, moreover, the essential facts have been made out. The Rev. A. Brandram and the Rev. J. Jowett, who were then the secretaries of the Society, felt at the beginning of the connection that Borrow's manner of expressing himself was not quite regular, and Mr. Jowett gave him an admonition in the following terms:

"I am sure you will not be offended if I suggest that there is occasionally a tone of confidence, in speaking of yourself, which has alarmed some of the excellent members of our Committee. It may have been this feeling, more than once displayed before, which prepared one or two of them to stumble at an expression in your letter of yesterday, in which, till pointed out, I confess I was not struck with anything objectionable, but at which, nevertheless, a humble Christian might not unreasonably take umbrage. It is where you speak of the prospect of becoming 'useful to the Deity, to man, and to yourself.' Doubtless you meant, *the prospect of glorifying God*; but the turn of expression made us think of such passages of Scripture as Job xxi. 2; xxxv. 7 and 8; Psalm xvi. 2 and 3."

Probably Borrow read the texts recommended to his notice and took the hint conveyed in the letter, for Jowett soon after compliments him on the amendment of his language. His masterpiece, the 'Bible in Spain,' was compiled from his official communications to the Society, and, if he ever resented Jowett's warning, he later on took very artistic and delicate revenge.

"It is rather amusing," says Prof. Knapp, "to contemplate the Secretary as he stood in those days on the platform of the public auditorium in Earl Street, with Lord Bexley, or the distinguished 'Friend' above named [Josiah Forster], in the chair, read-

ing aloud chapter after chapter of the 'Bible in Spain.' For so it was that the text of the letters tallied with that of the book, save here and there a slight emendation suggested by a later perusal, and the stereotyped heading of *Rev. and Dear Sir*, to conceal the epistolary genesis of the whole."

Prof. Knapp has devoted time and pains without stint to his work. His East Anglian researches, especially, deserve praise, while his acquisition of original MSS. places him in a position of advantage over all other students of Borrow's life and writings. Much of the material for which room could not be found in the biography is consigned to his edition of 'Lavengro.' A certain volubility of style and a slight acerbity towards those of Borrow's contemporaries who would not make a hero of him, are sometimes noticeable, but we readily forget any minute blemishes when we consider the vast amount of neglected information which Prof. Knapp has collected, and the scrupulous honesty which he displays in revealing what he has discovered. Hitherto Borrow has been, if not a myth, at least half in shadow to the vast majority of his readers. Now we can see him in the light of his personal ties, and of his outlook upon the world as it is preserved by his correspondence. We trust that a sense of the service which he has rendered to fellow-Borrowians will reward Prof. Knapp for the toil which he has so willingly expended.

---

*Wordsworth and the Coleridges.* With Other Memorials, Literary and Political. By Ellis Yarnall. Macmillan Co. 1899.

Among Mr. Yarnall's earliest recollections were those of Lundy, Garrison, and all the leading abolitionists, whom he met at the house of his aunt, Mrs. Lucretia Mott. There, too, he met Channing, "whose writings against slavery," he falls into the error of remarking, "were of earlier date than that of the beginning of the [Garrisonian] movement." He remembers Sumner saying, in the spring of 1860, that in case of Lincoln's election the Southern States would certainly secede, and he (Sumner) would not lift a finger to retain them; but, after the attack on Sumter, he naturally changed his mind. Mr. Yarnall's belief that Chase and Greeley had each a hope of being made President of a Northern Confederacy—whence their willingness to let the erring sisters go in peace—is too dishonorable to them to be accepted without serious challenge. It was Mr. Yarnall's good fortune to recognize Lincoln as a man of genius before his election. Remembered prophecies are generally of the *post-eventum* kind, but Mr. Yarnall is able to quote from a letter which he wrote to the *English Guardian*. A visit to Lincoln, just before Bull Run, confirmed the impression based on his speeches against Douglas. Another of Mr. Yarnall's prophecies that pleased him had for its object the marked ability of Mrs. John Stuart Mill, long in advance of Mill's adventurous praise of her.

During his first visit to Europe (1849) Mr. Yarnall made an excursion from Carlsruhe to the siege of Rastadt, one of the besieged and a leader of the insurgents being Mr. Carl Schurz. It meant more to go to Europe in 1849 than it means now. "After you," said Alibone of dictionary fame to Mr. Yarnall upon his first return, "you've been in Europe." Emerson, on the contrary, counted it a virtue in Whittier

that he had never been abroad. Prof. Henry Reed, the Pennsylvania Wordsworthian, had inculcated Mr. Yarnall with his enthusiasm for the poet, and a visit to Wordsworth was one of the most memorable events of Mr. Yarnall's first European journey. His second chapter gives an account of this visit. Wordsworth died the next year, and his physical decay was already strongly marked. Mr. Yarnall speaks highly of his conversation, but reports nothing that might not have proceeded from an ordinary mind. His opinion that there ought to be more English bishops—"five times as many"—smacks strongly of his exaggerated churchmanship. There is even a suggestion of an enfeebled mind in his reading aloud to Mr. Yarnall Prof. Reed's preface to an American edition of his (Wordsworth's) poems, and, after one quotation or another, saying, "That's from my writings." Quite the most beautiful part of the narrative is that which vividly reflects Mr. Yarnall's reverential admiration for the venerable poet.

"Walks and Visits in Wordsworth's Country" reports a succession of visits and rambles in the Lake Country in 1855, 1857, and 1873. In 1855 Mrs. Wordsworth was still living, nearly eighty-five years old, and Mr. Yarnall saw a good deal of her and gives an affectionate account of her; refraining, however, from the capital testimony to her intellectual parity with her husband—her contribution of the magical phrase,

"that inner eye  
Which is the bliss of solitude,"

to one of his most perfect lyrics. Mr. Yarnall was fortunate in his walking companion, the Rev. Derwent Coleridge, son of S. T. Coleridge and brother of Hartley. Together they visited Greta Hall, where Southey had lived and the Coleridge children were brought up. In 1857 Mr. Yarnall saw something of the Arnolds at Fox How. Miss Arnold told a touching story of the day of Wordsworth's death—how, full of the sentiment of its approach, she and another young friend climbed a hill overlooking Rydal Mount and watched until they saw the shutters closed and knew that the great soul had passed. Henry Crabb Robinson was at the Arnold dinner and talked a good deal, but Mr. Yarnall was not much impressed by him. In 1873 Mrs. Arnold was eighty-two years old, and yet full of cheerfulness and animation. Mr. Yarnall's recollections tally well with Matthew Arnold's letters of filial devotion to his mother in her long widowhood. He questions whether the Lake Country made Wordsworth, or whether his genius had invested it with something of the charm which it has now for all beholders. Seeing that there was only one Wordsworth, the credit of his surroundings for his personality is not easy to make out.

From Wordsworth and the local associations of his fame Mr. Yarnall passes to Sara Coleridge and her brothers Hartley and Derwent. He might well be proud of the friendship accorded him by the sister, and his generous tribute to her mind and character does not exceed their worth. In one of her letters to him she resents as a pure libel Carlyle's account of her father in the *Life of Sterling*. There is some looseness of statement where she is described as being "as to her mental part almost a child of Southey," and, a little

further on, "as to her intellectual part, probably even more indebted to Wordsworth." There are some good bits about her father, of whom Southey said, "Coleridge writes so that there are but ten men in England who can understand him, and I am not one of the ten." Wordsworth and Rogers were not more successful. "Wordsworth with Rogers had spent an evening with Coleridge at Highgate. As the two poets walked away together, 'I did not altogether understand the latter part of what Coleridge said,' was the cautious remark of Rogers. 'I did not understand any of it,' was Wordsworth's hasty reply. 'No more did I!' exclaimed Rogers, doubtless much relieved." Quoting Mr. Derwent Coleridge's criticism on the Brownings, Mr. Yarnall adds one of Tennyson's: "Browning would do well to add something of beauty to the great things he gives to the world." A meeting with Macaulay is reported, mainly interesting because of the frankness with which he revealed his limitations.

Next we have a chapter celebrating with genial warmth Mr. Yarnall's friendship with Sir John Taylor Coleridge and his son John Duke Coleridge, the late Lord Chief Justice of England, which is followed by "Charles Kingsley: A Reminiscence." Mr. Phelps, our former Minister to England, will be pleased to read that Chief Justice Coleridge thought him the most delightful Minister we had ever sent to England; and this after Lowell. Kingsley spoke of Emerson as editing Whitman, and Mr. Yarnall made no correction at the time, nor does he now make any. Strangely enough, Kingsley thought *'Blithedale Romance'* the best of Hawthorne's novels. Keble has a chapter to himself, and we get a vivid picture of him in his Hursley church and rectory, the beautiful church built in good measure from the earnings of *'The Christian Year.'* An Oxford Commemoration is described in terms which flatter the young barbarians of our own colleges. An elaborate and important chapter on William Edward Forster follows. It is enriched by many passages illustrative of the course of English politics. In conclusion, we have "The House of Commons in 1865," describing a great debate upon the *Alabama Claims*. The day following the debate, Mr. Yarnall had an interview with Gladstone. Lincoln's second inaugural had just appeared, and Gladstone said: "I am taken captive by such an utterance as this. I see in it the effect of sharp trial, when rightly borne, to raise men to a higher level of thought and feeling."

To his own stock of reminiscences Mr. Yarnall has added many apt quotations reinforcing his own sentiments and opinions, and, if some of his stories are not perfectly new, they are such that we are glad to have them told once more.

*A History of English Dramatic Literature to the Death of Queen Anne.* By A. W. Ward. New and revised edition. Macmillan Co. 1899. 3 vols.

The new edition of Dr. Ward's History has long been waited for. It does not present us an essentially different work from the older one, but it is a considerable improvement, and the revision has been carried out with labor and amplitude. The result is a production which, with all its

limitations, becomes indispensable as a reference-book and guide through the vast field with which it deals. Nearly seven hundred pages have been added, extending the work from two to three volumes. An analytical table of contents and a much fuller index greatly enhance the value of this edition, which finally makes complete a monument of encyclopædic learning.

Great as is the author's achievement in this work as we now possess it, it cannot be admitted that the plan and method pursued are those of an ideal literary history, nor that we have here the definitive history of English dramatic literature. Three stages are observable in the writing of literary histories—first, the collection of literary biographies in alphabetical order; second, the arrangement of these in chronological order and by chapters, with occasional summaries and connecting notes; and, thirdly, the organic history, in which at all points the attempt is made to trace the operation of the laws of cause and effect. Dr. Ward's work remains in the second category. It is descriptive and encyclopædic rather than historical. It lacks distinction of style, as well as subtlety and variety in critical appreciation. The author avoids the rhapsodies of Swinburne and the occasionally effusive æstheticism of Symonds, but he also lacks their special gifts. His scholarship, too, lacks grasp, and is summary and judicial rather than penetrating. His temperament and manner are more nearly those of Hallam than of more modern critics. We are given a good digest of the present state of knowledge, displayed with a careful regard for the weight of evidence. We are safe, but we are seldom inspired. There is no trifling with subtlety or whim, and the obvious is given its full value. The author lacks the robust and catholic taste of a born literary critic. He breathes more freely the atmosphere of the dramas of Dryden or Lee than of Webster or Ford (vol. iii., p. 313). The reader wearies of the insistent presentation of the point of view of prudential morality. It is true that the English drama in its great periods offers the most interesting material imaginable for ethical analysis, but it is material which requires to be judged with discrimination as well as in the mass and by the decalogue—witness our author's failure to perceive the full value of the paradox underlying Lamb's famous exculpation of the Restoration comic dramatists (vol. iii., p. 507). In the last analysis we others also reject art-for-art's-sake, but in the meanwhile neither art nor the criticism of art should be too obviously concerned with the categories of ethics.

Other peculiarities mark this work. The treatment of the origins of the drama, in the light of our present knowledge, is defective. The author would have done well to follow in this period the guidance of Creizenach. Nor can much better be said of the treatment of the early transition drama (vol. I, pp. 164f.), which at best is halting and vague. Amid the recent fluctuations of critical opinion with regard to the merits of Marlowe, Kyd, and Peele, Dr. Ward's judgments seem to us generally sound and well proportioned. As to Greene, we think he has allowed himself to be swayed too much by the extravagant enthusiasm of Churton Collins and others; while Lyly receives scant recognition. And why should the non-dramatic works

of the dramatists, as in the case of Greene, be treated so at length in a history of the drama? The excuse suggested (p. 392) seems to be quite insufficient. The work as a whole, as in the earlier edition, is much stronger in its treatment of the later Elizabethan dramatists. Jonson, as before, receives full justice, and the discussion of Chapman is appreciative and interesting. The history of Shakspeare's reputation and of Shakspeare criticism is considered at length. The pseudo-Shaksperian plays are treated with exemplary moderation of judgment, rising to exceptional appreciation, and justly, in the case of "Edward III." We confess ourselves far from persuaded by the argument for classing the greater Shaksperian comedies as comedies of incident rather than of character. The comedy of character is not the same thing as the comedy of humors. Is it not rather comedy in which the incident flows from the character of the person, as it does measurably in "As You Like It" or "Much Ado"? Dr. Ward is quite right in holding that Shakspeare's greatest power was that of characterization. But characterization marks the comedies as well as the tragedies. Dr. Ward's conservatism in the question of the influence of foreign dramatic sources on the Elizabethan drama (e. g., vol. III., pp. 264f.) we must hold to be fully justified until further evidence is adduced by those who are for generalizations magnifying this influence. As yet very little has been brought to light to prove the existence of any considerable influence of the early dramas of Italy or Spain on that of England.

The author has made the commendable effort, too often neglected by English scholars, to take into account the labors of all previous workers in the field. Naturally some things have been overlooked, such as the work of Fischer (*Kunstentwicklung der englischen Tragödie*), Tolman's thesis on "The Taming of the Shrew," the recent reprint of Bale's "The Three Laws," Collier's reprint of "Horestes," and others. Occasionally careless revision or proof-reading mars the first and second volumes. Additional errata in volume I. should be noted at pp. 63, 72, 76n., 169, 264, 279, 308, 352n., 502, 506 (read "one less than"); and in volume II. at pp. 57, 320, 561, 619 note 1 (read Brandon), 623 (verb omitted), 638 note 4, 648 note 2. There seems to be contradiction in the several references to the additions to Marlowe's "Faustus" (cf. vol. I., pp. 336-7, and vol. II., pp. 453, 458, and 468). A slight obscurity of phrase in vol. III., p. 38, in regard to the authorship of "Henry VIII.," appears to leave an inconsistency with the opinions expressed in volume II., 206f. and 746.

*Imperial Democracy.* By David Starr Jordan. D. Appleton & Co. 1899.

There is no uncertainty in the note which rings through these addresses. Human liberty ought to be the corner-stone of a democracy in practice, as it necessarily is in theory; and this truth, and the consequences of disregarding it, are the burden of Mr. Jordan's discourse. His book is headed with a line from Lowell—

"They enslave their children's children who make compromises with sin."

and concludes with a citation from Thoreau's "Plea for Capt. John Brown." These

voices sound with undiminished clearness across the gulf which separates us from the era of the abolitionists. They will sound long after the sentimental sophistry of our religious expansionists has passed away in shame. Who could now be induced to read one of the numberless defenses of negro slavery as a civilizing and Christianizing agency, which were once put forth by the clergy, North and South? But when will Thoreau and Whittier and Lowell be forgotten?

In spite of the subject and his own convictions, Mr. Jordan is not impassioned. His language is often forcible, but it is always within bounds, and his power lies in the array of arguments which he marshals. He examines the claim that war stirs the fires of patriotism, and asks his hearers if they really believe there is now more devotion to our country than there was a little more than a year ago. If there is, how is it shown? Does slaughtering helpless enemies increase our courage? Is it patriotism "to trample on the Spanish flag, to burn fire-crackers, or to 'twist the Lion's tail'?" Rather is it true that patriotism declines as the war spirit rises. "Men say they have no interest in reform until the war is over. . . . The patriotism of the hour looks to a fight with some other nation, not towards greater pride in our own."

Equally forcible is Mr. Jordan in showing what is involved in a colonial policy. It is nothing less than a change in the nature of our government.

"We must give up the checks and balances in our Constitution. . . . We cannot move accurately and quickly under the joint leadership of a conservative and steady-headed President, a hysterical or venal Senate, and a House intent upon its own reflection. . . . The town-meeting idea must give way to centralization of power. . . . The extension of dominion rests on the strength of arms. Men who cannot hold town-meetings must obey through brute force. . . . A republic cannot be an oligarchy as well. The slaves destroy the republic. Wherever we have inferior and dependent races within our borders to-day, we have a political problem—the negro problem, 'the Chinese problem,' 'the Indian problem.' . . . In the tropics such problems are perennial and insoluble. Cuba, Manila, Nicaragua, will be slave territories for centuries to come. These people in such a climate can never have self-government in the Anglo-Saxon sense. Whatever form of control we adopt, we shall be in fact slave-drivers, and the business of slave-driving will react upon us. Slavery itself was a disease which came to us from the British West Indies. It breeds in the tropics like yellow fever and leprosy. Can even an imperial republic last, part slave, part free?"

To the plea that England administers tropical colonies without injury to herself, Mr. Jordan replies that England is an oligarchy. Her foreign affairs are regulated by a powerful governmental machine, with the control of which the people have nothing to do. An oligarchy may be a good government, but it is not the kind of government that our fathers established. But unless our colonies are to be ruled by an oligarchy, they must be ruled by such rulers as we now choose. What they have done for Alaska, Mr. Jordan tells us minutely, and it is a chapter in our history full of shame and humiliation. We have ruined the hunting and fishing by which the Aleuts formerly supported themselves in comfort, and they are now starving and demoralized. If any one says, We

will change all that, and commit the administration of our dependencies to good men only, Mr. Jordan retorts with some of his experiences in suggesting the names of competent persons for Government positions requiring scientific training. Does the recent order of the President concerning the civil service indicate that the change for the better is taking place?

We could continue citing Mr. Jordan's arguments indefinitely, but we have said enough to show how completely he has covered the ground, and how clearly he has stated the issues. His book is an arsenal of weapons for all who detest war and oppression, and who detest them all the more when carried on under the pretence of establishing peace and freedom.

*Food and Feeding.* By Sir Henry Thompson. Frederick Warne & Co.

Sir Henry Thompson in this, the ninth edition of his valuable work, in which some new matter in relation to "slow cookery" is incorporated, announces that it is to be his final contribution on the subject of Food and Feeding. Of the value of this treatise there can be no better evidence offered than that, above all others, he has succeeded in arousing among the English an effort to improve their culinary methods, which are acknowledged to be inferior to those of any other civilized people. Had he attempted to accomplish this through appeal to their epicurean impulses, he would have met, as all his predecessors did, with signal failure. He chose his audience among the British middle classes, to the gratification of whose palates through the employment of improved cookery he was careful to make slow approaches. Before enlarging upon that topic, he gained their confidence by impressing upon them the value of varied and succulent diet as a hygienic promoter of longevity. That assured success.

Before disclosing to his countrymen the pleasure to be derived from the proper preparation and serving of aliments, Sir Henry Thompson tells them that they have adopted and maintained for centuries a diet that is suited neither to their climate nor to their mode of life. Their food is too rich in fats and proteids; in consequence, they fall victims to dyspepsia and many other chronic diseases with which they would not be afflicted if they could bring themselves to submit to the light, varied, and easily assimilated diet of their Continental neighbors. This they look upon with contempt, and pride themselves upon subsisting on what they consider "simple and wholesome food," which in fact is most harmful, and leads to premature corpulency that is exceedingly prejudicial to health. It is to his inappropriate diet that may be ascribed the passion of the Briton for violent muscular exercise. It is the natural, unconscious effort to rid his system of surplus and effete matter that leads him to follow athletic pursuits to excess. Of late years, in this particular, we are imitating him; but with us it is a cultivated or artificial impulse, for our diet is one more conducive to a sedentary mode of life than to one that stimulates to inordinate physical exertion. We eat far less of meat than the English, and vastly more of fish, cereals, and vegetables; moreover, the

culinary art in this country is very much in advance of what it is in England outside of the ranks of the nobility.

There is no other chapter in 'Food and Feeding' that can be read with more profit by the amateur cook or female head of a household than the one which treats of stewing and braising. These two processes come within the domain of "slow cooking," for to hurry the one or the other is to distort their purpose. Moreover, in stewing or braising the least expensive portions of meat can be utilized to concoct most savory and appetizing dishes. No two culinary methods are more abused or open to more complete failure. Their intention is to prepare and serve meat in a tender condition and in the most attractive form. In stewing, the contents of the saucepan, covered, should never be allowed to rise above a temperature of 170 degrees Fahr., and they should be kept at that point for three, four, or six hours, according to the quantity of material that is under treatment. This slow method cooks not only the meat, but likewise the vegetables, which could not be thoroughly done at the same time as the meat with rapid stewing.

In braising, Sir Henry Thompson fails to note one very important detail of the process. It is the outcome of long experience that, in braising beef, as a preliminary the braising-pan should be sufficiently heated to sear the flesh on both sides, before adding the ingredients and proceeding to the process of slow cooking. By this means some of the juice of the meat is retained, while the quantity that forms one of the constituents of the sauce is not materially reduced. Whereas the author of 'Food and Feeding' mentions the *miropots*, the *coulis* or sauce of the braise, composed of essence of ham or bacon, vegetables, wine, spices, and strong bouillon, he says nothing of the *marinade*, a bath composed of the same materials, in which flesh products are immersed for eight or ten hours previous to braising. This omission may be taken as evidence of the thoroughly practical quality of Sir Henry Thompson's knowledge of culinary processes. Many experiments with all sorts of *marinades* for meat, fowl, and fish have failed to disclose any advantage to be gained by their use. Salt-pickle is the only one that is completely effective, and that because it is a preservative, and meat can remain in it without decomposing for a sufficient length of time to become impregnated with a saline flavor. All *marinades* would be equally useful if, along with flavoring, they possessed preservative power; but flesh cannot remain in them for a sufficient length of time to become saturated with the savor of their ingredients; therefore, while to the sense of smell a *marinade* conveys delightful suggestions, it fails to respond with equal force to the palate.

There are so many topics in 'Food and Feeding' which arouse interest that satisfaction, to those interested in the culinary art, can be obtained only by perusal of the book. It is of no value to the amateur who pins his faith upon compilations of recipes. The only work, published in late years, that compares favorably with it is Thuddeum's 'Spirit of Cookery.'

Laird Clowes. In five volumes. Vols. 1 and 2. Boston: Little, Brown & Co. 1898.

This elaborate work, which is being issued under the direction and partial authorship of Mr. William Laird Clowes, with the assistance of Sir Clements Markham, Capt. A. T. Mahan, Mr. H. W. Wilson, Gov. Theodore Roosevelt, and L. Carr Laughton, is more of an historical storehouse than a history. The scheme of it involves more than strictly naval history, as a very considerable portion of its contents is devoted to the history of voyages and discoveries from the earliest times to the year 1898. The inclusion of this maritime history makes mere cumbersome in number and size volumes which at best, under the plan proposed, must be unwieldy. Besides the two under review, three more are to be published to complete the series.

In order to fulfill the design to begin at the beginning, the very early narrative up to 1066 may be necessary, but this portion of the naval and military history of England is uneventful as narrated, and possesses no more value than mere chronicles. When we reach the early maritime codes, we find matters of curious interest. The laws of Oleron, for instance, provided that when a ship was weather-bound, the master must (under penalty in case of damage) call the crew aft for consultation when a change of weather followed. "Gentlemen," he was required to say, "what think you of this wind?" And the voice of the majority was to determine whether the vessel was to put to sea or not. This sounds a little like "Pinafore." In 1215 we find that the management of King John's navy was largely in the hands of the priests, the Archdeacon of Taunton being apparently the chief. Women, too, have had indirect control, but rarely at sea and in immediate command; the example of Cleopatra at Actium standing almost alone. Privateers were found to be as lawless and objectionable in 1248 as in later days, and Nelson's remark that "the conduct of all privateers is, as far as I have seen, so near piracy that I only wonder any civilized nation can allow them," is so pertinent for all time that it is hard to understand why our own country refused so long to agree to the abolition stipulation of the Declaration of Paris, insisting upon a *quid pro quo*, the exemption from capture of merchant vessels at sea.

Coming to later dates and the epoch of Drake and his companions, we find insufficient credit given in this work both to the military qualities and to the achievements of Sir Francis Drake. The student will still have to refer to Corbett's 'Drake and the Tudor Navy' for the most intelligent account of Drake and his successful cruises. In the face of all the recent material that has been brought to light concerning the Spanish Armada, the treatment of this subject is unsatisfactory. It resembles too closely the patchwork of the whole book, and lacks both spirit and blend.

The second volume shows signs of improvement. In the introduction the author refers to a favorite project of his own for preparing historical records of certain ship names. There is very much in a name, both in the navy and in the army, and the habit of renaming ships from older ones of fine record, which exists largely in the British navy, might be followed to advantage in our own service. In fact, if our regiments

in the regular army were localized in name in addition to their numerical designation, it would emphasize their identity, and cause them to be followed with interest by the town or section from which they received their name. This would, of course, be heightened if the regiment was partly or wholly recruited from that locality.

The civil administration of the royal navy had become so corrupt in 1623 that vessels for which money had been appropriated and paid over were not even in existence. Similar statements have been made in more recent times of other European Powers, in regard to the construction of fictitious ships that went to sea upon fictitious voyages, and were lost to sight everywhere except upon the books of the dock-yard, which were thus balanced. The military history of the British navy contained in the second volume includes the narrative of the major and minor operations from 1603 to 1714, which attains interest when the author quotes from other authorities; otherwise, the account lacks both style and interest.

For later volumes, not only will there be more abundant material, but more practiced hands will take up the parable. The present illustrations are profuse and attractive, varying in form and quality from full-page photographs to plans and vignettes of considerable excellence.

*Au Congo Belge.* Par Pierre Mille. Paris: A. Colin et Cie. 1899. Map. Pp. xv, 308. 16mo.

The two fundamental principles upon which the Congo Free State was established by the joint action of the great Powers, were freedom of trade and freedom of the negro. M. Mille's book shows how the first of these has been acted upon by King Leopold, its absolute ruler, and touches incidentally upon the condition of the natives. Our author was the correspondent of the *Temps* at the recent inauguration of the railway, and, in his opening chapters, describes a few of the incidents of his journey to Stanley Pool, of which the most striking was the review of a great body of savages at one of the stations. His main object is to show how this vast territory, eighty times as large as Belgium, with an estimated population of thirty millions, is being developed. Some information is also given of the methods adopted in the French Congo and their results. After an account of the railway and its financial history, he dwells upon the system employed for the collection of the natural products, chiefly rubber and ivory, which, with the exception of a few Government coffee and cocoa plantations, is all that has been attempted as yet in the development of the resources of the country. This is followed by a brief exposition of the King's colonial policy, of the division of the territory into his "private domain" and the provinces in which certain companies have trade concessions, together with some statements in regard to the financial history of these companies. He closes with a reference to what he believes to be the two great sources of danger to the State—the over-eagerness to occupy new territory, and a want of the "*sens de gouvernement*."

What he has to say about the King's colonial policy is introduced by a suggestive conversation with a fellow-passenger who

*The Royal Navy: A History, from the Earliest Times to the Present.* By William

had under his care some four or five thousand rubber vines.

"Are you going to plant them on the Congo?" I asked. "Certainly; on my property on the Shabunda, since I am the colonist." [The italics are M. Mille's.] And as he saw that I did not understand him, he added: "What! don't you know that there is only one colonist in the Belgian Congo, and that is myself? You will find there great companies; . . . you will see some State plantations; . . . but a free man, on his own land, who does a little trading with his own money, and cultivates for himself alone—there is only myself."

That is, there is absolutely no private initiative. The whole trade is in the hands of the King and the companies. Certain districts are regarded "in principle as opened to commerce and to private cultivation, in reality only to a certain number of companies," which for the present cannot be increased, new concessions being refused. The rest "belongs to the King, constitutes his particular domain, his park, and his farm," and makes him, to use M. Mille's words (in this case in English), "the big-

gest India-rubber and ivory merchant in the world." It is only on the coast that free trade practically exists. It should be said that the author, so far from condemning this policy, advocates its adoption, with some necessary modifications, in the French Congo, which, neglected by the Government, remains absolutely undeveloped.

M. Mille does not attempt to show—it would be an impossible task—what the natives get in return for their forced tribute of rubber, a tribute at times collected by the military agents as men storm cities ("ont pris du caoutchouc comme on prend des villes"). If the required amount is not brought, the failure is punished sometimes by barbarities which would have disgraced the "conquistadores." The great thing to be desired is some controlling power over these agents which shall see that justice is done to the negro. "When the Belgians shall have established this," the author says in closing, "we shall be able to say that the great commercial and humanitarian enterprise which the Indepen-

dent State of the Congo is or ought to be, has definitively succeeded." Now it is simply a gigantic ivory and rubber Trust.

An appendix contains some official documents, including the last budgets of the French and Belgian Congo, and commercial statistics. There is also a map.

OLD SOUTH MEETING HOUSE, BOSTON.

## Beautifully Handwoven

BY EXPERT SAXON WEAVERS.

## The Augusta-Victoria Empress Shoulder Shawl

made of softest wool and silk, 40 inches square. 7½ inch fringe, warp silk and wool. Rich light green, delicate pink, roseherbe red, pure white or black.

Sent POSTPAID and REGISTERED on receipt of \$7.50—check, draft or money order—by

The Spacac Weaving Co.,  
12 Moravian Church St., Bethlehem, Pa.

## Maine Coast.

FOR SALE.—A compact tract of 400 acres of land in one of the most central positions on the mainland of Penobscot Bay. It has nearly four miles of bold rocky shore front, with beaches, coves, and beautiful headlands. The land runs to high elevations, and has great topographical variety; pine woodland; meadows and grassy slopes. There is a steamboat landing close by with daily service to and from Boston and the West. It is within half an hour by steamboat from Islesboro and Castine. There are several good farmhouses on the property, an ice pond, and a trout brook. Salmon are taken on the shore. The land everywhere commands broad and beautiful views of an archipelago of islands, the broad bay, distant sea, and mountains. The property is offered for sale as a whole at a low price per acre to settle a joint account. Photographs and further details may be obtained of

J. MURRAY HOWE, Trustee,  
28 State Street, Boston.

# The Nation.

NEW YORK, THURSDAY, AUGUST 24, 1899.

## The Week.

We expressed the opinion the other day that Mr. McKinley would concur in the obvious suggestion of President Schurman's interview at San Francisco, that we ought to retain the Philippines because of our future interest in the trade of China. Now Mr. H. L. Nelson, the editor of *Harper's Weekly*, tells us that this is exactly the kind of gray matter that the President's brain is depositing at Bluff Point. He thinks, says Mr. Nelson, that, if we should abandon the Philippines, we should be an object of derision to Europe, and that the Orientals would consider us of no account; that the trade of the Philippines is a small matter in itself, but that that of China is something to be struggled for, and that the Philippines furnish an excellent foothold for such a contest. This is not put in the form of an interview with the President, but as an inference from his daily walk and conversation. Of course it must be taken as an incomplete version of what is passing in the President's mind. Yet it is fitting to inquire what this conception involves and implies. It implies, first, that as many people, Filipinos and Americans, must be killed as may be necessary to give us a footing for the "struggle" in China. Trade with China we can carry on better from our Pacific Coast direct than by any round-about route; but if we must struggle, i. e., fight, for trade, then we want the Philippines for a *pou sto*. So we are to fight the Filipinos first in order to gain an advantageous position for fighting Russia, or some other Power or Powers that have effected a lodgment on Chinese soil, which they may use to the detriment of our trade. This is a fair interpretation of the droppings recorded by the editor of *Harper's Weekly*, mixed up as they are with some edifying reflections on the goodness of our intentions towards the Filipinos and the ultimate benefits we shall confer upon them.

One great trouble with all of Mr. McKinley's deliverances about the war is that he tries to unite in his own person the contradictory characters of the swashbuckler and the missionary. He has to wave the flag and threaten death and destruction to all who "assail" it, but in the same breath he has to express a tender concern for the souls of the men he is about to kill. This makes him a sort of "Fighting Bob" with a psalm-singing attachment. The result is some highly ludicrous juxtapositions of

language. One such occurred in the President's message to Congress last December, when he was describing the glorious sea-fight at Santiago. As a kind of climax he burst out with the words, "The Spanish loss was deplorably large." Why "deplorably"? Were we not there to kill all of them we could, and the more the merrier? What Mr. McKinley's narrative and the tone of it required him to write was "magnificently large," "inspiringly large"—but no, the chance to roll his eyes and do a little canting was too good to be lost, and so he ended his war poem with a snuffle and wrote "deplorably."

There was a similar impression of a monk on the warpath given by the President's remarks at the Catholic Summer School at Plattsburg, on Tuesday of last week. At one moment he talked like Emperor William, threatening to dash to pieces all who opposed him. The next he was a very Saint Columba in his yearning over those who withstood him. He would begin a sentence in the spirit of Napoleon (who, as the Abbé de Pradt said, regarded men only as projectiles to be hurled against his enemies), and would end it with a sentence worthy of Wilberforce. At the very instant when he seemed to have worked himself up to the point of ripping out an oath, he blessed instead. "Rebellion may delay," he declared in a terrible voice, "but it can never defeat"—what? Our formidable armies? The irresistible march of our banners? No; only our "blessed mission of liberty and humanity"! Surely, there never was such a dying fall into twaddle.

How completely "we have changed all that" appears in the news from the island of Sulu. Gen. Bates is negotiating a "treaty" with the Sultan. This is a new business for the United States—to make a "treaty" with one of its own subjects. But the fact of the treaty is not as startling as its contents. It proposes to leave a Mohammedan despot in absolute control of territory belonging to the United States. Not even moral or religious interference is to be allowed, as one article of the treaty specifically bars out missionaries. Slaveholding is to be continued, though the Sultan agrees, as a concession to silly American prejudices, to allow slaves, when able, to buy their freedom. The only hitch is over the question what flag the Sultan shall fly when on his journeys. He wants his own; at last accounts, Gen. Bates was still urging him to adopt the American. We hope there will be no yielding on this point. The idea of having any other flag than the star-spangled banner floating over

the Sultan's harem and slaves must surely be quite intolerable to McKinley.

President Schurman, upon reaching his Ithaca home on his return from the Philippines on Monday, expressed the opinion that what the Administration is doing in the Philippines is to "establish that sovereignty" which the United States assumed by virtue of the treaty of peace; that "the vital issue is the honor of the nation, the protection of loyal Filipinos, and the fulfilment of our obligations to the nations of the world involved in our acceptance of sovereignty"; and, finally, that "the means and agencies for the accomplishment of this end must be determined by the President." Dr. Schurman adds that the President understands the situation better than any one else can possibly do, and says that he has "no doubt the President will soon effect a solution of the Philippine problem which will be entirely satisfactory to the American people." In other words, the President of the Philippine Commission tells the country that it must trust everything to Mr. McKinley; that Congress has no part to play in the solution of this vast problem; and that discussion among the people is out of place, because "to his statesmanship and tried ability we may intrust the issue with perfect confidence." If Mr. Schurman has been correctly reported, the proposition to regard the President as an absolute dictator in a most important question of national policy has never before been expressed quite so clearly. Is the nation ready to accept such doctrine?

We shall not make haste to assert that the interview with Admiral Dewey, printed in Monday's *London News*, is authentic. Just because we like what he is reported to have said at Naples about the Philippine situation, we shall not assume that he really did say it, without confirmation. But we beg to point out that it is antecedently credible, because it is in line with what Dewey has before said and written concerning the Filipinos and the Philippine problem. The Admiral is now quoted as being fully convinced that the Filipinos are "capable of governing themselves"; that they "have all the qualifications for it"; and that "the only way to settle the insurrection and assure prosperity to the archipelago is to concede self-government to the inhabitants." Now this is really going no further than Dewey went in his letter to the Secretary of the Navy, dated Manila, August 29, 1898, in which he wrote:

"In a telegram to the Department on June 23, I expressed the opinion that 'these people are far superior in their intelligence and more capable of self-government than

the natives of Cuba, and I am familiar with both races.' Further intercourse with them has confirmed me in this opinion."

Admiral Dewey is said to have declared in the Naples interview: "I have never been in favor of violence towards the Filipinos." This is in full keeping with what he said to the Rev. Clay MacAuley last January: "Rather than make a war of conquest on this people, I would up anchor and sail out of the harbor."

So far, therefore, the interview is fully borne out by Dewey's known utterances. But now we come to a passage bearing on the actual situation and the actual duty of this country, which, if not repudiated—if adhered to and repeated—by the Admiral, will shatter Mr. McKinley's Philippine policy. It is this:

"The islands are at this moment blockaded by a fleet, and war reigns in the interior. *This abnormal state of things should cease. . . . I should like to see violence at once put a stop to.*"

If Admiral Dewey said this, it would be, we maintain, only a logical development of the views he has publicly expressed. If the Filipinos are capable of self-government, then a war upon them to make them submit to our yoke is, indeed, an abnormal state of things which should at once cease. If we began to use violence through a criminal blunder, the sooner we admit our hideous mistake, the better all round. But it will be asserted that the Admiral could not have cast such an awful reproach upon McKinley, because it would be not only an indiscretion, but an act of insubordination. We remember, however, that the Santiago "round robin" was flagrant military insubordination; yet it was necessary in order to expose and correct the frightful mismanagement of the War Department, and undoubtedly saved the lives of thousands of soldiers. Gen. Miles was guilty of insubordination in publishing what he did about his superior officer, but he won popular sympathy thereby, and the Government did not dare to punish him. Now, it may be that Admiral Dewey has concluded that it is his duty, in defiance of military etiquette, to speak out in a similar way in order to expose official blundering, which has long since assumed the proportions of a crime.

The tone of the imperialist press shows clearly enough the growing unpopularity of the Administration's course in the Philippines. One newspaper which, only a few months ago, was insisting that everybody except a few fanatics and fools favored expansion, and was satisfied with the President's policy, now says that it "is strange beyond ac-

is "a growing disrelish of the war, until and unless peace plans go hand in hand with it." Another of these organs, which used to ridicule the notion that the country was not enthusiastic for the war, now says that "many Republican Senators who have been in Washington have stated frankly that the sentiment throughout the country is changing, and that, while the feeling for expansion is still strong, it is being tempered by regret that the conquest of the Philippines is being accomplished at such a sacrifice of money and treasure." It is also admitted by the same newspaper that "the reports brought back to this country by the returning soldiers have had a dampening effect upon the public spirit." The San Francisco *News-Letter* summarizes the views of the Oregon volunteers who recently passed through that city on their return, in the statement that "to a man they declare that the Philippines are not worth the blood and treasure it will cost to conquer and govern them"; that "it is plain from the men's talk that they did their duty because their country had called upon them, but that they would not volunteer in a similar service again," and that "they say that our California boys feel just as they do, and that the same feeling, with more or less force, permeates all the volunteer regiments."

The officers chosen to be colonels and lieutenant-colonels of the ten new regiments reflect as much credit upon the Administration as did those put at the head of the first ten regiments now nearing completion. With one or two exceptions, they are men of unusual proved ability, many of whom, like Capt. John Bigelow, jr., distinguished themselves in the fighting about Santiago. This evidence of a desire to select the proper men for these positions, irrespective of politics, makes it all the harder to understand why the President should every now and then foist upon the service an officer utterly unfit to be in it, either by reason of bad character or because of his age. A case in point is that of Major Charles Newbold, recently appointed paymaster, at the age of sixty-two years. For many years a good, honest dairyman in Washington, as we learn from the *Army and Navy Register*, Major Newbold entered military life as a paymaster in the volunteers after the close of the war with Spain, and was duly transferred to the regular army, with the rank of Major, on the retirement of Paymaster-General Carey, a few weeks ago. In two years this fortunate man will be retired for age, with a pension of three-fourths of his present pay, \$2,500, for the remainder of his life, envied by a couple of hundred officers who, after thirty and even thirty-five years of arduous service in the line of the army, are still wearing a captain's shoulder-straps. We should like to hear, from any one quali-

fied to speak, some reason for this outrageous appointment. Is it that Newbold supplied milk to the White House, or must the dairymen be kept in line at Uncle Sam's expense?

Senator Tillman of South Carolina is not looked on as a particular friend of the colored race, but he seems to think that it is time to protest against the treatment which it is now receiving. With his usual violence of expression, not unjustified in this case, he denounced the conduct of a band of "whitecappers" who have been going about and whipping inoffensive negroes, calling those who took part in such outrages cowards. What is significant is that Senator Tillman based his condemnation of these proceedings on the condemnation which they were receiving from public opinion. "The Yankees," he said, "are watching us close, and the eyes of the whole world are now on the race problem in the South. They will take advantage of everything of this kind to abuse the South." Boston, he continued, "was the head and centre of all devilment"; this being especially manifested by the conduct of "that Jewett woman," who came down and rescued the family of the murdered negro postmaster. He warned his hearers that the better feeling which had begun to prevail between the sections would disappear unless the abuse of "poor ignorant black wretches" was stopped, and suggested that the representation of South Carolina in Congress might be cut down because of the new election laws. These laws were intended to disfranchise the negroes, and the claim was made that when this was done they would no longer be persecuted. This claim has not so far been justified by the event, and the condition of affairs is evidently extremely serious. The remarks of Senator Tillman were made at a mass-meeting called to denounce the whitecappers; the prosecuting attorney and the Sheriff both begging for the vindication of the law. A particularly ominous feature of this disturbance is the motive assigned for maltreating the negroes. They have been quiet and inoffensive recently, it is said, but some of the whites covet their lands, and are taking these means to get possession of them. Such mass-meetings as this are urgently called for in other parts of the South.

The exact legal situation created by the decision of the Court of Cassation in the Dreyfus case, and the instructions under which the present court-martial is proceeding, are not generally understood, we think. A careful reading of the full text of the decision shows that, like most judicial opinions, it is extremely cautious. In reality, it does not go beyond disannulling the former verdict.

against Dreyfus, on the ground that it was irregularly obtained. It was the illegal submission of secret documents to the military tribunal, of which the accused was left in ignorance, which compelled the Court of Cassation to order a new trial. True, it did refer in the decision to the evidence used against Dreyfus, and did, in a way, discredit it. But it did not do so in any such fashion as to prevent the present court-martial from giving weight to the old testimony if it chooses to. Thus it simply said of the famous "canaille de D." letter that "at present it is considered inapplicable to the condemned man." This is very far from deciding, as some have inferred, that the letter could not be used against Dreyfus at all. So of the alleged confession to Capt. Lebrun-Renaud. The court only said that it was not possible to fix the precise language of it, on account of the discrepancies between witnesses. Even in regard to the bordereau, the court did not positively decide that Esterhazy wrote it, but stopped with citing various facts which "tend to prove" that it was not written by Dreyfus. The upshot is that, legally, the court-martial can do what it pleases with all this discredited evidence, and, provided its proceedings are regular, can find any verdict it chooses against Dreyfus without danger of fresh reversal by the Court of Cassation. This suggests the peril that a monstrous injustice may be repeated under the forms of law.

Col. Picquart is the real hero of the Dreyfus case, and his testimony is easily the most important yet given at the trial. It ought to be convincing, as against the mass of suspicion and hypothesis which is all that has been urged as proof of guilt. His bold bearing, his quick sense of personal honor, and his love of justice, leading him to risk reputation and life in behalf of a man whom he never knew, have marked him out for admiration from the first; and his appearance at Rennes has been in keeping with all that was known of him before. It is a terrible charge which he substantiates against Gen. Mercier, and one no less damning against Gen. Gonse. The former not only submitted documents in secret to the first court-martial, but used one which he positively knew did not refer to Dreyfus. And Gen. Gonse, when proof of the horrible injustice done was laid before him by Picquart, simply said, "If you say nothing, nobody will be the wiser."

Two witnesses in the Dreyfus case on Monday attempted to create prejudice against him by telling of his relations with women of a certain class. One of these witnesses went so far as to repeat private conversations on this subject. The trial has gone very wide of the

mark in many ways. Indeed, it has not been confined to the subject of the inquiry at any time, but has ranged through the whole earth and the things under the earth, yet the precincts of opéra bouffe were not actually invaded until Gribelin and Junck were called as witnesses and began to tell what they had observed or heard in relation to the *demi-monde*. If anything could bring about a reaction in favor of Dreyfus among French soldiers, it would be this travesty of decency and justice. Lord Russell, the Chief Justice of England, is quoted as saying that there had been no testimony in support of the charge against Dreyfus that would warrant an English magistrate in holding him for a regular trial. This must be the opinion of every American lawyer. The rules for the admissibility of evidence constitute the foundation of the whole structure of jurisprudence, and they are just as necessary, just as indispensable, in a military trial as in any other, because the principles of justice are not altered in the least by the fact that a man serves in the army. Tested by the rules of evidence, the case against Dreyfus has already vanished. Adverse evidence has resolved itself into the private opinion of half-a-dozen generals and ex-War Ministers that Dreyfus might have committed the act of treason, because he had access to the documents named in the bordereau, and, therefore, he must be the guilty man. "If he did not do it, who did?" exclaims Gen. Mercier in tones of triumph, as though the burden of proof were on Dreyfus and not on his accusers.

Why no representative of the Pope was allowed to take part in The Hague Conference is explained at length by M. Georges Goyau in the *Revue des Deux Mondes* for August 1. It was all the doing of Italy. The Czar earnestly desired the coöperation of Pope Leo, and copies of his original appeal for disarmament and of Count Muravieff's circular fixing the bases of discussion were especially sent to the Holy See; and the Pontiff's immediate and hearty approval of the whole movement was rightly thought to be of great influence in helping it on. Everybody looked for some official representing the Pope in the Conference, but Italy suddenly interposed a veto. Only territorial sovereigns were invited, she said, and she could not assent to the implication that the Pope had any such sovereignty. Russia persisted in pressing the desirability of having Papal representation, but the Italian Prime Minister finally said that if the Pope had a delegate at The Hague, the kingdom of Italy would not. He also drew Germany into the case, the German Government notifying the Russian that if any European Power withdrew from the Conference,

Germany would also withdraw. So it practically became a question of no Pope or no Conference. Thus it came about that the Pope, whose encyclical in 1894 in favor of arbitration and disarmament was an anticipation of the Czar's noble summons to the nations, was prevented from having any direct voice in the councils at The Hague. M. Goyau closes his account of the affair with the sententious remark: "So, while Italy scored a success, the Holy See and the nations scored an experience."

The condition of India, as described in the speech made by Lord George Hamilton in introducing his budget, is much better than has been supposed. The great famine was not the only disturbing element; plague, earthquake, and a frontier war have also contributed to the impoverishment of the country. Nevertheless, the deficit for the year 1897-'98, the last year for which the accounts have been closed, was little more than £3,000,000. The total cost of the famine to the Indian revenue was over £10,000,000, and the frontier war took a good deal more than £2,000,000. Concerning the famine and the general question of the poverty of the country, Lord G. Hamilton observed that there were two theories current. One school maintains that British rule is bleeding India to death, and that distress and famine are caused by overtaxation. The other school holds that famine has always prevailed periodically in India, depending on the rainfall, and that under British rule its effects have been steadily narrowed. As evidence in support of this theory, the recuperative power of the people is important. In March, 1898, immediately after the famine, the surplus revenue for the coming year was estimated at less than £600,000. It proved to be over £3,000,000, which is the largest surplus ever realized in India. These figures certainly show a remarkable recovery from the effects of the famine, but their effect is somewhat impaired by the fact that the expenditure for the year in question was considerably reduced by the appreciation of the rupee. The amount of bills of exchange remitted was so large as to enable the Indian Government to diminish its gold liabilities in England by £2,695,000, while it succeeded in exchanging rupees for gold to the amount of about £1,500,000. The receipts from railways and irrigation works were also the largest ever recorded in India, and there was an actual reduction of military expenditure. As to establishing the gold standard, Lord G. Hamilton emphatically declared that he never would have considered it had he not satisfied himself that the establishment of such a standard would be one of the most effective instruments for improving the industrial condition of the lowest paid of the wage-earners of India.

### WHY WE CANNOT CONQUER THE FILIPINOS.

The problem of Philippine conquest is not a military one. This country undoubtedly has the physical force to make the islands a desolation and call it peace. We can harry their coasts. We can ravage their fields. We can drive their fleeing inhabitants to mountain fastnesses, and dash their little ones against a stone. If it is a mere question of brute strength—of money and men and ships and guns—we can employ it without limit. We can kill and burn and destroy like Avengers of God. No one doubts that. Mr. McKinley, in boasting of the new forces he has got together for bending the Filipinos to his will, is only glorying as a full-grown man might in his ability to break every bone in the body of the street wail. The disparity is too glaring. If we exert our giant's strength to crush the Filipinos, we can undoubtedly do it. But what we assert is that it is not a question of mere *force majeure*. There are moral obstacles in our path more terrible than an army with banners. If we wage a war of extermination against the Filipinos, they will have invisible allies mightier than all the battalions that tread the earth; so that they that be with them are more than they that be with us, and we can never conquer them.

We cannot conquer the Filipinos because we cannot, as a nation, place ourselves in a pillory to become the hissing of mankind; cannot justify the bitter taunt of the Spaniard that our pretended unselfishness and humanity were but thinly veiled greed and cruelty; cannot give fresh edge to the sneers of Germans at our vaunted purpose to set a captive race free, and to the cynicism of Frenchmen at the expense of our mission of justice and liberty; cannot make our best friends in England hang their heads in shame; cannot put it in the power of the civilized world to say that our generous professions were a hollow mockery and our plighted faith no better than a harlot's vow.

We cannot conquer the Filipinos because we cannot march over the dead bodies of our national leaders and prophets and heroes; cannot look into the grave and troubled face of Washington bidding us remember that "the basis of our political system" is the right of a people to make its own government, and urging us to exhibit to the world the "too novel example of a people always guided by an exalted justice and benevolence"; cannot, in Lincoln's presence, "ask a just God's assistance" in the effort to "bestride the necks of a people because they will be better off for being ridden"; cannot, with McKinley leading us, do what he said would be an act of "criminal aggression"; cannot welcome and applaud Dewey while going in the teeth of his saying, "Rather than make a war of conquest of this

people, I would up anchor and sail out of the harbor."

We cannot conquer the Filipinos because we cannot use any of our historic battle-cries in the fight against them; cannot allow our soldiers to give one countersign of liberty, while pursuing them; cannot arm our officers and men with the triple armor of a just cause; cannot nerve our troops with a hatred of the enemy nearly as intense as their hatred of the cruel and repellent work they are set to do; cannot look upon a victory except with shame that it is won over a foeman so unworthy of our steel; cannot ask a beaten army to surrender and trust to our good faith, lest the taunt be thrown in our face, as it was in President Schurman's by a Filipino envoy, that American good faith is not a thing to be considered seriously.

We cannot conquer the Filipinos because the country and Congress will not give the President the money necessary to pursue his ruthless work; because an outraged public sentiment will demand that he quit doing what we went to war with Spain to stop her doing; because burdened taxpayers will protest against being made to pay for shot and shell to do the work which wise statesmanship should be able to do without the firing of a gun; because we are too great a nation to trample on the weak, too free a people to permit chains to be riveted on another race by our agents and in our name, and too jealous a republican commonwealth to see our blood and treasure poured out in distant lands for the benefit of a favored few.

And if, in spite of all, the war of conquest and extermination is pushed to its bloody end; if the last Filipino town goes up in smoke and flame; if the last armed native is brought to bay in swamp or pass, and falls under our volleys; if it is not the Filipinos who will be conquered; they, even as they die before the pitiless hail of our bullets, may well exclaim: "Americans, you have not conquered us, you have conquered yourselves; in our ruin you have pulled down the pillars of your own temple of liberty; in beating us down you have trampled upon your own history and principles; in destroying our republic you have destroyed your own."

### RESULTS OF POLITICAL COURAGE.

One of the reproaches brought against those citizens who refuse to obey the orders of party leaders without criticism or discussion, is that their energy is wasted. "Why do you throw away your ballot and your influence," the independent voter is asked, "by deserting your own party? You cannot join the other party, for you do not believe in its principles, and if you hope to accomplish anything, your only chance is to stay where you belong, and take the bad and the good together." This appeal is probably in

most cases sufficient to overcome the disposition to revolt. Men hate to be called bad names. They dislike to break off friendly relations with their old companions, and above all they dread the reputation of being visionary and impractical. They find it on the whole easier to turn a deaf ear to the voice of conscience than to that of the party organization, and they justify themselves with the reflection that, after all, they could accomplish nothing if they did take an independent course.

Yet the fallacy of this appeal is constantly exposed. Every one admits that the conduct of party leaders may become so bad that they have to be displaced. No one denies that unscrupulous politicians may favor measures so contrary to party traditions and principles as to require repudiation. The question, therefore, concerning party policy is always open. Conditions are incessantly changing, and the course of party action must be determined by human volition. This being so, it is absurd to assume that the individuals who happen at any time to be in office, or to be in control of the nominating machinery, must have the absolute power of deciding on the policy of their party. To a certain degree they must have this power. The immediate demands of administration have to be met. But beyond that point administrative officers have no right to go. The intelligent members of the party must be consulted. If they are to be consulted, they have a right to give their opinions, and if the matter is a vital one, to insist on them. That is a condition of the healthy growth of parties. The party must advocate new measures all the time, and if the new measures are dictated by the managers and not by the thinking members of the party, it will very soon decay. We have had many examples of this in American history, and they afford ample proof that energy is not wasted by independent political action.

This truth was very well brought out by Mr. H. C. Parsons, a member of the Senate of Massachusetts, at the recent Ashfield anniversary. He reviewed the political course of George William Curtis, and pointed out that while he had been called the "ideal independent," he was properly the ideal party man. When his career is reviewed, we are struck with his activity in what we speak of as "politics." He attended all the caucuses, served on committees, was a delegate to conventions, presided at political meetings. He was chairman of his county committee and Presidential elector. He accepted some nominations for office, and might have had others if he had wished to bargain for them. He urged on college students "that participation in the details of politics without which, upon the part of the most intelligent citizens, the conduct of public affairs falls under the control of selfish and

ignorant or crafty and venal men." In all this, Mr. Curtis preserved his independence, and under his guidance and that of such men as he, the Republican party was enthusiastically supported by the best citizens. It was successful because of the courage which its intelligent members displayed in asserting their right to hold the party managers to their principles.

Hence, it involved no change in his theory of party government for him to oppose the Republican managers when they lowered the party standards. We need not dwell on the results of his action, because they are current history. But what the rising generation of educated voters needs seriously to consider is the practical results of such political courage as Mr. Curtis displayed, and as is now displayed by such good Republicans as Senator Hoar and Mr. Parsons. Young men are told that such opposition is blind and hopeless; that the anti-imperialists are fighting as those that beat the air. But every day's tidings prove the falsity of this view. It is not a question of creating a party; it is a question of influencing the managers of the existing parties. That these managers have been influenced by the courageous attitude of the anti-imperialists is easily demonstrated.

The aim of these citizens may be defined roughly as the preservation of government by the people, and the ideals of human equality and freedom. To hold distant peoples in subjection by right of conquest, as the Republican managers proposed, was inconsistent with that aim, and hence the independent element was thrown into opposition. But the Democratic party organization, owing to its expulsion of its independent element, was in no condition to attract Republican voters. Moreover, the managers of that organization were by no means sincerely hostile to an imperial policy. They thought it might be popular, and they cared little for consistency. The situation was extremely discouraging for the independents. They were too few to count, and both parties were against them. It was a time for the faint-hearted to draw back and to submit to what seemed inevitable. Fortunately there were enough courageous men to sustain the cause, and they may now contemplate the results of their action with good cheer.

One of these results is that they have furnished the Democratic party with a policy. From half applauding the subjugation of the Filipinos, the leaders have gradually veered around until they are ready to denounce it. Mr. Richard Croker's personal convictions about free government and human liberty are, perhaps, not very clear, but he is in position to judge of what is popular, and he has changed his tone about expansion. He thought it was assured, but he now thinks differently. Mr. Bryan was some-

what obscure in his first utterances, but he has grown more and more explicit. Appearances indicate that the Democratic party will adopt substantially the platform of the anti-Imperialists, so far at least as the continuance of a war of conquest is concerned. To have made this a political issue when the policy of subjugation seemed at one time to be universally accepted, is a great victory. It may be fairly attributed to the political courage of a comparatively few independent and patriotic citizens contending against great disadvantages.

Nor is this all. It is not only the Democratic leaders that have been aroused, but the Republican managers also. Signs are multiplying that they are alarmed. They are becoming more and more apologetic, the more the real issue is explained to the people. They are perhaps too far committed to their policy to change it openly; but they will probably be led to modify it. They assert that the war will soon be over, and they hope, no doubt, to overwhelm armed opposition. But if they find that they cannot conquer within six months, they will probably resort to diplomacy. Eventually, therefore, the principle of the consent of the governed may secure recognition, and that is the chief principle involved. If we review the whole situation, the "ideal party man" seems to have accomplished much. He has not thrown away his influence, which those who thought he must submit to fate have done. On the contrary, he has exerted it so successfully that future ages may hold that it turned the scales of destiny, and that those who were not frightened at being called traitors, have made themselves an enduring name as patriots.

#### THE IOWA DEMOCRACY.

The Democratic State Convention in Iowa last week was a political gathering of unusual significance. The party managers have nowhere in the West been more insistent upon keeping the silver issue to the front than in that State. In the State convention of 1897 a platform was adopted which gave first place to the financial question, laid "special emphasis" upon that portion of the Chicago platform bearing on this question, and specifically reasserted the demand for free coinage at the ratio of 16 to 1. Again, in 1898, the party put the same issue to the front, declared that the utterances of the Chicago platform concerning finance "explicitly define our faith on the money question," and held free coinage at the ratio of 16 to 1 "indispensable to the financial, industrial, and political independence of our people."

In sharp contrast with this attitude of the Iowa Democracy in 1897 and 1898 is the position which they take in 1899. The platform adopted at Des Moines be-

gins with an unequivocal and unreserved endorsement of the Chicago platform, "in whole and in detail," but it does not "lay special emphasis" upon the financial portion of it, and so far from holding free coinage at 16 to 1 "indispensable," it does not even mention that policy, or say a single word about silver. The new issue of imperialism has forced the old one of the national finances into the background.

Upon this new issue the Iowa Democrats first "rejoice in the exalted sentiment and motive that prompted the Government of the United States to take up arms in defence of the bitterly oppressed people of Cuba, and in the successful termination of the war with Spain, its patriotism, and the unsurpassed bravery displayed by our soldiers and sailors on land and sea." They declare that "war for liberation of the tyrannycursed island was worthy of the greatest republic, but for the same reason that we glory in the successful war against Spain, we deprecate and condemn the war against the Filipinos." They characterize the first as for the emancipation of a people, and the other for the subjugation of a people, and insist that, "if the war against Spain was right, and it was, that against the natives of the Philippines, who have committed no offence save to love liberty, and to be willing to fight and die for it, is wrong." They assert that "the attempt, unauthorized by Congress, to conquer the natives of Oriental islands is a repudiation of the American doctrine affirmed in the Declaration of Independence, and in conflict with the principles which George Washington and the patriots of the Revolution made sacrifices to establish." The last resolution in the series is as follows:

"We oppose conquest of the Philippines because imperialism means militarism, because militarism means government by force, and because government by force means the death of government by consent, the destruction of political and industrial freedom, and the obliteration of equality of rights and assassination of democratic institutions."

All this is sound doctrine. It is an excellent statement of propositions which can be seriously discussed and ought to be so discussed. The fly in the ointment is an absurd plank which expresses the belief that the war against the Filipinos was "inspired by Great Britain for the purpose of producing conditions that will force an Anglo-American alliance"; which not only protests against the war and demands its termination by the extension to the Filipinos of the same assurance given to the Cubans, but records "our deep-seated antagonism to an alliance with Great Britain or any other European Power," and expresses "our detestation of the attempt made in British interests to disrupt the friendly relations which have uniformly existed between the United States and Germany." This is a most transparent bid for both

Irish and German votes on demagogical grounds.

The other principal feature of the platform is the portion devoted to Trusts. The Iowa Democrats "view with alarm" the multiplication of these combinations of capital, call them "the direct outgrowth of the policy of the Republican party," condemn this policy, declare their "solemn conviction that the Trusts must be destroyed or they will destroy free government," and "demand that they be suppressed by repeal of the protective tariff and other privilege-conferring legislation responsible for them, by the enactment of such legislation, State and national, as will aid in their destruction."

The significance of all this is that the party evidently welcomes the chance to make an aggressive fight along the new lines of battle, which have been laid out under the eye of the commander-in-chief. Bryan not only was favored for the nomination next year, but was in Des Moines while the managers were framing the platform, and approved the course which was taken. The Iowa Democrats have undoubtedly "sounded the keynote" for their party in the Presidential campaign of 1900, provided that the conditions in the Philippines shall not materially change before next summer. Under existing conditions all the politicians in both parties could not make silver the chief issue next year, nor prevent the expansion policy from being the one which will engage the attention of the people. Issues are born out of the course of events and the feeling of the voters about those events; they are not made to order by a little group of political schemers. The war in the Philippines is what the people are thinking about, and even if Bryan should try his best to organize the Democratic politicians, and Mark Hanna the Republican, to make another fight over the silver issue, they could not succeed. Bryan evidently sees this. The readiness of the Iowa Democrats to make the change of base should be a warning to Republicans.

#### OLD-AGE PENSIONS.

At the moment when the British Parliament received the report of its committee favoring a national system of pensions for the aged, the Pennsylvania Railroad Company announced that it had matured a plan for the benefit of its superannuated workmen. To the superficial observer it may seem that these movements indicate a universal tendency; but the supposed analogy disappears when the difference between the agencies controlling the distribution of the pensions is considered. Ultimately, it is hardly too much to say, the pension policy of a government tends to be determined by the pensioners. The experience of the United States is practi-

cally decisive on that point. The ordinary Congressman does not dare to propose any reform of the scandalous abuses of our system, but is rather disposed to extend its scope, both by general and by special acts. The pensioners constitute a privileged class, often numerous enough to hold the balance of power at the polls, and they are solidly united against any reduction of their stipends. It is true that the interests of the masses should control the action of legislators, but practically legislators can seldom resist the demands of any large and well-organized body of voters. The masses are ignorant and indifferent. The interested classes are alert and insistent. It is hard to prevent them from enlarging their claims. It is impossible to cut them down when once allowed.

A railroad company differs from a state in that it has no "politics" in its constitution. There are not two organized bodies of men each trying to get hold of the management for the purpose of installing its members in the offices. The purpose of its existence is to sell transportation to the public at a price that shall pay all expenses, and furnish besides a reasonable compensation to the people who have spent their money in building and equipping the road. Of course, human nature being what it is, there is frequently a great deal of jobbery in railroad management. But, as a general rule, it is true that the stockholders choose managers because of the ability which they have displayed in attaining the legitimate ends of the railroad. Managers that cannot manage so as to pay dividends, have to give place to more competent men.

But in a government there are no tangible dividends. Governments do not make money, but spend it. They have no means of support except what they obtain from the revenues which their subjects earn. Their operations may promote the general welfare, but they do not directly increase the financial welfare of any one except their officers. Hence the responsibility of legislators for financial results is of the slightest. If times are hard, the people will generally hold the Administration responsible, but, as a rule, unjustly. Under President Harrison the Republicans passed the pension bill, the silver bill, the bill admitting the mining Territories as States, and a high tariff bill which struck off the revenue from the sugar duties. These measures so depleted the Treasury as to bring on a panic, which was attributed to the Administration of President Cleveland, although he did his best to repair the mischief. The mass of the people are altogether incapable of fixing responsibility for financial mismanagement by their rulers, while the stockholders of a corporation have some capability of this kind, although it is limited.

Hence, the chief inquiry concerning a

railway's pension system is a scientific one. We want to know the figures showing the term of employment, the wages paid, the probable duration of life, etc., just as we ask similar questions about an insurance company. The Pennsylvania Railroad Company, we may be sure, made a careful investigation of the whole subject before deciding on its plan. The plan involves the compulsory retirement of employees at the age of seventy years, or in some cases between sixty-five and seventy years. It implies practically service of the company for life, and is in addition to the relief-fund already provided for those invalided, which fund is also enlarged in its scope. Calculation has doubtless been made that this system will be economically advantageous to all parties. Employees will know that faithful service on their part will secure them against want in their old age, and will be encouraged to make additional provision for themselves. Stockholders will consider that the expense of the pensions will be repaid by better service, by the automatic displacement of the superannuated, and by the creation of a permanent force of employees. The latter will look on their pensions not as alms, but as accumulated earnings, or as increased wages paid for prolonged service.

The plan laid before the English Parliament is theoretically sound. It is meant only for virtuous citizens who have been able to support themselves up to the age of sixty-five, but who find themselves at that age with an income of less than ten shillings a week. No one sentenced to penal servitude within twenty years, no one who has received poor relief (except medical relief) within twenty years, no one who has not tried to the best of his ability to make provision for himself and those dependent on him, is to have a pension. These conditions are practically absurd. We know what similar ones amount to in this country. We have seen the practical operation of limiting pensions to those free from "vicious habits," and who are unable to support themselves by manual labor because of "mental or physical disability of a permanent character." These restraints are not applied, and it is vain to try to apply them. The restraints proposed in the English scheme are even more preposterous. The idea of ascertaining whether a million, or several million, persons have done their best to make provision for old age, is altogether fantastical. Such investigations, to amount to anything, would require a vast force of officials whose expenses would be more than the pensions. The additional inquiries concerning good character for twenty years and the receipt of alms would be almost equally difficult. In a small village, where population is not migratory, such investigations might be practicable. In Great cities they would ordinarily be hopeless.

But even if the scheme proposed could be worked, at the estimated cost of £10,000,000 a year, that is not the end of it. It is only the entering wedge. A very urgent demand is already made for extending the limits of the scheme. It is vain to urge that such alms-giving discourages thrift; that if the possession of a few pounds in the savings bank is to prevent a man from getting a pension, he will not think it worth while to save. Such arguments are beside the question, because, as we have said, it is a political one. The pensions have been promised, and the populace demands them. The *Spectator* declares that if the proposed scheme is adopted, difficulties and perplexities will arise which must ultimately ruin not only the Government, but the present safe and vigorous system of finance. Hence it suggests that it would be wise to begin with pensions for those aged 75 years, with some further restrictions. It adds that "nothing would be easier" than to reduce the age to 65, if it seemed wise. That is true; but it is also true that, after taking a step of this kind, retreat is impossible. *Facilis descensus*, and when the common people have once learned that they can be supported at the public expense without the opprobrium of the alms-house, they will not be satisfied until they have fully exploited this bountiful source of revenue.

#### THE DISCOVERY OF THE AGORA AT CORINTH.

AUGUST 4, 1899.

Since I described, somewhat more than a year ago, in these columns, the discovery of Pirene, the excavations at Corinth have yielded another important result, which makes it permissible, if not desirable, that this truly American work, which is going on so far away from the eyes of most Americans, should be trumpeted out a little at home. When I look back on the results of three excavation campaigns of from two to three months each, I am filled with wonder that we have been able to accomplish so much.

In the year 1896, when the excavations of the American School conducted by Dr. Waldstein at the Argive Heræum had come to a close, the managing committee of the School, through its chairman, asked me what excavation enterprise I had to propose, assuring me that whatever selection I made would be supported to the extent of the resources which the School had at its disposition. To this question I replied promptly. For more than a year I had had Corinth in my mind. I had felt that the time had come for the excavation of a large Greek city, which up to that time had not been attempted. Corinth afforded an opportunity to make this beginning, because the prosperous town that covered a good deal of the site of the ancient city had been wiped out by the earthquake of 1859. And yet I was appalled at the magnitude of the undertaking. The area of the old city was well known from traces of the ancient wall; but within this area, at the foot of the imposing Acro-Corinth, extending about a mile from north to south and nearly two miles from east to west, not one point of an-

cient Corinth was identified. There was, to be sure, a probability that one might strike something almost anywhere; but that one would miss the important things was vastly more likely. That one should hit the bull's-eye without some sort of suggestion was the most unlikely thing of all. A Greek ephor, M. Skias, had in 1890 made one attempt to find the Agora, resting upon a theory which he had formed in regard to its location—an attempt which had only a negative result. M. Skias came to the conclusion that very little of the Greek city would ever be brought to light. Feeling the uncertainty of any immediate results of excavations in this great area, I had for a time turned my attention to Argos, which affords a little strip of free ground, at the foot of its acropolis, while the rest of the ancient city is largely covered by the modern city of ten thousand inhabitants. But there was some difficulty in securing that particular area in Argos, and I had already reverted to Corinth when I was called upon to make my selection.

In order, however, to have two strings to my bow, I secured from the representative of the Greek Government in archaeological matters the concession not only of Corinth, but also of Sicyon, where the School had already rendered conspicuous service in excavating the Theatre. Prof. B. I. Wheeler, my colleague for that year, then visited with me both sites, in order that, as he expressed it, "we might not be talking through our hat" in answering the committee. As he concurred with me in the belief that Sicyon offered no essential encouragements which the more important neighbor city did not also afford, Corinth was the choice.

In the spring of 1896 we took the field, and dug more than twenty trial trenches, spread out over a wide area, but most of them in or near the wretched hamlet which goes by the name of Old Corinth, with the hope of finding out where to strike in earnest. It was only after this stage was reached that we could ask the Greek Government to step in and expropriate the land. Although we found much that was of interest, particularly vases of all ages, in several of these trenches, it was not until near the end of the three months' work that we gained, partially at least, our object. In Trench xviii we found, as we had hoped, the Theatre. This was buried under from fifteen to twenty feet of earth and badly broken up. So, after digging branches and supplements to our main trench until we got up to xviii f, we left it unexcavated, and so it lies to-day. Prof. Babbitt, however, made a plan of it, accompanied by a full description.

But the importance of the Theatre lay in the fact that it gave us the first identified point. Pausanias has a fairly full and fairly clear description of Corinth; and, having secured one point, we were on his track. Had we had a second point, we could at once have drawn a line and placed most of the monuments which we have now found. Had the name of the venerable temple ruin by which Corinth has long been known to travellers been known to us, we should even then have had this line. It is true that I guessed its name and recorded my guess in the report of this first year's work.

In a trench dug in a valley just east of this temple, we found at a depth of about

twenty feet a broad pavement, which, combined with the configuration of the soil, made me think that the Agora was near. To find the Agora was to solve the topography of Corinth, because Pausanias, after describing what is inside the Agora, proceeds out from it, describing monuments right and left along the main streets.

I can never adequately set forth the impatience with which I waited for the opportunity to put my guesses to the test of another excavation campaign. When the time came around to begin, the campaign dropped out on account of the war between Greece and Turkey; and two years of waiting increased my eagerness to a fever. In the work of 1898, proceeding up the valley east of the temple, we found buried under thirty feet of earth Pirene, the most famous fountain of Greece, with its architecture (a two-story façade) almost intact, except for the loss of its marble facing. There was much else in the work of that year that was interesting—public attention was especially drawn to the inscription from the Synagogue in which St. Paul preached; but the main result was Pirene. If we had found but two stones of it, it would have been important because it was our second point; and now we had our line. It was the same as if we had the Agora. We could now point in a certain direction and say, "There is the Agora"; but we could not tell quite how far away it was. But a broad marble staircase, thirty steps of which we laid bare, leading from the broad pavement before mentioned up the valley lengthwise, towards where it ended in a broad level space, led us to think that it was near. How very near we little knew. The campaign came to an end without the complete uncovering of Pirene.

This year I began the campaign with just as much interest, but no feverish eagerness. The finding of the Agora was now simply a question of time. I had outlined to the committee, as the work of this campaign, the completing the excavation of Pirene, the excavation of the temple, and the proceeding towards the Agora as far as the money held out. The three movements we carried on at the same time.

When we began to proceed up the marble staircase which led up the valley, we found that we were already at the top, and almost immediately we found the foundations of the propylæa, mentioned by Pausanias, through which the street to Lechæon, the harbor of Corinth on the Corinthian Gulf, passed out of the Agora. From the mere mention of Pausanias one would have no idea of the magnificent position of this gateway, looking down the valley, challenging the gaze, the observed of all observers. It was what we were looking for; but it came so suddenly that I did not dare to believe in our good fortune, nor did I announce it until the end of the campaign, when we had gone a long way through the propylæa, and cleared a considerable portion of the Agora itself.

Two important results followed. The "Old Temple" became at once and for all time the Apollo Temple, because it lies just where Pausanias puts the Apollo Temple. Then the huge, rough-hewn block of native rock just west of the temple was found to be a fountain, at the time dried up, with only about a third of its height protruding from the ground. Not until we had cleared it out to the bottom could we be sure that

it was a fountain-house; and then we knew from its position that it was the fountain Glauke, called after the unfortunate princess of that name, the wife of Jason, who threw herself into it to escape the fiery poison given her by Medea, who, if she could not have Jason, would destroy all that belonged to him.

All the results of our work will appear as heretofore in the *American Journal of Archaeology*. The story need not be made complete here. In brief, in three campaigns we proceeded straight to the goal. The two touchdowns were the Theatre and Pirene; the goal was the Agora. Before the close of our work this year, one who is universally recognized as a leader in the archaeological world said in public: "Since the excavations of the American School we have a topography of Corinth. Before, all was conjecture and confusion." These conjectures, to some of which great names were attached, were, of course, mutually contradictory, and most of them now seem ridiculous. One who has gone below the surface and found the bottom facts is privileged to smile at the great guessers of the past, and appropriate the words which Metternich used of his companions in statecraft: "My God! how wrong they are, and how right I am."

Without the aid of several generous donors, this work, which has cost about \$3,000 a year, could not have been carried on. The School, which is doing a fine work in quickening classical learning, is barely self-supporting. Excavating, which is that part of its activity which arouses most interest in Greece, and probably elsewhere, has to be paid for by a few willing friends. May these never grow less, but more! A buried city, and a famous one, is being brought to light by our American School. While Germany is laying bare Miletus, and Austria Ephesus, we ought to keep pace with them at Corinth. RUFUS B. RICHARDSON.

#### HUMANISM IN EDUCATION.

OXFORD, July 31, 1899.

The Romanes lecture, delivered here, towards the end of the academic year just closed, by Prof. Jebb, deserves a particular sort of attention from those who are concerned with the teaching of the classics in America. Attention can best be aroused, I am convinced, by dwelling on particular points which the lecturer made, and I shall therefore venture to refer those desirous of getting at the discourse as a whole to its published form, a pamphlet which was procurable on the day of the lecture.\*

Prof. Jebb began with an historical retrospect which occupied about one-half of his discourse, and paved the way for a luminous and cautiously framed delineation of the present functions and future prospects of classical studies in the education of our times. His argument bore most specifically upon education in England; but he did not avoid general considerations, nor could a survey of the present usefulness and future possibilities for Englishmen of classical training fail to have its very direct bearing upon the problems of American education in the present day. In this retrospect the new education inaugurated by the

Italian Renaissance in the period between Dante and Erasmus occupied much of the lecturer's attention. Mediæval education was averse to literary studies, since it was chiefly scholastic philosophy and theology, with law and medicine, upon which mediæval thought had been focussed. Greek, having been altogether lost in the West, had no place in the training of the Middle Ages. Ecclesiastical influences predominated everywhere, and the teaching of such Latin authors as were read was "encumbered with a fantastic pedantry" which insisted, for instance, that every passage construed might have "four meanings—literal, metaphorical, allegorical, and mystical." Mediæval education had, in fact, the well-defined practical aim of preparing its pupils for the Church, for Law, or for Medicine. The only rudiments of a general all-round training which the Middle Ages yielded were apt to associate themselves with life in the households of princes or nobles, and with prevailing physical or military preoccupations. Thus, until that time of intellectual and artistic quickening known as the "Revival of Learning" was at hand, education in Christendom had a markedly narrow and technical complexion.

In contrast with this, Prof. Jebb described the educational innovations of Vittorino da Feltre, called from the chair of rhetoric at Padua to undertake at Mantua the education of Marquis Gonzaga's children. Unlike most mediæval educators, this innovator, Vittorino, was no ecclesiastic. He nevertheless, as the speaker averred, "neither felt nor sought any conflict between the classical and the Christian ideal." He planned, and carried out in practice, an education "at once intellectual, moral, and physical." Improving upon the "old court training" of mediæval days in a thoroughly Greek vein, he gave an "education in which mind and body should be harmoniously developed." "No antique idea," said the lecturer, "appealed with greater force to the humanists, since none presented a stronger contrast to mediæval practice." The purely intellectual features of Vittorino's scheme were, if possible, opposed still more sharply to ecclesiasticism. Without having in view for his pupil any special calling, his aim was to form "good citizens, useful members of society, men capable of bearing their part with credit in public or private life. He treated the great writers of antiquity as living men," into whose mind and soul it was possible to penetrate "by sympathetic study." At first only Latin authors were used, but in time some Greek was taught at the Pleasant House (La Gioiosa), a villa where Vittorino's school was organized. Music, mathematics, and such science as the time could boast of also received attention. Vittorino's whole system earned the name of humanistic, "not simply or chiefly because the intellectual part of it was based on Greek and Latin," but, "in a more important sense," because it aimed to develop "the pupil's whole nature, intellectual, moral, and physical."

The lecturer then spoke of the foundation of Winchester College in Vittorino's boyhood, and noted that the Mantuan public school at La Gioiosa was in its prime when Henry VI. founded Eton. Still, not either of these, but St. Paul's School, founded by Dean Colet, the friend of Erasmus, was "the oldest English school which was

humanistic from its origin"; and the Statutes of Harrow, dated 1590, gave what seemed to be one of the earliest, if not the earliest, English example of "detailed regulations, as distinguished from merely general prescription, concerning the school study of Greek." Then, having noted that this education of the earlier Renaissance in Italy culminated in the establishment of the study of Greek in English schools, the lecturer summarily glanced at the expansion of the resources of humanism "as an instrument of education, by the manifold development of the higher classical learning in the centuries since the Renaissance."

As the outcome of modern archaeological research, he said that antiquity had gained "a more vivid reality," and the ideal of humanism has been "reinforced in a manner which brings back to us something of the spirit which animated the Renaissance when it was largest and most vigorous." For the enthusiasm of the Renaissance, Prof. Jebb here pointedly added, "was nourished by the monuments of classical art scarcely less than by the masterpieces of literature." But this very progress, so recently made, had brought us, he averred, to a point where "the larger benefits of humanism become more difficult to harmonize with the new standards of special knowledge." To understand the Greek and Latin literatures required "some study of ancient thought, ancient history, archaeology, art," while to become an expert in any of these branches was "the work of years." On this account, he added, in words which might be taken as a fair enough description of the training which culminates in the existing school of *literæ humaniores* at Oxford, "much can be said in favor of a plan by which the university student who is to devote a course of three or four years to the humane letters, confines himself, during the earlier stage of it, to the languages and literatures; then turns away from these viewed in their wider range, and concentrates himself for the rest of his time on one or two important aspects of classical antiquity, such as philosophy and history, to the exclusion of the rest."

Having thus described the modern and "reinforced" ideal of humanism in its culmination at the university, the lecturer addressed himself to that necessary foundation for a humanistic course in the university which must be found in the pursuits and experiences of the younger student "in the highest form of a school where the classics are taught"—a student, he it noted, especially in view of present American conditions, "who has not yet reached the moment at which the need of specialization begins to be felt." "Give this boy-student aptitudes and tastes for literary studies; make him one of that very considerable number of boys—a number immensely larger than the number of those who are fitted to excel in Greek or Latin composition—who can be appealed to by a "world very distinct from that in which he moves," and can feel it, nevertheless, to be a world not "wholly alien." When such a youth first achieves some appreciation of the best classical poetry and prose, he goes through "a little Renaissance of his own," as Prof. Jebb happily termed it, and feels "the stimulus of discovery." In fact, he "perceives in some measure a beauty of form unlike anything that he has found elsewhere."

\*The Romanes Lecture (1899): Humanism in Education. By R. C. Jebb, Litt.D., Hon. D.C.L. Delivered in the Sheldonian Theatre, June 7, 1899. Macmillan.

Something of the thought, the charm, and the music of great classical writers finds a "way into his consciousness" and dwells in his memory.

Many learners and teachers of the classics in America will unquestionably recognize Prof. Jebb's striking words as applicable to experience by no means unknown to American schoolboys engaged in preparing for the admission ordeal imposed by Harvard or Yale or any of our leading universities. But I think they will at the same time feel that the number of those in America who go through this "little Renaissance of their own" might be greatly increased if the demands of specialization in the university course for which our schoolboys are preparing did not scatter many a fairly gifted learner's powers over a somewhat formidable number of rudiments. Whatever may be the advantages secured by the usual American insistence upon the mastering of a minimum of attainment in a considerable number of subjects, one cardinal defect attaches to it inevitably. Being, under our usual system, required to dance attendance in the ante-chambers of too many of the palaces of truth which modern investigation has reared, the boy of good promise is often flurried and distracted at the very moment when he might be pressing on and entering for a brief moment the "Pleasant House" of the humanists.

Prof. Jebb gives as a date for the establishment of the study of Greek in the leading English public schools 1560-1600. This very period, when Greek was still struggling for its foothold, covers the school years of an overwhelming majority of the educated early colonists of America. Humanism and humanistic studies were yet plants of tender and uncertain growth in the England from which our forefathers severed themselves. It is, doubtless, fair to say that those of their number who could be classed as intellectual were chiefly among the New England pioneers. Just among them it is especially noticeable that mediaeval preoccupations with theological controversy were especially at home. The whole episode of Sir Henry Vane's brief tenure of the governorship in Massachusetts Bay, if carefully entered into, will show that the atmosphere of early New England, like that of the Middle Ages, was averse to literary studies, and must reveal why the humanistic training of the Renaissance had but a precarious and stunted growth in New England. Sir Henry Vane was at Westminster School and at Oxford, Roger Williams was at Charterhouse, and several others (the Winthropes, for instance) must have had good schooling in England, but they were all brought to America in the heat of theological dissensions which made a fair flowering of the newly planted humanism impossible. Of contemporary and new intellectual movements in England, that which culminated in the foundation of the Royal Society attracted the most attention and roused the most enthusiasm in New England.

If we turn to William Penn's later colony, or to the earlier planting of Virginia, we find the same absence of any and every condition favorable to the new humanism and humanistic study. Outside of New England, theological enthusiasm was less, but commercial preoccupations too often took its place. It is accordingly our plain duty to acknowledge that humanistic studies in America were starved at the outset, and never enjoyed that full contact with the

spirit of the early Italian Renaissance which was gradually transforming the schools of England, at just the critical moment when the American colonies were planted. Our Renaissance did not reach its completion until the movement from Germany inaugurated about fifty years ago. This remarkably fruitful movement shows so many signs of affinity with specialism, and found our soil so ill prepared, that a native growth of American humanism seems now more than ever problematical. We can hardly say with Prof. Jebb that the progress of knowledge during the last fifty years has "reinforced" our ideal of humanism, since there are facts tending to show that "the spirit which animated the Renaissance when it was largest and most vigorous" never fully and freely visited our Western shores until we had framed, without it, that whole system of the "good old-fashioned" college course which is one of our stumbling-blocks to-day.

In the second half of his lecture Prof. Jebb asked what was the general position of the humane letters in England at the present day, and what are their prospects of retaining this position? The progress of science, he declared—as who must not?—had been the most salient feature in the intellectual development of this century. And he added that this century was the first since the revival of learning in which a serious challenge had been thrown down to the defenders of the humanistic tradition. "But I think," was his conclusion, "that the position of humanism in this country at the close of the century is much stronger than it was at the beginning." There were certain elements in the imaginative literature of the early nineteenth century which worked on the whole against humanistic study, and there was "no popular force tending to spread a recognition of the humanistic ideal." All that has changed, for the influence of Tennyson throughout the English-speaking world "has made strongly for an appreciation of the classical spirit." Then, also, there had been, the lecturer said, the influence of Matthew Arnold, less popular, but not less penetrating than Tennyson's, whereby the distinctive qualities of the best Greek achievement have been subtly conveyed to the understanding of cultivated readers. And of Grote's great work he said that it had done more than any other one book of the century to "invest his subject with a vivid, an almost modern interest for a world wider than the academic." Such works, furthermore, as those of Symonds and Sellar had served to popularize the classical literatures in a scholarly sense, while translations "such as that by which Prof. Jowett has made Plato an English classic," have completed the work of this serviceable classicizing literature of the last forty years. I think we may also add that the controversy which for a time raged in America some ten or a dozen years ago, played a by no means contemptible rôle in bringing to the popular mind some sense of the importance of the Greek achievement.

All these considerations may, therefore, embolden the American humanist, whatever be the discouragements of his immediate outlook as compared with the brighter prospects of his fellows in England. We may, perhaps, even for America, cherish the hope that the danger which threatened

humanism a generation ago has lost some of its worst terrors. What Prof. Jebb describes as "the powerful alliance between insurgent men of science and disaffected humanists, aided by the legions of Philistia," will probably not succeed in permanently dropping Greek in the schools for all but a few boys. And so we may hope that classical studies in America may not be, in the lecturer's words, "so narrowed, so hampered, so maimed, as to lose nearly all their distinctive educational value and die out of the schools." LOUIS DYER.

#### MEMOIRS OF MME. DE LA FERRONAYS.

—I.

PARIS, August 2, 1899.

It is not often that people publish their memoirs in their lifetime; they generally leave that care to their successors. Chateaubriand was induced by financial difficulties to market his famous *Mémoires d'Outre-tombe*, but this title sufficiently proves that the memoirs were not to appear while he was alive. He contented himself with having them read aloud, in fragments, in the drawing-room of Madame Récamier. I do not know what reasons induced Madame de la Ferronays to publish her memoirs, which appeared a few days ago, and which are making a great sensation in the class of society in which Madame de la Ferronays has moved and taken a prominent place for (I may almost say) half a century, and which goes under the familiar name of the Faubourg St.-Germain. If she herself was born in what she calls "a family of high bourgeoisie," she became, by her marriage, a part of the Legitimist society, and has remained all her life a staunch royalist. What gives a peculiar interest to her memoirs is their Legitimist tinge. I will not note here stories and anecdotes innumerable on purely social questions, on well-known families, on persons who have more or less notoriety. They are often related with *esprit*, but they are in a sense what the French call *hors d'œuvre*. The history of the relations of the La Ferronays with the Count de Chambord has a more permanent and general interest.

Immediately after her marriage, Madame de la Ferronays started with her husband for Italy, to see her mother-in-law, who lived at the Villa Buonvisi, near Lucca. Her mother-in-law was extremely pious; she herself had, she says, read books not much in accordance with what was approved at the Villa Buonvisi. "I called the Queen Mary Tudor the 'bloody Queen'; I vaunted willingly the greatness of Queen Elizabeth; I considered Gregory VII. and Innocent IV. as scourges of the human race. It was in this way that history was then taught, and, with some modifications, I have not entirely got over this way of thinking." Her father-in-law, during the Revolution, served in the army of Condé, and was a devoted friend of the royal family in exile. Attached to the Duke de Berry, he became a sort of political courier for the Princes on the Continent. On the very day when the unfortunate Duke d'Enghien was arrested, he had been sent to him with a message from the Duke de Berry, and left his house an hour before the Prince was arrested by the gendarmes sent by Bonaparte. He returned to France in 1814 with the King and the Princes, and when the Duke de Berry

was married, he became the master of his household. The Duke had a very violent temper, and, after a scene of which the details are not given, M. de la Ferronnays left his service. He was appointed Ambassador to Russia, where he remained several years; he became very intimate with the Emperor Nicholas—so much so that, after the Revolution of 1830, the Tsar, "feeling concerned for the financial embarrassments in which he might be placed, sent a courier through the whole of Europe to place his privy purse at his disposal. My father-in-law declined it; but the generosity of the Emperor demanded from him the acceptance of a pension of 24,000 francs, half of which, after his death, was continued to my mother-in-law."

After 1830 M. de la Ferronnays received the delicate mission of reestablishing relations between the royal family, which was living near Prague, and the Duchess de Berry. The "King" was very angry with the Princess, who had thrown herself against his wish, into the insurrectionary movement in La Vendée, and had given such a singular end to her expedition. She had been made a prisoner, and in prison gave birth to a child. She declared that she had been secretly married to Count Lucchesi-Palli. The King wished to see the marriage act, and, it having been produced, he pardoned her.

M. de la Ferronnays, after having presented his wife to his parents at the Villa Buonvisi, had to present her to the members of the royal family in exile. They first took the road to Brunsee, where lived the Duchess de Berry, called simply Madame. "Brunsee was a fine habitation, with a grand air, worthy of the great Princess whom the tempest had thrown there. M. de Lucchesi had, before the public, the position of first chamberlain; but when, with all the forms of the greatest respect, he gave advice to Madame, she followed it without hesitation. The children did not yet appear before strangers. [The Duchess de Berry had five children by her second marriage, four of whom lived. The eldest, Anna, born in the citadel of Blaye, died a year after.]" The next visit was to Kirchberg, a house belonging to the Blacas, who had put it at the disposal of the royal family. Madame de la Ferronnays was introduced to all the members, to the Dauphin, who was "very red"; to the Count de Chambord, who was just recovering from a fall from his horse which left him a little lame for the rest of his life.

On her return to Paris, Madame de la Ferronnays began the series of visits which were the necessary preface to her new life—to the Duchess de Montmorency, to the Viscountess de Noailles, etc.; she tells many anecdotes of the ladies who were at that time the stars of society. Of Madame de Montmorency she relates:

"She had *le plus grand air du monde*. Her youth had been spent with the emigration, and she had almost known want. Her eldest daughter, the Princess of Bouffremont, was a model of every virtue; as much cannot be alleged of her second daughter. It was said that when the latter was on the point of marrying M. Louis de Talleyrand, titled Duke of Valençay, her maternal grandmother, Mme. de M—, called her, and said to her: 'My dear child, there are three ways of conducting one's life: the first is to do as I did, to defy Mrs. Grundy and to amuse yourself much; the second is the way of your mother, who respects propriety; the third is to imitate your sister, but it is very tiresome. . . . The epoch of the youth of Madame de M— was one in which there was much

frankness, and I heard it said that a very great lady of the Court of Louis XV., finding herself at breakfast in a château where a numerous company was assembled, and the talk was of a violent storm which had taken place in the night, 'Indeed,' said one of the invited guests, 'it was dreadful; and I said to the Bishop, "Do get up and draw the curtains." This gallant Bishop was also a *grand seigneur*.'"

"One of the salons of the time was that of an American lady, daughter-in-law of the Thorns, who were the first Americans to keep a great establishment in Paris. To be admitted to was a brevet of elegance. The fat Princess Léonie de Béthune did the honors there; she was an old spinster, of a rather vulgar appearance, sufficiently ill-natured, and of whom, though people feared her tongue, rather ugly things were said."

The Thorns inhabited the magnificent hôtel which, in our time, belonged to the Duchess of Galliera, and has since become the Austrian Embassy. A sister of M. de la Ferronnays was married to Mr. Craven.

"She so completely identified herself with the English nationality that she acquired an English accent in speaking French; she approved and accepted only the English ways of living. Mr. Craven, wholly devoted to Lord Palmerston, executed for him several secret missions, not much in harmony with what ought to have been the sentiments of my sister-in-law, and was sent to France, after the conclusion of the Spanish marriages, as private secretary to Lord Normanby. . . . Later, it was Mr. Craven who, though retired from the diplomatic service, prepared the crisis which ended in the fall of the monarchy of the Two Sicilies."

In 1843 the Count de Chambord held a sort of royalist levee in London, where he stayed for a time in Belgrave Square. The La Ferronnays, of course, were there. "The most important of the personages surrounding the Prince, who was treated with the greatest consideration, and who, at any rate, thought himself most worthy of respect, was Viscount Chateaubriand. He alone, in the drawing-room where all stood, used to sit in his chair, which he never left." Madame de la Ferronnays was presented to him. "He hardly inclined his head to bow. I did not feel much enthusiasm before the man whom pride had (involuntarily, perhaps) rendered so fatal to the monarchy." In the same year M. de la Ferronnays took his wife to Lorraine, where lived, in the château of Saint-Mars, the last survivor of the eldest branch of his family, a lady who had long been a canoness and married late a gentleman of Lorraine, the Count de Gosset, "to whom she considered that she had paid a great honor, and whose name, after his death, she adopted the habit of dropping. Saint-Mars was an immense place, which suffered much during the Revolution. Madame de Gosset was a strong Legitimist, and chose the second La Ferronnays of the younger branch for her heir."

In 1845 the sister of the Count de Chambord was married to the heir of the Duchy of Lucca. "Exiled princesses are difficult to place, and this marriage was made in spite of the Pretender's reputation for levity." A year afterwards, the union of the Count de Chambord with the Archduchess Theresa was announced, and caused great astonishment in the royalist party. "The Princess was three years older than her royal husband, and was known to be far from handsome." Several unions had been thought of for the Count, among them a marriage with the Grand Duchess Helen (who died Duchess of Nassau). Notwithstanding the concessions made by the Emperor, who insisted that the Grand Duchess

should be married in the Orthodox Church, but consented to leave her entire liberty to enter the Catholic Church the day after the ceremony, the Dauphiness absolutely refused to allow a union with a schismatic. It was necessary to look elsewhere. The choice seemed to fall upon a daughter of the Duke of Modena, the only reigning prince who had refused to recognize the legitimacy of the royalty of the Orleans-Bourbon branch. He had two daughters, Theresa and Beatrice. The latter had, unfortunately, "a passion for Don Juan, second son of Don Carlos." "There is no way to combat or to explain the follies of young persons, even Archduchesses." There remained Theresa. The future Countess de Chambord was tall and had *un grand air*; but, at her birth, an accident had deformed one side of her face. . . . Educated at the court of Modena, where the most complete absolutism, the most reactionary ideas, were the rule, she had felt this influence; and what was called liberalism seemed to her an insult to the divine law."

## Correspondence.

### CALIFORNIA AND THE WAR.

TO THE EDITOR OF THE NATION:

SIR: California is popularly supposed to be a stronghold of "expansion," since the commercial benefits expected from this policy might very naturally be heaviest on this coast. Recent developments have, however, put the California expansionists in a very laughable predicament. When we entered upon the humanitarian war with Spain, and the President called for volunteers, California was the first State to turn over a regiment to the United States Government, and her generous enthusiasm was still further shown by the great number of Californians who enlisted in the various regiments from other States while they were encamped at the Presidio in San Francisco. After the war became one of conquest in the Philippines, and troubles began to thicken around the Administration, so that a call for volunteers was talked of in Washington, the two Senators from California sent a telegram to President McKinley, offering him an entire regiment from southern California. The men, they said, were ready and eager to enlist.

The call has now been issued, and recruiting offices opened in Los Angeles, the headquarters of the regiment so generously and promptly offered to the President. Witness the result! The latest dispatch from Los Angeles says that Lieut. Chappalear has been ordered to leave Los Angeles for San Diego, in the hope that he may find a few recruits there for the Thirty-fifth Volunteers. During the last week at Los Angeles just one recruit was obtained, and he was a Chinaman born in this country. It makes all the difference in the world, even to commercial Californians, what we are fighting for, and the State that was quickest to muster in troops for one war, bids fair to be the slowest to find men for our present policy of aggression.

EDSON R. SUNDERLAND.

OAKLAND, CAL., August 11, 1899.

## THE STUDY OF HISTORY IN SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: The communication in your issue of August 10, referring to the report of the Committee of Seven on the "Study of History in Schools," seems to me to contain certain fundamental errors. I heartily agree with the writer that it is time that the secondary-school men freed themselves from the domination of the colleges, and in great measure arranged and organized the curriculum to suit themselves. But in the performance of that task they may, perhaps, receive some assistance from the reports of various committees that have been studying the problem from the standpoint of specialists interested in certain subjects. There is nothing in the nature of dictation in the report of the Committee of Seven. It is the result of two years of careful work, and if there is anything in it that is helpful, the teachers may profit by it. What is not acceptable need not be adopted. The reader of the report will see that the secondary school is nowhere in the report spoken of as primarily a preparatory school. Indeed, it is because the Committee believes that history is of great importance in a curriculum which is made up for the purpose of fitting boys and girls for intelligent citizenship, not simply for entering college, that the chief emphasis is laid upon the educational value of historical work rather than upon the acquisition of a modicum of information sufficient to meet college requirements.

The writer of the communication has also erred in saying that "the historians have just insisted on four full years for them." A good many schools now give four years to history, and the Committee, after studying European and American schools, consulting teachers, and examining programmes, has marked out what is believed to be a model four years' course. But to insist on four years of history as a college entrance requirement did not so much as occur to the Committee. We believe that, following present tendencies, the secondary schools of this country will before long give continuous courses in history, especially for those students that are not required to spend from one-third to one-half of their time on ancient languages; but we have not insisted upon anything like this.

Finally, it seems to me that the task of the secondary-school man has been lightened, not increased, by the reports of the committees of specialists. He now has before him a long list of recommendations and suggestions. It is not too much to expect that he can obtain help from them; he cannot reach the impossible, and crowd eight years of work into four, or treat each subject as if it were the only one needing consideration. It is to be remembered that the report of the Committee of Seven was prepared at the suggestion of Superintendent Nightingale, chairman of a committee of the National Educational Association, an association composed almost solely of secondary teachers. This committee has been charged with the labor of making recommendations for the unifying of college entrance requirements. It is such a body as this, and not a committee of specialists, that must seek to reconcile conflicting claims and organize a systematic programme. Above all, it is not to be expected that, when a committee of historical students has prepared a report in response to Mr. Nightingale's request, the report will

be considered a piece of presumptuous interference on the part of college professors.

ANDREW C. McLAUGHLIN,  
Chairman of the Committee of Seven.  
August 15, 1899.

## THE PROPOSED "NATIONAL INSTITUTE."

TO THE EDITOR OF THE NATION:

SIR: I have received with much regret a proposition, signed by several eminent names, and looking towards the establishment of "The National Institute of Art, Science, and Letters," to consist of 200 members. My special ground for regret is that this organization, unlike almost all organizations established for similar purposes in America within the last half century, appears to be limited to one sex only.

Among national societies based upon the larger membership, and including women as well as men, are the American Social Science Association, the American Philological Society, the American Folk-Lore Society, the American Modern Language Society, the American Historical Society, the Appalachian Mountain Club, the Associated Chapters of Phi Beta Kappa, and the Association of American Authors. Many of these organizations have had women not merely as members, but as officers. Thus, Prof. Abby B. Leach was Vice-President and is now President of the Philological Society; Miss Alice Fletcher is Vice-President of the Folk-Lore Society; Mrs. Julia Ward Howe is a Vice-President of the Association of American Authors, and Mrs. Caroline Healey Dall has always, I believe, been a director of the Social Science Association.

I have been, at different times, a member of each of these societies, have been an officer of several of them, and, indeed, President of three, and I am not aware that the slightest inconvenience has ever followed from the union of both sexes in their membership, or that any proposition has ever been made looking towards a change. Meanwhile, there have been similar societies which, while originally based on a narrower plan, have expanded their membership to include women; as has been done, for instance, in the American Oriental Society and the New England Historic-Genealogical Society. Other learned societies have admitted women occasionally and sparingly, though enough to establish the precedent. Thus, the late Prof. Maria Mitchell was admitted to the American Association for the Advancement of Science, and also to the Academy of Arts and Sciences; while women are now chosen freely, I believe, into the Society of American Artists. In fact, it may safely be said that in recently formed societies of a national character for the promotion of "Art, Science, and Letters," the tendency has been all one way. Can any good reason be given why the proposed "National Institute" should attempt to turn back the tide? For one, I can take no part in such a movement, and have, therefore, felt obliged, however reluctantly, to decline the honor of its membership. THOMAS WENTWORTH HIGGINSON.

GLIMMERWOOD, DUBLIN, N. H., August 20, 1899.

## THE ALASKA BOUNDARY.

TO THE EDITOR OF THE NATION:

SIR: It may be of some interest to your readers to call attention to the testimony,

as an historical document, which the maps of North America and Canada in the ninth edition of the *Encyclopædia Britannica* bear to the Alaska boundary question. In both, the United States claim is distinctly sustained.

Yours, JAMES M. HUBBARD.  
Ripton, Vt., August 16, 1899.

## "YOUSE."

TO THE EDITOR OF THE NATION:

SIR: I am afraid your correspondent is mistaken in saying that "yous" is unknown in Ireland, for there is the best of authority on the other side. In that admirable book of Jane Barlow's, 'A Cread of Irish Stories,' a book which is the perfection of art, and of that art which does not thrust itself in your face as an end in itself, but serves as a model for the production of perfect form, the word occurs as the ordinary plural of *you*. I cannot give the page, as I have not the book at hand; but my memory is certainly not at fault, for I read it only a few days ago. P. Q. R.

## Notes.

Houghton, Mifflin & Co.'s fall announcements include three additions to the "American Statesmen" series, viz., 'Salmon P. Chase,' by Prof. Albert Bushnell Hart; 'Charles Sumner,' by Moorfield Storey; and 'Charles Francis Adams,' by his son and namesake. Also, a 'Life of Bishop Latimer,' by the Rev. A. J. Carlyle; 'Horace Bushnell,' by the Rev. T. T. Munger; 'Letters and Recollections of John Murray Forbes,' edited in two volumes by his daughter, Mrs. Sarah F. Hughes; 'Letters and Passages from Letters of Ralph Waldo Emerson to a Friend, 1838-1853,' edited by Charles Elliot Norton; 'Reminiscences,' by Julia Ward Howe, together with 'Is Polite Society Polite? and Other Essays,' by the same author; 'Contemporaries,' by Thomas Wentworth Higginson; 'Life of Rear-Admiral Charles Henry Davis,' by his son, Capt. Charles H. Davis, U. S. N.; 'The American in Holland,' by the Rev. William Elliot Griffis; 'The Dutch and Other Quaker Colonies in America,' by John Fluke, together with 'A Century of Science, and Other Essays,' by the same author; 'The Narragansett Friends' Meeting in the Eighteenth Century,' by Caroline Hazard; 'The End of an Era'—namely, that of slavery in Virginia—by John S. Wise; 'The Prose of Edward Rowland Sill,' essays by a poet; 'Sonnets and Madrigals of Michelangelo Buonarroti,' rendered into English verse by William Wells Newell, with Italian text and notes; 'Sonnets,' from Blon, Moschus, and Bacchylides, by Lloyd Mifflin; 'Two Tragedies of Seneca,' translated by Ella Isabel Harris; 'An American Anthology,' by Edmund Clarence Stedman; 'The Martyr's Idyl, and Shorter Poems,' by Louise Imogen Guiney; 'Beyond the Hills of Dream,' poems by W. Wilfred Campbell; 'Animal and Plant Lore,' edited by Fanny D. Bergen; 'The Book of Legends,' gathered by Horace E. Scudder; 'The King's Jester, and Other Short Plays for Small Stages,' by Caro Atherton Dugan; 'Plantation Pageants,' by Joel Chandler Harris; and the 'A. L. A. Index to Portraits,' edited in two volumes by William Coolidge Lane.

Henry Holt & Co. will shortly issue 'Moulds, Mildews and Mushrooms,' by Prof. Lucien Marcus Underwood of Columbia University.

The Scribners will publish Robert Louis Stevenson's 'Letters,' edited by Sidney Colvin; 'Letters of Sidney Lanier'; a new volume of 'American Lands and Letters,' by Donald G. Mitchell; 'Search-Light Letters,' by Judge Grant; 'Fisherman's Luck, and Other Uncertain Things,' by the Rev. Henry van Dyke; 'The Authority of Criticism, and Other Essays,' by Prof. W. P. Trent; 'Anglo-Saxons and Others,' essays by Miss Aline Gorren; 'Nooks and Corners of Old New York,' illustrated, by Charles Hemstreet; an historic 'Stones of Paris,' by Benjamin Ellis Martin and Charlotte Martin, illustrated; and 'Reminiscences,' by Mrs. John Drew.

It will be convenient to divide the list of forthcoming publications of the Macmillan Co., beginning with the American contingent. This includes F. Marion Crawford's 'Life of Pope Leo XIII.'; Norman Hapgood's 'Abraham Lincoln: The Man of the People'; 'Francis Lieber,' by Prof. Lewis R. Hartley; 'The Men Who Made the Nation,' by Prof. Edwin E. Sparks; 'Topics of United States History,' by John G. Allen; 'Select Charters, and Other Documents Illustrative of American History, 1606-1775,' edited by Prof. William MacDonald; the third volume, 'National Expansion, 1783-1845,' of Prof. A. B. Hart's 'American History Told by Contemporaries,' and the first volume of the same editor's 'Source Readers of American History,' viz., 'Colonial Children,' which has its counterpart in Alice Morse Earle's 'Child Life in Colonial Days,' and its sequel in Hamlin Garland's 'Boy Life on the Prairies'; the following in Prof. Woodberry's 'National Studies in American Letters'—'Brook Farm,' by Lindsay Swift, 'The Knickerbockers,' by the Rev. Henry van Dyke, 'Southern Humorists,' by John Kendrick Bangs, 'The Flower of Essex,' by Prof. Woodberry, 'The American Historical Novel,' by Paul Leicester Ford, and 'The Clergy in American Life and Letters,' by the Rev. Daniel D. Addison; 'The Development of the English Novel,' by Prof. Wilbur L. Cross; 'Studies in Literature,' second series, by Prof. Lewis E. Gates; 'An Introduction to the Poetical and Prose Works of John Milton,' by Prof. Hiram Corson; 'The United Kingdom: A Political History,' by Goldwin Smith, in two volumes; the second volume of Thomas E. Watson's 'Story of France: The Revolution'; 'The Roman History of Appian of Alexandria,' translated by Horace White, in two volumes; 'Among English Hedgerows,' by Clifton Johnson, with illustrations from the author's camera; 'Scotland's Ruined Abbeys,' by Howard Crosby Butler; 'Nature Pictures by American Poets,' edited by Annie R. Marble; 'The Listening Child,' a selection of English verse for children, by Lucy W. Thatcher; the first volume of Russell Sturgis's illustrated 'Dictionary of Architecture'; a newly rewritten edition of Prof. Charles H. Moore's 'Development and Character of Gothic Architecture'; August Mau's 'Pompeii,' translated by Prof. Francis W. Kelsey; 'Tropical Colonization,' by Alleyne Ireland; 'The Economic Works of Sir William Petty,' edited by Prof. Charles H. Hull; 'How Can I Earn My Living?' a handbook for women, by Mrs. Helen C. Candee; and the first volume of a 'Cyclopedia of American Horticulture,' by Prof. L. H. Bailey.

The English portion of Macmillan's list embraces 'Cardinal Newman as Anglican and Catholic,' by Edmund Sheridan Purcell; 'The Life and Letters of Archbishop Benson,' edited by his son; the Autobiography of Clement Scott, dramatic critic of the *Daily Telegraph*; the ninth and concluding volume, with index, of Henry B. Wheatley's admirable edition of Pepys's Diary; 'Sir Henry Irving,' by Charles Hiatt; 'Sir J. Everett Millais,' by J. Lys Baldey; 'The Welsh People: Their Origin, Language, and History,' by John Rhys; 'A History of the British Army,' by the Hon. J. W. Fortescue; 'The Moorish Empire,' by Budgett Meakin; 'Highways and Byways in Normandy,' by Percy Dearmer, and 'Highways and Byways in the County of York,' by Arthur H. Norway; 'Destruction of Ancient Rome: A Sketch of the History of the Monuments,' by Rodolfo Lanciani; 'A History of Gothic Art in England,' by E. S. Prior; 'Pre-Raphaelite Painters: Their Associates and Successors,' by Percy H. Bate; Ostrogorski's 'Democracy and the Organization of Political Parties,' translated from the French by Frederick Clarke; the third volume of Palgrave's 'Dictionary of Political Economy'; 'The National Income and its Distribution,' by Prof. William Smart; and 'The Psychology of Socialism,' by Gustave Le Bon.

A. C. McClurg & Co., Chicago, will issue 'The Honey Makers,' a work for apiculturists, and others, by Miss Morley.

L. C. Page & Co., Boston, have in press 'Our National Music and its Sources,' by Louis E. Elson.

'Twenty Famous Naval Battles: Salamis to Santiago,' by Prof. E. K. Rawson, is in the press of T. Y. Crowell & Co.

The second volume of President Sharpless's 'History of Quaker Government in Pennsylvania' is about to be produced by T. S. Leach & Co., Philadelphia. It will bear the title of 'The Quakers in the Revolution.'

The size and varied composition of Mr. Kipling's audience, from orchestra chairs to top gallery, is plainly put in evidence by the different editions of his writings. In addition to original magazine publication, we believe that his present arrangements contemplate three issues, in different styles and at different prices, of each of his volumes. Naturally, the "Outward Bound" edition which the Scribners publish is the last one to be reached by the successive writings; and in that handsome form we now have Part I. of 'The Day's Work.' Part II. will follow shortly, and four additional volumes are promised by the beginning of 1900. It is to possessors of the foregoing issues of the Outward Bound edition that these volumes appeal—in fact, the publishers announce that they will not be sold separately.

The recent havoc wrought by the elements in Porto Rico is a gloss upon Mr. William Dinwiddie's 'Puerto Rico: Its Conditions and Possibilities' (Harpers), a volume full of interesting photographic illustrations. The author spent two months on the island, directly after the Spanish evacuation, and shows himself a good observer, well disposed to the native inhabitants, and not given to exaggeration. He writes systematically of what he has seen and learned, and supplies at the end some trustworthy statistics of trade. There is a good index, and a good map should have accompanied it. Mr. Dinwiddie says (p. 19): "The early historians record frightful devastations by hurricanes in the months of July

and August," notably in 1825 and 1837; "but," he adds, "it has been many years since a storm of any far-reaching violence has visited Puerto Rico." His informants led him to make light of these scourges—"puny affairs as compared to our own cyclones of the broad prairies." Mr. Ober, in his 'Puerto Rico and its Resources,' is by no means of this opinion.

Under the title 'Oriental Wit and Wisdom' (London: Luzac & Co.), Dr. Budge has republished in one handy volume the 737 Laughable Stories of Bar-Hebraeus, the famous Maphrian of the East, who lived in the latter half of the thirteenth century. The translation was originally issued together with the original text, and its separate publication is intended for those general readers "who for want of time and other reasons" are not able to study Syriac. As the version has already been commended by specialists, it may be looked upon as authoritative, and there will doubtless be many who will be glad to peruse this compendium of mediæval jokes in English. The tales of a flavor too coarse for English are lightly veiled in Latin. It is surprising that they are so few. The title does not fully explain the nature of the Stories, many of them being aphoristic and serious rather than jocular.

Given a rare book, *rarissimo*, say the 'Canzoni di Dante, Madrigali del detto, e Madrigali di M. Cino e di M. Girardo Novello' (Venice: Guglielmo di Monferrato, 1518), reproduce it sumptuously in its entirety under the title 'Canzoni d'Amore e Madrigali di Dante Alighieri,' etc. (Florence: The Landi Press), and limit the edition to 86 numbered copies, and you have a newly created situation dear to bibliophiles and dearer to Dan-tophiles with short purses.

We have received from the Buffalo Public Library a beautifully printed 'Descriptive Catalogue of the Gluck Collection of Manuscripts and Autographs' acquired by that institution through the generosity of the late James Fraser Gluck (Cornell, 1874), together with some others through different channels. The preface makes what we should judge to be a large claim for the collection as the most extensive and valuable owned by any public institution in this country in 1887; in 1897, Mr. Gluck nearly doubled its value. It is preponderantly English and American. There are sermons by Beecher, Chapin, Parker, J. F. Clarke, Thomas Starr King, Phillips Brooks, and others; MSS. of books and articles, etc. Five sources have been most prolific: the correspondence of Gen. William F. Barry, Theodore Tilton, J. R. Osgood, and Mr. Gluck himself. A portrait has been attached, where possible, to the autograph. The editing of this catalogue has been well executed by Mrs. H. L. El-mendorf. Often the specimen is reproduced in full—with permission in the case of writers still living.

The forty-seventh annual report of the Boston Public Library, 1898-99, is a document of much value, and inspires a sense of the loss which the institution has sustained in the transfer of its librarian, Mr. Herbert Putnam, to the National Library at Washington. We have space only to remark on one item, which tells of every new work of fiction in English under consideration for purchase being read and reported upon independently by two outside volunteers and by a third in case of disagreement. These volunteers are members of a committee, all women, and from fifteen to twenty in number.

Their decision is not final, and is frequently reversed, but "these reports are of the greatest service to the administration of the Library."

The Boston Public Library report laments the inability of its own bindery to keep up with current work and at the same time make necessary repairs to precious volumes in constant request and use. The nineteenth annual report of the Peoria (Ill.) Public Library enumerates four showy works and one of a better class (the dearest costing \$9.00) which fell to pieces in from three to nine issues.

A more ardent than well-equipped admirer of Thackeray has been doing a poor service to readers of the *New York Critic* by guessing at Thackeray's contributions to *Punch*. He did so after applying to *Punch's* biographer, Mr. M. H. Spielmann—who has a marked file of the paper and the manager's ledger, and can pronounce without appeal on every surmise—for authentic information, which Mr. Spielmann withheld, having a mind to use it himself. This ought to have been enough to put a damper on Mr. Frederick S. Dickson's zeal, but he braved the confutation in store for him, and has accordingly drawn from Mr. Spielmann the inevitable exposure and correction. He comes up smiling, however, in his rejoinder, and contrives to get in a whack at *Punch* for its travesty of Lincoln in the aberration caused by our civil war.

In the second number of the *Mayflower Descendant* (Boston, 623 Tremont Street) is begun publication of the second volume of Plymouth Colony Deeds. The Commonwealth published volume I. in 1861, when the civil war doubtless checked the enterprise. It is announced that the Massachusetts Society "is to begin the compilation of the genealogies of the *Mayflower* passengers and all of their descendants, in all male and female branches," under the direction of its Committee on Historical Research. Its stock of accumulated data is already considerable, and for a fee of two dollars the Committee will make a preliminary examination of it for the satisfaction of those who wish to perfect their lines of descent. For this the editor, Mr. George Ernest Bowman, should be addressed.

The renewed hostilities with the Yaqui Indians in Mexico lend interest to an illustrated article on them by Verona Granville in the July number of the *Land of Sunshine*, in which the recent peace is assumed to be lasting. Mr. Charles F. Holder's opening paper, describing, with curious specimens, the new Aquarium set up at Avalon Bay, Santa Catalina Island, by the Banning Co., ought to help towards the writer's desire to see established in that favorable spot a zoölogical station like that at Naples.

There has been published in England a big-type arithmetic, and if it should be generally adopted, one more source of cruelty to children will have been done away with. Much has been said lately about the injury done to children in the kindergarten by giving them work to do of too excessive fineness, but this work is at least of a pleasurable sort, and their constrained attention is in so far of a less exhausting nature. But to add to the inevitable hardship of learning disagreeable things the wholly unnecessary effort required to follow fine print, is an injury which is without excuse, and one which it is strange that educators are not more alive to.

The Association of Collegiate Alumnae has issued a forty-page pamphlet giving a detailed account, with value, conditions of application, and whatever the student would care to know, of the fellowships and scholarships open to women in this country for graduate work, and of the scholarships open to women for undergraduate work in the nineteen colleges belonging to the Association. This information has never been collected before, and will be of value not only to the many who want to choose a place for study, but to the many more who are interested in the progress of education generally. It is generally understood that opportunities for women are broadening, but it is not so clearly realized how far this process has advanced. This compilation shows that of the twenty-four colleges and universities now doing graduate work of scope enough to bring them into the Federation of Graduate Clubs, only three fail to admit women. Of those that admit women, only three fail to provide scholarships and fellowships for them; and of these three, one does not offer fellowships or scholarships either to men or to women. The universities which have the unenviable distinction of refusing to share their stores of learning with women simply because they are women are still (we take occasion to mention this curious anachronism from time to time) Clark, Princeton, and Johns Hopkins.

As usual, the competition for the Grand Prix de Rome drew many visitors to the École des Beaux-Arts during the third week in July. In painting, the subject assigned was taken from Musset's "Rolla"; "Hercule, fatigué de sa tâche éternelle, S'assit un jour, dit-on, entre un double chemin. Il vit la Volupté qui lui tendit la main: Il suivit la Vertu qui lui sembla plus belle." The paintings of the ten competitors showed little originality of conception and composition, but remarkable skill in drawing and the use of colors. Only one of the young men, Emmanuel Benner, had ventured to represent the two female figures fully draped, and at the same time to lend to Virtue a face which makes the decision of the demigod at all plausible; to nine out of ten of these young Frenchmen Virtue appears stern and forbidding. Aside from the coloring of the backgrounds, otherwise more or less conventional, the canvases might all belong to the era of the First Empire, so strongly does the classical tradition survive in the School.

The Comédie-Française has for the second time shown its generosity towards an unfaithful member. The elder Coquelin has for three or four years been playing on various European stages, and thereby forfeited the sum of 100,000 francs deposited as security with the company. The latter, after having won its suit against him, has not only given him absolute liberty as to his future movements, but has also restored to him the above sum. A similar treatment was extended, several years ago, to Sarah Bernhardt, who, by the way, is just now making in her own theatre in the Place du Châtelet improvements which cannot be completed before January.

—In his second volume of the 'Writings of James Monroe' (Putnam), Mr. Hamilton covers only two years, and does not complete the record of Monroe's earlier mission to France. Most of the material was used by Monroe, in his own defence, and by

Pickering, as a state paper. The new documents consist of the letters written to Jefferson and Madison, in which the personal character of the writer is shown more plainly than in the formal dispatches to the Secretary of State. That Monroe was unfortunate in his mission is well known, and the reasons for his failure stand out in every letter. He sympathized with the French, and presented his credentials just after the death of Robespierre, when the victories of the French armies seemed to promise supremacy in Europe. Easily influenced by the welcome accorded to him, he overstepped his instructions, and took a position that displeased the Administration at home and could not be maintained in France. He secured the release of Thomas Paine, and, while boasting of it to discredit the supposed inactivity of his predecessor, Gouverneur Morris, he found he had a troublesome guest on his hands, who borrowed his money and wrote savage libels on Washington. He took upon himself to aid Spain in making peace with France, and proved only a cat-paw to that astute power. He looked upon England as the enemy of France and the United States, and, while denouncing her horrid conduct, read the treaty of Jay, which made war between the United States and Great Britain impossible. He wished to raise a loan for France, but found no support at home. Wherever he turned, he met with a want of success.

—The cause is obvious. His small, narrow mind ran to suspicions, and he saw treachery in every act that could in any way affect his influence. His confidants were keen to recognize this, and, while feeding his suspicions, drew him away from the very men who could have done so much to aid him. It was not extraordinary that he should denounce Jay to Jefferson and Madison, for Jay's negotiations on the Mississippi question under the Confederation were open to criticism. But it was unusual for one minister to denounce to the Secretary of State another, acting in a foreign state and under instructions not known to the critic; all the while asserting "my own perfect knowledge of the principles," etc. He had closed the door to any communication of the terms of the treaty from Jay, and nursed a fancied slight until it became a real grievance, laying it before Randolph and the French committees with equal freedom, and, it may be added, with equal indiscretion. In like manner he hinted charges against Consul Parish, merely because of his English birth. Too ready to listen to the suggestions of others, he ever saw his dignity wounded by acts necessary in themselves and of very remote concern to himself. He was always rushing in to defend his acts where no defence was necessary, and was "pained and surprised" when others ventured to question the expediency of his deeds or utterances. In truth, he stood isolated, and had no sources of information. His dispatches are plainly made up from the gazettes of the day, and read more like annals than intelligent accounts of the motives or policy of France. This defect becomes evident when his letters are compared with those of Morris, or of Rufus King. His enthusiasm was forced, and under it lay a crabbed and somewhat bitter ability, more adapted to conduct the affairs of a Virginia plantation than the foreign relations of a nation. The proof-reading of the volume still shows a little carelessness.

—Berkeley, of all authors, without exception, the most stimulating to a beginner in metaphysics, has hitherto appeared in four editions of his collected works. The first, of 1784, is contained in two sumptuous quartos with broad margins, open type, and paper not too brilliant. Unfortunately, like most such quartos, they are in other respects unsatisfactory, important passages being omitted at the whim of the editor. The second edition, of 1837, noticeable only as being compressed into one volume, is said to be a reprint of the first. This is not true of the third, published in 1843, in two volumes octavo, by Thomas Tegg, uniform with his editions of Hartley, Harris, Cudworth, etc. It was edited by Rev. G. N. Wright, and has some peculiarities that certainly facilitate perusal. The three Latin treatises are presented in literal English versions. The "Principles of Human Knowledge" has been subjected, obviously for the convenience of Oxford students, to a singular process. Sub-titles are introduced; long sentences are broken up, so far as punctuation can accomplish it; freely scattered italics draw attention to leading conceptions; hands point to striking passages; every logically essential proposition is enclosed in brackets; while occasional footnotes call attention to comments in Reid's "Intellectual Powers." The fourth edition is the celebrated one in four volumes by Alexander Campbell Fraser (Clarendon Press, 1871), of which every page is disfigured with superfluous explanatory notes, to the reader's deep disgust. For George Berkeley knew how to give expression to his ideas as well as any man that ever lived, Alexander Campbell Fraser not excepted, nor near to being excepted. Mizar would shine out the clearer were it uncommenced by Alcor's mimicry. The volumes are edited, however, with much ability and with modern accuracy, contain Berkeley's curious early metaphysical note-book, and form altogether a highly important work.

—We are now presented with a fifth edition of the good Bishop's philosophical works in three volumes of Bohn's Libraries (New York: Macmillan); and this edition will best answer the purpose of the majority of readers. The new editor, Mr. George Sampson, has given us the complete philosophical Berkeley, and nothing but Berkeley, save for the indispensable brief histories of the several publications, and an old Biographical Essay by Arthur James Balfour, containing many fine observations—altogether quite a charming thing; not omitting very much, either. The works are, in this edition, printed in the order of their original publication, but with the author's own definitive text. In reprinting them, modern critical scrupulosity is carried to its highest pitch, quite beyond Fraser. The "Que-rist," for example, having been much changed in the second edition, is here printed twice, so as to exhibit both forms. Facsimiles of the original title-pages are given, and two portraits of the Bishop, one from the painting in the National Portrait Gallery, the other in the family group from a replica of the Yale portrait. The painter in both cases was John Smibert. The only thing we regret in this edition is that it should be confined, albeit not strictly (the Guardian papers being included), to the philosophical works. Perhaps a fourth volume will remedy that. The celebrated verses in which Berkeley predicts that America will be comparatively free from the convention-

alities of schools and of courts are, however, inserted so as to give an opportunity for the conventional British sneer by Mr. Sampson.

—Few if any English books have done so much for 'Ecclesiastes' as the first edition of Mr. Tyler's work bearing this title, which appeared in 1874. It is unnecessary to rehearse the position taken by the author of explaining Qoheleth through post-Aristotelian philosophy. In its new form (London: D. Nutt) the book is rewritten throughout and many changes have been introduced. The old threefold division is retained of introduction, exegetical analysis, and translation with notes. The notes might have been enlarged with great advantage. But the thing which, in this edition as in the first, must most strike the Semitist, is the startling contrast between Mr. Tyler's acquaintance with classical literature and with that of the Semitic world, and his equally startling ignorance of Semitic forms and ways of thought. The only exception to this is his evident knowledge of the Mishna, but it may be safely said that the exegetical light to be gained there is darkness visible. His book thus exasperatingly resembles the brilliant little work of Plumptre. For example, he quotes approvingly Plumptre's attribution of the phrases "under the sun" and "seeing the sun" to Greek influence, being ignorant of, or ignoring, the many close Old Testament and Semitic parallels. "Let us hear the conclusion of the whole matter." In all probability the verdict of the future will lie with Zeller's cautious admission that the author of the book may have been touched by Greek culture, and not with Mr. Tyler's "theory of vigor and rigor" that he elaborately labored to dissuade from the study of Greek philosophy. Commonplaces can hardly be treated as proofs of common origin; and deep in the primitive Semitic mind there lie just those antagonisms of vanity and tempered enjoyment, of submission to a personal and omnipotent Ruler and recognition of evil in his rule, that puzzle Mr. Tyler and drive him for an explanation to contradictory Greek schools. When students of the literature of the Hebrews will study it in its place among the literatures of the Semites, such hypotheses of influence will sink back to their true level. For Mr. Tyler personally, a somewhat extended examination of Muslim thought—in literature, life, and theology—might mean much.

#### MORE FICTION.

*Tristram Lacy: or, The Individualist.* By W. H. Mallock. The Macmillan Co.

*The Awkward Age.* By Henry James. Harper & Brothers.

*Vengeance of the Female.* By Marriion Wilcox. Chicago: Herbert S. Stone & Co.

In an early chapter of Mr. Mallock's novel there is a letter written by Lord Runcorn, a Prime Minister and uncle of "Tristram Lacy, the Individualist." It is addressed to a benevolent lady of rank and fashion who has selected Lacy as a hopeful Conservative candidate for a doubtful constituency, and asked the uncle for an expression of his opinion. Real prime ministers are generally accomplished letter-writers, and Mr. Mallock has been quite clever enough to write up to a tradition of high office. The letter is, first of all, a definite answer to inquiry, and, after that, a polished bit of composition in which the class that Lacy

represents is most effectively characterized. Yet if ever there was a letter which should have been withheld from publication, or at least consigned to the seclusion of a fine-print appendix, it is this fatally perfect one, signed "Runcorn." Its appearance on page 10 leaves the reader with 400 pages ahead of him and nothing new or more to be learned about the principal character. Mr. Mallock justifies Lord Runcorn's wisdom, but the process is only more tedious, not much more interesting or suggestive, than are the admirable arguments from given premises in text-books on logic.

Lacy has already experienced and discarded religious faith and poetic ideals; tried and abandoned the careers of politics and arms; loved and been jilted; known poverty and wealth, and has become, to quote his uncle, a victim of the modern malady, pessimism, whose fundamental peculiarity is not an inability to enjoy the smaller things of life, but an inability to believe that there is any true greatness in its great things. For his enjoyment of these smaller things Mr. Mallock makes sumptuous provision—family seats in England, *châteaux en Provence*, sunshine and roses, and women whose dower of wit and peerless grace is supplemented by shining raiment of infinite variety. One of these women Lacy almost wishes to marry, and another is quite determined to marry him. She is a widow of many perfections, including devout religious faith, and, by delivering Lacy to her in the last chapter, Mr. Mallock probably means to intimate that he will recover through her his lost ideals and a fresh and strong incentive to action.

The consciousness of failure in what should be the great figure of his novel may have increased the animosity with which the author regards many of the lesser people, in whose characterization he shows great energy of bad taste and bad temper. These are mostly poor people obliged to do some sort of work in order to live, and separated hopelessly from prime ministers and their nephews. Ordained by God to a degraded position, they try, at least temporarily, to forget His decree by talking about human brotherhood, equal opportunity, etc. They even gather together in a squalid way and charm each other with prophecies of the good time coming and absurd plans for hastening its arrival. In describing these wretched and ridiculous beings, Mr. Mallock drops the moderate irony, the fluent grace, the brilliant cynicism so perfectly at his command when roaming delightedly in high society. He becomes vulgarly malicious, and what may be meant for scathing satire is only cheap and stupid caricature. His most virulent attack is upon a woman who follows his own trade, and whose books have achieved immense popularity because they combine a reasonably interesting tale with discussion of serious social questions. He calls the lady Mrs. Norham, but we all know her name. Fortunately, we need neither admire her books nor agree with her opinions in order to perceive Mr. Mallock's venom and to know that it has overreached itself. The English people may have little literary judgment and no literary taste, yet it is preposterous to assert that the whole nation, including an occasional duke, has ever accepted with enthusiasm any book that could have been written by a woman with the instincts of an ambitious

scullery-maid and the style of a drunken prig. At intervals the stream of Mr. Mallock's wrath flows away from Mrs. Norham and her offensive disciples, and pours itself upon a group of rich Jews. These are abundantly endowed with unpleasant peculiarities, which might, however, be forgiven if it were not for their determination to spend their money on and with the British aristocracy. Never, if Mr. Mallock can help it, shall the Israelites be permitted to bribe with gold his own chosen God, the God to whom he pays perpetual tribute in literary frankincense and myrrh.

People who hold eccentric or even extreme views on social subjects, people who talk and write volubly without any preliminary thought, people who sacrifice mind and morals to get notice from great society, are, of course, legitimate targets for satire, and have not been spared by satirists; but these people have never been suppressed, or improved, or shamed, or even effectively ridiculed by a writer who cannot keep his temper, who appears to be working off personal prejudices and grudges, who himself shows conspicuously the weaknesses he lashes. In the earlier periods of English literature, including its greatest, the author openly sought a noble patron. As acknowledgment of gracious patronage, he prostrated himself in a preface or dedication, and then became a free man. A sincere admiration for Mr. Mallock's literary ability, and a belief in his power to write usefully and well, urge us to suggest to him the propriety of reviving that ancient custom.

A society that at the same moment affords models for fiction so far apart in aim, thought, spirit, and style as "Tristram Lacy" and "The Awkward Age," is necessarily vast, complex, and tolerant. It appears to be bound together only by a few habits, chief of which is a reckless consumption of tea between the hours of five and six. Mr. James's set is rarely caught in the act of swallowing anything more substantial than tea, which may account for their thin blood and acute nervous susceptibility. For a good many years Mr. James has been disembarassing himself of the serious view, and avoiding the representation of people whose force has a physical basis sufficient to support explosive passions, violent prejudices, or moral earnestness either in the practice or the criticism of life. He has now arrived at a point of intellectual remoteness from the flesh where he regards men and women with almost as slight reference to their bodies as if he were a philosopher contending that nothing is real except what cannot be perceived by the senses. If this attitude towards his creations were only a literary device, none could be cleverer or more discreet for an author embarking on the delineation of such a coterie as that which surrounds Mrs. Brookenham. To think of these frankly inquiring minds and untrammelled spirits united with bodies would be to picture to ourselves an uncommonly bad lot, much worse than we have any right to suppose Mr. James has ever wished to introduce. Readers will so think about them in proportion to their limitations, or inability to be quite content with fiction that is no grosser than psychology.

In his earlier works, the author's psychological analysis was often independent of

the action. He has gradually achieved a much more lively and artistic method. The minds reveal themselves or conceal themselves by talk. The Brookenham circle talks wonderfully. The one real joy and indissoluble bond is the desire "utterly and unreservedly to go to the bottom of things," the assurance that there's not a "single thing they can't take their ease about, can't intelligibly name, and comfortably challenge." The kind of things which they frequently delighted to turn inside out may be inferred from the title. By the presence of a girl of the Awkward Age, the "saloon" was broken up, or, in the words of one of its gayest habitués, lost its solidarity, became nothing more than a collection of fortuitous atoms.

As a literary performance, "The Awkward Age" is very brilliant and fascinating. All the author's seriousness is devoted to the art of expression, the perfecting of method, form, and phrase. Yet he has his defects. The people who talk so well in the free-and-easy vernacular of the English "classes" talk too much; they have too many catch phrases, such as, "She is of a charm," "You are of a splendour," which are not English at all; frequently, in their eager chase after the real meaning of things, they become Delphic, and break into ejaculations which, however expressive to the author, leave the reader in the lurch. These defects are trifling, yet peculiarly irritating, because they show how easy it is, while polishing a manner for perfection, to get quite adrift from nature and lapse into the most artificial mannerism.

The book entitled "Vengeance of the Female" is not so ferocious as it sounds. Lord Salisbury's famous reference to Spain and other southern European nations as "dying States" has offended the author, and her opening prefatory comment is not discreet or polite, or in a way justified by her own observation of these nations. Her assumption is that they are not exhausted and moribund, but still in a stage of irresponsible, prattling infancy, and therefore incapable of governing themselves. Having taken that position, she sustains it by the recital of a number of very amusing incidents, and by a silence about the abundant evidence of how old the Latin races are, in art for instance, and literature and experience of life, including sin. The points of Latin character which have attracted her are those that show out in domestic and social life so grotesquely different from the Saxon that they are almost always misunderstood, or, if understood, despised. The author has understood and has not despised, because, when she is not writing a preface, her own strong point is a sense of humor. To this valuable quality is added a faculty for seeing and frankly accepting the variety in human nature with no desire to harmonize or to adjust according to a conventional standard. Her appreciation of scenery and of local atmosphere is keen enough to give freshness and novelty to places that every scribbling traveller has written about, and she knows when to stop and where. It is not probable that her book will affect the judgment of statesmen, but it is quite up to convincing them that it would be well to lend a hand and keep alive nations that can afford us so much harmless mirth.

### THREE BOOKS ON THE KLONDIKE.

*Alaska and the Klondike.* By Angelo Hellprin. D. Appleton & Co. Pp. 315.

*The Trail of the Goldseekers: A Record of Travel in Prose and Verse.* By Hamlin Garland. Macmillan Co. 1899.

*Two Women in the Klondike: The Story of a Journey to the Gold-Fields of Alaska.* By Mary E. Hitchcock. G. P. Putnam's Sons. 1899.

The power of gold has never been illustrated more vividly than by the celerity with which it has made the name Klondike known the world over. In the early months of 1897 no one but a few adventurous prospectors had heard of that region, which now adds \$10,000,000 or more a year to the world's treasure; nor did any one dream that a "San Francisco of the North" would be built at the confluence of the Klondike and Yukon Rivers in a few months, with electric lights, newspapers, bath-houses, banks, theatres, and most of the comforts of civilization. Prof. Hellprin gives an entertaining description of Dawson City and the Klondike in which so many of the conditions that once made California the land of romance have been repeated—the gathering, from all parts of the world, of men of all classes, from the professional gambler and ruffian to the college-bred gentleman or the man of fashion; their chivalrous conduct towards the few women among them, in inverse ratio to their respectability; the miners dancing in crowded halls, their pockets stuffed with gold dust; the absurd prices asked for provisions at certain times (a gallon of milk \$60, chickens at the rate of three for \$100, watermelons \$25 each, hay \$1,200 a ton, and so on). The hotel at which the author put up charged \$25 a week for board and \$35 for a room, which, however, did not include windows, for, by a strange oversight, none of those who had preceded Prof. Hellprin to Dawson City had thought of bringing window-glass—or brooms! "Not until the approach of impending winter, when it was virtually too late to supply the deficiency, was it realized that a most important article of comfort had been overlooked in the mad race to the interior." Yet in this same windowless Dawson there was a well-built saloon embellished with four mural decorations for which a local "artist of promise" had received \$800!

Dawson has already three weekly newspapers, appropriately named the *Nugget*, *Midnight Sun*, and *Dawson Miner*, two of which cost 50 cents and the other 25 cents a copy. Eastern ten-cent magazines cost 75 cents each. A single copy of a Seattle paper which brought the news of the destruction of Cervera's fleet sold for \$50; but the man who bought it rented a hall and dispensed the news at a rate which yielded him a profit of several hundred dollars. The Dawson post-office was in a most primitive condition, letters being tacked up to the sides and fronts of different buildings, petitioning for rapid delivery. Women alone could be sure of getting their letters promptly; while a man had to wait for days, they walked in with an air of superiority and were promptly waited on. The same precedence—often by days—was given them in the matter of filing claims. Obviously in the Klondike, women have all the rights they could desire—all except the poor squaws, who may be seen carrying sacks of

four weighing fifty pounds or more over the mountain passes, side by side with the dog-teams. Mules and horses were, of course, in evidence, too, though thousands of them had perished on the trails. Prof. Hellprin had been warned against one of the passes because of the stench of decaying horse-flesh. What he saw convinced him that there must have been a dead animal for every sixty feet of distance. "The poor beasts succumbed not so much to the hardships of the trail as to lack of care, and the inhuman treatment which they received at the hands of their owners." The dogs, too, had a hard time of it. "Poor creatures! They are at times so freighted down that they seem hardly able to walk." It is true, the men did not spare themselves any more than their animals. Some, unused to toil of any kind, carried from 50 to 80 pounds, and, of course, broke down. As for the Indians, they must have changed since Hearne wrote, a century ago, that they considered a woman worth two men because she could pull so much more on their journeys. To-day, if we may believe our author, the squaw carries only fifty pounds, while the Indian himself takes double that weight.

There is much of this entertaining information and gossip in Prof. Hellprin's volume, but its most interesting part is that which describes the gold-fields. Three excellent maps make it easier to follow his remarks. In looking them over one is struck first—as in the case of the Dawson newspapers—by the local color in the names, especially of the waterways, among which there are the "Bonanza," the "Nugget," the "All Gold," and even the "Too Much Gold" creeks. The next thing that attracts attention is that nearly all the good and promising streams of the region fall off from Dome Mountain and its ridge, which is therefore "held in a respect bordering on veneration by the Klondikers," as it is believed to contain the "mother lode" or source of all the gold dust. So far, however, practically all the gold that has been obtained in the Klondike or across the American line—which is only forty miles away—is alluvial gold, from river and creek bottoms and the adjacent loose hillsides. One reason why the Klondike placers remained so long undiscovered is that superficially they present an appearance unlike that of other gold-fields. Miners from California at first indulged in sarcastic remarks about the folly of searching for gold in "moose-pastures," but it was in these pastures, under a dense overgrowth of trees, bushes, and moss, that much of the gold was found. The vale of Eldorado was one of them. The frozen ground, too, presents new problems, but otherwise the miners stick to their old-fashioned pick, shovel, gold-pan, and old-time rocker and sluice-box in preference to more modern contrivances, the result being that a third of the product goes over into the tailings and is lost for the present. Nevertheless, there are claims that have yielded up to \$200,000. The Professor thinks the wealth of the region has not been over-estimated, and that many good locations are still open. There are also opportunities for hydraulicking. In a chapter entitled "Physical History and Geology," the author treats local conditions for professional readers, and there is a final chapter on Laws regulating mining.

Tourists are already beginning to wend

their way to the Klondike, and for them there is much useful advice in the present volume. The information regarding the climate will come as a surprise to many, who are hardly prepared to read about a "wonderful land of the North," with its "mellow sunshine that is not to be found elsewhere." The author, who has visited many parts of the world, writes: "I can truthfully say that never before had it been my fortune to experience such a succession of wonderful summer days as during my stay in the region about Dawson," the temperature never rising above 82 in the shade. "During the period of free navigation," he says in another place, "there is usually little or no wind, the summer atmosphere of the North being singularly passive." He found, too, that the mosquito plague had been grossly exaggerated except for certain localities, his own experience having been almost absolutely negative. The trails, again, are not so bad as painted, while railway and steamboat have already greatly reduced them. Add to all this that the Klondike is a paradise for botanists and for lovers of berries of various sorts—many of them unknown in the East—and that the scenery on the way up includes some of the finest fjords and mountains in the world, and we have reasons enough for packing our valise for a trip 1,300 miles north from Seattle—not forgetting Prof. Hellprin's volume as a guide.

The next two works on our list, while they impart but little information regarding the Klondike, are properly a contribution to Klondike literature, and as such are acceptable for their truthful recitals of personal experiences in a journey to or towards the land. Mr. Garland, whose "Rose of Dutcher's Coolly" would hardly suggest for its author the rough-shod would-be miner of 1898, was one of the unfortunates who were lured by promises and representations into following the "Ashcroft Trail," one of the now famous "all-Canadian routes" to the gold-fields, whose termini were to most followers the dismal swamps and mountain fastnesses of the Stickeen or of the adjacent region. The horrors of this and the Edmonton route have been made too well known by newspaper report to permit for them any further advertising, and no glowing accounts of "open prairies of sweet grass," of "road-gangs" laying out easy trails, and of the "poor man's" route, made largely in the interest of transportation companies, are likely to entice prospectors further in the direction of this line of travel. Mr. Garland's account of his failure, after three months of hard travelling, to reach his destination, Lake Teslin, is pathetic to a degree, but it presents with wonderful vividness the hardships and miseries of the unknown trail. We recall few books of travel which are so graphic in their portrayal of nature; and if the aspects chosen are mainly from the side of wretchedness, rather than from that of warm sunshine, it can only be regretted that, in the region traversed by our author, the sterner aspects of nature are much more often found than those which gladden the landscape. As a book of travels, "The Trail of the Goldseekers" can make slight claim; but as a personal narrative in connection with an historic movement it will be read with much interest, even long after the movement itself has ceased.

Mrs. Hitchcock, who, as we are informed in a prefatory note by Mr. Elisha Dyer, "is

the widow of the late Commander Roswell D. Hitchcock of the United States Navy," and "descended from Lord Fitz Gerald," and who, with her travelling associate, Miss Edith Van Buren, a grand-niece of President Van Buren, enjoyed the advantage of having been "born and reared in luxury and refinement," presents an aspect of travel very different from that of Mr. Garland. A journey to Dawson by way of the lower Yukon, and out again to civilisation over the White Pass, is no longer one of hardship, although at times discomforts of a rather mild type may present themselves, and consequently the narration of such a journey need not be other than one of pleasant or of pleasing facts. As such, Mrs. Hitchcock has given it to her readers, and it will be conceded that she has made a readable, even if unnecessarily bulky, book. Much the greater part of the 500 pages is given over to an uncompromisingly minute detail of happenings in tent, on the trail, and in the cabin of a steamboat—happenings not alone to man and woman, but to a "Great Dane," to a parrot, and to sundry canaries, all of which were a part of the "outfit." But from this mass of very unimportant material, agreeably served up, one can with diligent study obtain a fair insight into the condition of things which ruled at the time that the journey was undertaken, namely, the summer of 1898. Possessed of a keen intelligence, Mrs. Hitchcock was able to observe much which would readily escape the ordinary male tourist.

While the book, therefore, can hardly be considered to have been written in a serious vein, it is not without its value in its plain and homely statements, and its method shows it to be reliable. It is largely embellished by reproductions from photographs, many of which were taken by the authoress or her associate. One wonders at the subtitle, a "Journey to the Gold-fields of Alaska," seeing that the Klondike is entirely in British territory. The map which accompanies the book, prepared by "Miner" Bruce, is far from accurate or adequate, and almost wholly deficient in just that part which deals with the Klondike.

#### STORR'S LIFE OF QUICK.

*Life and Remains of the Rev. R. H. Quick.*  
Edited by F. Storr. Macmillan.

Here is a book which no one who is interested in the course of education during the last thirty years can afford to neglect. Quick produced one educational classic, his "Educational Reformers," published in 1868. In this book he hit upon the device of connecting many of the most important educational truths with great persons, like Milton, Rousseau, Locke, Comenius, Pestalozzi. Thus he found opportunity for much entertaining biographical detail, and aroused interest in principles by starting with persons. Though Quick was intensely concerned with the practice as well as with the theory of teaching, yet his long and varied experience as a teacher would not be pronounced specially successful. But his failures as well as his successes were all made tributary to his thinking and to his writing, and in acuteness of observation and philosophic grasp he is excelled by few writers on education. He became, in fact, the central figure in a

small circle of men who have accomplished the most for educational reform in England. From these men came the founders and supporters of the *Journal of Education*, that mirror of English educational thought and progress; and not the least influential of this circle is Mr. Storr, Quick's biographer. It is a pleasant task to endeavor to convey, within the limits of a review, some just idea of the range and value of the contents of the book, and of the charm of the person whom it describes.

It is not unnatural to compare the book with Parkin's 'Life of Edward Thring.' Thring and Quick, most different in personality and character, had each the habit of keeping a full written record of their thoughts and experiences. The biographers of both have followed the wise plan of letting the subject speak in his own words. The consequence is, that each book gives the sympathetic reader an extraordinary sense of personal acquaintance with the man whom it describes. Thring was more intense, poetic, brilliantly endowed. To him were given powers of personal inspiration of others, a faculty of public speech, and a facility of expression which were denied to Quick. But Quick's gentleness—not without fire (his Harrow sobriquet was "Old Fireworks")—his philosophic mind, his inextinguishable love for getting at the truth of things, his power of stripping off the outside husk from any practice or theory which had nothing but custom to support it, have given to his words and opinions peculiar and lasting weight.

Robert Quick was born in 1831 and died in 1891. His father was a substantial London merchant who left him with a competence. The pecuniary independence thus secured to him allowed him greater freedom than falls to most educators. Books and travel to any extent were within his reach, and a position could be immediately laid down when results seemed unsatisfactory. His early years of study were interfered with by delicate health, the result of measles, from the effects of which he never fully recovered, though he was a large and muscular man. In 1850 he went to Trinity College, Cambridge, and took his degree with only moderate distinction in 1854. At Cambridge he devoted himself to mathematics rather than to classics and literature, for which he had more aptitude. He followed this course in consequence of a theory, which he afterwards rejected, that it was well to devote one's self, at college, to subjects for which one had little taste, rather than to those which were most congenial, because the latter would be sure to receive attention at some subsequent period! On leaving Cambridge, he took orders, apparently because more obvious opportunities for work for others seemed to offer themselves in the Christian ministry than in other callings. He had, in some way, made the acquaintance of Thomas Carlyle, and it was by his advice that he first visited Germany, spending a month in Hamburg and acquiring some facility in German conversation. This visit was followed by others, the longest one of six months in Leipzig; and he became an excellent German scholar. His familiarity with German thought and the German language led naturally to the production of 'Educational Reformers,' for, as he himself says, he soon discovered that all books of any value on the history and science of education were in German.

The student of Quick's life will be interested to know the names of the various places

at which he worked. He began at the grammar school at Lancaster, in 1858. Here he remained only six months, leaving on account of a disagreement with the head-master about Sunday work. Then followed work at Guildford, Hurst, Cranleigh, and, from 1869-1874, at Harrow. Cranleigh was what the English call a preparatory school, i. e., a school where young pupils are prepared for the large public schools. Quick was called to Harrow just after the appearance of his 'Educational Reformers.' He was himself an old Harrovian and had been a schoolmate of the head-master, H. M. Butler, and it might have seemed that he had at last found his true field of work. But he lacked that agility of mind, that facility for turning off routine work, that large supply of nerve-force which the brilliantly successful assistant-master requires. He saw, also, only too clearly, the defects of the system—the total lack of coördination of work, the absolute independence of every master of the work of every other. He could not easily endure the neglect of individual needs which is often inseparable from class teaching; the indifference, stupidity, and idleness of the mass of the boys distressed him. The consciousness, too, that he was debarred from his favorite occupations of study and writing by the endless grind of teaching and of correcting exercise-books, continually distressed him. And so, after five years of service, he left Harrow, not without appreciation, not without having left his impress, yet not having achieved a decided success.

In 1876 Quick made a singularly happy marriage. In 1879 he was appointed lecturer on education in the University of Cambridge. This position he held for four successive years. During the later years of his life, he made two private educational ventures: the first, a preparatory boys' day-school in London, from 1876 to 1881; the second, a preparatory boys' boarding-school at Guildford. His interest in the development and education of his own children, Oliver and Dora, intensified his interest in these two experiments. In 1883 he was appointed by his college to a living at Sedburgh, which he held until 1887. He then established himself at Redhill, within easy distance of London, where, without the strain of obligatory duties, he passed the last four years of his life.

One hundred and twenty-six out of the five hundred and forty-four pages of this volume are occupied by the biography of Quick, which is itself largely an autobiography. The remainder consists of extracts from the forty volumes of his journals. These note-books cover a period of more than a quarter of a century, and are the record of the thought of a lifetime. Dr. Storr says that there is scarcely a dull page in the forty volumes, and this our reading fully confirms. Here the personality of Quick is so clearly revealed that, as one reads, one almost seems to be in conversation with him. We must pass over entirely his instructive study of child-life entitled "Dora and Oliver," a careful account of the development of his two children, from their birth to their seventh and fourth year. Nor can much place be given to his thoughts on distinctly educational subjects, valuable as they are. They are, in fact, too valuable to condense, and it may be assumed that progressive teachers will read them in full. We will prefix dates to the passages quoted:

(October 17, 1877.) "Now I have settled down here quietly with Bertha [in his pri-

vate school at Bayswater, London]. I have been looking over books, etc., and the conclusion I have come to is that I have material for educational writing which I could not manipulate without an additional life or two. The danger now is lest I should be crushed by my material and never do anything. How strange it is that one is so long in learning the importance of great books, and the necessity of neglecting middling ones!"

(January 1, 1878, Marine Parade, Brighton, 6 A. M.) "When one thinks of the immensity of time and of the Christian hope that there is endless existence before us, one is perplexed that this infinity of time should take its character from a few years that seem to bear no proportion to it. One observes, however, that, in the time here, by far the greatest portion is determined by certain hours or, it may be, minutes.

"In itself a thought,  
A slumbering thought is capable of years,"

says Byron. With most of us the greater part of our life seems merely wasted. Perhaps the scanty moments we give to prayer may, in importance, be the chief part of our existence."

(June 6, 1881.) "I was lately examining some old papers. They were old scribbles of mine in 1853, twenty-eight years ago. I could not help feeling vexed that they were so good. The first twenty years of life are the really most important part, after all."

(July 23, 1885.) "As I grow old, my capacity for the active business of life (never very great) seems to grow considerably less, while my desire (and, I fancy, my ability) to theorize on life seems to increase. But my time is so consumed by small things that I never get free and never feel free to think and write."

(May 15, 1886.) "Perhaps, before the end of my journey, I may be able to write some useful essays, working up the materials in these note-books. The question is whether I shall find time. Till lately, one has thought of the station as at an immeasurable distance. It does not seem so, now. Like the members of that old-fashioned sect still known by the name given them at Antioch, I don't believe in the existence of a terminus."

(June 15, 1886.) "My father used to say that one of his best points as a man of business was that he never let stock hang on hand. He would keep the decks clear and not get hampered with the old stuff."

(July 8, 1887, Redhill.) "In our present state, the machinery of life is far too extravagant of force. When one has arranged one's affairs, seen one's callers and returned their calls, read one's letters and answered them, there is hardly any time left except for meals and sleep. It seems to me a clear duty to reduce all these demands on one's time. Besides this, I think we should spend a portion of the day with some great writer. One is disinclined to rise to the thoughts of a great writer, and one gets to prefer incessant grind. How few intimacies one has with great writers! One has 'no time' to cultivate their acquaintance. But one finds plenty of time to read newspapers and periodical twaddle which does no good at all."

(October 17, 1887, Redhill.) "In indexing my notebooks, I have lately had to read a good deal of my own writing. It is extremely devoid of what M. Arnold calls charm. But one claim to attention my writing has: I write because I think."

(October 26, 1887, Redhill.) "I am always engaged in a struggle with my physical surroundings. I do not like disorder, far from it; but never having paid proper attention to keeping things in order, things are too many for me. And, after trying hard to get them straight, I fail. My difficulties arise from two sources—first, I have a sort of acquisitiveness which prevents me from throwing away what may come useful; and, secondly, I am always putting things to rights, but never take pains to keep them so."

At Redhill, Quick passed a laborious life. The day was about equally divided between his pedagogic and literary studies, and the hours devoted to his friends and correspondents. The four walls of his study were lined

with book-shelves reaching to the ceiling. His visitors had difficulty in finding a seat: chairs, arm-chairs, and sofa were strewn with books, pamphlets, and reviews. Traveling scholars of all nationalities knocked at his door, some in quest of information, others requiring an introduction or a recommendation for some post, or not rarely seeking pecuniary assistance.

Mr. Quick went to pay his friend, Prof. J. R. Seeley, a visit on February 20, 1891. He was to stay four days, and to read his friend's proofs. He stayed more than four days, and he did not read the proofs. On the second day, the two friends went out for a walk after luncheon, but had hardly left the door when Quick was stricken with apoplexy. He was brought back to the house, where he lingered sixteen days, at first in complete consciousness, which gradually diminished until the end. Prof. Seeley says of him: "I never knew a man of happier disposition and temper. He was all candor and kindness. Intercourse with him was always easy, yet never insipid. He had a singular modesty which he contrived to unite with perfect firmness of judgment. His religion he had learnt from Frederick Maurice."

Here this sketch must close. The more the reviewer has read the extracts from the note-books, the more valuable does he esteem them. Not only every teacher, but every one alive to the deepest concerns of humanity, will do well to have this book at hand, and will find in the thoughts of this noble soul cheer and inspiration.

*Colonización de Filipinas: Inmigración Peninsular.* Por Manuel Sastron. Manila. 1897.

It appears that, just before the Philippines passed out of the possession of Spain, a plan of colonization on an extensive scale was under consideration by the Spanish Government. It was proposed to establish agricultural colonies in the archipelago, the material for which was to be drawn from the population of the South American republics. The idea was entertained that large numbers of Spaniards who had been disappointed in their expectations of getting on in the New World, would be glad to try life over again in the Philippines, with the aid of liberal subventions from the mother country, and that in this way a step forward might be made in bringing the interior of the islands within the domain of civilization. The supporters of this novel scheme of colonization went so far, it seems, as to contemplate the translation of no fewer than 20,000 families, or 100,000 souls.

The little volume before us is an exposition of the conditions that would confront the settlers of Spanish blood ("Peninsulares") in their new home. It deals primarily with the problem of agricultural colonization, but also discusses the situation presented by the islands with respect to the importation of laborers and handicraftsmen of all kinds. The author has filled the position of civil governor in several provinces of the archipelago, has sat in the Spanish Cortes, and is a doctor of medicine. He writes from the standpoint of the Castilian who would shed the last drop of his blood for the maintenance of the integrity of the Spanish realm. He is im-

bued with the conviction that the Santa Madre Patria has been actuated by the noblest motives in her dealings with the Filipinos, who, he contends, show a smaller percentage of illiteracy than many peoples of Europe and America, and whose material progress, as measured by imports and exports, he considers most satisfactory.

Dr. Sastron's object in putting forth this memorial is to protest solemnly against the notion that the Philippines can offer a field for agricultural colonization on the part of white men. He regards the climate in practically every part of the archipelago as hopelessly fatal to such expectations. The maladies which he enumerates as the three great inevitable scourges of the interior are gastro-intestinal catarrh, chronic dysentery, and anemia resulting from malaria. He declares emphatically, although reluctantly, that, even under the most favorable conditions of alimentation, the foreign cultivator of the soil is almost sure to succumb to one or another of these ailments or a combination of them; and as to acclimatization, he asserts that there is no such thing as becoming acclimatized in the sense that immigrants are acclimatized in Cuba, for example, in the case of those coming to the Philippines to till the soil with their own hands. Even the agricultural colonies established in recent years by the *Compañía General de Tabacos de Filipinas*, although composed of natives, with Spanish overseers, and generously fitted out in every respect, including safeguards as to sanitation, proved a complete failure in consequence of the unwholesome climate. In one of these settlements, located in the central part of Luzon, all the European employees, without a single exception, were prostrated by the malarial fever within a fortnight after their installation. All that Dr. Sastron is willing to admit is that there would perhaps be just a bare chance of success for agricultural colonization within prudent limits in the island of Mindanao, provided, of course, that the twenty different tribes living there in a state of anarchy ("en la mas completa desorganización politico-social") had not to be reckoned with. He quotes the following passage from one of the publications of a society in the Philippines which bears the name of Real Sociedad Económica de Amigos del País:

"To pretend to apply the same principles of colonization [as in the temperate zone of Australasia] in Java, Malacca, or the Philippines is sheer insanity, an unrealizable aspiration, a dragging to death of the very immigrants with whom we are seeking to accomplish the miracle of the regeneration of these colonies. Indeed, they themselves are fully aware of it, and, whether through knowledge or through instinct, they have not come nor will they ever come to these regions."

The very journals of Manila, according to the author, in spite of their interest in the increase of the Spanish population, almost unanimously shared his views.

Dr. Sastron devotes considerable space to the discussion of the possibilities of coffee culture in the archipelago, and he enters into a laborious calculation of the cost of starting a family in this line of industry, as well as of the probable outcome. He is forced to conclude that the outlook is anything but promising. It was only about 1872 that the cultivation of coffee in the Philippines began to assume large proportions. In 1887 the production reached high-water mark.

In that year, in a few districts in the province of Batangas (bordering on that of Manila), the value of the crop reached the sum of about \$2,500,000. After this, however, the yield declined rapidly, owing to some blight or malady that appears to have baffled all attempts at prevention, until at last it was reduced to a small fraction of what it had been before. A large proportion of the growers have cut down their plantations.

The kind of immigration which, in the eyes of Dr. Sastron, would profit both the islands and the immigrants, is that of miners, mechanics, and other non-agricultural hands; but even here his view of the possibilities is by no means an enthusiastic one. He is inclined to think that the mineral wealth of the Philippines may ultimately prove considerable, but his speculations are anything but glowing. He considers native labor unfitted for such industries as the mining of coal, and in more than one place he expresses the conviction that it takes three Filipinos to do the work of one European.

This handsomely printed book of 115 pages was set up by the inmates of the orphan asylum at Malabon, of which now probably not a trace remains after the havoc wrought there a few months ago. Truly, war in the Philippines is "hell."

#### BOOKS OF THE WEEK.

- Arnold, Sir Edwin. *The Gullistan. From the Persian.* Harpers. \$1.  
 Birt, Archibald. *Castle Cavares. A Romance.* Longmans, Green & Co. \$1.25.  
 Chapman, F. A. *E. Personal Rights and the Domestic Relations.* Connecticut, O.: Home Study Publishing Co.  
 Daniels, Prof. W. M. *The Elements of Public Finance.* Henry Holt & Co. \$1.50.  
 De Quincey, Thomas. *Murder as a Fine Art.* Cassell & Co. 10c.  
 George, H. B. *Napoleon's Invasion of Russia.* London: Unwin; New York: New Amsterdam Book Co. \$4.  
 Halsey, Helen N. *The Child Witness.* F. T. Neely.  
 Kirk, Eleanor. *The Prevention and Cure of Old Age.* Brooklyn: The Author.  
 Leaf, H. M. *The Internal Wiring of Buildings.* London: Constable; Philadelphia: J. B. Lippincott Co. \$1.50.  
 Lodge, H. O. *The War with Spain.* Harpers. \$2.50.  
 Matthes, Prof. A. *Deutsche Baukunst im Mittelalter.* Leipzig: B. G. Teubner.  
 Maupassant, Guy de. *Boule de Suif.* From the French. London: Heinemann.  
 Mendes, H. P. *Looking Ahead.* F. T. Neely.  
 Méras, B., and Stern, S. M. *Cinq Histories.* Henry Holt & Co. 80c.  
 Milne, W. J. *Grammar School Algebra.* American Book Co.  
 Milne, W. J. *Plane Geometry.* American Book Co.  
 Moore, J. H. *Better-World Philosophy.* Chicago: Ward-Waugh Co.

# The Nation.

NEW YORK, THURSDAY, AUGUST 31, 1899.

## The Week.

President McKinley was in great form on Friday when he made his speech to the church militant at Ocean Grove. He declared that his policy in the Philippines was:

"Peace first; then, with charity for all, establish a government of law and order, protecting life, property, and occupation, for the well being of the people—a government in which they shall participate under the stars and stripes."

Peace first by means of ten new regiments! Gunpowder and ball with charity for all, and the whole gamut of hypocrisy described by Tacitus in words that have rung through the ages, "Solitudinem faciunt, pacem appellant"—They make a solitude and call it peace. But what would you do? say the would-be missionaries, Methodist and other, who throw the cloak of religion over this welter of blood. We would do what Admiral Dewey recommended in his interview in the *London Daily News* of August 21, viz.:

"I have never been in favor of violence towards the Filipinos. The islands are at this moment blockaded by a fleet, and war reigns in the interior. This abnormal state of things should cease. I should like to see autonomy first conceded, and then annexation might be talked about. This is my opinion. I should like to see violence at once put a stop to. According to my view, the concession of self-government ought to be the most just and most logical solution."

Those words ought to be printed in letters of gold, and no places would be more fit for their display than the platform of the Auditorium at Ocean Grove and the entrance to the White House at Washington city.

How rapidly the situation in the Philippines changes from week to week, and always against the policy of subjugation, is shown by the news that native mayors, supposed to be in sympathy with the Americans, have been put in jail for conspiring to aid the insurgents. One of them, in fact, is said to hold a Colonel's commission in the Filipino army. Yet it was only two or three months ago that the acceptance of office by these men was trumpeted abroad as a convincing proof of the peaceful spread of American rule. There we were setting up municipal governments. Couldn't the blind anti-imperialists see that the natives hailed our coming, and were glad, as soon as protected from the savage Aguinaldo, to accept our beneficent sway? Well, here are these pet mayors of ours risking their lives to work for Philippine independence. The very men whom President Schurman and the other Philippine

Commissioners were pointing to as triumphant evidence of the readiness of the better class to welcome American control, are now shown to have been actively recruiting for the Filipino army. It will not do to dismiss them as treacherous scoundrels. They are our own chosen scoundrels, if scoundrels they are; and if they have tricked us and left us a laughing-stock, that only shows into what perils and pitfalls we have walked.

It is reported from Washington that Gen. Otis has decided to extend to the Philippines the law excluding the Chinese from the United States. What reason exists for such action it is difficult to conjecture. Perhaps the intention is to keep the Chinese at home in order that we may deal with them there. But other nations can get at them in China, while if we let them come to the Philippines we may secure a monopoly of their trade. All accounts agree that the Chinese element is the most tractable that we have to do with, and that it is the most industrious and progressive. Our Government passed the exclusion laws because they were demanded by the people of our Pacific Coast States. The Chinese were pouring in in such numbers as to excite a fear that they would outnumber the whites, and the laboring class was especially violent in its protest against their competition. It is stated that the native Filipinos are also strongly opposed to "Chinese cheap labor," and one of the diplomatic agents of our Government writes from Manila that the exclusion of the Chinese would aid materially in bringing the war to a close. If our Government is reduced to such expedients as this to aid its military operations, the situation is indeed desperate. The Chinese have on all rational grounds a better right to be in Manila than we have. Many thousands of them have long been there. They carry on most of the retail trade, and their influence has been described as valuable by Admiral Dewey. To forbid their immigration is not only to insult the Chinese Government, but is plainly injurious to the prosperity of the Philippines. It seems incredible that so doubtful a measure as this should have been adopted for no better reason than the hope of propitiating malcontent Filipinos; but no other explanation is suggested.

The expenditure for the army during the last two months is said to amount to \$30,000,000, or half a million dollars a day. What Congress appropriated for this purpose was not far from \$80,000,000, which will be exhausted, at the present

rate of outgo, before next December. It is urged that a good deal of this expenditure is on account of contracts that have now been completed. On the other hand, the army is being rapidly increased, and the additional expenditure will be very considerable. Furthermore, the cost of maintaining troops will necessarily be greater this year than last. Nearly all prices have risen, and in some cases the rise has been very great. Possibly Mr. Root may develop such abilities as a war minister as to expel jobbery from the Department; but the task is formidable. Some fifteen months ago, the Government hired two steamers on the Pacific Coast, worth perhaps, \$250,000 apiece, at the rent of \$1,000 a day, all operating expenses being assumed in addition. After twelve months one of these steamers was returned to the owners, but the other is still retained by the Government, at the same rent. Now that the war is to be prosecuted with renewed vigor, this vessel will probably be kept in service for another year. There is nothing exceptional in such jobs as this. They are necessary incidents of war, and, if the people disapprove of them, they should demand that the war be stopped. On some accounts we are glad to see that the disbursements are at such a rate as will require application to Congress for enlarged appropriations. They will not be granted with the same haste as in the past, and the attention of the people will be called to the price which they are paying for a very doubtful kind of military glory.

Quay met in convention at Harrisburg on Thursday and heartily endorsed Quay. He also had a good word to say for his supporter in the White House. Quay declared himself proud of the Pennsylvania troops. If they are proud of him, the commonwealth is secure. He renewed his promise to the Cramps of a subsidy for the ships they build. Quay resolved that he was for everything that is good for the State and nation, and especially for himself. That is a faithful summary of the so-called Republican State convention at Harrisburg. All accounts agree that there was never a convention in the State so boss-ridden, with the delegates so listless, with nominations and pledges of future nominations so minutely and tyrannically determined in advance. As the free expression of the mind of the party, or even of that of the Quay goods and chattels who composed the convention, it would be ridiculous to take its action and resolutions. The whole thing was simply designed to show that Quay is supreme boss, his power unimpaired by the revelations of last winter, morally damning as they were. It also was designed to show Mr. McKinley that he,

with the "great moral earnestness" which Col. Hay has said is his chief characteristic, has done just right in standing by Quay through thick and thin, in spite of the protests of the mind and conscience of the Republican party in Pennsylvania. "Let them kick, Mr. President," is what Quay says in effect; "I will furnish you the delegates just the same."

One searches the Pennsylvania platform in vain for warm approval of the President's Philippine policy. It simply promises him support in "the prosecution of the war," in order that "the supremacy of the flag may be maintained." Not a word about the wisdom of taking the islands, or the desirability of keeping them. In this respect the Pennsylvania Republicans imitate the example of their brethren in Iowa and Kentucky, and even in Ohio. They shy awkwardly at the Philippine issue, and are evidently prepared to bolt and run from it, if political safety seems to lie that way. The Ohio Republicans are heartily in favor of "a wise solution" of the Philippine problem, and, *sotto voce*, wish to heaven they knew what it was. The Kentucky Republicans are going to support Mr. McKinley until he establishes "order and progressive government" in the Philippines, but they evidently wish he would be a little quicker about it. So it goes. A President who does not know his own mind has behind him party leaders who are afraid of their horses.

The demand for iron and steel has so far outstripped the supply that the export of these metals has fallen off and some importations have taken place in lines which are usually abundant at home. Structural iron is in particular demand, but all the mills are filled with orders from four to twelve months ahead. The supply of ore is not equal to the demand. The number of lake vessels fit for carrying ore is likewise deficient. In short, all people seem to want iron at the same time. Now, is not this a favorable time to repeal the duty on iron ore? The revered Dingley put a tax of 40 cents on it, and also on the sea water or other dampness that might be absorbed by it in the course of transit. There is plenty of iron ore in Cuba actually owned by American citizens who cannot get the use of their own property without paying a fine of 40 cents per ton. If this iron ore were obtainable, it would, of course, take the place of some of the manufactured iron which, under the stimulus of the present excessive demand, comes in from abroad over the top of the Dingley tariff.

The merits of the controversy over the advance in the price of beef are not

easily determined. There are so many causes in operation as to make it impossible to tell the effect of particular ones, and we may add that so many reckless statements of fact are made as to obscure the whole question. It seems to be undisputed, however, that the price of live cattle in the West has materially advanced. At Omaha, for example, steers are selling for a half more than they have brought in recent years. This disposes of the charge that the recent advance of prices in this city is due to the arbitrary action of the great butchering companies. They have raised the price of meat because they have to pay more for cattle. On the other hand, it is quite probable that their charges were unreasonably high before, and are still unreasonably high. They are protected against competition, except among themselves, by the extent and completeness of their organizations. They have perfected the art of butchering, they have developed the art of utilizing by-products, they have created the art of refrigeration, and they have made an art of transportation. It is obvious that any attempt to compete with such organizations must be on a large scale, must be scientifically planned, and must be very ably managed. Considering the increased demand for meat for exportation, the growth of population, and the ability of the people to pay for meat because of their present prosperity, the general tendency of prices, and the probable shortage in the supply of cattle, it seems doubtful if the butchers of this city can succeed in lowering the cost of beef by their proposed combination.

The Alaska boundary question rises out of the fog and falls back into it with admired regularity, but fails to cause any excitement on this side of the line. The latest thing heard on the other side was that the Canadian Government, despairing of justice from the United States, had resolved to build a railroad on their own territory from some port of their own to the Klondike or to the navigable waters flowing thither. This proposal was quite generally acquiesced in by Americans. At all events no objection could be advanced against it. If Canada can afford to build 700 miles of railroad through a barren country, a road which will have to be operated at a heavy loss, all right. Undoubtedly she can afford it, for she has done such things before when she was much poorer than she is now. Nobody here will lift a finger to prevent her. Yet it would be a pity to waste so much money, and we do not believe that Canada really intends to do so. She already enjoys a right of way across our territory from the head of the Lynn Canal to White Pass. She can send goods in bond from Skagway just as she sends them through Portland, Me., to

Montreal, and as we send from Buffalo to Detroit via the Canada Southern Railway. In fact, this bonding privilege is all that she needs commercially. Some little delay, due to formalities, is met with in passing the custom-house, but it is not attended with any expense.

When the goods arrive at White Pass, they cross the Canadian boundary duty free, of course, while American goods taking the same route are subjected to the Canadian tariff before they can reach the Klondike market. This protective tariff, coupled with the railroad, has already killed the town of Dyea and is fast sapping the life of Skagway. These places, while they were outfitting-posts for travel to the Klondike, did a roaring business, but since the White Pass railway has reduced the necessary outfitting to small proportions, the prosperity of the towns on the Lynn Canal has greatly declined, for although goods continue to go through, they do not break bulk; they leave no toll except the wages of freight-handlers. Now, under these circumstances, while the Canadians are making nearly all the profit out of the Klondike trade, and the towns of Dyea and Skagway are either dead or decaying, why should there be so much tail-lashing at Ottawa? Why should Premier Laurier talk about arbitration or war or a new railroad to the Klondike, and why should Sir Charles Tupper tell of his determination to stand by the Government to the last extremity? Evidently, because one of them represents the ins and the other the outs of Canadian politics. They are enjoying now all the profit they could obtain by a new railroad—that is, a virtual monopoly of the Klondike trade. They have everything they could desire except the spectacle of their own flag waving over a port on the Lynn Canal. Facts must prevail in the long run, and this convinces us that a settlement of the boundary question will be reached ere long without either arbitration or war or a new railroad 700 miles long.

The reappearance of M. Labori in the Dreyfus trial, and the mental vigor he has displayed, have already had a considerable influence in changing public opinion as to the result of the trial. It is now evident that the assassin fired at the right man, for in disabling Labori he took out of the court-room the one man whom the prosecution stands most in fear of, the one man who knows most about the case, the one upon whom the defence leans with the greatest confidence. If Labori's strength holds out, the tissue of perjury and forgery which the Court of Cassation partly exposed will be riddled to the satisfaction of the lovers of truth throughout the world. Every dodge, every meanness of the prosecuting witnesses has been com-

fronted by Labori with merciless logic, and with indignation of the contagious sort that must have its effect even upon a prejudiced court-martial.

Gen. Mercier is rapidly becoming chief villain of the Dreyfus tragedy, and, luckily, he is meeting the usual dramatic fate of villains in being exposed and overwhelmed with confusion. A whole series of his lies and perjuries was thrown to the ground on Saturday by the testimony of Capt. Freystätter, a member of the court-martial of 1894. The issue of veracity was whether Mercier, then Minister of War, had illegally submitted evidence in secret to the judges, and whether, in particular, he had included the famous Panizzardi dispatch in a translation which he knew to be incorrect. First Mercier denied having done it at all; then asserted that if Col. Sandherr or some other man now dead had sent in the dispatch along with the other documents of the secret dossier, it was in the form which the Foreign Office certified to be correct and which exonerated Dreyfus. But now Capt. Freystätter declares that it was precisely the fraudulent translation of the Italian attaché's dispatch which Gen. Mercier, knowing it to be fraudulent, caused to be read to the judges. This, we suppose, is the basis for the rumor that Mercier himself is to be arrested and court-martialled. His cool audacity did not entirely desert him in the face of Freystätter's revelations. That officer had said something about Dreyfus having been suspected of selling the secret of the Robin shell. An evident lie! cried Mercier, as the Robin shell was not in use before 1895. Will it be believed that Gen. Mercier himself spoke of the same charge against Dreyfus in his testimony of August 11? There it stands in the *Figaro's* stenographic report, the "secret de l'obus Robin." Surely a very shallow as well as a daring villain is this Mercier.

The part which French yellow journalism has had in keeping alive the myths and passions and prejudices which are the only real evidence of Dreyfus's crime, is well brought out by M. Guerlac in his letter in the *Tribune* of Monday. What with clerical organs of slander like the *Croix*, furious anti-Semite papers such as the *Libre Parole*, and the shrieking army-worshipping and foreigner-hating *Petit Journal*, with its circulation of more than 1,000,000, the difficulty of making the truth known in France begins to be seen. It is these newspapers, affirms M. Guerlac, which have fooled the majority of the nation. Even the reports of the present trial they grossly color and pervert. They make out Mercier and Boisdoffre and Gonse national heroes, giving triumphant proofs of Dreyfus's guilt, and repre-

sent Col. Picquart as a sneaking driver, with his face stamped all over with cowardice and duplicity. Take, for example, the way in which the *Petit Journal* treated the attempted assassination of Labori. It almost suppressed mention of the crime, giving to it only a few casual lines. By way of comment, it spoke of the atrocious assault as a "regrettable incident," which "one cannot but condemn, and we do not hesitate to do so"; but then it proceeded to argue that the crime was the very natural retort to the hooting of Mercier by the crowd on the previous Saturday, so that the real responsibility lay with the Dreyfusards! It is against such formidable engines of mendacity that the mind and conscience of France have to struggle in their attempt to convert popular opinion.

Mr. Chamberlain's speech about the Transvaal situation on Saturday was disquieting mainly because it showed his impatience and determination to bring matters speedily to a crisis. He complained that Krüger was slow and grudging in all his concessions; that they had to be squeezed out of him like water out of a sponge. What of that? Is that not the usual way of diplomacy? The chief question is whether the concessions are actually made or not. There is every reason to think that Krüger has now conceded all that Sir Alfred Milner demanded. But, as is natural, he wants something in return, and that is, a promise that England will respect the independence of the Transvaal. Why should Mr. Chamberlain refuse this? Only three years ago he said it would be "immoral" for England to interfere in any way with the independence of the Boers. Oom Paul on his side might complain that Chamberlain's demands are always rising; that it is impossible to satisfy him. The situation is unquestionably grave, more so through Parliament not being in session; but we still believe that Lord Salisbury will restrain "pushful Joe," and not allow him to plunge Great Britain into a needless war. Meanwhile, both sides are pushing forward their preparations for the final struggle.

In view of the complaints made by the British Government of the oppression of its subjects in the Transvaal Republic, it should be observed that only white men's rights are considered. The natives of British India are subjects of the Empress Victoria, but they do not have the rights of English citizens. They have no political rights, and their legal rights are limited. The Legislature of Natal has taken measures to exclude their Indian fellow-subjects from that colony. It has levied a capitation tax on them, which is quite as oppressive as the tax levied on the Outlanders

by the Boers. The Dominion of Canada imposes a tax of \$50 on every Chinaman that enters that country, and British Columbia has lately tried to keep out the Japanese. It seems that the Japanese have been pouring into that province at an alarming rate, with the usual result of furnishing "Asiatic cheap labor," and when they have established themselves they show no disposition to go away. What is most startling is the fact that the Japanese Government has had the impudence to suggest that, after a certain period of residence, the Japanese in British Columbia should be given the franchise. The Dominion Government has been obliged to veto the exclusion law of Columbia, and Mr. Joseph Chamberlain is reported to have suggested that the Natal act might be copied. To this the Columbian authorities reply that the Japanese Government would probably regard that as an unfriendly proceeding, and the problem remains unsettled. Evidently the admission of Japan to the status of a civilized Power may have awkward consequences. It implies that the Japanese are on a level with white people, and must be treated like the subjects of the European states. To refuse them the franchise in the Dominion of Canada, after the claims that Great Britain has made for the Outlanders in the Transvaal, may have an air of inconsistency which cannot easily be explained away.

Emperor William has again run up against that ridiculous provision of the law which compels him to ask money of a popular assembly. When he opened the Dortmund-Ems canal some three weeks ago, he broadly hinted to the Prussian Diet that he expected a prompt vote of the money necessary to complete a system of waterways stretching right across Germany, and connecting the Rhine, the Weser, the Elbe, the Oder, and the Vistula. But the refractory Diet refused the grant by large majorities. It was those stout and consistent Protectionists, the Agrarians, who did the mischief. They do not want improved internal communications which would simply increase the facilities for bringing in foreign agricultural products and foreign timber. To them, the opinion of a British vice-consul that the Dortmund-Ems canal would be "distinctly favorable to British shipping," was enough to condemn all such projects. So they braved the wrath of the Emperor, and flatly refused him his money. That potentate is in a fury, and is calling his Cabinet to task for having allowed such a rebuff to fall upon him. But dismissing a Minister or two will not go to the root of the trouble. It ought to be made treason to deny the Emperor any sums he may demand, and the whole Diet should be drowned in the canal. Their successors would then be more reasonable.

## THE TRUTH IS NOT IN HIM.

Mr. McKinley has broken his long silence on the Philippine question. He has also broken something else, as we shall proceed to show. What he asserted in his speech at Pittsburgh on Monday is doubtless what he would like to believe to be true, but the facts are otherwise. We shall set forth as dispassionately as possible some of Mr. McKinley's perversions of the truth.

To begin with, he said:

"Until the treaty was ratified we had no authority beyond Manila city, bay, and harbor. We then had no other title to defend, no authority beyond that to maintain. Spain was still in possession of the remainder of the archipelago. Spain had sued for peace. The truce and treaty were not concluded."

Very good; then by what title or authority did William McKinley assert on December 21, 1898, seven weeks before the treaty was ratified, sovereignty over all the Philippine Islands? In his proclamation of that date he declared that "with the signature of the treaty of peace . . . the future control, disposition, and government of the Philippine Islands are ceded to the United States." He went on to announce that, "in fulfilment of the rights of sovereignty thus acquired," he proposed to immediately occupy and administer "the entire group of the Philippine Islands." In other words, what the President now says he could not do legally, he did do. Boasting now that "every step taken was in obedience to the requirements of the Constitution," he compels attention to the fact that his proclamation of December 21, 1898, was in flat violation of the Constitution. If he could, as he then asserted, proceed to occupy and administer the entire group, then his excuse for doing nothing outside of Manila falls to the ground. If, as he now says, it would have been illegal to assert title to the islands before the treaty was ratified, then he is a confessed law-breaker, for such title he did assert. We prefer (to quote his own language) to "leave to others the ungracious task of justification and eulogy."

Mr. McKinley declared further that his purpose in originally sending troops to Manila was to "emancipate" the natives, and that, therefore, they should have been our "firmest friends." Well, it was not the fault of the Filipinos that eternal friendship was not sworn on the spot. They were for months most profuse in their expressions of gratitude and admiration and attachment. If ever a statesman had an easy task, it was that of consolidating the amity which existed for months at Manila between Filipinos and Americans. But all was turned to bitterness and hatred. Why? Because the Filipinos discovered that, whatever might be the case with Dewey and the other officers on the scene, the Government at Washington was insincere in its fair words. This is not a matter of opinion. There is an official

document on record which shows how hollow are these later pretences of an intention to "emancipate" the Filipinos. As early as June 16, 1898, the Secretary of State, Judge Day, wrote a letter to Consul Pratt in which the real purpose of this Government respecting the natives was revealed. Warning the Consul against having any relations with the Filipino leaders, Mr. Day said: "This Government has known the Philippine insurgents only as discontented and rebellious subjects of Spain"; and went on: "The United States, in entering upon the occupation of the islands, . . . will expect from the inhabitants . . . that obedience which will be lawfully due from them." There is the announced purpose of the McKinley Administration a month and a half after Dewey's victory—the islands to be seized, the natives to be subdued.

The President's most unblushing distortion of the truth was his assertion that it is only "the will of one man" that keeps the Filipinos from submitting, and that the insurgents "in no sense represent the sentiment of the people." This is antecedently incredible, and it also flies in the face of a mass of evidence to the contrary which is simply overwhelming. Not alone newspaper representatives, but army officers and commanders of our ships, report the situation of our troops in the islands as that of besieged men. If ever there was proof that a foreign invasion was dashing itself against a strong and rising national sentiment, we have that proof in the Philippines. Napoleon did not find it more marked in Spain or Russia. In the very newspapers containing the President's speech are dispatches from a trusted Philippine correspondent, saying, "The only friendly natives I found on my southern tour were the Moros [Mr. McKinley's polygamous and slaveholding protégés]. Even the non-combatants hate us. In Manila the native feeling against us is growing stronger every day." And the same day we get the testimony of the Rev. Peter MacQueen, long in the islands as chaplain of the First California volunteers, to the following effect:

"There is not a Filipino in the islands that wants the American form of government. There was a time when the conquest of the islands might have been completed with comparatively little bloodshed, and that was immediately after Dewey's victory. Since that time the policy has been such as to encourage resistance."

We are content to leave the President's assertions and the facts to confront each other. But we are heartily glad he has spoken out. He has now committed himself to the policy of subjugation. He has staked his political fortunes on the popularity with Americans of a merciless war upon millions of men of another race, half way round the globe, who resent and repudiate our pretensions to rule over them. Unless

the country we have known and loved has suddenly become a cruel nation of conquerors, the ultimate fate of such a President and such a policy cannot be in doubt.

## RECOGNIZING SLAVERY.

The *Tribune* of Friday morning contained an editorial article pointing out that, muddled and scarcely intelligible as a large part of the charter of New York is, the provision that no president of a borough shall have a vote in the Board of Public Improvements except upon matters relating exclusively to his own borough "is absolutely lucid, yields its full meaning at a single glance, and is incapable of supporting the claim based upon it under any torture." The *Tribune* adds:

"If it can be held to mean that the borough presidents can vote on the water scheme, then the provision making the Mayor's term four years may as well be held to mean that the Mayor's term is two years or five, and article xiii. of the Federal Constitution be construed as permitting slavery to exist in any part of the United States."

On another page the *Tribune* published the Associated Press dispatch from Manila, which announced that Gen. Bates had returned there from Sulu, having succeeded, "after five weeks' negotiation with much tact," in securing the signing of an agreement with the Sultan of the Moros. By this agreement American sovereignty over the Moros is recognized, and the United States may occupy and control "such parts of the archipelago as public interest demands." The Americans are to continue paying the Sultan the same subsidy which he got from Spain; the Americans are to protect the Moros against foreign imposition; American courts are to have jurisdiction, "except between the Moros"; the introduction of firearms shall be prohibited, piracy shall be suppressed, and there shall be no persecution on account of religion.

"Domestic institutions" among the Moros are not disturbed. One of these institutions is slavery. Mr. John Foreman, in his 'Philippine Islands,' says on this point:

"The Mussulmans (called by the Spaniards Moros) now extend over the whole of Mindanao Island, and the sultanate of Sulu, which comprises Sulu Island and about 140 others, 80 to 90 of which are uninhabited. Slavery exists in a most ample sense. There are slaves by birth, and others by conquest, such as prisoners of war, insolvent debtors, and those seized by piratical expeditions to other islands."

Prof. Dean C. Worcester, now a member of the Philippine Commission, in his 'Philippine Islands,' says:

"We soon found that the slave business still flourished in Tawi Tawi. Girls of fifteen years were valued at three *cabans* (about five bushels) of rice. One was offered to us at Tataan for three dollars in cash. The proposition was a secret one, for while Don Felipe [the Spanish commander] could not control the Moros on the south coast, he would have no slave-catching or selling about his corner of the island. He told us that the slave-dealers had no difficulty in selling all the able-bodied men they could

capture to the Dutch planters in Borneo—a fact which affords one more illustration of the benefits that civilization sometimes brings to a benighted land!"

The thirteenth amendment to the Constitution of the United States declares that "neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction." It is an interesting fact that the amendment, as originally introduced by Senator Henderson of Missouri, provided that slavery or involuntary servitude "shall not exist in the United States." The Judiciary Committee, through its chairman, Senator Trumbull of Illinois, reported it back with a change in the form of the prohibition, and the addition, after "the United States," of the words, "or any place subject to their jurisdiction." In presenting the revised draft to the Senate on the 28th of March, 1864, Mr. Trumbull emphasized this point:

"It is a proposition so to amend the Constitution of the United States as for ever to prohibit slavery within its jurisdiction."

The United States in 1864 possessed no "place subject to their jurisdiction" outside the bounds of the States, Territories, and District of Columbia, which constituted the Union. A prohibition of slavery "in the United States" would have prevented its existence wherever our government had jurisdiction. But the opposition to the "peculiar institution" was so earnest, and the determination that this government should never again lend any favor to it was so strong, that the Republican leaders decided to cover all possible contingencies in the indefinite future. They therefore so amended the Constitution that if the nation should afterwards, as it did only three years later, acquire Alaska, there should be no danger of slavery existing there, and that in whatever remote corner of the world the flag of the republic should ever wave, the mere fact that the United States held jurisdiction should of itself mean freedom to all the inhabitants. As the *Tribune* says of the clause in the New York charter regarding the voting power of a borough president in the Board of Public Improvements, the language of the amendment "is absolutely lucid, yields its full meaning at a single glance."

The idea that the thirteenth amendment might be construed as permitting slavery to exist anywhere that the United States government holds jurisdiction rightly seemed to the writer of the *Tribune* article unthinkable. Yet that is precisely what the McKinley Administration is doing. The government of the United States is to exercise sovereignty over the Moros, and at the same time it is to allow the continuance of slavery in this "place subject to their jurisdiction." The war with Spain was begun "in the cause of humanity," and

"for the sake of freeing the oppressed." The latest development in the train of events which has followed is this proposition of the McKinley Administration to construe the thirteenth amendment as permitting slavery to exist under the jurisdiction of the United States. What do the clergy, the religious organizations, the missionary societies think of this?

#### PHASES OF THE NEGRO PROBLEM.

During the past week the war in the Philippines has been thrust somewhat into the background by the news from the nearer conflict between whites and blacks in the State of Georgia. About ten days ago, Henry Delegal, a black politician of Darien, Ga., made an assault on a white woman—or was charged with having made such an assault. Delegal was soon arrested. The negroes conceived the idea that he was to be lynched—"falsely conceived" the idea, the whites say, but not unnaturally, any candid observer must admit. When the Sheriff started on Wednesday to remove Delegal from Darien to Savannah for safe-keeping, "the negroes dropped everything to go to his rescue," and surrounded the jail. The Sheriff appealed to the Governor for aid, and 200 militiamen were sent from Savannah. Arrests of black rioters were then made by the dozen.

Two of Delegal's sons "were badly wanted," and two white deputy-sheriffs went after them. They apparently submitted to arrest, and then fired upon the sheriffs, one of whom was wounded by John Delegal and soon died, while the other was threatened with instant death by a crowd of negroes, and had a narrow escape. Of course, this intensified the excitement. The negroes practically deserted Darien and took to the swamps. They threw out pickets and sent in word that they would not submit to arrest. The whites sent to every convict camp in the State for bloodhounds, dispatched an armed posse on horseback to the scene of the trouble, organized another posse to go by special train, and sent a steamer to Brunswick to bring as many volunteers as could be secured. Early Saturday morning operations began. Every negro found as the white forces advanced was arrested. Women and children, as well as men, were placed under guard to prevent information from being carried across the country to the eight cabins which had been the Delegal stronghold. The cabins were searched without result, and then "the swamps were being beaten closely while the soldiers lined out on the bluffs, prepared to send a volley into the negroes as they came before the posse," when Henry Delegal's aged mother came out and arranged for his surrender. He was lodged in jail at Darien on Saturday night, and there was at once "a noticeable decrease of negro

talk; the surrender of Delegal and the arrival of additional troops having completely unnerved those in Darien." On Sunday it was thought prudent to send home some of the troops, while the rest remained in camp until after the special term of court to try Henry Delegal, John Delegal, and thirty-five black rioters. But the country is still thoroughly alarmed.

Meanwhile, there have been interesting developments in the relations between the two races in the neighboring State of Florida. A white politician named Crum was recently appointed postmaster at Peck, Fla., and took a negro for his clerk. Last week a party of "whitecaps" violently attacked Crum, whipped him cruelly, and poured carbolic acid upon the lacerated flesh. He is still confined to his bed and suffering terribly. The colored deputy has fled from the neighborhood in fear of his life. The Federal Government immediately ordered the discontinuance of the post-office, and offered a reward of \$200 each for the apprehension of the guilty persons. This caused great indignation among the whites. Two post-office inspectors who went to Peck have not returned. It is reported that the residents will not allow them to leave, and fears for their safety are entertained. The United States District Attorney, with six deputy marshals from Jacksonville, went to Peck on Saturday night with warrants for the arrest of sixteen whitecaps, took the town by surprise, and bagged seven without resistance. When they went back on Sunday for the rest, armed guards along the road tried to stop them, though without success; but armed men have since been on the alert throughout the neighborhood, determined to prevent the arrest of any more of their people. The officers sent for reinforcements, and propose to execute the rest of the warrants at all hazards.

In the State of South Carolina a new aspect of the trouble between whites and blacks has developed. A number of outrages were recently committed upon negroes at Greenwood, S. C., by whitecaps. The blacks had committed no crime, and had not tried to hold even so petty an office as a clerkship. The only trouble was that they live more cheaply than the whites. It is a region where land-owners rent their holdings largely to tenants. Of course, they want to get the largest possible returns. The small white farmers find that the blacks, whose standards of comfort and expenditure are pitched on a lower scale, can afford to offer a higher rental, and they are thus pushing the whites out of the most productive land. The whites have consequently taken to whipping the blacks by night, in the hope of frightening them away.

Here are three phases of the race problem presented almost simultaneous-

ly in three adjoining States in the "black belt." Any one of them alone, because typical of conditions that exist widely, would seem alarming enough to engage the most thoughtful Americans. But, in point of fact, few people have time to give them any attention, so engrossed is the nation with the efforts of the Administration to thrust "benevolent assimilation" upon an unwilling race of colored men on the other side of the globe.

#### OUR OWN ANTI-DREYFUSISM.

We have been working ourselves up in this country to a fine pitch of virtuous complacency over the Dreyfus case. France seems to us so wrong, so possessed, so driven by passion and ridden by panic fears, that we cannot but have a better idea of ourselves by comparison. We not only feel vastly superior to Frenchmen, as they display themselves in this affair, but we wish earnestly to manifest to them our moral disapproval. We even talk of morally boycotting them. We will avoid them. We will keep away from their Exposition. America will gather up her skirts and, as she passes by disdainfully, let her soiled French sister see what real virtue and moral indignation mean.

Now, it is always ungracious to disturb the peace of mind of people thanking God that they are not as other men are; but it is sometimes necessary and salutary to do so. Indeed, we have not only Scriptural warrant (which might not be enough), but good Republican precedent, for saying something unpleasant to "holier-than-thou" folk; and to our mind there is a good deal of rank Pharisaism and hypocrisy, none the less offensive for being partly unconscious, in the present attitude of many Americans towards France and the French people. We believe, and are glad and proud to assert, that the instinctive regard of Americans for individual justice, and for the rights of an accused man before the law, would make the Dreyfus tragedy impossible in this country. But we also believe that in some of the deeper-lying passions and motives which account for the horrible injustice done Capt. Dreyfus, we are not so different from the French as we plume ourselves upon being. In fact, if we look closely into the matter, we shall find it too true of many of us that wherein we judge the French we condemn ourselves.

What, in the last analysis, is the reason why France has apparently gone mad about Dreyfus? It is because the nation has come to have an insane devotion to the army. In the military power it has come to feel that its strength and safety are bound up. Anything that touches or seems to touch the credit or efficiency of the army drives a Frenchman into a frenzy. The nation is for the army, not the army for the nation; and it is with

a fierce energy as of self-preservation that the French rush blindly to crush any one who seems to be attacking the army. It is upon this feeling, almost amounting to mania, that the conspirators against Dreyfus have artfully played. But are we wholly innocent of any such national delusion? Have we no public men who exalt the military arm as the nation's true grandeur? In our execration of the wrongs of Dreyfus, we must not forget that every man among us who asserts might over right, who advances the doctrine that our country's hope is in the army and navy, and that the Commander-in-Chief can do no wrong, is by so much revealing himself an anti-Dreyfusard. Theodore Roosevelt took occasion in one of his recent speeches to point to the awful exhibition France was making before the civilized world. We beg to tell him that it is of just such ideas as his own about the supreme importance of the army, and the glorification of the military life, that France is perishing.

Another point in which we at this moment are "deplorably like" the French, is our persistent unwillingness to admit that we have made a mistake. It is safe to say that the judgment of the civilized world is as unanimous in the opinion that our policy in the Philippines has been a huge blunder as it is in the opinion that Dreyfus was unjustly condemned. We say nothing now of the larger question of expansion—let that be as it may; it is certain that our handling of the situation in the Philippines has been one long mistake and misery. But are we going to admit it? Never! Our anti-Dreyfusards are as fierce about it as their French brothers were against revision. We, too, have our *chose jugée*. If we perhaps did blunder in our attitude towards the Philippines, our dignity as a nation will not allow us to reconsider and reverse it. No, we say, we have made our decision, and it is irrevocable. But this is pure anti-Dreyfusism.

Finally, let us look in the French mirror and see if we do not recognize familiar features in the furious outcry with which Picquart and Scheurer-Kestner and Pressensé and Bréal and Stapfer and Seignobos, and the few brave men who dared to tell the French nation that a grievous wrong had been done, were pursued by press and public. Is there any analogy between the sneers with which these "intellectuels" were denounced, and the taunt of "doctrinaires" which Gov. Roosevelt hurls at our professors and publicists who ask that the country be just and conciliatory, instead of truculent, in the Philippines? Alas, alas, we are all poor mortals, and there is nothing so like an inflated and besotted Frenchman as an inflated and besotted American. We only hope that our moral indignation will not be exported for the use of the

absent and foreigners—the two great classes of human beings who are always wrong—to the point of sweeping bare the home market. We think we foresee a large domestic demand for the article in the near future, and advise those who are using up all their reserve stock of horror and shame in denouncing the anti-Dreyfusites of France, not to put the United States in the humiliating position of being obliged to ask Frenchmen to send us some back when we need it most.

#### AMERICANS AND GERMANS.

Whatever tends to promote friendship between the different peoples of the earth is to be welcomed, and Prof. Münsterberg's article in the September number of the *Atlantic*, entitled "The Germans and the Americans," is full of friendly professions. For many reasons, however, we apprehend that the article will fail to remove such misunderstandings as now exist, even if it does not add to their number. It specifies many particulars in which German theories, prejudices, and habits differ from those of Americans. It explains why Germans who have long been citizens of the United States are a socially isolated class, even if we do not admit that the average German-American stands below the level of the average German at home. It advances certain theories and speculations, more or less suggestive and meritorious, concerning the psychological constitution of Americans, and it would be ungracious to deny that it accords us a generous meed of praise.

Nevertheless, the reasoning of the article is fallacious. It assumes that what is true of some is true of all. The population of the United States is made up of many races, and when Prof. Münsterberg speaks of what Americans believe or like, we have to ask what he means. The Irish Americans have their own feelings, and so have the German, the Scandinavian, the Russian, the French, the Italian, even the Jewish elements. There are Africans and Asiatics with prejudices of their own, and there are marked differences between the native Americans of the South and those of the North; nor are the latter to be classed as homogeneous. Speaking broadly, the people of every race dislike and dread or despise the people of every other race. As Cicero observed, the same word means stranger and enemy. Granting Prof. Münsterberg's sweeping assertion, which is that the two peoples do not like each other, let us ask, What peoples do like each other? Can he name any people that love the Germans? Are the French fond of them? or the Danes? or the Poles? or the Russians? or the English? Do the non-German Austrians love their German fellow-citizens? Do the Bavarians, even, love the Prussians? and have the Germans any sincere liking for any

of these peoples that do not like them?

Prof. Münsterberg recounts many dissimilarities between Germans and Americans which are amply sufficient to arouse dislikes; but any foreigner of equal ability could do the same for his own race. When a distinguished German is presented to one of our leading statesmen and finds him squirting tobacco-juice on the floor, or even into a spittoon, he does not like it. Neither does a well-bred Englishman or Frenchman. Tastes differ. It is idle to argue about them, still more idle to imagine that one people will give up its habits to please another. The descendants of the Puritans, who are probably the people that Prof. Münsterberg has in mind when he generalizes about Americans, do not like the ways of Germans, and probably never will. Perhaps, it is better that they never should. They come of an ascetic stock. They seriously think that the Germans have accomplished the desecration of the Sabbath and the subversion of the cause of temperance. They have accepted their music, with due deliberation, but they are not reconciled to their dancing and beer-drinking. But that the American people as a body have any peculiar aversion to the Germans, is not established by anything that Prof. Münsterberg advances.

It is an altogether different matter when we come to consider Prof. Münsterberg's glorification of what he calls Germany, but which is really a medley of political and social misrepresentations. He sneers at the German-Americans because they protested against the "Anglo-American Alliance," and entirely ignores the fact that this was by way of protest against imperialism. He is an enthusiastic imperialist, and, no doubt, is disturbed that his fellow-countrymen are unanimously opposed to him; but that is no excuse for not doing justice to their attitude. Equally misleading is his account of Germany. We may concede that "there is no people under the sun with more valuable inner freedom than the Germans." "Inner" freedom is not easily suppressed, but when we are assured that "the German University is the freest place on earth," we can but stare and gasp. There was a Liberal Member of Parliament named Virchow, who was also not unknown as a professor at the University of Berlin. How did the Government treat him? What sort of treatment did Mommsen receive under Bismarck? What course was taken with Prof. Geffcken when he published the diary of the Crown Prince? How came Georg von Bunsen to be prosecuted? What is the explanation of these recent attacks on professors who have taken the part of the Social Democrats? What of Prof. Delbrück's fine?

Even as regards the outer forms of freedom, Prof. Münsterberg maintains, Germany is freer than the United States. Comparisons are odious. Many outrage-

ous infractions of liberty take place here, and we are at present in no mood for boasting. But that is the very reason why we must protest against other unfounded claims. Prof. Münsterberg says the right to insult the President is not freedom. That begs the question. Is it freedom when an editor is sent to prison for four months for commenting on the Emperor's speech at the opening of Parliament? The numberless prosecutions for *lèse-majesté* are not to be brushed away with a metaphysical definition. Prof. Münsterberg says that he is a monarchist, and calmly assumes that the present revival of mediæval pretensions by the Emperor is monarchy. He is welcome to his opinion, but until he can silence the voices of the German Liberals and of an immense number of German voters, he has no right to make such representations to the American people. Few intelligent Americans have any objection to a constitutional monarchy. It is impossible for us, but we might be better off if we had it. We will not go so far as to say that few intelligent Germans favor the recent developments of imperialism in that country, but we know that a great many do not; and they are by race and position quite as well qualified to speak as Prof. Münsterberg.

Take the case of the German colonies, for instance. "The colonial transmarine development of the German empire is taking away that narrowness of its citizens which too much depressed the spirit of individual initiative." As a matter of fact, two or three thousand Germans a year may be induced to settle in these colonies, after twenty years of Government support, at a cost to their countrymen of about 100,000 marks per colonist. How is individual initiative thereby relieved from depression, and how is it related to the disposition of Germans to colonize anywhere rather than under their own flag? Prof. Münsterberg is delighted with the Spanish war and our new policy of conquest. He says that "an heroic revival is at hand, imperialism awakens echoes throughout the land"; and hints that we shall best approximate to the true ideals illustrated in the German Emperor by becoming an aristocracy and putting our government in charge of a Cæsar.

That is the theory in the minds of a certain class, in this country, in Germany, and elsewhere. It is the theory of reaction, of servility, of despotism. The *Titelsucht* which is corrupting the German empire goes with it; the ignoble desire to be promoted by the ruling powers into an arbitrary social prominence without reference to intrinsic worth. Such is not the theory of those Germans and those Americans whose political ideal is liberty, and whose effort is to make free from the oppression of its rulers. One of the best of men and ablest of German

statesmen, Bamberger, declared just before he died that the conduct of our Government in the Spanish war had put back the cause of Liberal progress in the Old World a hundred years. To put back what Bamberger called the cause of liberal progress is exactly what Prof. Münsterberg would like to do, and if his ideal is to prevail, Germany will be detested by every American who loves the constitution established by his fathers. There is eternal hostility between the ideals of freedom and of despotism. If the governments of Germany and the United States are to be free governments, there will be no need of reconciling Germans and Americans. They will have no disputes over naval superiority, or colonies, or tariffs. If not, no likeness between the peoples will prevent conceited and ambitious rulers from quarrelling.

#### VAMPIRES.

AMHERST, August, 1899.

Some years ago the writer, accompanied by a friend, was travelling on foot in Greece. One day, after sunset, we reached an isolated farmhouse, situated on the edge of what was then the great Copaic morass, immediately north of Orchomenus. We had been tramping through Greece for seven weeks; we were very footsore, and a long walk had made us unusually tired and hungry on that particular day. As we approached the house, we were greeted by the barking of a huge, and apparently very savage, dog, who made frantic efforts to break his chain in order to gratify his burning curiosity in regard to the two forlorn travellers. Had we known what was to follow, the dog would have inspired us with more respect, but we had seen many Grecian curs masquerading as lions, though at heart they were as cowardly as hares. So, trusting to knowledge born of experience with other dogs, we scarcely deigned to notice the vigorous protests of this savage beast. Arrived at the door of the farmhouse, we knocked once and again. Apparently the house had no inmate. But after a time the door opened cautiously, and a burly Albanian peasant appeared in the doorway extending towards us a pair of tongs in which was held a live coal of fire. The extraordinary performance rendered us for the moment speechless with astonishment. The peasant, pale and apparently quivering with terror, stood but for a moment holding the coal of fire towards us. Then, without having uttered one word, he hastily closed the door in our faces and bolted it with care.

This behavior was as inexplicable to us at the time as it is, no doubt, to the reader now. But at any rate one thing was certain: the man had given us the strongest assurance that he regarded our room as better than our company. We were confronted by a condition, not a theory; we were literally worn out; we knew that the nearest village was about five miles distant; it was now dark, and we longed to be housed and fed. So we knocked at the door again, and yet again, but all within was as silent as the grave, in striking contrast with the deep-voiced bellowings of the dog behind us. But our friend of the tongs could not be in-

duced to come forth a second time and parley with us. Finally, we gave up in despair, and, wandering away past the uproarious cur, we sat down in sadness upon a neighboring bank to determine what was to be done under the distressing circumstances. To our great relief, we soon descried a half-grown boy approaching on a donkey, but to our queries as to the possibility of finding lodging for the night in the house he answered with a decided No, stating that he was the only Greek on the premises, and that the inmates were Albanians who were in no wise likely to entertain strangers. "But," said he, pointing to a hut of considerable size, "there is the dog's house. You can sleep there if you want to. But they always turn the dog loose at night, and if he finds you, he will eat you up, as sure as fate." Thus saying, he left us to confront an unameliorated condition: the door of the house opened to allow him to enter, but was closed and ostentatiously bolted after him.

In the course of our wanderings we had frequently been compelled to spend the night in the open air as best we might, but on former occasions we were not so tired, foot-sore, and hungry as we were on that particular evening. It was, therefore, a real hardship to be treated with a rude inhospitality that was wholly inexplicable to us, because, hitherto, we had received not merely hospitality, but marked attention even. However, under the circumstances, the only thing left for us to do was to take possession of the dog's house as the sole protection within our reach against the chilling dews of a Grecian spring night. That dog was something of an aristocrat, and his house was a veritable palace—for a dog; better, indeed, than many houses that are occupied by human beings. Upon entering we found, to our great regret, that the door was off its hinges, and, in spite of anxious effort, we could not adjust it in the pitchy darkness. The dog had been set free, and was now rampant, roaming to and fro and calling for our blood, with deep-mouthed howlings that gave us concern, as I am free to confess. Taking all things into consideration, we had come to respect the dog, and it was with pain that we realized that we could not debar him from impertinent intrusion upon our privacy. We propped the door up, but, had the powerful dog so wished, he could have entered without difficulty. In our unarmed condition, therefore, we were not wholly free from anxiety lest he might find an opportunity to eat us, according to the reassuring prophecy of the Greek boy.

But weariness bore heavily upon us, and, yielding to necessity, we laid us down, just as we were, in the dust that was ankle deep, and of that peculiar liquid variety produced by the action of innumerable trappings. The whole night through, the dog never once ceased his search for us; we could hear him now near at hand and now in the distance, but ever making night hideous with his bayings, which did not have for us the soothing, nerve-calming effect upon which Byron dwells. We had been reading that poet as we journeyed through Greece, and we were keenly alive to the irony of the words:

"Tis sweet to hear the watch-dog's honest bark  
Bay deep-mouthed welcome as we draw near home."

Fortunately for us, it did not occur to the dog to look for us in his own house, though

he often came uncomfortably near, and so we dragged through the weary night without a visit from our canine friend, of whom, by this time, we stood in absolute terror.

We arose at the peep of day, selecting for our exit a moment when the dog seemed to be baying in the distance, and attempted to gain the open country before he could discover us. Vain delusion, for we had not taken many steps before the dog became aware of that for which he had been searching fruitlessly the entire night, and made for us with the speed of the wind. His faithful, all-night hunt deserved to be crowned with success, but he was doomed to disappointment—at the very moment, too, when he had treed his game. Fortunately for us an inmate of the house was astir even before us, and, throwing himself upon the furious beast as he rushed past, he bore him to the ground and held him there. From the time of St. Paul down to the present day everybody in Greece has been inquisitive. Under the circumstances, the curiosity of our benefactor was natural enough, but still it was ridiculous in the extreme to see him lie there on the furious, struggling, howling dog, and ply us with a host of questions, many of which were wholly irrelevant. When finally he had satisfied his curiosity, he apologized for the treatment we had received at the hands of the rude Albanians, and bade us go—in God's name. We were not slow to obey, nor did we stop to satisfy our own curiosity as to how he came to be there in his peculiar garb, for he was stark naked.

In Greece the belief in vampires was once widespread, but it has been gradually dying away as education invades the remoter recesses of the land. Even in Athens one still sometimes hears: "May the vampire take you!"—a curse of diabolical nature. But the belief in vampires is now confined to the lower classes, and perhaps chiefly to the Albanians, of whom Von Halm relates that they entertain many other absurd superstitions, such as belief in the existence of men with tails—no doubt a reminiscence of the Satyr of classical mythology. Among us most people have but a vague and indefinite idea in regard to the vampire, his *raison d'être*, his haunts and habits. It seems that after death some people do not rest quietly in their graves, but come forth at night when the moon shines. They live by sucking the blood of men, and return to their tombs at the approach of dawn, after gorging themselves with human blood. There are two kinds of vampires: the blood-sucking and a less malignant variety. It is of the malignant vampire that Byron speaks when he writes:

"But first, on earth, as vampire sent,  
Thy corpse shall from its tomb be rent:  
Then ghastly haunt thy native place,  
And suck the blood of all thy race."

The less malignant type of vampire amuses itself by playing tricks on people and by frightening them, but otherwise does them no harm. The more malignant vampire, on the contrary, is fond of the liver of its victims, whom it attacks in the form of a variety of animals or insects, such as cats, dogs, fleas, spiders, etc.

The best evidence that death has been caused by a vampire is the mark of a bite on the nape of the neck, though sudden death of any kind is regarded as its work. The fear of sudden death is said to be very great among the peoples with whom the vampire loves to dwell, for the reason that he who has been killed by a vampire himself becomes one. Allatius tells us that the

vampire is not the soul of the deceased, but an evil spirit which enters the body of the dead person. He says:

"The corpse is entered by a demon, which is the source of ruin to unhappy men. For frequently, emerging from the tomb in the form of that body, and roaming about the city and other inhabited places, especially by night, it betakes itself to any house it fancies, and, after knocking at the door, addresses one of its inmates in a loud tone. If the person answers he is done for. If he does not answer he is safe. In consequence of this, the people of the island of Chios never reply the first time, if any one calls them by night."

Fire is the surest protection against vampires. Behold, then, the key to the treatment to which we were subjected by the Albanian peasant. The poor creature had mistaken us for vampires. We did not discover this fact until after our return to Athens, when some friends, to whom we recounted our strange adventure, opened our eyes. We had not seen a vampire ourselves, but the Albanian saw two, and trembled.

It is a fearful thing to become a vampire, and people whose friends have died are always anxious to gain some certain knowledge as to the status of their beloved dead. The question, "How fares it with the spirit of my dead mother, father, husband, wife?" is a momentous one even to this day. In many places it is still customary to disinter the corpse after it has lain for a year in the grave, in order to solve the question as to whether the soul of the dead be in heaven or hell. I believe that this custom had its origin in the vampire faith, though I am not prepared to say that the vampire superstition is nowadays the confessed cause of the exhumation. The condition of the bones decides whether or no the spirit is in heaven or hell, but if the body be found in a good state of preservation, with the skin taut like a drum, then the dead person has become a vampire.

There are various causes for the change into a vampire after death. Chief among them is excommunication by Holy Mother Church, then great sins of any kind, the curse of parents, dealings with witches and witchcraft, eating the flesh of a lamb that has been killed by a wolf, the springing of a cat or a dog over a corpse before its burial, etc. Accordingly, it is easy to see that the clergy are clothed with a fearful power, for with the words, "Whosoever ye bind on earth shall be bound in heaven, and whosoever ye loose on earth shall be loosed in heaven," in their mouths, they may hold a Damocles sword over the heads of an ignorant and superstitious peasantry, and thus wield a power which one shudders to think of, especially if the clergy be unscrupulous and the people faithful and pious. Nay, the days when the clergy availed themselves of this mighty power are almost within our touch. Not only throughout the Middle Ages, but down certainly to the first decades of this century, the vampire played a great rôle in the East, and the clergy not only did not hesitate to use this excellent means of moulding the ignorant to their will, but took pains to disseminate the belief that excommunicated persons who died without having been absolved from the curse of the Church, became *ipso facto* vampires after death. The superstition is not to be regarded in the light of a mere myth which the peasantry believed in without having their lives influenced thereby for good or for bad. Nor was the belief confined to the

peasantry; it had a firm hold on all classes, for we are told by learned and good men not merely that they know of this effect of excommunication by hearsay, but that they can vouch for it personally, because they have seen it with their own eyes. The Church claimed not only the power to excommunicate, but also the right to absolve from the curse pronounced by the ecclesiastical authorities. This absolution might be pronounced at any time, either before or after the death of the excommunicated person. Consequently it was possible for a dead man to remain a vampire for a season, and still get to heaven after a time, provided his friends had money or influence enough to procure for him absolution at the hands of the Church.

In Crete the priests were regarded as being very skilful in exorcising the vampire. Friday night was the proper time for the ceremony, because on that night the vampire usually remained in his tomb, but occasionally he absented himself even on Friday nights; in that case the exorcism failed, or, in other words, the officiating priest did not feel that he had made money enough out of his victim. When other means of laying the demon failed, the corpse was burned. Tournefort, in his 'Relation d'un Voyage du Levant' (I., 131 ff.), gives an amazing account of the laying of a vampire-demon by cremation in the island of Myconos. A quarrelsome peasant had been murdered in the fields. Two days after his burial it was known that he had appeared at night and played tricks on people. The priests sedulously spread the report, for it meant that masses would be said. On the tenth day after burial, solemn mass was said, the body was exhumed, and the heart was cut out by the village butcher—an operation attended by the escape of such noxious gases that the abundant use of incense was necessary. Every one was crying, "Vampire, vampire!" Some said that the blood was red; the butcher averred that the body was warm, others that the corpse was not stiff when carried out for burial—a sure sign that it was a genuine vampire. The heart of the corpse was burned on the seashore. But all this had no effect on the vampire, who continued his pranks as before; every one had some big tale to tell of his doings. It came, finally, to such a pitch that people abandoned their houses and encamped in the squares, and all were terrified at the approach of night. The priests reaped a rich harvest. All day long men were busy plunging swords into the grave, until a wise Albanian discovered that the hilts of the swords resembled a cross, and of all things the vampire fears the cross most because he can never leave his tomb as long as a cross is on it. He suggested the use of Turkish swords. But all was in vain; the vampire continued his wicked ways; the people were beside themselves with terror, and so many families emigrated to the neighboring islands that Myconos was threatened with depopulation. A great funeral pyre, consisting of wood, pitch, and tar, was erected on a jutting promontory of the island, and on it the remnants of the corpse were burned to ashes. The vampire was laid; Myconos had peace, and many ballads were composed in honor of the event.

The most available account of the vampire is that in Tozer's 'Researches in the Highlands of Turkey' (II., 80 ff.), where the reader will also find the literature of the subject cited.

J. R. S. STERRETT.

# MEMOIRS OF MME. DE LA FERRONAYS.

—II.

PARIS, August 9, 1899.

Many are the details which Madame de la Ferronays gives regarding the salons of Paris in the years preceding the Revolution of 1848. She herself began her apprenticeship as *maitresse de maison*. "M. de la Ferronays desired that I should prepare myself to become his aid—in the measure which belongs to a woman—on the day when, as we hoped and wished, he should be called by the return of the King to have an employment at Court, or, as he would have much preferred, in diplomacy." Her sister, La Roche-Aymon, and herself lived then in great intimacy; all the agreeable men of their generation and of the older generation came to their house.

"In my youth, and I cannot imagine that the fashion has changed in this respect, men paid court to the women; they fell in love or pretended to do so. The *liaisons* were taken seriously; I could cite women who never consoled themselves for the pain given by a rupture. Between society men and women the question of money did not exist. Our betting with friends ended in exchanges of neckties, of ribbons, of umbrellas for canes at the utmost. A young man, in an intimate *liaison*, which lasted several years, with a lady among my friends, having dared, on the 1st of January, to offer her a diamond heart which had cost 400 francs, she became indignant, and sent it back, asking if he took her for a *filie entretenue*. . . . We attached so much importance to not allowing our manners to be similar in the smallest degree to those of the light ladies who abounded at the theatre or at supper parties, that we did not admit that the expenses should be divided among the men to our exclusion; and our friends did not dream of paying for us—we should have considered it a humiliation."

In the year 1847 M. de la Ferronays went to Venice to be presented to the Countess de Chambord.

"He did not find Madame pretty; but she had made an effort to please, and had shown herself amiable towards the French, having not yet reached the time when, as she often told me, she felt humiliated before them because of her sterility, and considered that, the more royalist they were, the more they ought to desire her death. The poor Princess, who can perhaps be reproached with not having had a beneficent influence over her husband, suffered cruelly for not having given a Dauphin to the country. Was it her fault? These are nature's secrets."

The Revolution of 1848 was a satisfaction and a sort of revenge for the Legitimist party. Madame de la Ferronays says about it:

"The throne of Louise-Philippe, erected by one revolution, was upset by another; but, whatever our sentiments at the time, it was a misfortune for the country. We should not now have to deplore the loss of two provinces; a respectable royal family would not have demoralized France by excess of luxury as the Empire did, and the sterility of Monseigneur [the Count de Chambord] would have given the branch of Bourbon-Orléans a legitimacy which it failed to have, to establish itself on a solid basis. But it is impossible for men to foresee the future; the passions do not reason; and by us royalists the fall of the July monarchy was hailed with joy."

The troubles which followed the Revolution, especially the bloody insurrection of June, 1848, against the Constituent Assembly, gave great hopes to the Legitimists.

"It was the time when, in the shops of Paris, Monseigneur was called 'Monsieur Crédit,' and when, under that name, his portraits figured in all the shops. My husband

was soon to go to Frohsdorf, and in his illusions, of which I partook, he imagined that he would come back with the Prince, to whom he was to carry generals' uniforms. When the moment came for his taking the road to Frohsdorf, having carefully shut the doors, we ourselves put these precious uniforms in the trunks that were to take them to Austria; and while we were thus engaged, M. de la Ferronays said to me: 'You will see, my dear, that Monseigneur will accept the flag which France brings him, since, to keep his liberty entire, he has never worn a cockade on his hat or his clothing.' Those we were packing had none."

This little incident seems to show that in 1848 the Count de Chambord was not as absolutely hostile to the tricolor flag as he proved to be in 1872, when the Constituent Assembly chosen after the war was on the point of offering him the crown.

"During all the years," says Madame de la Ferronays, "anterior to the *Coup d'Etat*, negotiations were entered into with chiefs of army corps, and money was spent with open hands. MM. Berryer, De Valmy, and the Duke de Noailles always wished to retard the moment of action, not seeing that they were compromising success. Large sums were paid to a Marshal of France who was needy and received money from both sides. Every time, and it happened frequently, that M. de la Ferronays arrived at Frohsdorf, the Dauphiness, whom we called the Queen, said to him: 'Fernand, do bring us a colonel, or nothing will be done.' Once, he replied: 'Madame, I bring you better than a Colonel, a Marshal of France. Marshal Bugeaud asks Monseigneur if, on the day when he calls him in the midst of the army of the Alps, which he commands, he will be ready to come.' 'Immediately,' was the answer. But the Marshal imposed delay, and afterwards, for the misfortune of France, turned towards Louis Napoleon."

In 1850 M. de la Ferronays was completely attached to the person of the Count de Chambord, and accompanied him first to Wiesbaden. It was there that the Prince learned the death of Louis-Philippe. He at once ordered a mass to be said, and wished all his household to attend it. "It was an order for us all, and I must confess that we were a little astonished to go into mourning for a King whom we had never accepted, and whom we had always considered our most mortal enemy." The Count de Chambord spent the winter of 1851 at Venice; there was still some hope for the royalist party, and visitors were numerous. Among others came M. de Falloux, who had broken with Prince Louis Bonaparte. "M. de Falloux, whose dominant virtue was not frankness, came to Venice to play a sharp game. He wished to diminish the influence of the Duke de Lévis, and to surround the Count with new men, who would accept his leadership." Venice was full of princes. There were the Duke and the Duchess of Modena, the Duke and Duchess of Parma, the Infant Don Juan and his wife the Infanta Beatrix, sister of the Count de Chambord.

"The sight of the Duke of Parma and of the Infant Don Juan had the effect of putting Monseigneur in very bad humor. The Duke of Parma, rather disagreeable to everybody, was particularly so to the French, especially to those in the family of his brother-in-law, whom he made responsible, though they never had anything to do in the matter, for the conditions imposed on him in his marriage contract, by which he was not allowed to touch the fortune of the Princess, his wife."

The father of the Duke of Parma, the Duke of Lucca, had employed in his stables an Englishman called Ward, who entered more and more into his favor, and ended

by becoming the preceptor of his son. The Revolution of 1849 turned the Duke of Lucca out of his states, and he abdicated in favor of his son, whom the death of Marie Louise, according to the terms of the Congress of Vienna, soon called to the throne of Parma.

"The Infant Don Juan was not handsome," says Mme. de la Ferronnays, "and it was difficult to understand the passion which he inspired in the Archduchess Beatrix, who had become very deaf at this period. She was the mother of Don Carlos and of Don Alfonso. . . . The poor Infanta became afterwards so deaf that the efforts which she made to hear the persons to whom she granted an audience, occasioned nervous attacks. It was a common infirmity with all the members of the house of Austria-Modena."

On her return to France, Mme. de la Ferronnays witnessed the *Coup d'État* of the 2d of December. Paris woke up to the sound of the drums. Gen. Changarnier and other generals, the Deputies of the Chamber, were thrown into prison.

"My husband," she says, "had papers which might have been compromising; he confided them to me to be taken to a safe place, and, on my return to the Faubourg St. Germain, I had the painful pleasure of seeing pass before me Louis Napoleon, acclaimed by the troops which lined the avenue of the Champs-Élysées. It is the only time in my life that I screamed 'Vive la République!' a demonstration which had no result, not even to console my heart. . . . We were entering the era of sadness, even of some apostasies; but the manner in which these were received in society restricted their number. In the evening from a balcony at the circus of the Champs-Élysées, we saw carriages, surrounded by troops, which took some of the Deputies to Mont Valérien; the others were taken to Vincennes. . . . Our poor friends and our chiefs were still so full of illusions that, while in certain regions people conceded to the new régime only the essentially Napoleonic duration of a Hundred Days, the chiefs advised my husband, who was sent to explain the situation to Monseigneur, to tell him expressly not to move, for there was every reason to believe that the President had only taken power to place it in his hands. Oh, how stupid honest people, intelligent as they may be, can sometimes be!"

This is Madame de la Ferronnays's judgment of Louis Napoléon: "The new master of France was feeble and undecided; the will of M. de Morny and of M. Fleury had been necessary to lead him to an act of energy. He was a dreamer, a voluptuary, a good man at heart, liked by those who approached him, and having nothing of the terrible man he had the name of being."

Madame de la Ferronnays is very severe on the Countess of Teba, who came to France with her mother, Madame de Montijo, and became the Empress of the French. This marriage, she says, "decided her fate as well as that of France, of which the handsome Spaniard, by her levity, her frivolity, and her incapacity to conduct the affairs she mixed herself up in, prepared the ruin. She contributed to the irreparable disasters under which our country has sunk."

Courtiers became more rare at Frohsdorf after the establishment of the Empire. "The grand figure of the daughter of Louis XVI. disappeared. For me she left a great void. She had always shown me great kindness. Her life had been that of a saint, and, if her speech was a little brusque, her heart was full of indulgence. People were unjust to her in France; they would not make allowance for

the dreadful memories that confronted her when she reentered the Tuilleries, which she had left on the 10th of August."

## Correspondence.

### "OUR COUNTRY, RIGHT OR WRONG."

TO THE EDITOR OF THE NATION:

SIR: For the last two or three months the idea has been growing in this country that, since the war in the Philippines is actually under way, no honorable course is open to us but to force it to a successful termination. Even among those who once most nobly took the side of justice toward the unfortunate islanders, this thought seems to be commanding itself. Half-hearted humanitarians quiet an uneasy conscience by pleading the stain to national honor which would result from the slightest retraction in our exorbitant demands. But is not our country great and powerful enough to afford to be generous if by that means she can be just? Those who urge the bloody prosecution of an unjust war to save what they are pleased to call our national dignity, would do well to recall the position taken by our English defenders at the time of the Revolution. No hypocritical pride brought them to the low level of sanctioning the continuance of a wrong merely because it had been ignorantly and foolishly begun.

On October 31, 1776, in the House of Commons, Mr. Fox boldly and honorably declared:

"The noble Lord who moved the amendment said that we were in the dilemma of conquering or abandoning America. If we are reduced to that, I am for abandoning America."

And this champion of liberty, whom we all honor for his fearless honesty, entered his vote against a bill for raising revenues to maintain the war,

"because he could not conscientiously agree to grant any money for so destructive, so ignoble a purpose as the carrying on a war commenced unjustly, and supported with no other view than to the extirpation of freedom. This he conceived to be the strict line of conduct to be observed by a member of Parliament."

In November of the same year, Edmund Burke said in the House of Commons:

"You simply tell the colonists to lay down their arms, and then you will do just as you please. Could the most cruel conqueror say less? If you had conquered the Devil himself in Hell, could you be less liberal?"

And yet this is the identical policy which our Government is now enforcing with fire and sword, while we stand weakly by and say, "Let it go on, since we are in it."

And the great Chatham, as true a patriot as England ever knew, whose son resigned a commission in the English army rather than fight against liberty, said in the House of Lords, in the second year of the war:

"We have tried for unconditional submission; try what can be gained by unconditional redress. This country has been the aggressor. You have made descents upon their coasts; you have burnt their towns, plundered their country, made war upon the inhabitants, confiscated their property, proscribed and imprisoned their persons. I do therefore affirm that, instead of exacting unconditional submission from the colonies, we should grant them unconditional redress."

Again, a few months later, he declared with fervent earnestness:

"I would sell the shirt off my back to assist in proper measures, properly and wisely conducted; but I would not part with a single shilling to the present ministers. Their plans are founded in destruction and disgrace. It is, my Lords, a ruinous and destructive war; it is full of danger; it teems with disgrace, and must end in ruin. . . . If I were an American, as I am an Englishman, while a foreign troop was landed in my country, I would never lay down my arms! Never! Never! Never!"

If England, far from feeling herself humiliated by such sentiments, coming from men high in official station, looks back to them as the truest patriots of that age, surely we Americans need dread no bitter judgment from posterity if we repeat those chivalrous and humane views.

Once before in our brief history our country fell from her lofty place among the nations, and plunged into a cowardly war with a helpless neighbor. Then, as now, the siren's song of pride corrupted our people. Then, as now, a short-sighted Administration forsook the straight path of moral rectitude and honored tradition, justifying a war of criminal aggression by the plea that we must not retreat. Then, as now, strong words of remonstrance were raised in Massachusetts, which are full of encouragement for us to-day. Charles Sumner, the ever-eloquent champion of justice, in an address to the people of Boston, on the 4th of February, 1847, exclaimed in righteous wrath:

"We are told that the country is engaged in the war, and therefore it must be maintained, or, as it is sometimes expressed, vigorously prosecuted. In other words, the violation of the Constitution and the outrage upon justice sink out of sight, and we are urged to the same acts again. By what necromancy do these pass from wrong to right? In what book of morals is it written that what is bad before it is undertaken becomes righteous merely from the circumstance that it is commenced? Who on earth is authorized to transmute wrong into right? Whoso admits the unconstitutionality and injustice of the war, and yet sanctions its prosecution, must approve the Heaven-defying sentiment, 'Our country, right or wrong.' Can this be the sentiment of Boston? If so, in vain are her children nurtured in the churches of the Pilgrims, in vain fed from the common table of knowledge bountifully supplied by our common schools. Who would profess allegiance to wrong? Who would deny allegiance to right? Had this sentiment been received by our English defenders in the war of the Revolution, no fiery tongue of Chatham, Burke, Fox, or Camden would have been heard in our behalf. Their great testimony would have failed. All would have been silenced, while crying that the country, right or wrong, must be carried through the war."

May we not rise above the unreasonable and vicious idea that what we all condemn in an individual, we may sanction in the state? The just man, when he sees himself in the wrong, is restrained by no shallow pride from desisting, and making amends to the full extent of his ability. Should not a nation do as much? A word from our Government, guaranteeing to this brave and heroic people the blessings of that dearly loved liberty which years of struggle had all but won, would end the carnage in a moment. Can we, in the light of history, honorably refuse so small a sacrifice?

S.

August 19, 1899.

## THE MIXED FILIPINOS.

TO THE EDITOR OF THE NATION:

SIR: There are more people on the Philippine Islands than were in the whole western hemisphere when Columbus discovered America. In the latter, moreover, the population was homogeneous throughout, but in our new archipelago the blood of all mankind flows in the veins of its heterogeneous population. For the white sub-species, you have Semite, Hamite, European, and Iranic ingredients; for the yellow, Malay and Chinese; for the brown, the Polynesian supplies the blood; and for the black sub-species there are twenty thousand Negritos, or dwarf negroes. Even the American Indian cannot be omitted, for, during two centuries, between 1565 and 1765 about, the Philippines were governed exclusively from Acapulco, Mexico.

Concerning the Negritos, Dr. A. B. Meyer, director of the Royal Ethnographic Museum, Dresden, publishes a timely book of a hundred pages, issued in English by Stengel, in Dresden. The text forms two chapters of his greater work on Philippine types, printed in folio in 1893. Ethnologists will be glad to have these chapters in handy form, since not only do they bring to date what is really known of this interesting people, but the author attacks with vigor the unsubstantiated theories concerning a negroid substratum in all the Indo-Pacific islands and southeastern Asia promulgated by Quatrefages and Hamy, endorsed by Flower and Lydecker, and put in general circulation by Keane.

O. T. MASON.

WASHINGTON, D. C., August 24, 1899.

## Notes.

Miss Lillian Whiting's 'Kate Field: A Record' is on the point of being issued by Little, Brown & Co., Boston.

Thomas Whittaker will soon publish 'My Smoking-Room Companion,' a satirical sketch by William Harvey King, M.D.

The Continental Publishing Co. announces 'A Daughter of Neptune,' stories of East and West, by William Winslow.

Mrs. Mabel Loomis Todd of Amherst has just completed a thorough revision of Dr. Dorman Steele's text-book, 'A New Descriptive Astronomy,' which is now in the press of the American Book Company.

'An Autumn Lane, and Other Poems,' by Will T. Hale, is in the press of Barbee & Smith, Nashville.

The Moravian Book Concern (The Cornelia Press), Bethlehem, Pa., will shortly publish 'Fifty Years Ago,' by Mary Wiley Staver, a description of a trip to England and the Continent, with illustrations.

The Open Court Publishing Co., Chicago, will issue next month 'Solomon and Solomonic Literature,' by Moncure D. Conway; 'Science and Faith; or, Man as an Animal and Man as a Member of Society,' by Dr. Paul Topinard; and 'The Evolution of General Ideas,' by Th. Ribot, translated by Miss Frances A. Welby.

'A First Glance at the Birds,' by Charles A. Keeler, being a general introduction to the study of California birds and an advance portion of a larger work, 'Bird Notes Afield,' by the same author, will be brought out at once in pamphlet form by Elder & Shepard, San Francisco.

Mr. Miller Christy's undertaking to write an exhaustive and authoritative 'History of the Hudson's Bay Company,' after personal research in the archives of England, France, and Canada, and with access to the Company's records, has not been affected by the approaching appearance of two other works on the same subject by Beckles Willson and Prof. Bryce of Winnipeg.

'Through Persia on a Side-Saddle,' by Ella C. Sykes (Lippincott), a fairly stout volume, is an unpretentious account of the author's experiences in her travels about Persia and while keeping house for her brother, the first British Consul appointed to the city of Kerman. She writes in a good-humored, straightforward way, describing what she saw and did, and wisely not attempting to give much information about anything else. The book reads well, and, though containing little in the nature of exciting adventure, will interest those who care for books of travel or for descriptions of the part of the East in question.

The fifth part of David W. Hoyt's 'Old Families of Salisbury and Amesbury, Mass.' (Providence) completes the work, and finds room for some additional documents, with additions and corrections and three indexes. An odd erratum pointed out was caused by some one's misreading a passage in Isaac Estey's will (Topsfield), "daughter Sarah I reckon she had her full portion upon her marriage," making it "Sarah Ireland."

The time of the army upheaval in France is propitious for the appearance of Part I. of 'A French-English Military Technical Dictionary,' prepared by Cornélie De Witt Willcox, First Lieutenant of Artillery, U. S. A., and issued from the Adjutant-General's Office at Washington. The 160 closely printed octavo pages, ending with *espace*, contrast sharply with the total 118 pages of Barrère's pocket 'Dictionary of French and English Military Terms (French-English),' which was published by Hachette in 1896. Lieut. Willcox's labor is worthy of all praise. The proof-reading appears to have been very scrupulous. While *consaille de D*— will not be found in this vocabulary, *borderons* is given, with a number of qualifications (*énonciatif, énumératif, nominatif*, etc.). Of *coup*, 192 different definitions are given. Under *école* there is a list of the French military schools. Not least interesting are the instances of military argot, as *bel*, 'extra drill,' and *Dache*, 'hairdresser to the Zouaves' (a mythical personage), used in the phrase *elles racontent cela à Dache*, "Go tell that to the marines." The author gives a list of 129 authorities, which includes 30 official French publications and 45 lithographed text-books of the Artillery and Engineers School at Fontainebleau.

Part 26 of Hatzfeld's 'Dictionnaire Général de la Langue Française' (Paris: Ch. Delagrave) finishes the letter R, and carries the letter S to *soulever*. In this section occur an unusual number of characteristic compounds, such as *songe-malice*, *soi-l'ye-laisee*, Saint-Simon's *sauve-l'honneur*, and one of the newest, *saute-ruisseau*, a sort of errand-boy (admitted by the Academy in 1878). *Sauve-qui-peut* takes its alphabetical place, instead of being put under *sauver*, as the Academy treats it. The same authority from 1718 to 1740 printed *sans-souci* without the hyphen, which it conceded to *sang-froid* only in 1798. (A century earlier, it is recorded, some used the expression *sens froid*.)

*Sauve-faire* and *sauve-vie* were both deprecated as neologisms in 1671; and while the Academy adopted the former very speedily, in 1674, it turned a cold shoulder on the latter till 1740. Of three significant words the etymology is quite obscure—*sobriquet*, used in our modern sense in the fifteenth century; *soi*, and *souche*. About four more parts will complete this compact, scholarly, yet popular dictionary.

The gullibility of Quesnay de Beaurepaire, the late President of the Paris Court of Appeals, is a striking example of the monomania of suspicion not unknown in actual life and on the comic stage. His fanatic belief in the guilt of Dreyfus has made him more than once the dupe of tricksters whose wiles any schoolboy of ordinary intelligence would have seen through. Any one interested in this psychological problem should read 'Karl et Quesnay de Beaurepaire' (Paris: P. V. Stock). "Karl" is the wag, probably a student of the Latin Quarter, who, after easily making his victim swallow the bait of "irrefragable evidence" against Dreyfus, exposed his credulity in the *Figaro* to the laughter of the world. "It was upon the judgment of this man that the liberty, the honor, the lives of a host of unfortunate men and women depended. . . . The fate of hundreds of these was at the mercy of such want of sagacity and common sense." And then the question arises: Is it probable that this judge of the highest rank is the only one of his kind? What influence will the discovery of such incapacity have upon the popular respect for the law and its representatives?

The tenth volume of the 'Collections of the Nova Scotia Historical Society' (Halifax) covers the years 1896-98, and consists of a monograph by T. Watson Smith, D.D., on 'The Slave in Canada.' This subject has been all but completely ignored by historians and school-book makers—"Clement, the author of the school history accepted by nearly all the provinces, dismisses it in a single sentence"—so that the present generation, even among the well informed, is sceptical of the existence of slavery on provincial soil. Dr. Smith has been at great pains to establish the fact with such minuteness that no one will attempt the task again. The courts virtually abolished slavery long before the British Emancipation Act of 1833 could operate upon it in Canada, and apprehension as to the effects of this measure related wholly to the trade relations between Canada and the West Indies. Of the indemnity for emancipation, "not one solitary dollar found its way into Canadian hands." Dr. Smith has produced not only a permanently valuable book, but a very readable story, which has hitherto been covered up, not from shame, but from forgetfulness. He has few if any cases of extreme cruelty to record, and no instance of burning alive or dead. His survey would not have been complete without a chapter on Canada as the American fugitives' paradise—a glorious page. While he adds to our knowledge from his side of the line, he has not fully studied the sources of our Underground Railway history. His caption, "Influence of Canadians on Slavery Elsewhere," might have been illustrated by the fact that the leader of the moral agitation against slavery in the United States would, but for the accident of his parents' removal to Massachusetts, have been a native of Nova Scotia.

The annual report of the State Geologist of New Jersey for 1898 embraces as an appendix Mr. Gifford Pinchot's "Study of Forest Fires and Wood Production in Southern New Jersey," a document of 100 pages, copiously illustrated, which will, we are sure, mark the beginning of the final effort to save that district from a scourge whose effects are moral as well as physical. Closely allied to this is Mr. C. C. Vermeule's briefer paper on the pine belt of the same section in connection with water supply, a subject of great moment that cannot be too soon considered. The same authority, whose investigation of the volume of streams in New Jersey and available surface water-supply took rank at once as a standard work, makes here a first attempt to solve the more complex problem of water-supply from wells, which is nevertheless inseparable from that of surface-supply. Mr. Lewis Woolman furnishes his annual record of artesian wells in New Jersey, which is contributing so much towards a definition of water-bearing strata not confined to that State alone. Prof. Rollin D. Salisbury sums up, from the practical side, his studies in the surface geology, characterizing the various soils in relation to the underlying formations and to their economic utility. Dr. Kummel passes beyond the State limits on the north in order to complete, in Rockland County, N. Y., his study of the Triassic red sandstones and trap rocks. The result is confirmatory rather than novel. The variability in the thickness of the trap sheet is still remarkable, but more difficult to determine accurately. While it is sometimes 400 feet above the Hudson River level, at certain points it lies beneath.

The Secretary of Agriculture aims to make the Department's Yearbook for 1899 a summary of what has been done in this country towards scientific agriculture during the lapsing century, and to distribute 50,000 copies at the Paris Exposition. Mr. Gifford Pinchot of the Division of Forestry accordingly solicits information regarding the efforts of private landowners to apply the principles of forestry economically and conservatively. He will send a card with printed inquiries to any one desirous to assist in collecting these statistics.

A circular from the committee of forestry and roadside improvement of the Massachusetts Horticultural Society, Boston, asks about the kind of trees adorning the roadside in any locality, their thriving, objectionableness, etc. Answers are solicited before October 1.

The *Geographical Journal* for August opens with Col. J. R. L. Macdonald's account of his explorations in the almost unknown country to the north of Uganda and east of the Nile. The principal geographical result was the discovery that the high and healthy plateau which lies between Lake Victoria and the coast runs far to the northward, though at a reduced altitude. Parts of it were highly cultivated and thickly inhabited, in one district with "a magnificently developed people of great stature" and "possessing immense herds of cattle, donkeys, sheep, and goats." "Each village or little group of villages has its own chief, but important matters are settled by a council of all the chiefs, and, as there are very strict and recognized rules regarding the settlement of serious disputes, there is no fighting between these numerous settlements." Another thing

which distinguishes them from most African tribes is that "marriage is not merely a matter of barter. If the girl objects to marry her suitor, her refusal is absolute and settles the matter." Supplementary to this is an account, by Major H. H. Austin, of a branch expedition which he led to the north of Lake Rudolf, in which he succeeded in making a comparatively thorough survey of the western shore. There were evidences of the lake's westward encroachment on the land. "At one point," he says, "we observed a regular line of trees, extending for a distance of between two and three miles out into the lake." Prof. A. G. Nathorst summarizes the scientific results of the Swedish Arctic expedition of 1898, and calls attention to the bacteriological investigations. In a total of 4,400 gallons of the atmosphere filtered in a score of different localities, the doctor of the expedition "did not discover a single bacterium, and only an infinitesimal quantity of aspergillus, or mould." He "further examined the intestinal contents of a number of different animals, but without, generally speaking, discovering any traces of bacteria." Among the collections brought home were "numerous specimens of red snow and green snow," besides mammals and birds which will, it is hoped, form the nucleus of an Arctic Biological Museum.

P. Leendertz, jr., in *Noord en Zuid*, treats of "The Names of the Months," a subject of much interest to Dutch and Flemish scholars. This was the most vexatious problem connected with popularizing the Roman calendar in the Netherlands, which was not accomplished until long after the term of Roman occupation. While the remote German progenitors of the present Netherlands had not names for all the twelve months, their descendants gradually evolved one hundred and twenty-eight, more than a dozen of which, gleaned from mediæval manuscript almanacs in the Royal Library, have not been given by any other authority. These one hundred and twenty-eight examples (of which a careful list is drawn up, with a glossary) are ranged in eight classes, according to derivation from the season, the weather, the occupations of man, the products of nature, the products of industry, the habits of animals, pagan and civic festivals, and church festivals. Some of these are still in use, though not often now found in print. Naturally, each month received many names, while one name often did duty for more than one month. Not only might many of the above matters occur in more than one month, but the discrepancy between the lunar and the solar year often demanded the insertion of a whole month, which took the name of its predecessor, bringing all the names wrong the next year, and, this not being of rare occurrence, great confusion ensued. To remedy this, Charlemagne chose twelve of the names, and tried to have them generally used, but failed. The Church secured greater uniformity, but only by substituting the Latin names, which steadily gained ground, despite the efforts of purists and patriots. Why? Grimm says, no doubt rightly, because of ambiguity and clumsiness in the popular names.

The timely subject of the decadence of the Latin nations is treated in an article by Prof. Giuseppe Sergi of the University

of Rome, in the *Nuova Antologia* for August 1 ("Come sono decadute le nazioni latine"). Passing in rapid review the nations of the valley of the Euphrates and Tigris, of Asia Minor, Egypt, and Greece, the writer dwells more at length upon the Roman Empire, and winds up with the people of Italy, Spain, and France, in order to show that all of these either have passed away or are threatened with the same fate from one and the same cause, viz., immobility, or the desire to maintain unaltered and intact from foreign influences the civilization transmitted to them or developed by them. There is but one means by which a nation can resist the progressive impulses from outside without being doomed to extinction, namely, absolute isolation. It is thus that China has till now continued her national existence, but she belongs to "social palæontology," and now that she has been forced to open her frontiers to outsiders her days seem to be numbered. Corruption, vice, luxury, etc., can be considered only as concomitant causes of the decadence of the Roman Empire and of nations in general. The Renaissance in Italy could have become a real *risorgimento* only by repudiation of the Roman tradition, and, together with it, of the morbid aspiration of reviving the Empire; while, in fact, it was not a *rinascimento* but a *rinveccchiamento*, destined, as far as the reinvigoration of the nation is concerned, to failure. In modern Italy, Latinity, through the classical school, is still viewed as a continuation of Roman life: a fatal anachronism, a sign of inhibition to modern progress. These few points will suffice to show the trend of Prof. Sergi's essay, and to suggest the originality of his thesis and arguments.

In consequence of the unrestricted sale of alcoholic liquors in France, the number of *débits* in the country has reached the enormous figure of 424,500, or one to every eighty-five inhabitants. No wonder, therefore, that the private organizations struggling against the evil of alcoholism are coming to be looked upon as insufficient, and that legislative action is resorted to. A measure, aiming at the gradual reduction of the places for the sale of liquor to one for every three hundred inhabitants, was introduced during the last session in the Senate and has found many supporters all over the land. At the same time, the crusade against strong drink is being vigorously carried on by numerous temperance societies, forming together the Union Française Antialcoolique (5 Rue de Latran, Paris), which publishes a monthly journal under the editorship of Dr. Legrain, the head of the inebriate asylum at Ville-Evrard. In the army and navy the temperance movement has also taken root, and much zeal is displayed by teachers and school inspectors in the provinces. From Cahors (the home of Gambetta), e. g., it is reported that there are as many branches of the temperance league as there are schools in the district, and "games have been organized so that even hardened drinkers prefer, on Sundays, the bowling-alley in front of the school-house to the tavern." It is rather curious that wine-growers, i. e., those not manufacturing distilled liquors, are looked upon as the staunchest friends of the temperance league. In so-called temperance restaurants limited quantities of natural wine are served with the meals, if desired. "Total ab-

stinence" has reference to spirituous liquors.

The death of Dr. William Wright has directed attention to the extraordinary growth of the work of the British and Foreign Bible Society, of which he was for more than twenty years the linguistic superintendent. During that time 153 new versions of the Bible, in whole or in part, were added to the Society's list, which now contains 364 versions in different languages and dialects. This means that the same influence which the English Bible has exerted on the English character and tongue since the days of Wiclif and Tyndale is now being exerted on multitudinous races and tribes.

The practical boycott of the Indian coolie and merchant throughout Africa, with the sole exception of British East Africa, is apparently about to lead to the development on a vast scale of unoccupied land in India. In Assam alone, the province adjoining Bengal, whose population taxes the utmost food-producing powers of the soil, out of eight and one-half millions of cultivable land only one and three-quarter millions are occupied. It is proposed to bring this great region into communication with the congested province by the extension of the Assam-Bengal Railway, the construction of roads and tramways, and the granting of tracts not exceeding 10,000 acres for thirty-three years free of taxation to native capitalists, on condition that they clear their grant of forest and jungle. This would create a proprietary body, which is contrary to the settled policy of the Indian Government, namely, to secure the land to the actual tillers of the soil; but the exigencies of the situation may compel the adoption of the scheme.

Our correspondent "D. B." calls attention to an error in his interesting letter on the Isle of Man in the *Nation* of August 3, where one should read £10,000 instead of £10 as the tribute the island annually pays to the Imperial Government. An error of quite as grave significance in a different category arose on p. 136 (No. 1781), when quoting the lines lent by Mrs. Wordsworth to her husband. "That inward eye which is the bliss of solitude," was fatally disfigured by lapse of pen or memory into *inner*.

—Prince Kropotkin continues, in the September *Atlantic*, his lurid narrative in his restrained and considered style. It embraces the assassination of Alexander II., Kropotkin's expulsion from Switzerland a few months later, and his subsequent life, first on French soil, later in London, again in France, his arrest under the new extradition treaty between France and Prussia, his imprisonment at Clairvaux, with his release and return to London in '86. His estimate of Alexander II. is not ungenerous, but, excepting the prison episode, there is in this instalment of the memoirs more of the inverted vocabulary peculiar to anarchism, hence more to alienate sympathy, than before. Prof. Hugo Münsterberg's article, "The Germans and the Americans," we discuss elsewhere. A foregleam of the promised Life of John Murray Forbes by his daughter is afforded in Mr. Edward Waldo Emerson's agreeable biographical notice of that perfect citizen. Mr. Crothers's paper on "The Mission of Humor," like Saadi, sits in the sun. Blessed are they, says the Psalmist, who, going through the vale of misery, use it for

a well. This article will show them how. The only short story in the magazine is a particularly good one, by Ella Peattie. Is the Contributors' Club asleep or dead or peradventure on a journey?

—The proposed American interoceanic canal is the principal subject of the August number of the *National Geographic Magazine* (Washington). In a striking article on its commercial aspects, Mr. Joseph Nimmo, jr., formerly Chief of the Bureau of Statistics in the Treasury Department, calls attention to the fact that, though \$1,326,176 has been appropriated within four years to ascertain the engineering features and cost of construction, "not one cent has been appropriated by Congress for the purpose of ascertaining the probable commercial value of the project—i. e., the amount of shipping which would pass through it." Yet section 231 of the Revised Statutes expressly provides for the preparation and submission to Congress of "full statements of all existing facts tending to show to what extent the general commerce of the country will be promoted" by such works as this. The assertion of the advocates of the canal that its commercial necessity is so clear that it needs no investigation, he meets with the fact that it is not the shortest nor most practicable route for the trade of our Atlantic seaports with Asia or Australasia. The distance from New York to Manila by the Suez Canal—a sea-level canal, whereas the Nicaragua involves 220 feet of lockage—is 181 miles less than by the Nicaragua Canal. As to the anticipated commerce of the States east of the Rockies with the Pacific States, he holds it impossible to believe that, with the present number of transcontinental railroads and the low cost of transportation (the average rate being "about one-third the average of the rates which prevailed thirty years ago"), any important part of this trade could be diverted to the canal. This conviction is strengthened by the fact that railroad competition has proved almost destructive of river and canal traffic. The commerce with South America is not an appreciable factor, as it is mostly carried on by sailing vessels, and the canal is impracticable for them. In fact, "the general trend of the evolution of transportation facilities during the last twenty years has been in the direction of reducing the possible tonnage of any American interoceanic canal. From a computation based upon all the controlling conditions of the present day, I conclude that not more than 400,000 tons of shipping annually can be confidently expected to pass through any such canal. The receipts from any American interoceanic canal from tolls would therefore be insufficient to meet the expenses of its maintenance and administration, with nothing for interest on cost of construction, amounting probably to eight million dollars a year."

—Armando Ferrari discusses in the Milan *Perseveranza* the origin of the sonnet. In time it remounts to the first decades of the thirteenth century. In structure, Biadene has shown that it arose from a fusion of a *strambotto* of eight lines and one of six. This glee form of verse has never ceased to flourish in Sicily. What region of Italy was to be credited with the fusion is the chief matter in debate. Ferrara bases an argument on a *disputa* on love, of which the joint authors were a Tuscan,

Jacopo Mostacci of Pisa; a Neapolitan, the youthful Pier della Vigna of Capua; and a Sicilian, the notary Jacopo da Lentini. The *disputa* (an imitation of the Provençal) was opened by Mostacci, who had recourse to the *strambotto* of eight lines, but found the vessel too small for its contents, and so annexed the six-line *strambotto*. The fourteen, making one body, he passed on to Pier della Vigna, who responded in kind, while Lentini capped their efforts with one of his own, without, however, uniting the two *strambotti*. Ferrari supposes plausibly that the three friends met at the University of Bologna, then a great seat of learning; and it is notorious that at that epoch Pier della Vigna was a student there. By this clever boxing of the compass Ferrari satisfies many local ambitions. The Sonnet, of Sicilian components, was born in Bologna about 1234; a Pisan called it in being with the aid of two representatives of the southern provinces. Crossing the Apennines into Tuscany, it there flowered to perfection under Dante's care and Petrarch's. What poetic form could be more thoroughly national?

—With keen regret we record the death at Seal Harbor, Maine, on August 3, of William McCrillis Griswold, son of the late Rufus Wilmont Griswold, but better known as the creator of the "Q. P. Indexes." This series embraced the *North American Review*, *Lippincott's Magazine*, the elder *Scribner*, the *Eclectic*, *Harper's Weekly*, some British and some German historical magazines, *Essays*, etc., and a line of "Q. P. Annuals." It was, moreover, initiated with a general index to the *Nation* (1865-1880, afterwards extended to 1885, with a contemplated and perhaps commended extension to date). It was entirely characteristic of Mr. Griswold that he undertook this most useful work, peculiarly useful to the editors of the *Nation* itself, without previous consultation with them or any request for support, so that its appearance was a complete surprise. It was but one mark of Mr. Griswold's attachment to this journal, to which he was a more or less frequent contributor, as well as its ever friendly critic. The scope of the Index was literary, historical, social, and economic, and left room for one political; and this, entitled 'A Record of Politics and Politicians in the United States, 1865-1883,' with occasional references to other sources than the *Nation*, was subsequently (1883) produced, equally unsolicited and unheralded, and has a value quite beyond any probable general appreciation of it. Of all Mr. Griswold's indexes it is proper to say that they bore the strongest marks of the "personal equation." He was his own publisher; his labors could fairly be called disinterested, since the pecuniary return was most precarious; hence, a studied condensation, with signs and symbols offering no little obstacle to rapid reference. Even some phonetic deformations in line with the so-called reform (applicable last of all to an index) were philanthropically adopted by Mr. Griswold. These eccentricities were reinforced by an imperfect knowledge of the mechanic art of printing. But, all deductions made, the Quarterly Periodical Indexes were and will ever remain a great boon to students.

—This indexical passion, rather than gift, was manifested in other ways—in a com-

pilliation of narratives called 'Travel,' 'France,' 'Germany,' and 'Switzerland' respectively, and in Descriptive Lists of Novels, of much higher and more permanent worth. Here the classification was carried out by countries, and even by sections in the case of the United States; and current criticism of each work was cited, according to the editor's lights or material. In the prosecution of this task, Mr. Griswold employed and increased his exceptional knowledge of the more or less forgotten periodicals of the day of small things in American letters—the period of his father's literary activity as journalist and author (to mention but one of his numerous works) of the 'Poets and Poetry of America.' Mr. Griswold bore with a rare philosophy the renewed assaults of latter-day admirers of Poe upon his father's memory, which Mr. Woodberry's supreme biography effectually vindicated against the charge of malignity towards the poet. Only a year ago did he publish, not an apologia, but a truthful portrait by indirection of his father, consisting of the frankest presentation of 'Passages from the Correspondence and Other Papers of Rufus W. Griswold.' Our readers can turn to the review in No. 1742 of the *Nation* to refresh their memory of this very important landmark in our literary history. It was, unfortunately, marred by defects in construction, and, being a private venture like all the rest of its author's, it fell somewhat flat, but no public library can afford to be without it. It was an honorable as well as a pious termination of Mr. Griswold's labors. The death of this not more indefatigable than modest worker was untimely. He was born in Bangor, Maine, in 1853, and graduated at Harvard College in 1875. A wife and children survive him.

—Probably the most noteworthy of the many efforts put forth to secure a modification or revision of the steps recently taken by the Russian Government against the national individuality of the Finns, has been a series of appeals, on the part of the savants, scholars, artists, and other non-political men of prominence in all the leading countries of Europe, addressed to the Czar. It is a singular phenomenon that the movement was spontaneous and independent in these various countries, and in all practically on the supposition that the Czar himself had not a clear conception of the far-reaching evils of his decree, so that the addresses were virtually appeals "from the Czar poorly informed to the Czar better informed." The German address could circulate only for a short period, but nevertheless secured 160 signatures from among the brightest minds of the country. Lister's name heads the English list, while the French bears the names of many members of the Academy. The Italian address contains an exceptionally long list of prominent names; Austria and Hungary each sent one of their own; the Belgians sent both a Flemish and a French appeal; and in those of Holland, Switzerland, Denmark, Norway, and Sweden, the signatures of the leading thinkers and authors are found. It is rarely that an international manifestation of this character, without a central impetus, proves so extensive and successful among this class of men. Recently a deputation of prominent scholars and savants assembled in St. Petersburg, and asked for permission to present an address to the Czar, but an audience was refused them.

#### TUCKER'S CONSTITUTION OF THE UNITED STATES.

*The Constitution of the United States: A Critical Discussion of its Genesis, Development, and Interpretation.* By John Randolph Tucker, LL.D., late Professor of Constitutional and International Law and Equity in Washington and Lee University. Edited by Henry St. George Tucker, Professor [in the same chair]. Chicago: Callaghan & Co. 1899. Two volumes, octavo, pp. xxviii, 1,015.

The son of "Randolph Tucker" has done well in publishing these volumes. Although not quite finished, and never revised by the author, they preserve for us with substantial fulness the constitutional views, and the grounds of them, held by one of the best and ablest of modern Virginia statesmen; one who was true to the old doctrines of his State, and who had the opportunity to restate them and attempt their vindication in the light of what has been decided since that great event which is known at the South as "the war between the States." Whoever takes up this book, having known the delightful man that wrote it, so full of character, intellectual energy, and a contagious, irresistible generosity and kindness of nature, almost the type of what we think of as best in the old-fashioned gentleman of Virginia, will need no urging to read it. All who knew him must rejoice to see this record of his best and most serious thinking—a book full of interest and instruction.

Whether one agrees with the writer's fundamental positions or not, and whether or not one finds them in harmony with the later decisions of our Supreme Court, he will, at any rate, agree that they are clearly stated, put with force, and carried out to logical conclusions. And the reader who has been bred on other meat than this will do well to reflect that what he finds here has got to be reckoned with. It may not agree with what our courts are laying down today; but the history of our Supreme Court teaches us that the fashion of courts passeth away; what is prevalent in this age may vanish in the next.

This book is not, properly speaking, a law book, a treatise on constitutional law, but rather, what its title imports, a commentary on the Constitution of the United States by a lawyer. We have chapters of political philosophy, followed by textual criticism and exposition and historical explanation; and also a fairly full statement and criticism of the cases. The legal aspect of the subject is not the sole or even the primary one.

The author's fundamental conception of the instrument is seen in such a passage as the following. He has been saying that while the States have the greater number of powers, the Federal Government has "preëminence in the reach and majesty of power. . . . But in their essential sovereignty of dominion they are alike and of equal dignity." And then he adds (p. 847):

"The real question in the comparison of the two classes [of powers] is as to the holders of the respective powers. The Federal Government holds the one class and the State Governments the other class. Back of both is the reserved authority of the States, as delegators of both classes, and as the original source of all powers belonging to both governments. The powers held by the Federal and State Governments are delegated to them by the States, as the bodies-politic, with essential sovereignty, from which emanate the functional capacities of each of these governments."

The writer goes on to say that this is demonstrated by the fact that the Constitution prohibits the States from exercising the powers delegated to the Federal Government. Why prohibit, if it was not necessary? "Annul the prohibition by striking out this section, and these powers would belong to the State governments concurrently with the Federal Government." This reasoning may seem inadequate, but the style of it is characteristic of that method of discussion, refined, ingenious, academic, which our old Northern Federalists used to wonder at, when they first met the Virginia statesmen in Congressional debate. The Virginia Federalists had it, and even the judicial opinions of Marshall, the greatest of them all, are full of it.

The meaning of the passage above quoted will be elucidated by adding the writer's explanation of some of these phrases. In an earlier part of the book he describes the "body-politic" as "the corporate unity of the many, bound together in society," and points out that the "distinction between the body-politic and the Government is fundamental and essential." The former

"is not the Government, nor the persons admitted to participate in the functions of Government, but it is the whole body of persons politically associated. . . . A constitution . . . is the act by which the Body-politic constitutes the Government and delegates and limits its powers. . . . The Body-politic is creator; the Government its creature; the Body-politic is principal; the Government its agent. . . . Every Government is the delegated agent of some organic Body-politic. . . . Destroy the Government and the Body-politic remains. Destroy the Government of a State, and the State still stands. But destroy the Government of the United States, and what single Body-politic remains? All that would remain would be the forty-five Bodies-politic—the States."

The writer agrees that the fourteenth amendment is a final, authoritative denial of the doctrine of secession, of a legal right to withdraw from the Union; but he holds that the fundamental character of the Union remains unchanged, that it is still merely a compact between States whose only bond is the Constitution. There is no "merger or fusion" of States or people into a new Body-politic. There is only a new "Government," discharging certain functions for the States. We are "functionally one" as to the delegated Federal powers, but "organically separate" as independent States.

Such a theory as contrasted with that simpler view, which time and events seem likely to uphold, viz., that the people of each State have created a new nation by contributing a share of their power to a common stock—each the same share—must, of course, bear fruit in the interpretation of the Constitution. Very different results are reached from such different premises. See, for example, the influence of our author's fundamental theory in his ingenious argumentation about the legal-tender question (p. 514):

"Congress can coin money; the States cannot. And the gold and silver coin struck by Congress becomes legal tender because the States are forbidden to make anything else legal tender. The denial to the States to make anything but gold and silver coin a legal tender indicates that, but for this prohibition, the States might have done so. This prohibition to the States and the grant to Congress result in the conclusion that Congress can make current a coin which is legal tender in the payment of debts, and against which the States cannot discriminate. If this be so, how can bills emitted under the power to

borrow money, and not as currency, be a legal tender for any debt?"

And again (p. 825), in speaking of the prohibition on the States, we read that if this be put with the clause giving Congress the power to coin money, the clause

"would then be as if it read, 'Congress shall have the power to coin gold and silver coins, and no State shall make any but these a tender in the payment of debts.

... There is no power given to Congress, nor a hint of a power in Congress, to make anything a tender in the payment of debts. ... It would, therefore, seem to be a sound interpretation of these kindred clauses of the Constitution, that while Congress was to be the instrument for putting the stamp of currency upon coins of gold and silver, in order to create a circulating medium, the States were forbidden to make anything but these coins a tender in the payment of debts, and no power was delegated to the United States to do so; and therefore, as a medium for the solution of debts between man and man, the Constitution intended that the gold and silver coin stamped by Congress, as well as foreign coin, ... to be regulated by Congress, was to be the only medium for the payment of debts under the system established by the Constitution."

And again (p. 516):

"If, then, the Constitution has made gold and silver coin the only legal tender, and Congress has power to strike these coins, and this power to coin is denied to the States as well as the power to make any other than these coins a legal tender, it would seem to follow that Congress may coin both metals, and can deny to neither the functions of money. As the States are confined to both, as legal tender, Congress must furnish both."

Even as hard as that the author is willing to squeeze his grapes! When one reads this sort of reasoning, he seems to be living in the days before the war. There is much else that gives a like impression. The *Dred Scott* case, for example, is cited repeatedly as if it had decided what was merely the dictum of two or three judges. It never was the law of the Supreme Court that negroes, merely as such, or even negroes the descendants of slaves, were not citizens, capable, merely as such, of litigating in the Federal Courts. Again, the writer puts forward the old doctrine as to the inability of Congress to keep slavery out of the Territories, and denies the validity of the reconstruction acts and of any power to hold the rebellious States under military government when they had laid down their arms. Indeed, one finds here most of the main consequences of that highly elaborated theory of our national Constitution which had been worked out at the South of old, under the influence of a *parti pris*, to protect their local institution of slavery. It is fortunate that these doctrines have now to fight their way and hold their own, if they can, North and South, simply upon their merits. It will probably be found, in this open field of controversy, that they will not fit the facts of the past any better than they will serve the purposes of the future.

In arriving at a theoretical conclusion in favor of the judicial power to disregard legislative enactments as unconstitutional, Mr. Tucker adopts the view of Marshall that it is necessarily involved in the idea of a written constitution. He does not advert, any more than Marshall did, to the experience of other countries having such constitutions yet recognizing no such power in the courts. In considering the scope of this power, he says, forcibly and justly:

"If the court be in doubt whether a law

be or be not in pursuance of the Constitution—where the repugnancy is not clear and beyond reasonable doubt—it should refrain from making the law void in effect by its judgment, lest it should be really repealing a valid law by legislative act, instead of declaring it void by judicial act.

... The obligation of the Constitution on a judge in respect to his judicial functions is different from its obligation on a legislator or executive officer. ... The oath of the judge binds him to support the Constitution as to the prescribed limits of his jurisdiction as a precondition to his discharge of his function in declaring a law to be unconstitutional. His duty to do the latter depends upon whether his jurisdiction extends to it; and, unless it clearly extends to it, in undertaking to decide on the unconstitutionality of a law he may pass the boundaries of his jurisdiction, and exercise the legislative power of repeal; therefore he cannot declare a law void or unconstitutional unless for clear and undoubted repugnancy. The case is different with the legislator and the executive. ... If he doubts his power ... he is bound to resolve the doubt against the act, not in favor of it."

It is this point, so often forgotten in impatient comments on perfectly sound and just decisions of our courts, which Cooley has put so well in saying that a member of the Legislature may refuse to vote for a bill on the ground of its unconstitutionality, and yet afterwards, when promoted to the bench, be bound to support the same measure, if passed by the Legislature against his vote, as being constitutional; that is to say, not so clearly unconstitutional that he can disregard the decision of the Legislature, the body charged, in the first instance, with the right and duty to act.

As to the construction of these volumes, the main text (874 pages) is divided into fourteen chapters. The formal exposition of the Constitution begins with chapter viii, at page 349. The first seven chapters are made up of an introduction, in which some fundamental principles are worked out and terminology is settled, and of other chapters on the Source of Sovereignty and Power, the Limit of Governmental Powers, the Origin of English Institutions, American Constitutional Development, Two Important Compromises in the Constitution, and The Constitution as Modified by the Civil War. The other chapters deal first with the arrangement and interpretation of the instrument, and then take up in turn the legislative department (nearly three hundred pages), the first ten amendments, the executive department, the judicial department, and limitations on the powers of the States. An appendix of some sixty pages contains a variety of illustrative documents, including the Constitution and the Virginia and Kentucky Resolutions of 1798. Although the author had not quite completed his work, the editor has preferred to print it as it stood, without undertaking to supply any omissions. Apparently these were not many.

This serious and valuable treatise is published in a worthy style, handsome and solid. In the excellent preface, the editor, who is, we believe, the author's son, as well as successor in his chair at the University, tells us that the author, born in 1823, died in February, 1897, and that systematic work on these volumes only began in the autumn of 1896. "He was the son of Henry St. George Tucker, President of the Court of Appeals of Virginia, and grandson of St. George Tucker, also a member of that court, and who was the author

of 'Tucker's Blackstone,' the first commentary on the Constitution of the United States." Students of political science, of constitutional history, and of constitutional law have reason to be grateful to the editor for the pious care and the good judgment with which he has produced these studies of his distinguished father. They contain ample evidence of what the editor impressively says: "The book is an expression of the views of the author—not merely his intellectual opinions, but his deep convictions—in the consistent exercise of which he lived and in the faith of which he died; and neither the dissent of friendship, nor the storm of popular indignation, nor yet the hope of political preferment, ever shook his unswerving devotion to them."

It is proper to mention two or three slight errors. On p. 159 the author says that in England the crown has not exercised the veto power since 1692. Anne exercised it in 1707, in refusing her assent to the Scotch Militia Bill. The important case of *Hans v. Louisiana*, in both the table of cases and the book itself, is disguised as *Ham v. Louisiana*. In citing Cooley on Constitutional Law, we are not told which of his two books is meant, the 'Principles' or the 'Limitations.' It may be added that the author, at p. 803, misconceives the case of *Gelpcke v. Dubuque*; and that here and there, as in the cases of *Ableman v. Booth*, the *Dred Scott* case, already mentioned, and the *Milligan* case, he states inaccurately the points decided. But it should also be added that these are trifling things to speak of, in so large a work, which the author had no opportunity to revise.

*Reminiscences by Justin McCarthy, M.P.*  
Harper & Bros. 1899.

There is no form of literature so much in demand to-day as personal reminiscences, and there are probably few people living so well qualified as Mr. McCarthy, both by his experience and his powers of expression, to meet this demand. Beginning life as a newspaper reporter, he had excellent opportunities of seeing and describing some of the great men of his youth. Then he became editor of the *Morning Star* in the days when it was largely under the personal influence of John Bright and represented the most intelligent liberal opinion of England. Then he blossomed out as a successful litterateur, which implies a passport to all that is most interesting in London society; and, finally, he became an active and influential member of Parliament. Such a career would compel even a retiring person to make many interesting acquaintances, though he might refrain from describing them; in the case of Mr. McCarthy, with a sociable disposition and a passion for celebrities of all kinds, such a career made these good-sized volumes quite inevitable.

The book has the defects of its writer's qualities. This very geniality, this remarkable absence of political bias and personal venom, this fondness for all the celebrated men "who have shaken me by the hand," produces a certain monotony of praise that becomes a trifle wearisome. One is reminded of John Bright's theory that in properly constructed novels and plays there should be none but good characters. Possibly he was right in believing that such stories would raise the moral standard of readers, but would it be entirely safe to assume that they would continue to be read? Making due al-

lowance, however, for this defect, there remains so much of the charm that invariably attaches to genuine personal recollections of the great that the book is assured of many interested readers.

Mr. McCarthy's earliest recollection of Gladstone dates back to 1854, in which year he was sent to London to report the Budget speech for a Liverpool paper. He was assigned to a seat in a remote corner of the gallery and feared that his mission would prove a failure. Great was his relief, therefore, when he found that the Chancellor of the Exchequer's wonderful powers of voice and elocution enabled him to catch every syllable. Next to his voice, Mr. McCarthy was most impressed by Gladstone's eyes, which, like Goethe's, seemed to have the power of resting on every one in the room at the same time. In later years he, of course, knew Gladstone well, and he says that his face became more and more striking as the years went on, and that it possessed that preëminent quality of distinction that at once compelled the attention of a stranger—a quality, by the way, which he found also in the face of Nathaniel Hawthorne. Of his conversation, Mr. McCarthy says that he had the happy faculty of drawing out the ideas of his company, and that, in spite of his wide range of knowledge and love of speech, he never produced the Johnsonian effect of a schoolmaster haranguing a class.

Mr. McCarthy is a great admirer of Dickens. His admiration shows no sign of having suffered from the reactionary chill that has struck so many of the early votaries, but it breaks out in a new place. He does not, like Andrew Lang, go into fine frenzies over 'Pickwick' or Little Nell, but he admits that he is quite unable to do justice to Dickens's genius for after-dinner speaking. He considers him the very best speaker he has ever heard under these conditions, and he brackets Lowell and Depew in the second place. On the other hand, he is willing to allow that Dickens's readings, while inimitable in their way, were at least a fair subject for criticism. To many who heard those readings, and can recall the intense disappointment and shattered enthusiasm that followed the author's interpretation of his own works, this may seem a very moderate admission; but Mr. McCarthy is so pleased with the recollection of the novelist's handshake that it is perhaps all that could be expected. In connection with Thackeray, Mr. McCarthy revives the old discussion as to whether or not the author was entitled to a place in his own 'Book of Snobs,' and decides in favor of the negative view. But here again his good nature and loyalty to those who were once his friends seem to warp his judgment.

Of so many people does Mr. McCarthy say, "So and so was always described as very disagreeable, but I am bound to say that I found him kind and pleasant"—or words to that effect—that the reader will be apt to wonder what dire offence Charles Kingsley could have committed that he alone is outside the pale. In all this crowded gallery of portraits only his is painted in decidedly unpleasing colors, and what faint praise is thrown in is clearly of the damning variety. Lord John Russell, on the other hand, is one of Mr. McCarthy's heroes, in disregard of the popular opinion that Lord John was selfish and cold-blooded. That he had a saving sense of humor is well known, and nothing

could be neater than his reply to Sir Francis Burdett, who had formerly been a Radical agitator, and was expressing his contempt for the cant of patriotism: "Yes," said Lord John, "there is only one thing worse, and that is the recant of patriotism." Mr. McCarthy says that nothing in the nature of a living experience ever carried him so far back in time as hearing Lord John casually mention that he had met in Florence the widow of the Young Pretender. But, after all, this is not as startling as it sounds when we remember that the drunken reprobate who had once been known as "Bonnie Prince Charlie" died in 1788, while his widow lived till 1824. Moreover, in the minds of most readers, the mention of the lady recalls Alfieri rather than the Pretender.

Of Cobden and Bright Mr. McCarthy saw a good deal, and in comparing them he very justly says that, while Cobden believed in democracy as such, Bright's efforts were directed to the accomplishment of certain specific reforms, especially of the suffrage, and that, when these were attained, he virtually became a Conservative. Cobden was disliked in England forty years ago, as such men are disliked in America to-day, because, although he was not a peace-at-any-price man, he thoroughly distrusted a war policy as a means of benefiting mankind, and he had absolutely no sympathy with the spirit of Jingoism. It was this feeling that actuated him when he told Lord Palmerston that he could not take office under him because he had frequently described him as the worst Foreign Minister England had ever had. "But," said Palmerston, "Milner Gibson has often said the very same thing, and he is going to take office." "Yes," replied Cobden blandly, "but then I meant it."

Of the great public speakers of other days, Mr. McCarthy instances Brougham, whom he heard at the banquet of the Social Science Association at Liverpool in 1858, and he describes the curious effect on the company of the sudden appearance on the scene of a very venerable old man, with whom Brougham at once fell into earnest conversation, but who was entirely unknown to the rest. It turned out to be Robert Owen, the philanthropist, then in his eighty-seventh year, who had outlived his generation and seemed like one returned from another world. With many natural disadvantages, Brougham was undoubtedly one of the greatest orators that ever lived. For sheer force of sustained logical argument he was perhaps equalled by Sir George Lewis, who, Mr. McCarthy declares, was the only speaker who ever succeeded in completely changing his opinion in regard to the subject under discussion. No doubt this sort of conversion is very seldom accomplished because the speeches delivered in legislative bodies are apt to be aimed at the public outside.

Mr. McCarthy has paid several visits to this country, and, being a good-natured person, and having been very well received here, he has nothing but pleasant things to say about us—some of which, we hope, are true. We would call attention, however, to one of his statements which is obviously incorrect. He says that greater changes have taken place in the outer aspects of the streets of New York in the last ten years than have taken place in London in

the last forty-five years. Possibly this might be true about the comparatively small sections of the two cities that come under the observation of the well-to-do, although the immense changes that have been wrought in London during the longer period by the Embankment, the Holborn Viaduct, and the new avenues leading to Charing Cross seem to make it improbable. But in the last forty-five years great cities have been added to London at every point of the compass, as any one may discover by driving in a hansom from north to south or from east to west; compared with these vast additions, the growth of New York in the last ten years is absolutely insignificant. Of course Mr. McCarthy has known many Americans and tells many American stories—among others, one of Henry Ward Beecher's reading from the pulpit various letters received by him during the previous week. One of these contained the single word "Fool." "Now," said Beecher, "I have known many a man write a letter and then forget to sign it, but I never knew a man sign a letter and then forget to write it."

With characteristic good nature, Mr. McCarthy seeks to rehabilitate certain dubious political reputations, such as those of Prince Napoleon and Lord Randolph Churchill. In the case of the Prince he succeeds in showing that he was a free-trader, that he foresaw the rise of Prussia, that he foretold the result of the American Civil War, and that he was utterly opposed to the Emperor's Mexican enterprise. Moreover, it appears that Cavour had a high opinion of the Prince's statesmanship. Mr. McCarthy's brief in favor of Randolph Churchill rests largely on a story which certainly shows the possession of humor. It appears that a great lady once spoke to him of the fund being raised for the benefit of the wives of distressed Irish landlords, and said that, though she was entirely in sympathy with the movement, she had not subscribed to the fund. "I see," said Churchill, "your sympathy doesn't take that form." But it would require more than a good story to establish Lord Randolph's claim to be a statesman.

We have not space to dwell on Mr. McCarthy's account of George Eliot's Sunday receptions, his description of the continual controversies between Froude and Freeman, his lifelike pictures of Huxley and Tyndall. Suffice it to say that on these and many other topics he is instructive and entertaining, and amiable always.

*German Higher Schools: The History, Organization, and Methods of Secondary Education in Germany.* By James E. Russell, Ph.D. Longmans, Green & Company. 1899.

Of all species of extravagant waste, there is none more unpardonable than that which permits one nation to remain in ignorance of the clever and successful methods devised in another for gaining important ends. The enormous product, in the way of scholarship, which is brought forth in Germany each year is such a remarkable phenomenon that when any light can be thrown upon its first causes, that light must be received with gratitude by those who wish to see a like brilliant issue in our own country. Mr. Russell's book is very exhaustive; it is the result of a long study of the subject,

and, so far as his descriptions can be tested by one's personal observations, it is remarkably accurate and sound. Every one who is actively interested in the improvement of methods of education in this country will give serious study to this volume; we can only say here in general terms that much is accomplished in Germany because much is demanded of the teacher, and of the pupil as well. Education is made a matter of extreme concern in every family; nothing but serious illness is allowed to keep a child away from school for a single day, and no extraneous interests are suffered to interfere with his steady preparation of his daily tasks. With this spirit thoroughly ingrained in the family, it becomes possible for the teacher to ask for and to obtain a very large output of work from the student. It is true that it is not disinterested love of learning on the part of the family which brings about this result; a boy's career depends so absolutely upon his completing each grade of study at the right moment, and with the right degree of success, that the pressure is very strong to see that nothing hinders him upon his way. The obverse of this picture of industry is that there is not enough time for play, and especially not enough consecutive free time for engaging in the regular athletic sports. But it is possible that athletic sports are less essential to the boy's well-being than we have hitherto supposed in Anglo-Saxon countries; it is possible that the English authority on food and feeding is right in thinking them an excrescence that might well be removed, an effort to work off the ill effects of the Anglo-Saxon diet, over-rich in proteids. Without question, the time which the German youth gives to music contributes more to making him a civilized human being than many hours of athletics would do; and if it is a question of enduring health, he is far from falling in the rear of his American competitor.

It should be remembered that "secondary education" has not the same signification in Germany as here; its upper end coincides with the end of the second or third year of our college course, as nearly as comparison can be made. We do not associate with the phrase the reading of Sophocles and Æschylus, yet that is covered by it in Germany, and yet the boy finishes this portion of his studies at the age of eighteen, as a general rule. Though there is not at all the same fixed relation between age and advancement in school here as there, it may, nevertheless, be safely assumed that the German boy of eighteen is fully two years ahead of the American in acquirement. And the character of the instruction which he has received, as a means to the producing of a cultivated human being, may be gathered from this bit of description in the book before us:

"I have heard such masters teach Sophocles in a way to make one uncertain which to admire most, the marvellous beauty, depth of emotion, and ethical content of the tragedy, or the artistic power of the teacher in making every scene pulsate with life and every sentence speak straight to the hearts of his students. The ethical, the æsthetic, and the patriotic blend in one."

Without going into detailed questions of methods, which are for the technical educational journals to discuss, we note some random points of interest. Education is

compulsory from six to fourteen; it is free from six to nine. The cost of instruction in the gymnasium is from \$20 to \$30 a year, but there are many bursaries. One-half the expenses of the schools is paid by these tuition fees; the general Government pays only one-sixth of the expenses, but it assumes very complete control of the education furnished. From five to six hours a day are spent in the school-room, and from one to three hours are given to outside study; this latter, however, consists chiefly in working up the exercises of the past day. Instruction goes on with much more effort on the part of the teacher than with us, and what we call the "recitation" is not known either in fact or in name. The modern German teacher has become (thanks to the explicit effort of the Government to this end) a person of much social importance; with the military rank which it is now his privilege and his hope to attain, he has gained a distinguished bearing which differentiates him widely from the traditional German pedagogue. The five or six thousand school-teachers who have become officers of the *Landwehr* have made a complete revolution in the status of the teaching profession: "to have officers of the Reserve in a school is equivalent to saying that there are just so many able disciplinarians, perfect gentlemen, men of high moral character and ambitions in the teaching corps." If the discipline is frequently stern and the teacher apparently unsympathetic, this is not disagreeable to the student; he is himself imbued with the military spirit, and is not averse to having it manifested in the school-room.

The German principle for secondary instruction is that the pupil should not be left to flounder about by himself, but that everything should be made plain to him in the class-room. He is considered to have not yet arrived at the stage of independent study, and time is not to be wasted in beating about the bush. The ability to make an occasional lucky guess is in no wise identical with sustained logical thought. The supervision of pupils is not confined to the school premises, but has to do with their entire life outside of school, nor are parents permitted to have their own way with their children. The schoolmaster is in the possession of professional knowledge, and the whims of over-indulgent parents are not allowed to interfere with his methods of training. The use of tobacco is altogether prohibited in the lower classes, and upper-classmen may not smoke on the street or in public places. In no subject of study have recent reforms been of such marked success as in the modern languages; they are taught, besides, with such scientific method that as great proficiency in Latin can be attained in six years if French is studied first as can otherwise be got in nine. As an indication of the remarkable mastery of foreign tongues that can be secured by good teaching, Mr. Russell relates that he was one day asked to speak to a class of boys in English, and was somewhat afraid that they might not understand him: "Imagine my surprise when, at the teacher's suggestion, six of these boys in turn reproduced in their own words and in almost faultless English the gist of all that I had said to them." This was the result of two years of class instruction in English for four hours a week.

*Japan in Transition.* By Stafford Ransome. Harper & Brothers.

We can hardly expect literature in the average book about Japan, and this one reads more like a commercial report than the product of a scholar or polished writer. Mr. Ransome is a somewhat narrow-minded civil engineer, whose knowledge of subjects beyond his professional ken seems to be rather limited. His style is colloquial, and his reiteration of pet phrases is rather wearisome. His utter lack of perspective in writing, as a correspondent, on commercial matters aroused the just indignation of honorable merchants at the treaty ports. Now, it is plainly evident that, in expatiating on "The Position and Prospects of Christianity," he is familiar neither with actual figures easily accessible and collected with care and diligence, nor with the native literature or periodical writing. His wild assertion about the "2,000 paid foreign missionaries" in Japan, and his apparently profound ignorance of what Americans in all lines of work have done in Japan, show him as untrustworthy in some parts of his report as his commonplace English is loose and threadbare.

Mr. Ransome is on firmer ground when he talks of what he has touched and known. He sees old Japan passing away. New Japan is hardly as yet born, except in the spirit. He describes with briskness and vigor—hastily, also, as if the whole scene would change in a moment—"the transition Japan, which is passing through its most critical throes just now." One must read this book as a correspondent's news-letter, in which neither background nor perspective is visible. The author, who lived but a few weeks over a year in Japan, has apparently got his ideas wholly from English periodical and other ephemeral literature. He speaks evidently to the club, and to an English public in whose eyes Russia must always be the Satan among the sons of God, his fellow-imps being the missionaries, who are made responsible (p. 233) even for the troubles in Formosa.

The best chapter in the book is that on the new school of the drama. As the Japanese "adopt nothing, but adapt everything," they have borrowed many foreign texts and plots, giving them the proper Japanese background and color, and adapting the words to the native prejudice and palate.

The moral standard is discussed with fairness, the author arguing that, to understand or appreciate an alien civilization, "one must begin by making his mind a blank." He defends with spirit the commercial integrity of the Japanese, or rather explains why the Chinese is reckoned superior, and he sees a steady improvement among the business men in the island empire. In modern industry the weak point is that the educated man devotes himself too exclusively to theory and neglects the practical side. He still fears the ancient traditions, being afraid "to dirty his hands in acquiring the practice." Mr. Ransome thinks the power of the Japanese to compete with the skilled producers of Europe has been greatly exaggerated. Treating of the effect of war on foreign relations, he says there is no deep-rooted hatred of the Chinaman, despite surface contempt for Chinese methods. There is a good sketch of "politics past and present," and, in treating of "strategic geography," the author

furnishes a chapter which all military students will welcome. As a colonizing Power Japan never wanted Hawaii, does not want the Philippines now, has more than enough to do in Formosa, and, with the rise of manufactures, with congestion of population in the cities and denudation of the country—compelling large imports of food—she is likely to need all her people at home for generations to come, and has, strictly speaking, no surplus population. As an ally, Japan is just the country, with just the people, which Great Britain needs. Both nations united can keep out of hostilities and compel a coal famine that will stop war. Present-day education is discussed and set forth with intelligence, well selected and arrayed figures, and an excellent map.

This work is presented in attractive type and binding on good paper. The clear and beautiful half-tone illustrations, over fifty in number, show finely the progress made in machinery, manufactures, the navy and army, modern architecture and engineering, while the charm of female grace and beauty and the makers of New Japan, especially in statesmanship, arms, and science, are not forgotten. The four maps are of high value and deserving of great praise.

*Artic: Storia della Repubblica Ateniense dalle Origini alle Riforme di Cleistene.* By Gaetano De Sanctis. Rome: Tipografia Polyglotta della S. C. de Propaganda Fide. 1898. Pp. vii., 364.

He who undertakes to write the constitutional history of Athens ought to sift carefully the literature which has accumulated on the subject in recent years, especially since the discovery of Aristotle's 'Constitution of Athens.' De Sanctis, however, though a scholar of established reputation, has not taken so serious a view of his duty as an historian. Limiting himself, for the most part, to a few good authorities, he has made free use of their material, often without giving them due credit. As a result of this neglect, the reader is in many instances at a loss to determine whether a given view has originated with the author.

Though the work contains some new features and gives evidence of considerable diligence in research, the soundest passages in it are those which aim at digesting the opinions of others. Such is the greater part of chapters i.-iii., which treat of the formation of the Athenian state and of the regal period. Chapter iv., on the decline of the monarchy and the archonship, is unsatisfactory. From the mere fact that the word "archon" is simpler than the word "polemarch," the author concludes, against the testimony of Aristotle, that the archonship was instituted before the polemarchy. Yet, were we to follow the analogy furnished by the two Athenian councils, we should reach the opposite result, for it is the earlier council which bears the more complex title. Equally slender is the evidence for De Sanctis's opinion that the thesmothetæ were instituted at the same time with the archonship, or at all events before the polemarchy. It seems better to connect the origin of this office with the rise of the timocracy, which belongs apparently to the seventh century B.C. But De Sanctis has no room in his work for the growth of timocracy, though he is aware that Solon did not create that

form of government. It seems strange that he should have ignored Busolt's masterly treatment of this subject. Again, disregarding a statement of Aristotle that in early Athens the magistrates were appointed by the Council of the Areopagus, he declares that from the beginning they were elected by the people, and cites Spartan usage as proof. His failure to grasp the truth of this matter, as Aristotle represents it, leads him to misconceive the whole development of the Athenian constitution before Solon. Athens and Sparta did not advance along parallel lines.

The first three sections of Aristotle's 'Constitution of Athens' De Sanctis (chapter v.) considers of no historical value—a tissue of "combinations." But Aristotle's combinations are worthy of consideration; it is not unlikely, too, that he had some slight documentary evidence for the time before Solon. Our author goes with the majority in pronouncing section iv. of the 'Constitution of Athens' a political forgery of some fifth-century oligarch—a crude mixture of the old and the new—which the simple-minded Aristotle accepted as a constitution of Draco and inserted without hesitation in his history, though it was absolutely incongruous with the rest of the work. Blass, who differs from the majority, the author silences with an exclamation, and proceeds to support his own view by misinterpretations and by violent emendations of the text. There is need of greater fairness in the treatment of this unfortunate section.

The title of the seventh chapter, "The First Written Constitution"—that of Solon (594 B. C.)—strikes the reader as very strange. There is a vast difference between a written constitution, as that of the United States, and an unwritten constitution amended by written laws, as that of Athens. The former presupposes an advanced stage of political thought reached in Athens in the latter half of the fifth century B. C. It was not till 411 B. C. that Athens came under a written constitution, and then for only a few months. When the author, p. 193, says that the people, not content with the code of Draco (621 B. C.), demanded a constitution, he ascribes to them a theoretical knowledge of government which even the Greek philosophers did not begin to acquire till nearly two centuries later.

Among the surprises afforded by the book is a new date for the conspiracy of Cylon. Till within recent years, all agreed in placing this event between Draco and Solon (621-594 B. C.); Busolt and Wright made it earlier than Draco, and their view has the support of Aristotle's 'Constitution of Athens.' Now De Sanctis (chapter viii.), following a suggestion of Beloch, declares that it occurred while Pisistratus was in exile (after 560 B. C.). His theory, though interesting, is far-fetched. Connected with this date of Cylon is his opinion (chapter ix.) that Pisistratus instituted the naucraries. In this case, he argues that the term "naucrary" had reference to ship-building, and that Athens had no fleet before Pisistratus. But the derivation of the word is uncertain, and the laws of Solon referring to this institution prove its existence in his time. It is hardly possible, as De Sanctis assumes, that the Attid-writers should have been deceived as to the authorship of these laws.

On purely subjective grounds, De Sanctis (chapter x.) places the constitutional reforms of Cleisthenes before his struggle with Isagoras, and makes these improvements the cause rather than the effect of the strife, thus setting aside the testimony of Herodotus and of Aristotle. That Cleisthenes, the founder of the democracy, should have ever been the head of the aristocratic party is to him an absurd idea. The test of absurdity, however, is unsafe. To one acquainted with practical politics, a summersault such as that which Herodotus ascribes to Cleisthenes seems too commonplace to raise a suspicion.

In conclusion, it may be said that the tendency of De Sanctis is to cut loose from authority and from the recognized canons of historical criticism, and to give free rein to the fancy. It is to be noted further that his originality lies especially in changing the dates of events. Zealously patterning after Beloch, yet lacking the judgment of his master, he falls far short of the standard set by Busolt, who, in the second edition of his 'Griechische Geschichte,' has contributed greatly to our knowledge of early Attic history.

*Siberia and Central Asia.* By John W. Bookwalter. Springfield, Ohio.

There is so much that is unfair in many popular ideas about Russia, there are so many people ready to believe anything unfavorable to that country, that something dithyrambic on the subject may be useful every now and then as a corrective. Last year, Mr. J. W. Bookwalter travelled rapidly (making all due allowance for the slowness of Russian trains) through the regions he describes; and the result is a heavy volume containing, besides a large number of not very interesting photographs, an array of descriptions, statistics, and conclusions delivered with a breezy cocksureness that makes the reader feel no time has been wasted. If the chops and steaks at the railway restaurants were juicy, it showed that the region had a splendid future as pasture-land; again and again a few well-handled figures prove great things; and what use would there be in having a guide through whom people could be interviewed, if what they said, especially when officials, were not accepted? Thus the process of acquiring information was speedy—sweeping in great facts as well as small of history, sociology, and anything else.

For instance, speaking of the harmless Khirgiz, the writer says: "I am informed that they are yet the same untamed nomads that, under Mundzuk and his successors, as a mongrel Tartar and Mongol horde, swept with such destructive fury nearly 1,600 years ago through the length and breadth of Europe, holding even Rome in terror for several centuries." Why bother to look up in some stupid book the accuracy of such striking information? Or, for a more domestic detail: "I am also informed that in large cities, like St. Petersburg, where the water is not of the very purest, it is the duty of every householder, during the summer, to place a suitable vessel in front of his house, containing boiled water, for the free use of the passer-by." Mr. Bookwalter appears to have been at least in Moscow, in July, but he does not mention how many such exaggerated cholera regulations he

has himself seen signs of. To counteract common accusations that Russia is a barbarous state, ruled by corrupt and ignorant officials, it is pleasing to hear that

"Within certain limits this is perhaps the most secure and the freest country in the world. . . . There is perhaps no nation whose official classes are so well informed, or who so minutely understand the commercial, industrial, and even the political policies of other nations, and the real working and trend of their institutions. It was, no doubt, this penetrating foresight [the author does not seem to be "informed" in this case] that caused her, long ago, to devise her policy of territorial acquisition, under which she laid aside for future use such vast accessible and contiguous areas of country which to the rest of the world seemed useless."

Even the passport system in "the freest country in the world" finds favor:

"It is, moreover, an instrument that greatly aids in more thoroughly utilizing all its [the Government's] sources of energy, and in knitting more effectively together the potencies of national life into a compact, mobile whole, leaving no loose ends floating about."

A good deal might be said in regard to this statement about a land that has suffered for centuries from the plague of vagrancy, but we do not care to go into the question of Mr. Bookwater's beliefs, of his faith that every suggested railway will be built at once (which is very different from the usual experience in the empire of the Czar), of his political reflections, reminding one so often of those of the ordinary Russian traveller one meets. His whole attitude is that "tout est pour le mieux dans la meilleure des Russies possible." It is, however, perhaps worth while to call attention to some of the errors of detail in his facts.

The standing army of Russia is very large, but it is not "1,500,000 to 2,000,000 of men," nor could she "quickly put herself on a war footing of four or five millions of men, well appointed and equipped." The assertion that the railway from Kushk is "being quietly extended to Herat," *i. e.*, in Afghan territory, seems so absurd on the face of it that we ask for more proof than the remark in another place that "it is hinted." The road from Petrovsk to Derbent can hardly be "almost completed," as last July people were still talking of beginning it in a year's time. Although the Russians have large families, they are not by any means "probably the most prolific race on the face of the globe." "The famous" Shamy (not Schemy) was not "a Georgian chieftain," but a Lesghian, and he "made his last stand in defence of his country" at Ghunib, far away in Daghestan, not near Tiflis. It is incorrect to say of climbing Ararat that "those who visit the summit are provided by the Government, for their protection, with ten or a dozen Cossacks from the barracks located at the foot of the mountain, where there are always quartered several regiments of these celebrated soldiers." Last summer, when a foreigner came to try the ascent, there were only some score of men in these barracks (even in winter there are but a few hundred), and at that time no officer or soldier in the vicinity had ever attempted to get to the top of the mountain. A party of ten infantrymen and three Cossacks served him as a volunteer escort, at the invitation of the officer commanding a summer camp part way up the mountain, and some such courtesy may have become the custom since,

if there has been occasion for it this year. The "good road from Kutais to Vladikavkaz," though existing for most of the distance, is in one portion only a bridle-path, impassable for carriages. The way from Abbas Tuman to Kutais is fine enough, but not "one of the wildest and most solitary passes in the world," nor need the precautions against brigands always be elaborate.

So we might go on. In fact, throughout the book there is a general looseness of statement which makes one hesitate to accept without further confirmation anything it says. The author would have done wisely to subject "a work thrown off during the excitement and fatigue of a long journey" to careful correction at greater leisure.

*Esek Hopkins, Commander-in-Chief of the Continental Navy, 1775-1778.* By Edward Field. Providence. 1898. Portraits.

Mr. Field seeks to defend Hopkins against certain charges of misconduct while commander of the Continental Navy in the first years of the Revolution. This is not an easy task, for many circumstances contributed to bring to pass the discharge of Hopkins under serious charges. There were personal as well as political reasons for the act, and it is much to Mr. Field's credit that he does not suppress what may tell against Hopkins as a man or as a naval officer. A sea-captain of long standing, in the employ of the Browns of Providence, Hopkins certainly knew how to handle a ship. He had the usual faults of a seaman, and they became glaring when he undertook to become a politician. Hasty and intemperate of speech, he did not hesitate to break out against those with whom he had served and to whom he had for years given support. He carried his habits into the "navy," a few small vessels hastily brought together and controlled through the Congress. The local agents of this body were charged by Hopkins with being interested in privateers, of caring more for their personal interests than for those of the continent, and of encouraging malpractices that their gains might be the greater. He was known to have spoken disrespectfully of the Marine Committee of Congress, though he doubtless uttered only the truth, for the committee gave extraordinary orders at extraordinary times, and laid the responsibility of failure on the fleet. He used language more forcible than was necessary, thereby shocking the chaplain of the fleet, who did not hesitate to mention the affair to Congress, urging the demands of his own conscience, while overlooking the dangerous example of insubordination among men much discontented and ready to conspire against their commander. On the other hand, Hopkins enjoyed the warm friendship of John Adams, John Paul Jones, and others not more likely to take up with a sham; and even Knox, himself something of a rough diamond, wrote of him, "Though antiquated in figure, he is shrewd and sensible. I, whom you think not a little enthusiastic, should have taken him for an angel only he swore now and then."

The test came in actual service, and here there was much to create doubt of his real abilities. It is hardly possible that Congress really intended to give Hopkins the same relative command at sea as Washington held on land, but high rank was given, and the fleet was constituted with some flourish. The

one expedition that could be considered of any moment was that to New Providence to seize powder and stores. Only partial success was attained, for the greater part of the powder had been shipped away by the English Governor, and Hopkins returned to New London after engaging a British vessel under conditions that would seem to insure his success. Yet he failed, and the months of idleness that followed gave rise to an opinion that Hopkins was not the man for the place, and did prove that he lacked organizing ability. It may be admitted that many conditions favoring success were wanting. The Marine Committee of Congress interfered, ordered him on impossible ventures, and, when disappointed, laid the blame on the Commodore. Money was wanting, and could not be obtained as needed. It was difficult to enlist men, for the higher pay and greater chances of privateering drew into that calling those who might have made a navy. There were jealousies among the officers of the fleet, and discipline was not maintained.

Without money, men, or officers, Hopkins blurted out his opinion of men and things, and this was reported to his superiors. Congress ordered him to appear before it and explain his conduct, but did not accept his explanation as satisfactory. Later, on the complaints of his own officers, he was suspended and dismissed from the Continental service. The charges made were vague, and covered many insinuations that no court would admit to be evidence; yet it cannot be said that Congress was too severe in its judgment. Hopkins, with characteristic temper, court-martialled those who had complained of him, and then sued them for libel in the civil courts—a poor remedy for an injured reputation, and in this case bringing none. It is difficult to accept the opinion of Mr. Field that Hopkins was sacrificed to the spite of men whose influence was very powerful, and whose enmity he had incurred by denouncing their guilty practices. Nor could the prejudice against New England so freely expressed in Congress account for the result. Schuyler was kept down by a prejudice of New England against him, and at this time that prejudice was in the ascendant, controlling Congress in its decisions on the Northern army. How, then, could a general prejudice of an opposite nature accomplish all that Mr. Field attributes to it? There was enough in Hopkins's own acts and character to account fully for what was done, and it is nothing against him to admit it. His habits were those of sea-captains of the time, and the picture of the interior of a public house in Surinam, reproduced in this volume, tells the whole story.

Mr. Field has made an interesting volume, but it could be wished he had printed more of Hopkins's letters.

### Atkinson's Elementary Botany

By Prof. Geo. F. ATKINSON of Cornell. Profusely illustrated. xiii + 444 pp. 12mo, \$1.25 net.

Nature (London): "This is one of the best little books of its kind it has been our lot to look through for a long time. Pleasantly written, admirably printed and illustrated, it forms an excellent introduction to the study of the science of botany, and Professor Atkinson is to be congratulated on the way in which he has fulfilled the task he has set himself."

### Barnes's Plant Life

By Prof. CHAS. R. BARNES of the University of Chicago. With about 400 illustrations. 494 pp. 12mo, \$1.12 net.

### Holden's Elementary Astronomy

By EDWARD S. HOLDEN, sometime Director of Lick Observatory. (American Science Series.) About 400 pp. 12mo (October).

This book aims to present the most significant results of ages of astronomical observation, so as to give wide general views and at the same time a luminous idea of the most important of the special methods of the science. Being designed for beginners, the topics are treated at length with great clearness.

### Kingsley's Vertebrate Zoölogy

By Prof. J. S. KINGSLEY of Tufts College. 417 pp. 8vo.

A new book by the author of "The Elements of Comparative Zoölogy." It is very fully illustrated, and can be used as a companion to McMurrich's "Invertebrate Morphology."

### Martin's The Human Body

#### Entirely New Edition

#### of the Briefer Course

Revised, with Practical Exercises by Prof. Geo. W. Fitts, of Harvard. xiv + 408 pp. 12mo, \$1.90 net.

Prof. Henry B. Ward, of the University of Nebraska: "Martin's has always been a most admirable book from a scientific point of view, and the addition of the appendices, particularly that on demonstrations and experiments, will do away with the single objection urged against the book hitherto."

29 WEST 23D ST., NEW YORK, 378 WABASH AVE., CHICAGO.

Publishers, Boston

BOOKS.—All Out-of-print Books supplied, no matter on what subject. Acknowledged the world over as the most expert bookbinders exist. Please state wants. BAKER'S GREAT BOOKSHOP, 14-16 John Bright Street, Birmingham, England.

FREE READING.—UNITARIAN LITERATURE and printed sermons sent free by addressing F. O. Box 373, Concord, Mass.

### Peabody's Laboratory Exercises

#### In Anatomy and Physiology

By JAMES E. PEABODY, of the High School for Boys and Girls. New York. x + 79 pp. 12mo. Interleaved. 60c. net.

Forty-five simple and unobjectionable experiments.

Prof. H. C. Sumner of Brown: "An exceedingly useful and thoroughly up-to-date manual."

### Torrey's Elementary Chemistry

By JOSEPH TORREY, Jr., of Harvard. 437 pp. 12mo, \$1.35 net.

A systematic course of instruction accompanied by carefully chosen laboratory work, mainly quantitative in character, suitable for well-equipped schools and elementary college classes.

### Underwood's Moulds,

#### Mildews and Mushrooms

A guide to the Systematic Study of Fungi and the Mycetozoa and their Literature. By Prof. LOUIS M. UNDERWOOD of Columbia. Illustrated with ten Helotype plates, one colored. 298 pp. 12mo, \$1.50 net.

The chapters cover the Relations of Fungi to other Plants; Reproduction, Constituents, and Habits; Phycomycetes, Ascomycetes, Fungi Imperfecti, Basidiomycetes, Fungus Allies, the Study of Mycology in general and in America; the Geographic Distribution of American Fungi, Methods of Collection and Preservation—Hints for Further Study.

There are indexes—I. to Latin Names, II. to Root Plants, III. to Authors and Collectors, IV. General Index and Explanation of Terms.

### Woodhull & Van Arsedale's

#### Chemical Experiments

By Prof. JOHN F. WOODHULL and M. E. VAN ARSDEALE, both of Teachers' College, New York City. 136 pp. 12mo, 60 cents net.

An elementary laboratory manual of the chemistry of every-day life, air, water, combustion, bleaching, alkalies, soaps, etc.

### Evans's Algebra for Schools

By GEORGE W. EVANS of the English High School, Boston, Mass. 433 pp. 12mo, \$1.12 net.

Aside from a number of novelties, the book is distinguished by two notable features: I. Practical problems form the point of departure at each new turn of the subject; II. It contains nearly 3,500 examples, none of which are repeated from other books.

Prof. Paul H. House of Harvard: "The author has certainly been successful in presenting the essentials of elementary Algebra in a thoroughly sensible way as to sequence of topics and method of treatment."

# The Nation.

NEW YORK, THURSDAY, SEPTEMBER 7, 1899.

## The Week.

The religious press of the country appears to have been struck dumb by President McKinley's grisly speech at Pittsburgh. Of the dozen or more of last week's denominational journals which we have looked over, only one or two so much as refer as a matter of news to McKinley's summons to the slaughter, and not one utters a word of either approval or condemnation. This must mean that there is a good deal of searching of heart going on in religious circles. At least one week more of reflection will be necessary before the professed heralds of peace can bring themselves to go in for a war of extermination. But why do the religious papers conceal from their readers the fact that slavery and polygamy are now thriving under the American flag in the Sulu archipelago? Perhaps the editors are really ignorant that such is the fact. It has been so carefully burked in the *Tribune* and other head-in-the-sand newspapers, that it may not have reached the ecclesiastical sanctums as yet. It cannot be that Christian ministers will hold their peace when they find McKinley annexing slavery and polygamy, and promising not to interfere with them. We think that the country would even consent to see the flag "hauled down" under these circumstances.

A great deal of valuable information concerning the exact situation in the Philippines is furnished in the letter from the *Evening Post's* Manila correspondent, dated July 29. He confirms the statements which have been made by many returning army and navy officers, and by other visitors to the islands whose utterances have been published during the past few months. After a year of occupation and six months of fighting, we hold to-day barely more than 1 per cent. of the territory of the islands, and have in subjugation not over 5 per cent. of the population. From 15 to 18 per cent. of our troops are incapacitated for service by sickness due to the climate, and so anxious are they all to get home that only enough to organize six companies, instead of seven regiments as claimed, can be induced to remain after their time has expired. The way in which "official news" on this latter point has been manufactured was shown by Congressman Lentz, in his speech at Cooper Union on Monday evening. He said that when a dispatch from Gen. Otis was given out at Washington, reading, "Volunteers willing to re-

main," he went to the War Department and asked to see the original, which proved to be as follows: "Volunteers unwilling to resign, but willing to remain until transports arrive." That was a feat in "editing" worthy of the most expert partisan journalist that ever conducted an "organ."

One clear case of our bad faith in the Philippines is our use of the money raised by taxation. Article VI. of the proclamation issued by the Philippine Commission on April 4 explicitly promised that "the public funds" should be "applied only to defraying the proper expenses of the establishment and maintenance of the Philippine government," and that "local funds collected for local purposes shall not be diverted to other ends." On top of this comes the admission by the Washington authorities that Gen. Otis has collected something like \$5,200,000 in taxes; and that of this he has spent only \$200,000 in public improvements, while appropriating \$3,000,000, with the approval of this Government, to the uses of the American army; a balance of \$2,000,000 remaining on hand. Yet the natives are blamed for saying that the Americans are liars and oppressors, and for complaining that they are worse off—taxed more heavily and given less liberty—than under Spanish rule. President Schurman, in his tardy conference with Mr. McKinley, may be inquiring why this particular promise made by the Philippine Commission was so flagrantly broken.

The election in the Eighth Congressional District of Missouri on August 29, to choose a successor to the late Representative Bland, was of national importance. This is not because the opposing candidates were men of national reputation, as his persistent leadership of the free-coinage movement had made Mr. Bland, but because the campaign was conducted solely on the issue of the expansion policy, and the verdict was to be the first expression of popular opinion on that issue at the polls. The Democratic convention of the district adopted a platform which declared that "we are unreservedly opposed to the militarism and imperialism of President McKinley," and the Democratic candidate made his fight on this plank. The Republican platform expressed the belief that it is "the duty of Congress, as declared by our President, to establish a form of government suited to the needs of all the inhabitants of the territory that the providence of Almighty God and the fortunes of war have brought under our control"; and the Republican candidate strongly upheld the President's policy,

publicly announcing from the stump that McKinley's administration and Philippine policy were on trial, and that to defeat him would be a declaration by the people against that policy. The Republicans entered the campaign with perfect confidence that they would greatly reduce Mr. Bland's majority of 2,800 a year ago, and with strong hopes of "redeeming" the district, especially as there had been dissensions over the Democratic nomination, and the candidate selected was objectionable to the extreme silverites. Instead of this, the Republicans have lost ground, and their candidate is beaten by a larger majority than in 1898.

A Republican organ which warmly supports the expansion policy, recently quoted the platforms of the two parties on this issue, and remarked that, "as will be seen, the two parties take opposite grounds on the expansion question, and it will be interesting to know with which side the majority of the voters agree." Another newspaper advocate of expansion said on the very day of election that the result would be "interesting, because the candidate of the Democracy is an open opponent of the retention of the Philippines and the prosecution of the war to enforce the authority of our flag." There are other interesting features of the result than the overwhelming defeat of the expansionists. One is the fact that the Philippine business was the one thing which engrossed the attention of the people. Another is the fact that the Republicans lost most heavily where the most canvassing was done by the Democrats along anti-expansion lines, and that "Republican strongholds" refused to support the Administration's policy. A third is the indication of the attitude of the German-Americans toward this new issue. These voters are particularly strong in Osage and Cole Counties, and the Republican vote in these two counties was cut down by 500 to 600. The opponents of imperialism have reason to feel greatly encouraged over this result.

The voters of Ohio deserve the commiseration of the nation. They have to choose between a ticket named by the Republican boss upon a platform which commends the President for his recent assault upon civil-service reform, a ticket headed by the Democratic boss, and an independent candidate who is a crank. It will not be surprising if a good many of them take to the woods on election day. With any other candidate than John R. McLean, the Democrats had a fair chance of carrying the State, but they have thrown that chance away. McLean decided this year to name

## SAYING DITTO TO SPAIN.

The brutal note in President McKinley's latest Philippine war cry has evidently startled his warmest supporters. "There will be no useless parley, no pause until the insurrection is suppressed." Not one of McKinley's champions in the press of this city has commented on this announcement of a policy of extermination, except with the significant comment of shamefaced silence. They know, if the President does not, where his truculent sentiment came from. It was made in Spain. McKinley is only saying ditto to Weyler, to Polavieja, to Arolas. His threat will carry no surprise to the natives, for they will see in it only a repetition of the fulminations of Spanish Governors-General. To them it will be but one oppressor upholding the language and employing the methods of another. So far as the President is able to commit the United States to a policy in the Philippines, he has now committed us to the Spanish policy. After long denouncing it with unmeasured hatred and abhorrence, we embrace it.

There is no concealment about it. Secretary Root, with the usual *insouciance* of a civilian Secretary of War, has announced that from now on the war will be prosecuted with "vigor." Senator Elkins interprets this to mean "relentlessly." Naval officers are saying that the thing to do is to blockade every Philippine port and starve the inhabitants. The soldiers in the field have got tired of abandoning towns for the use of the natives, and now burn every house to the ground as they withdraw. In short, the plan of carrying on a "philanthropic" war—of killing people tenderly, and with tears in our eyes—has been abandoned. From now on we are going to kill, burn, ravage, without rest or remorse. The President of the United States proposes to better the instruction of the cruellest Spanish general that ever launched his bloodthirsty decrees in Manila.

It has taken Mr. McKinley a long time, and has doubtless cost him many struggles, to come over to the policy of inhumanity. We may measure the distance he has travelled by comparing his Pittsburgh speech of Monday week with his Boston speech of last February. Then he was all adrip with the milk of human kindness. Every drop of Filipino blood spilled was "anguish to his heart." He was determined to make the natives feel that "we are their friends, not their enemies," by "affording them every opportunity to prosecute their lawful pursuits." So, too, in his illegal proclamation of last December, Mr. McKinley assured the inhabitants of the Philippines that we came "not as invaders or conquerors, but as friends, to protect the natives in their homes, in their employments, and in their personal and religious rights." From all that to the Pre-

sident's no-quarter speech at Pittsburgh is a long journey, though made in so short a time; it is the journey from Lincoln to Torquemada.

Now, we have no idea of trying to make Mr. McKinley out a monster personally. Let him be as amiable and kind-hearted a man as his friends assert him to be. His sudden blossoming out into a merciless conqueror is not a personal, so much as it is a political, development. He has simply stepped into Spain's shoes in the Philippines, and he necessarily begins to look very Spanish. Continuing Spanish methods of taxation, sincerely flattering Spain by imitating her method of calling upon the natives to submit or be killed, it is no wonder that, having begun by saying A and B, he is now saying Z, and undertaking the subjugation of the islands in the very spirit of a Spaniard, announcing his purpose in the words that might have been taken from a proclamation of Gen. Weyler. The cruel situation has been too much for a kindly man. His philanthropy has been slowly transmuted into truculence.

No account of our going over to Spanish methods in the Philippines would be complete which left out the analogy between the Spanish archbishops and the American Methodist bishops. Read the effusive address to Mr. McKinley by Bishop Fitzgerald, at Ocean Grove, week before last. A fighting bishop of the Middle Ages never made a more frightful mixture of war and religion. The President was carrying the flag to the other side of the globe, but he was also "marching with the forces of the Lord under the Banner of the Cross." The Archbishop of Manila never surpassed that. Think of it! Here was a President who had just completed an agreement by which the American flag was again made to float over slaves, as well as over Mohammedan harems; who had encouraged his ally, the fierce Mohammedan chief, Datto Mundi, to fall with his Mussulmans upon the Christians in Zamboanga and slaughter them like so many Armenians falling before Bashibazuks; who had announced his purpose to carry the torch and sword to every part of Luzon—and a Methodist Bishop rises to declare all this the service of God! "In the prophets of Jerusalem I have seen an horrible thing; they walk in lies and strengthen the hands of evil-doers, that none doth return from his wickedness."

## THE LIFE-SAVING SERVICE.

Civil-service reform has won such victories as it has achieved largely against the opposition, or at least without the help, of those in whose hands the administration of the merit system would rest. It has been a rare thing for the head of a bureau to show any satisfaction over the application of the rules to his force. An earnest appeal from such

an official for the extension of the classified service to his subordinates would be pronounced incredible by most people familiar with the subject.

But there is one branch of the government which is entitled to this credit. The United States Life-Saving Service, which was organized on the present basis in 1871, has from the very first been controlled by men who sought to make merit the sole test of employment and retention. The chief officers, more than twenty years ago, urged upon Congress the necessity of legislation to hold off the spoilsmen; and, after long effort, they procured the enactment in 1882 of a provision that "the appointment of district superintendents, inspectors, and keepers and crews of life-saving stations, shall be made solely with reference to their fitness, and without reference to their political or party affiliations."

Mr. Sumner I. Kimball, who has been General Superintendent for more than twenty years, holds that this is the first enactment ever made distinctly proposing the exclusion of political considerations from appointments in any branch of the civil service. Without waiting for Congressional action, Superintendent Kimball and the other chief officers had from the first attempted to enforce this principle. District superintendents were always instructed in making their nominations for keepers, and keepers in employing surfmen for their crews, to pay the strictest regard to professional qualifications, to the exclusion of every other consideration. But there was great trouble with the partisan rapacity and activity of persons outside of the service, and every effort was made to reduce places in the service to the level of partisan spoils. In one or two newly organized districts these influences triumphed for a brief time about twenty years ago, with the result that Mr. Kimball redoubled his efforts to secure the law which was finally enacted in 1882.

In reviewing, in his last annual report, the history of the long struggle for the best possible system, Superintendent Kimball says that, while the statute of 1882 brought much relief, it did not end the attempts of the spoilsmen to subordinate the service to political uses and personal ends. Frequent endeavors were made, "sometimes springing from more reputable sources than could be expected," to induce the officers of the service to circumvent the law, or to treat it as a dead letter. When the political complexion of the Administration changed, as after the election of 1884, unfounded charges were made that the officers had conducted the service in the interest of the party which had just gone out of power; and when called upon to be specific, the bringers of these charges affected surprise that a thing so obvious should be doubted, and ridi-

culed the idea that proof should be deemed necessary.

It became clear that relief could be secured only by the inclusion of this bureau within the classified service, and for this Mr. Kimball and his allies labored. President Cleveland's comprehensive order of May 6, 1896, made the change which had so long been sought, and the action was hailed with delight in the Superintendent's office. The new system has now been tried long enough to test its practicability, and it has more than realized what was expected of it. Original admission to the service was fixed at the grade of surfman, the chief qualification for which is, of course, surfmanship. Competitive tests by actual trial in the surf would be expensive and dangerous. Written examinations would not fulfil the purpose. Experience was, therefore, made the criterion, and the names of all competitors attaining a percentage of 70 are entered upon the register of eligibles. Whenever a vacancy occurs at a station, the keeper makes requisition upon the district superintendent for a certification of eligibles, and the names of the three eligibles standing highest on the register for the section in which the vacancy exists are furnished, from among whom the keeper makes his selection, certifying that the choice has been made with reference to fitness only, and without reference to political or party affiliations.

When a vacancy occurs in the place of station-keeper, the district superintendent and the resident assistant inspector jointly recommend the member of a crew in the district whom they deem best fitted for the position, setting forth explicitly their reasons. Written examinations are employed when the place of district superintendent is to be filled, as such officials must be able to solve ordinary problems in arithmetic, keep accounts, conduct correspondence, and use business methods generally. All the keepers in a district where a vacancy occurs are therefore invited to participate in a written competitive examination, and the general superintendent picks out one of the three who stand highest.

The experiment has been tried long enough to warrant a judgment, and Superintendent Kimball reports that "the application of the civil-service rules for the ascertainment of the qualifications of candidates for appointment and promotion has proved quite satisfactory." The first admission to the service under the civil-service rules was on April 1, 1897. From that date to December 1, 1898, a period of twenty months, 389 surfmen were appointed, 17 of whom proved unsatisfactory and were discharged. On the other hand, during the twenty months preceding April, 1897, there were appointed under the old method—that is, each keeper selecting his own men—459, of whom 46 proved

unsatisfactory, and were discharged. In other words, under the new system only 1 out of every 23 has proved unsatisfactory, while under the old system 1 out of every 10 so proved, the percentage of unsatisfactory men under the old being more than double that under the new. Mr. Kimball thus summarizes the beneficent results of the change upon the general condition of the service:

"The relief which the legislation of 1882 failed to bring promises to be realized with the new order of things, and the difficulties and vexations which that law only alleviated seem likely to disappear. Nobody now charges that the appointments in the service are made to subserve political or personal ends, nor, since the promulgation of the President's order of July 27, 1897, prohibiting removals except for just cause—a logical corollary of the civil-service law—that, when removals are made, they are dictated by party spirit or to promote individual interests. Contentment and quiet have superseded the anxiety and excitement which formerly periodically swept along the coast, the officers are permitted to devote their time and talents exclusively to the promotion of the welfare of the service, and the service itself seems to have gathered added strength for a career of usefulness which may excel the notable record of the past."

#### DREYFUS'S ALLEGED CONFESSION.

Capt. Lebrun-Renaud's appearance, out of the regular order, in the Dreyfus trial on Thursday, marked the desperation of the Generals of the prosecution. The alleged confession of Dreyfus on January 5, 1895, is their last card. They had previously played the secret dossier, only to have it shown to be patent nonsense. They had striven in vain to make out a presentable case for the Dreyfus authorship of the bordereau. Nothing was left but the prisoner's own avowal of guilt, which they have always said would be sworn to when the time came. This has really been their trump card all along. Their answer to all charges of irregularity and unfairness in the 1894 trial has been, "Well, what of it? No wrong was done an innocent man, for Dreyfus himself confessed, when all was over, that he was guilty."

Now, there are several suspicious things about Capt. Lebrun-Renaud's testimony regarding the confession, yet it will not do to set him down as a conspirator and perjurer. He was sent by Mercier to tell his story to the President, but did not do it, for reasons that appear most unsatisfactory. He destroyed the leaf of his note-book on which he had jotted down his recollection of Dreyfus's language, which was, to say the least, unfortunate. Yet he undoubtedly thought that he had got some sort of confession from Dreyfus. Several officers are ready to swear that he spoke of it to them immediately. Moreover, if he were inventing a "confession," he would hardly have been so clumsy as to begin it with the vehement protest, "I am innocent!" This was what struck the Judges of the Court of Cassation, who said, in that part of their *arrêt* relating to the confession, after showing

that it could not, in any case, be pleaded as an excuse for irregularities in the trial of 1894:

"It is impossible to see in this language an avowal of guilt, since not only does it start off with a protestation of innocence, but it is not possible to determine the full and exact text of what was said, owing to the discrepancies between the successive declarations of Capt. Lebrun-Renaud and those of other witnesses."

One of these discrepancies has reappeared in the present trial. On August 18, Gen. Gonse swore that Lebrun-Renaud had told him that Dreyfus confessed to having delivered "simply copies" of important documents; this Capt. Lebrun-Renaud now denies. It looks as if this were only a theory of the General Staff, to account for the proved fact that not a single original document was missing from the War Department. They wanted Dreyfus to confess to having made copies, and so they boldly put that avowal into his alleged confession. But Capt. Lebrun-Renaud discomfits them utterly on this point. This is one of the signs that he is an honest man, if a bit stupid, and we suppose his testimony is explicable on the theory that he is telling what he believes to be the truth, but that he did not understand what Dreyfus was alluding to, and so muddled his words in reporting them. This, we infer, is Dreyfus's own explanation. He reproached Lebrun-Renaud, not as a deliberate falsifier, but as one who had failed in his duty to inquire the bearing of language he did not understand. Capt. Lebrun-Renaud's good faith in the whole business is also borne out by his steady refusal to say whether he thought Dreyfus's words tantamount to a confession of guilt. He doggedly said that he was only repeating words which he knew he had heard.

For full light on the mystery we have to go back to the original *interrogatoire* of Dreyfus on August 7. He was then cross-examined by Col. Jouaust in this very matter of the confession. What was the conversation he had with Lebrun-Renaud in the Cherche-Midi prison?

Dreyfus—This conversation was a monologue. I said to him, "I am innocent." I was conscious of the excited people outside to whom was to be shown a man who had committed the most abominable crime of which a soldier can be guilty. I understood the patriotic anguish which filled these people, and I wanted to cry out to them, "I am not the guilty man!" I added, "The Minister of War knows it." This had reference to what I had said to Lieut.-Col. du Paty de Clam when he came to see me. I had told him, "Say to the Minister that I am not guilty."

The President—Did you not say to Capt. Lebrun-Renaud, "The Minister knows that if I have delivered documents, they were of no importance, and it was only to get important ones in return?"

Dreyfus—I was recalling the conversation which I had had with Du Paty de Clam, and I said, "The Minister has sent to me Lieut.-Col. du Paty de Clam to ask if I did not deliver documents without importance in order to get some of importance."

The President—According to you, then, the words were those of Du Paty de Clam.

Now here we have material and a

plausible theory to cover the whole case, maintaining Dreyfus's innocence and honesty at the same time with the honesty of Capt. Lebrun-Renaud. The latter heard words of which he did not catch the import, and, putting them together stupidly, made out the extraordinary jumble which has passed for a confession of guilt. Dreyfus's simple and straightforward testimony clears up the whole puzzle and accounts for everything. But how do we know he is not lying? What evidence is there that Du Paty de Clam ever visited him and tried to extort a confession? Gen. Mercier himself furnishes it. In his deposition he read an official letter from Du Paty de Clam to himself as Minister of War which entirely confirms Dreyfus, and really gives the *coup de grâce* to this whole myth of a confession. Mercier read the letter for another purpose, and no one seems to have noticed how completely it makes an end of the alleged confession of Dreyfus.

In his deposition of August 11, Gen. Mercier admitted that he had been very anxious to get a confession from Dreyfus. So, he says (we translate from the stenographic report):

"I sent to him on December 31 Major [the title is so given] du Paty de Clam with orders to say to him that, his condemnation being plain and definitive, I could do nothing as respects that, but that the Government could still do something in the matter of his punishment; for example, by giving him his choice of place of deportation, or allowing him means of communication with his family—that the Government would show him some indulgence if, on his side, he would do something to show his penitence, and especially if he would tell the Minister of War what documents Germany had received through him."

There, if ever, was the opportunity of a confession, with indulgence promised. But what was the result? An official report from Du Paty de Clam, in which he said (we quote only the material parts):

"I have the honor to report that I have been nearly one hour in close conversation with Dreyfus. *He will not confess to anything*, declaring to me that above all he will not plead extenuating circumstances. . . . He hopes that within five or six years the matter will be cleared up, and that the enigma, which he cannot solve, will be explained. . . . *I regret not to have had better success in my undertaking.*"

What could be clearer? Secretly and formally urged by Mercier to confess, Dreyfus stoutly protested his innocence. Five days later, while again protesting his innocence, he referred to the approaches made to him, and the theories suggested to him by Du Paty de Clam, and was understood by thick-headed Lebrun-Renaud to have made Du Paty's language his own. Hence the trumpeted "confession," which turns out to be one of the easiest bubbles of the whole case to prick.

#### NO MORE ABANDONED FARMS.

The literature of summer has been noticeably wanting this year in disser-

tations on abandoned farms. In New England, where such farms have been most in evidence, the question has hardly been raised in the press. States which, two or three years ago, were issuing descriptive catalogues of deserted farms, and endeavoring, by systematic advertising, to bring tenants again to these once prosperous homes, seem not to have continued their efforts, or else to have incorporated their data in less prominent publications. Even at farmers' institutes and grange meetings, so far as reports of them have got into the newspapers, the familiar lament over the decay of New England agriculture has been chiefly conspicuous by its absence.

The reason for this is soon told. Discussion of abandoned farms has waned because that class of farms has now largely disappeared. One may travel far, through even the remote sections of New England, without finding any large number of farms which may properly be called deserted. The solution of what, at one time, seemed a serious problem has not, to be sure, been found in quite the way that many people expected. There has been no great "return to the country," and no large permanent addition to the farmer class from the ranks of those born and bred in cities and towns. That an abundance of cheap land, once the fact were known, would offset the attraction of great centres of population, has not been demonstrated. The abandoned farms of New England, once numerous and now infrequent, have been taken possession of by persons other than those who it was once hoped might flock to them. Some have been bought by wealthy and fashionable people, and turned into more or less elaborate summer places. Others have been taken up by professional men of limited means, drawn by the prospect of obtaining a vacation home at small expense. A good many have passed into the hands of owners of adjoining property, who have at last come to see that, other things being equal, a large farm is likely to be more profitable than a small one. Some have been acquired for the timber they bear, and a few have been bought for speculation. In one way or another, however, the list of abandoned farms has been greatly reduced, until in many sections the number is not greater than would be expected under normal conditions.

It is very apparent, however, that this change is none the less a revolution because quietly wrought. What the full effect is to be in the farming industry of New England, has yet to appear; but some of the results are already discernible. To begin with, the lazy, shiftless, and ignorant farmer, whose premises are an eye-sore to every passer-by, and whose dull effort returns but the most meagre existence, is being crowded out, and forced to seek a place better dis-

posed to tolerate him. Further, there is a distinct improvement in agricultural methods. The complaint of many old residents that the newcomers are only "summer people," and not bona-fide farmers, will not bear examination. As a matter of fact, an increasing number of the once-deserted farms are being cultivated and improved as never before. Modern buildings, labor-saving machinery, and scientific tillage are everywhere the order of the day. The grade and value of stock, especially cows, and the quality of orchards, are unquestionably improving. Many old farms now support fine herds of high-grade or registered cattle, and return their owners a substantial profit from the sale of butter and milk. A strong impetus has been given to the movement for good roads. Of "fancy" farming one sees, on the whole, very little, for the reason that most of the new business is carried on by men with small capital, who practise economy not only because they have to, but also because it pays. What one gathers is the impression that an ancient industry, long bound to traditional methods, is being reorganized on a basis of scientific knowledge and business principles.

Socially, too, the effects are beginning to show themselves. The presence in a community of one or two well-ordered farms, economically administered, has an unmistakable tendency to provoke discussion and, eventually, imitation. There is a multiplication of wants, with a higher standard of living as its inevitable result. General improvement of the appearance of things becomes at once desirable and expensive. It costs more to live because one needs more in order to be satisfied. It seems clear that this upward pull, exerted by the presence of an increased number of persons relatively well-to-do, must in the near future cause a sharp rise of wages, and at the same time drive to the wall the small farmer whose ability or resources will not allow him to keep up. Indeed, both of these processes are now actually going on. In many parts of New England, farm labor is more difficult to obtain, and commands a higher price, than was the case five years ago; while the farmer with no capital but his hands, and indisposed to adopt scientific methods, sees both the quality and the quantity of his product relatively declining, and his chances of profit growing less and less.

For New England, therefore, the disappearance of the abandoned farms means social transformation. The day of the "old-fashioned farmer," who lived upon what he raised, and sold only what he could not consume, is past, never to return. The farms of New England are being taken up more and more by men who, not wholly dependent upon them for their living, devote themselves to special crops, do their work by hired

labor, and are themselves, for considerable portions of the year, absentees. The demand for a country place is accompanied by the demand that that place shall pay for its keeping. That the process will eventually give us a type of alternating town and country life, akin to that prevailing in England, is by no means improbable, if, indeed, such a type is not already established. The resident farmer, on the other hand, has but two courses open to him, if he wishes to be assured a comfortable living. He may accept the new conditions and become himself a landed proprietor and agricultural *entrepreneur* on the new scale, or he may resign his independence and become a hired man. For there is going on quietly, in our day, a social and industrial change likely, before many years, to give the development of the farms of New England into the charge of men who themselves never swung a scythe or held a plough.

#### THE PLAGUE AND THE EUROPEAN.

NEW HAVEN, August 31, 1899.

The bubonic plague is in Oporto. The wonder is that it has not found lodgment in Europe before this. But now that it has come thus far, it may be useful to inquire whether its previous course warrants anxiety on the part of European and American officials.

From the more or less sensational accounts of the newspapers during the outbreak in India in 1896-'97, it seemed as if the plague had appeared suddenly and then swept with great rapidity over a wide area. Even were this the case, it must still be remembered that the swift spread of an infectious disease in a sub-tropical environment by no means implies a similar power of propagation in the Occident. But it is a mistake to suppose that the plague appeared suddenly in alarming strength, or that it extended itself with baffling haste through an unprepared population. Not only were the people well warned and in a state of anticipation (that they were not better prepared was their own fault) as the disease advanced from one outpost to another, but each step forward was taken so leisurely that it seemed rather as if the Great Death were reluctant to fulfil its obvious mission and hesitated as long as possible, until forced by the very apathy of its victims to do its work. It is true that when its strength was fed and its appetite aroused, it did not loiter in its task of destruction, but the appetite followed on the feeding, and the feed was, so to speak, thrust upon it.

To drop the native personification, the plague even in Bombay, or at its best, was at first not a serious matter, and would not have become so had not the sanitary conditions been unspeakably favorable, and the people inconceivably loath to adopt defensive tactics against it. The latter was, after all, the more powerful factor in favor of the plague, as was well shown at a later date when it entered Calcutta. For filthy as is Bombay (and the wards where the plague first appeared were the filthiest in the city), Calcutta is even worse. The latter has the finest modern buildings and the vilest slums of any city in India; but, by the time the plague arrived at the mouth of the Ganges,

it was met by European science, and routed by it, despite the opposition of the natives. The latter did what they could to oppose, not the plague, but the enlightened opposition to the plague offered by the "foreign tyrants," and that the death-list in Calcutta was so small is due entirely to the fact that the tyrants were in control.

In Bombay, not only were the natives in control for more than six months after the plague appeared, but they had pecuniary interests which went far to make them more apathetic than they are by nature in the face of "God-sent" calamity. To be plain, municipal affairs are in the hands of the City Council, and the City Council numbered many native fathers of the town, who owned and drew heavy rents from the very buildings which fostered the plague. The suggestion that some of the worst of these buildings should be destroyed was naturally opposed, but no less hostile were the worthy fathers to the demand of their few European colleagues that these houses should be made decent or at least be disinfected—for such a procedure would have driven away tenants and reduced rents. It was much better to let the tenants die, for then new ones would come in at once, whereas if the huge caravanseries in which live the lower classes were renovated or disinfected, prospective tenants would be scared away. No one wants to live in a house which has been infested with European magic-powder or in one liable to receive visits from European doctors.

Thus from the outset the plague was hidden, fostered, and encouraged. It began with a few victims, and had they been isolated at once it could never have spread. Instead of this, long after it had slowly gained strength in Mandvie Ward, where it originated, sick patients were whipped away at dead of night and hidden in the next district to infect an environment equally susceptible to disease on account of its equal filth and physical weakness. It is, in fact, an historical incident of no little importance in estimating the growth of the plague that Kamatipur Ward, which stands next to Mandvie Ward in point of filth and density of population of the lowest class, was deliberately infected in this manner. The plague had been confined to a few blocks, not because it had been encountered or hedged in, but because it spread very slowly, when a lad sick with plague was stealthily taken out of the filthy nest in which he was dying and packed off to Kamatipur. In three days the plague broke out in the latter ward, and so it was, as far as could be traced, in each advance of the disease. For whether the plague is contagious or infectious may still be disputed, but there is no doubt that, given the right soil, the seed springs up when carried from one place to another by the human dirt in which it breeds.

In June, 1897, I wrote in a paper, published that same summer in the *Forum*, that the plague had been exterminated through the energetic action of Gen. Gatacre. And so it had. For a fortnight there were no cases in Bombay. But then succeeded cholera and, worse than this debilitating stroke, the inevitable result of renouncing all precautionary measures. That the plague reappeared again and has been in Bombay ever since, is due simply to the fact that one inefficient committee after another has fooled with the disease. But, above all,

and most careless and sinful, when the plague-infected residents who had escaped from the city began to return, no efficient means was taken to prevent their bringing back the plague. This is the sole secret of the long continuance of the disease. Two months after it was discovered, it was "under control"—result, discontinuance of precautionary measures and recrudescence of plague. Six months after this (under European management) it was stamped out—result, again discontinuance of precautionary measures, with revival of the disease. Gen. Gatacre sent to Egypt, the natives again in command of the town, and the town still in command of the plague.

But while it is evident from a study of the growth of the plague in Bombay that it can be headed off and stamped out, it must further be remembered that Bombay natives are not Europeans. Dirty as are southern Europeans, neither they nor their homes can compare with the lowest Hindus and Mohammedans of Bombay. There the plague had its best soil; in Europe or America, the conditions of climate and habit are such as to preclude the possibility of the plague making much headway if met at once by rational methods of defence. Irresponsible papers report that the plague has reached Oporto direct from India, possibly through infected hides! Both these statements are false on the face of them. No merchandise communicates the plague. This has been shown repeatedly, notably in the Marseilles plague. Further, hides "infected" (implying that the animals were sick) are an impossibility. The only animals affected by the plague are men, rats, and pigs. But, above all, there is not a case known where, even in human subjects, the plague germ has taken over twelve days to develop, and a longer time than this is required to come from India to Oporto. Unless, therefore, a plague patient was allowed to leave India, and gave the disease to another *en voyage*, the tale of direct importation is a fable. It was perhaps introduced from Egypt, where it is now mildly active.

The lesson for us to learn is that no very long quarantine need be established against the plague, and especially that even if it finds entrance into the country there is not the slightest reason to be afraid of it. And here the difference between Oriental and Occidental susceptibility to plague is most reassuring. Even the Bombay papers published accounts of deaths of Europeans; but those familiar with social conditions in India know that the half-breeds, Eurasians, always call themselves Europeans. Now the Eurasians died of plague like natives, but their families had the death reported as "European," especially if name and place were given. This was matter of common talk in Bombay, and indeed it was impossible that real Europeans should be confused with Eurasians in so small a society. It was in fact not till January, 1897, that any European died of plague, and he was a doctor who had not only been in constant attendance on plague patients for four months, but had, the day before he was stricken, neglected to dress an open cut on his finger. After this there were a few deaths among the hospital nurses and Italian sailors, who were in continual contact with plague patients. The ordinary European went about his daily business and even joined unharmed the soldiers

called out to help "inspect," that is, visit, the very haunts of the plague. Even in India a sufficiency of good food and daily baths were prophylactic. In the case of those unable to eat and bathe enough, as in the slums, immediate isolation and disinfection were all that was required, till, through the stupidity of the municipality, discipline was abandoned and the Great Death was invited to make itself at home. WASHBURN HOPKINS.

# MEMOIRS OF MME. DE LA FERRONAYS. —III.

PARIS, August 23, 1899.

Madame de la Ferronnays enters with some detail into the life of the Count and Countess de Chambord, which will be found interesting, even by those who are unable to read the memoirs of Dangeau. We learn in her book that "Monseigneur detested all public demonstrations of piety, and would not bear, in any other affairs than those which interest the conscience, the intervention of priests, any more than of women." In this last respect, he tried, probably, to differ from some of his most famous ancestors; but could anybody affirm that the Countess de Chambord had no influence over him, and that she did not use it, sometimes, to the detriment of his best interests? Speaking of Madame de C—, who was lady to the Countess, Madame de la Ferronnays says:

"She was goodness itself, but also a nullity — the kind of woman that suited the Count de Chambord, who feared very much having in his house persons whose intelligence might incline them, by their necessary relations to Madame, to politics. Monseigneur, besides, was very *autoritaire*, and I laughed inwardly when I heard good *ultras* express the fear lest, once in France, he should show himself too liberal. Nobody was less so than he. In the event of his restoration, he thought of organizing in France departmental assemblies to which would be attributed larger powers than those of our present councils-general, for the promotion of decentralization. All his sympathies were with the provinces and provincial people; he feared Paris, a little like Louis XIV., who kept a bitter memory of the day when, at the beginning of the Fronde, it was found necessary to take him out of it. The Count's confidants knew his views on this subject, and the secret of it was well kept."

Madame de la Ferronnays, on leaving Frohsdorf, once made the tour of the Ottoman Empire. She tells us that she visited the harem of Khamil Bey, whose function it was to introduce the Ambassadors. The wife of Khamil asked her what she should think if her husband had several wives in his house. "I answered, to her great astonishment, that there was such a difference between Mussulmans and Christians that the latter had a different house for each wife." Perhaps Madame Khamil did not quite understand this answer.

Among the Senators of the new Empire were two Legitimists, the Marquis de la Rochejaquelein and the Marquis de Pastoret. The name of the first, and the favor with which the second was regarded by the Count de Chambord, rendered these desertions odious. The indignation with which they were received arrested on the slope those who might have been tempted to descend to the bottom. A Senatorship was offered to M. de la Ferronnays, or, rather, to his wife; but it was refused, though 30,000 francs a year

would have been convenient to a young "ménage à la portion congrue."

The Emperor's marriage to the Countess of Teba was celebrated with much pomp:

"We saw reappear the chamberlains in red uniforms, the ladies of the new Empress in grand court dress—all a novelty to our generation. The new sovereign, in the midst of all her splendor, was often bored. She had never loved the Emperor, and her heart remained faithful to the Marquis of A—, who had once been betrothed to her. On rainy days, in her idleness, the ladies of her household said, without blushing, that she took them to the rooms where her numerous wardrobes were kept, and that when she showed her gowns she gave them one after another those which pleased them most; it was transforming them into ordinary maids."

In 1861 the Duchess de Berry fell into great financial difficulties.

"The Princess, ignorant, like all the women of her rank, in money matters, had signed, without understanding their import, papers which involved her, and the Austrian law is, or at any rate was then, very severe. Even the Princes of the imperial family did not escape its application. The emotion and the fears of Monseigneur were terrible; to find immediately three millions was not easy. My husband had the idea of making an appeal to the royalist ladies, asking them to receive, each in the country which they inhabited, subscriptions for five years. This work, founded under the name of Maria Theresa, prospered, and was of great help."

The generous Duke de Luynes immediately sent half a million francs, and he would never accept repayment.

The Count de Chambord's sister, the Duchess of Parma, had been very unfortunately married. Her husband was assassinated on the ramparts of Parma. Carried to a mean house in the neighborhood, he had time to send for his wife, and to revoke publicly the will in which he had made Ward the tutor of his children and the regent of the duchy during their minority. The Duchess dismissed Ward, but she did not keep the regency long, as the duchy was annexed to the kingdom of Sardinia. She took refuge in Switzerland when she was forced to leave Parma, and fell very ill on her way to Venice, where she joined her brother. She died there, leaving to the Count de Chambord all the care of four very young children. "In the royalist party," says Madame de la Ferronnays, "the death of the Duchess of Parma was keenly felt, and I have always thought that, if the life of this very intelligent princess had been prolonged, she would, in decisive moments, have exercised a happy influence on Monseigneur."

M. de la Ferronnays died in 1866 at Frohsdorf, which had become the ordinary residence of the Count de Chambord after the annexation of Venice to the kingdom of Italy. Mme. de la Ferronnays has since remained chiefly in France, and many are the anecdotes which she has to tell about the imperial court. She only occasionally made the pilgrimage to Frohsdorf. The marriage of the Princess Marguerite, daughter of the Duchess of Parma, to Don Carlos, Duke of Madrid, a niece of the Countess de Chambord, was long opposed by the Count, but took place in the end, as it was desired by the Countess de Chambord. The young Duchess of Madrid had always lived apart from the world, and at Gräts Mme. de la Ferronnays remained some time with her, and initiated her undoubtedly into many things of which she was ignorant. "The Duke of Madrid was already occupied with the preparation

of the insurrection which he was on the point of provoking in the north of Spain, and in which his brother, Don Alfonso, was of such help to him." Gräts is in the neighborhood of the castle of Brunsee, where lived the Duchess de Berry. Madame, as she was called, was an invalid, and lived with one of her daughters.

"Her daughters were all three married, and the second, a widow, contracted an alliance very inferior to what her birth gave her a right to, and which displeased her family, by whom the name of Madame Conti (whom I never saw) was seldom pronounced. It seemed as if Madame felt that she found in me one of the last occasions which life gave her of speaking about France. She put endless questions to me concerning this country, for ever dear to the great race of the Bourbons, which will always be its incarnation. She asked to be informed as to all those whom she had known, what they were doing, what had become of them."

When the civil war was on the point of breaking up in Spain, the Duchess of Madrid came to Paris, and stayed with Madame de la Ferronnays, sending her to Italy with dispatches for Don Alfonso, who was then an officer in the regiment of the Pontifical Zouaves, and for Cardinal Antonelli. Madame Craven, the sister-in-law of Madame de la Ferronnays, was living at the time in Italy, at Castagneto, near Salerno.

In the winter of 1869 Madame de la Ferronnays began to open her salon, where she received all the society of the Faubourg St. Germain, which was still very exclusive, and all the distinguished foreigners. She speaks with much freedom of certain persons who much engaged public attention at the time, and among others of M. Thiers, who had become the head of the Opposition in the Chamber. The war with Germany was approaching.

"The state of health of the Emperor, whom death had already in his grasp, may be his excuse before history, and one feels some pity in thinking of what, morally and physically, he suffered during the year which has justly been called 'l'année terrible.' His state of health, well known to the Empress, was the cause of her desire for a declaration of war. She had no doubt that the war would be a succession of victories, and that, under the protection of a victorious army, in the event of the Emperor's death, she would become the regent of her son. Without her intervention, some of our great disasters and their fatal consequences would have been spared us. It was she who turned towards Sedan the army of MacMahon marching on Paris."

During the war Mme. de la Ferronnays remained in Paris. Her son was in a regiment of cuirassiers; she herself became a member of a committee of ladies, formed on behalf of the wounded. As president of the work of Maria Theresa, she had entered into relations with many persons who could be useful under the circumstances. The committee met at the Palace of Industry (now demolished in order to give place to the new palaces for the Exposition of 1900). The part of the memoirs relating to the war and to the long siege of Paris is highly interesting. Mme. de la Ferronnays did a very noble work in taking constant care of the wounded; her energetic character supported her in this great crisis, as well as the consciousness of the good she was doing. After the capitulation of Paris, she left France in order to see her son, who was a prisoner in Germany. On her way back, she stopped at Geneva, where the Count de Chambord was established with his wife. The Count took leave of her in

these terms: "Au revoir, in France. You have too long been visiting us; it is for us now to return your visits, and, but for M. Thiers, this would already have been done." "My illusions," says she, "regarding this fatal man, made me long keep secret these words, the last that the Prince addressed to me."

The latter part of the memoirs touches the negotiations which preceded the reconciliation of the two branches of the royal family, the attempts made to establish the monarchy which were frustrated by the refusal of the Count de Chambord to accept the tricolor flag, and by interesting particulars of the last moments of the Count de Chambord.

## Correspondence.

### A FRESH FIELD FOR ANNEXATION.

TO THE EDITOR OF THE NATION:

SIR: As the next step in our career of expansion, I suggest the immediate occupation of the island of Tierra del Fuego.

The advantages of such a course must be obvious to every patriotic mind. In the first place, the island is the undoubted key to the South Pole. This in itself should be sufficient. In days like these, when every nation endeavors to get as many "keys," real or supposed, as a stage-jailer in a melodrama, every American worthy of the name ought to desire such a superb addition to our own national key-ring.

The strategic advantages of the occupation would, of course, be enormous. Suppose that a hostile fleet, dispatched against our beloved land, should attempt to sail around South America. In this highly probable event, we could either bombard the miscreants from Cape Horn, or overwhelm them in the Straits of Magellan. Should further aid be required, a treaty *à la* Sulu could be negotiated with the leading Patagonians, the ladies of whose families are no doubt just as extravagant as their Sulu sisters. It is generally understood that the object of the Sultan of Sulu, in treating with the United States, was to obtain the means of supporting his harem; and who knows but that a few glass beads or bottles of hair-dye (judiciously applied to Patagonian heads) might lay the foundation of a treaty of incalculable value to the United States? To give an impoverished chieftain the means of indulging a set of extravagant chieftainesses is an excellent way to get concessions from the chieftain—and it would be just as valuable near the South Pole as near the Equator. While Uncle Sam, from his habits and traditions, may be rather new to this sort of business, yet it is to be hoped that the old gentleman will lay aside his coyness, and follow the Sulu precedent in every similar case, thus showing his profound knowledge of the springs of human nature.

It is also extremely likely that if we do not take the island, some other fellow will. This, as we know, is always a reason for our seizing territory, whether we need it or not. And the difference, in point of morality, between our "occupying" land, and somebody else's "grabbing" it, is as apparent in this case as in that of Hawaii or the Philippines.

By occupying the island, we should also renew our acquaintance with our old friend

the Monroe Doctrine, of whom we heard so much in dear old Venezuelan days, but with whom, since our Philippine achievements, we have, for some mysterious reason, been rather less intimate.

I am prepared, of course, to hear that there are traitors who would oppose the occupation. At all such I hurl defiance (in advance). To every true American heart (and to such alone do I appeal) the advantages of the plan I have suggested must seem beyond dispute.

DANIEL HOLSMAN.

No. 505 CHESTNUT STREET,  
PHILADELPHIA, August 28, 1899.

### McKINLEY'S PLAUSIBLE COLOR.

TO THE EDITOR OF THE NATION:

SIR: Your remarks upon Mr. McKinley in the *Nation* of August 24 remind me of some words of Plutarch's about Cæsar and Pompey: "If they must have indulged their thirst of victories and triumphs, the Parthians and Germans were yet to be subdued; Scythia and India yet remained, together with a very plausible color for their lust of new acquisitions, the pretence of civilizing barbarians."

A. B. H.

WESTVILLE, Mo., August 27, 1899.

### A SLAVE-BURNING ON BOSTON COMMON.

TO THE EDITOR OF THE NATION:

SIR: In John Fiske's 'Old Virginia and her Neighbors,' published last year, several colonial burnings-alive are mentioned (II., 265). These instances were in Virginia, South Carolina, New York, and one of them in Massachusetts. These are "cited as especially notable." "There may have been others," the author adds, speaking of these colonies in general; but he seems to have known of no second case in Massachusetts, for he says elsewhere: "There is one instance of such an execution in Massachusetts" (II., p. 320), though his wish there was to extenuate nothing of the ghastly roll. Another instance, however, which escaped his eye, usually inevitable, he will recognize as "especially notable," like those he chronicles. Its scene was Boston itself; it was the earliest of its class in New England, and, after lying hid longer than the *Meghewer* Log, it has only recently come to light. What was it?

There is an old tradition in my family that J. B., an ancestor born at Boston in 1665, would never eat roast pork, and gave as the reason for his dislike that its odor brought back to him a sickening whiff of wind from a woman he had seen burned alive at the stake on the Common when he was a 'prentice boy. This story I heard in the twenties—perhaps as early as 1830—at the table of my father, who in 1770 was old enough to have heard and understood it, if told by his grandfather, whose birth was 1713, and who was himself a grandson of J. B., the original eye-witness of the tragedy on the Common. Our family has never ceased to reside in Boston, and nothing breaks the continuity of the tale. The first eating of spare-rib must, season by season, have brought to mind the ancestral antipathy to that delicacy, and kept it as familiar in table talk as any household word. No link in the traditionary chain appeared likely to be forged or distorted. Yet, or rather therefore, I early began search for documentary or contemporary confirmations of what was after all demonstrated but thin-

ly. In turning over many volumes my quest was fruitless. Winsor's four elephantine octavos, which it would seem must have picked up every grain of wheat and tares in Boston annals, yielded me nothing.

So I began to waver in my faith as to the objective reality of the tragedy which our home circle had shuddered over for generations. Still, there was a kind of credence in my heart for testimony which had so long walked hand in hand with the records downward from 1713 in the folio Bible before my eyes and bequeathed down from many an ancestor. But full assurance did not come to me from without till after 1860, though it might have reached me sooner, and its actual coming was welcome.

In 1858 the only surviving child of Jeremy Belknap presented her father's papers to the Massachusetts Historical Society. A committee appointed to examine them found numerous manuscript extracts which had been copied by Belknap from a diary of Cotton Mather, which had been long supposed to have perished. The last of the extracts which they printed ran thus (Mass. Hist. Soc. Proceedings 1855-8, p. 320):

"1681, Sept. 22. A negro woman who burnt two houses in Roxbury, July 12, in one of which a child was burnt to death, was executed in Boston. She was burnt to death—the first that has suffered such a death in New England."

The 'prentice boy, J. B., who stood by this burning at the stake, was sixteen in the previous month.

The moral is, that genealogists will do well not to be neglectful of family traditions. They are clues out of many a labyrinth.

August, 1899.

J. D. B.

### PIAZZA.

TO THE EDITOR OF THE NATION:

SIR: Mr. Matthews's letter on "Piazza" in No. 1770 of the *Nation*, which I have just seen, reminds me that while I have never heard the pronunciation "P-H" which he mentions, yet forty years ago it was quite common to hear "pe-ayze" (accent on second syllable) in the country districts of Pennsylvania and New Jersey. The thing itself, as a covered veranda extending the full length of one or more sides of the house, was then supplanting the mere porch or stoop over the front door, and perhaps the pronunciation "pe-ayze" was a survival of the English "P-H." The tendency in the same country districts now is to call it a "py-assa," with a long *i* and the accent on the first syllable.

J. T. M.

PHILADELPHIA, August 31, 1899.

## Notes.

D. Appleton & Co.'s preliminary fall announcements include the fifth volume of McMaster's 'History of the People of the United States'; 'A History of American Privateers,' by Edgar Stanton Macley; 'Reminiscences of a Very Old Man,' 1808-1897, by the late John Sartain; 'The Principles of Taxation,' by the late David A. Wells; 'Oom Paul's People,' by Howard C. Hillegas; 'Russian Literature,' by K. Walliszewski; 'The Comparative Physiology and Morphology of Animals,' by Prof. Joseph Le Conte; 'Evolution of Atrophy,' by Jean Demoor and others; 'The Log of a Sea-Wolf,' by Frank

T. Bullen; 'The International Geography,' by Nansen, Markham, Bryce, Davis, and others; 'Britain and the North Atlantic,' by H. J. Mackinder; 'Scandinavia and the Arctic Ocean,' by Sir C. R. Markham; 'The King's Mirror,' by Anthony Hope; 'Mammon & Co.,' by Edward F. Benson; and 'Some Women I have Known,' by Maarten Maartens.

Henry Holt & Co. will soon publish the 'Life of Dean Liddell,' by Henry L. Thompson, Vicar of St. Mary's, Oxford, with illustrations, some after the Dean's own drawings.

'The Circle of a Century' is the title of a new novel by Mrs. Burton Harrison about to be issued by the Century Co., along with a new edition of her 'Anglomaniacs,' with illustrations by Dana Gibson.

'The Lion and the Unicorn,' short stories by Richard Harding Davis, will shortly be issued by the Scribners.

Victor Hugo's Memoirs, translated by John W. Harding, will be published in this country by G. W. Dillingham Co., who also announce 'The Funny Side of Politics,' by George S. Hilton.

R. H. Russell's fall announcements include 'The Kings' Lyrics,' poems of the time of James I. and Charles I., gathered together by Fitz Roy Carrington; 'Animal Jokes,' comic drawings by Mary Baker-Baker; and a portfolio of drawings by the German artist C. W. Allers.

A. C. McClurg & Co., Chicago, announce a new volume by Mrs. Latimer, 'Judea, from Cyrus to Titus.'

Prof. J. Mark Baldwin of Princeton is about to sail for England to see through the press the 'Dictionary of Philosophy and Psychology.'

The Rev. E. B. Parsons, Secretary (at Williamstown, Mass.) of the United Chapters of the Phi Beta Kappa fraternity, is preparing a catalogue, one line to a name, of the members, with a brief history, the constitution, list of officers, and a select obituary.

'The Publishers' Trade-List Annual' for 1899 appears in unshrunk proportions from the office of the *Publishers' Weekly*. These united catalogues are, as we have more than once remarked, of value to the ordinary purchaser as well as to the trade.

From Macmillan Co. we have volumes vi. and vii. in the acceptable Eversley Edition of Shakespeare's works edited by Prof. Herford, open in its typography and externally in simple good taste; and volume xii., still not the last, of Constance Garnett's direct translation of Turgeneff's novels, 'The Diary of a Superfluous Man, and Other Stories.'

In 'Webster's Collegiate Dictionary' (Springfield, Mass.: G. & C. Merriam Co.), we have the latest and largest in the ascending scale of abridgments of the 'International Dictionary.' It is a full-bodied octavo of more than eleven hundred pages, in double columns for the vocabulary, which is reinforced by the customary introductions on pronunciation and orthography, and appendixes, consisting of a (new) pronouncing glossary of Scottish words and phrases, a vocabulary of rhymes, one of proper names, one of English Christian names, a summary view of classical mythology, a dictionary of foreign and classical quotations, etc., etc., and the usual supply of helpful illustrations. The greater fulness of the vocabulary selected corresponds to the higher grade in years and intelligence of the class aimed at; and

that a much wider class will here find their daily requirements more than met, is past question. The plan and merits of Webster are too well known to need dwelling on. The etymologies are conditioned by the progress of the Oxford Dictionary, say as far as the letter G. The print is small (testifying to the inclusiveness of the work), but as clear as may be. In short, the new Webster will commend itself.

'The Duchess of Nona: A Complete Novel,' by Maurice Hewlett, which appears in *Lippincott's Magazine* for September, is the same story which was published in the *Fortnightly Review* for July and August, under the title "Anima Semplicitas; or, The Duchess of Nona." No intimation is given that the story has already appeared in another magazine under a different title.

The *Library Journal* for August points out that, "since January 1, Mr. Andrew Carnegie has given the sum of \$2,450,000 for the establishment or development of American libraries" in all parts of the country, leaving out of the reckoning all sums below \$50,000. More than a half of the above total went to increasing his great Pittsburgh foundation. The bestowal of \$50,000 on Fort Worth, Texas, for a library building, led to a mass meeting called by the Mayor, who exhorted citizens to come out with "horns, drums, bells, musical instruments, and any and everything that will make a noise."

A writer in a recent number of the Berlin *National-Zeitung* has an interesting description of the Körner Museum at Dresden. In the course of it he cites some particularly bloodthirsty stanzas from an unpublished "Song of Vengeance," ending with a holocaust of the French invaders of the Fatherland—

"Damit kein Grab das deutsche Land vergifte  
Mit überheilschem Aas!"

This poem was committed to the pocket blankbook presented to Körner by Frau Henriette von Pereira-Arnstein as he was about to take the field. The book, stained with the patriot's blood even to the very page of the famous "Prayer before the Battle," is now in the Museum, after a curious fate. Returned to the donor by Körner's mother, it was by the former given on request to the "philanthropic" Austrian Duke Maximilian, who carried it with him on his imperial invasion of Mexico. This is as if the original manuscript of Washington's Farewell Address or the Declaration of Independence should return to America by way of—General Otis and Manila!

The day after the murderous attack upon M. Labori, the lawyer of Dreyfus, the *Journal des Débats* had an impressive article on the old text, that lawlessness and sedition may not long with impunity be preached to the masses by an unprincipled press. The utter depravity of the Parisian journalists of the lower class, the abomination of their daily volleys of abuse against government, law, and justice, is—we say it with profound gratitude—unequalled by the worst performances of any newspapers in this country. And the same senseless abuse (not criticism) of the powers that be, which, with nauseating monotony, fills the columns of the cheap evening papers, the same incriminating names applied to the highest dignitaries of state and the courts, are echoed aloud without shame or reserve, mingled with the sacred words of *patrie*, *peuple*, etc., etc., by vulgar lips in cafés and other places of public resort. It is the conviction of many who

love liberty and pity France that what the unfortunate country needs first of all is some restriction of the license of the press. "This pistol shot," says the *Journal des Débats*, "will not be the last one, and this sad affair [of Dreyfus] will end in civil war, if respect and silence before the law be not observed by all, or, if need be, enforced on all, to whatever party or faction they may belong, and if violence, hatred, contempt of justice and law, all the fanatic, anarchical, homicidal passions, continue to poison the air we breathe."

During the summer semester of 1899 just closed, the number of women in attendance at the German universities was 355, namely: Berlin 179, Bonn 45, Breslau 27, Erlangen 4, Göttingen 29, Halle 19, Heidelberg 13, Kiel 8, Königsberg 20, Würzburg 11. The absence of female students from Munich is conspicuous. We may add that the University of Strassburg has just decided to admit women to its courses of study on the same conditions as men. Hitherto this institution has been most obstinate in resisting the innovation. There is now no German university in which women may not pursue their studies.

The price paid by Germany for the Caroline Islands does not seem so extravagant after all, when one reads the Government's memorandum concerning the islands to the Reichstag, published, together with a map of the German possessions in the Pacific, by Dietrich Reimer (Berlin). The map shows the steamship lines projected by the North German Lloyd and by the Jaluit Company of Hamburg, which latter is already in possession of factories in all the more important islands of the Caroline, Pelew, and Marshall groups, and contemplates founding colonial settlements in several places best adapted for plantations of coco and sago palms, tobacco, and coffee. Three-fourths of the exports of copra, not very extensive, so far, and mostly in exchange for German products, is being handled by this company. The climate of the Carolines, the memorandum states, is almost entirely free from fever and greatly tempered by ocean breezes; the islands abound in well-protected harbors with sweet-water streams. The new steamship lines will make regular connections with Sydney, and thus include the newly acquired possessions in the Australian network of trade.

Among the maps published by Carl Flemming (Glogau) is a good up-to-date map of Africa (eighteenth edition) by A. Herrich, sold, like most of the series, at the low price of one mark. The scale is 1:14,500,000, making a sheet about thirty inches square.

An English expedition, which left Berbera on the Gulf of Aden in November last for hunting and exploration in Abyssinia, has just returned to England from Cairo. Its route lay through Somaliland to Harar, and from thence to Adis Abeba, the Abyssinian capital. The only sign of civilization, by the way, says one of the expedition in an interview reported in the *London Times*, was the telephone running between these two places, a distance of about 300 miles. "The stations, which are about two days' march apart, are mere thatched huts surrounded by strong high stockades. The dirty Eastern hut, with its Abyssinian attendant, affords a striking contrast with the telephone and the instructions to 'Ring up Adis Abeba.'" The line was constructed by a Franco-Russian company in which Menelek is a shareholder. Among the numerous evidences of the ap-

tivity of these two nationalities in the empire are a large hospital and medical establishment at the capital with five or six Russian doctors and a staff of dispensers. But British prestige is very high at present, Menelek having been much impressed by the Fashoda incident. Not only were there no difficulties put in the way of the expedition, but permission was given to travel in parts of the country in which no white man had ever been. Leaving the capital, it proceeded in a northwesterly direction through a region full of elephants and lions, and everywhere bearing evidences of Abyssinian raids. Crossing the frontier, it entered an unexplored country inhabited by people of a negro type and ruled by an Arab. From thence the expedition reached the Blue Nile, and descended the river to Khartum and Cairo.

Even at the risk of carrying coals to Newcastle, we would call the attention of students of sociology to the excellent services rendered by the Musée Social of Paris. This institution was founded a few years ago through the liberality of the Count de Chamberlain, and is now every year giving upwards of a thousand consultations, oral or in writing, and always gratuitously, on any question pertaining to the material and moral improvement of the laboring classes. Questions of a general and familiar nature are immediately answered by the Secretary, but new questions and those requiring the assistance of specialists are referred for study to one of the sections of the Musée and answered after due investigation. All inquiries should be addressed to M. le Directeur du Musée Social, 5 rue Las-Cases, Paris, where a carefully selected library of some 15,000 volumes, and files of several hundred periodicals in different languages, are always at the disposal of the public.

The death of Robert Clarke of Cincinnati on August 26 removes a conspicuous and honored member of the book-publishing fraternity in this country. He was at first a seller, then a publisher and editor of books, while he amassed a private library exceptionally rich in Americana, which has happily come into the possession of the University of Cincinnati. Mr. Clarke was but seventy years old, having been born in Scotland in 1829. For nearly sixty years his home had been in the city by the Ohio. His services to American history (and particularly that of the Ohio Valley) as student, publisher, and collector will be long remembered, but, as he never married, he leaves no posterity to perpetuate his name.

—The *Century* for September is a "Salt-Water Number"—in a general sense apropos of the international interest in the yacht races for the *America's* cup. A thoroughly delightful contribution is Capt. Joshua Slocum's, first of four papers which are to describe his circumnavigation of the globe alone in a forty-foot sloop. The present instalment takes him from Buzzard's Bay to Gibraltar and thence to Pernambuco. It is immensely interesting, yet no more so than Bullen's "Way of a Ship" (after Solomon), which is an account of sundry ships he has sailed in and of their good and naughty ways of behavior, as full of charms and caprices as a dance of children. Another article of prominent interest is Robert S. Rantoul's "Voyage of the *Quero*," a true story of how Capt. John Derby of Salem took to England the news of the fight at Concord. Papers follow of every degree of saltiness—on lessening danger for them that go down to the

sea in liners, on Chinese piracy, on the shifting of dates as one goes East and West, on Winslow Homer's sea paintings, on a Jewish-American naval officer of the early years of the century, whose life was made a burden to him for purely anti-Dreyfusard reasons. Even Alexander the Great in this number finds himself sailing towards the sea, his conquests in India ended; while the ever-obliging Franklin, in his character of scientist, absents him from lightning and stoves awhile to study the Gulf Stream from the observations of a Nantucket sea-captain. Mrs. Van Rensselaer writes a particularly agreeable account of the Cathedral of Le Puy. Perched on its rocky peak in the "recklessly improbable and pictorial city of Le Puy," it lends the value of contrast to the briny tang of the magazine, whose salt swash somehow sets one to thinking of the sea-officer who, on his holidays, always went inland and visited an agricultural fair.

—In *Scribner's* for September Mr. W. C. Brownell has a notable appreciation of Mr. George Butler's painting, with some attractive reproductions from the artist's work. Butler's portraits, he says, "seem the painting of his idea of the subject in its suggestive, stimulating, rectifying presence"; and this artist "sees things in color, evidently, which is very different from seeing color in things." Epigram, however, is the least merit of the paper. An interesting article on and from the Canadian Wilderness, by Frederic Irland, carries the reader into a woody and lakeful distance compared with which the ordinary camping ground is civic. Stevenson's letters now date from the Adirondacks in winter, whence, in his always fascinating style, he denounces the climate as "harsh, grey, glum, doleful," and shoots out the lip at Henry James for the over-use of "immense" and "tremendous." Contemporary interest chiefly attaches to Robert Grant's "Search-Light Letter to a Political Optimist," which saddles our public troubles on the average American voter, the good fellow who cannot afford to be too particular, but leaves that to the reformers. To "strengthen the moral purpose of the plain people" is the remedy without which it is vain to abolish dishonesty in high places. This paper should be made into an election tract.

—Pendant would appropriately be J. W. Martin's article in *Harper's*, "A Cure for City Corruption," which talks instructively of Municipal Self-Government. London, Birmingham, Glasgow, and the dawning day in Boston point the moral and the way. The most humorous feature in Mark Twain's creditable pages "Concerning the Jews" is his advice to them to "organize" in American fashion. Dr. Henry Smith Williams contributes a clear and well-packed history of "The Century's Progress in Experimental Psychology." Dr. Wyeth rallies again to the glorification of Gen. N. B. Forrest, and will, we fancy, have to reckon with criticism in declaring that the massacre at Fort Pillow was no massacre but fair fighting; that there was no real violation of the truce, although "to a certain extent both the Federal and Confederate commanders disregarded the strict obligations" of the "white flag"; that "a large majority of the negroes" within the fort, and many of the whites, having had free access to liquor, were "under the demoralizing influence of this intoxicant"; and that "no cruelties were practised by Forrest's

men upon any prisoners, wounded or unwounded." The expansionist lesson for the month is delivered by Chalmers Roberts, who holds up the familiar object-lesson of Egypt under the British occupation.

—Prof. C. W. Colby's 'Selections from the Sources of English History' (Longmans) is, we believe, the first attempt to present, in a single volume of moderate size, representative excerpts from contemporary sources illustrative of the history of England. Selection is so much a matter of individual judgment, and, in the case of student manuals, is likely to depend so much upon the compiler's own way of presenting a subject to his classes, that no two authorities would agree as to just what should or should not be included in a book of this character. Prof. Colby's work, however, has been conscientiously done, and his decisions offer few occasions for other than captious criticism. To compress into a volume of three hundred pages, however, one hundred and seventeen selections, chosen from a period of eighteen hundred years, is, of course, to make a book adapted to elementary instruction only; and the editor tells us that he has been careful "to keep both passages and comment within the compass of boys sixteen years old." With this object in view, statutes and constitutional documents have been, in general, excluded, the extracts consisting mainly of narrative and descriptive pieces illustrating the course of political events or the social and industrial life of the people. A loosely written introduction deals with sources and their use; and there are brief introductions to the various selections. The arrangement is chronological rather than topical; the work, therefore, develops no special thesis and emphasizes no particular phase of the subject. Where, however, as in the United States, English history is generally taught, outside of the universities, in comprehensive courses extending over a year or less, the use of such a volume as this, in connection with the narrative textbook, cannot fail to enliven and vitalize the study and give to leading episodes something of human interest. The book is certainly to be commended to teachers.

—Prof. A. B. Hart's 'Source-Book of American History' (Macmillan) suggests a boiling down of the same editor's unfinished 'American History Told by Contemporaries.' The present volume has the characteristics already familiar in the larger work—a logical analysis of the subject, well-chosen selections, rigorous devotion to reprints *verbatim et literatim*, and elaborate introductions (in this instance by two hands besides the compiler's) on the use of the book. The result is a manual which every teacher of American history ought to know, and which every school-boy ought to read. In the more limited extent of the period with which he deals, Prof. Hart has the advantage of Prof. Colby; mechanically, too, his book is better made. Like Prof. Colby, however, he eschews "documents," and culls from letters, pamphlets, colonial records, and the like, rather than from the statute-book. Prof. Hart is nothing if not up to date; we are not surprised, therefore, to find the 'Source-Book,' which begins with Columbus's letter to Sanchez on the discovery of the New World, ending with extracts from Roosevelt's 'Rough Riders' and President McKinley's last annual message. We question the entire wisdom of insisting

as strenuously as does Prof. Hart, on the special virtue of an exact reproduction of archaic typography, spelling, and abbreviations, especially in works intended for elementary instruction. Such devotion to the old manner is very likely to fix the attention of young people on the form rather than the substance of the past, and perpetuate the mischievous notion that our ancestors were curious people, and not flesh and blood men and women like ourselves. Surely antiquarianism and historical accuracy are not quite the same thing; and, unless form is more than substance, Prof. Hart wholly misses the point in saying sententiously, as he does in his preface, that "to reduce the quaint and wandering sentences of our ancestors to order would be like putting Cotton Mather into the silk hat and plain black coat of modern society." Moreover, we think an editor ought to be consistent, and not, for example, replace the old long s with the modern form—and without saying anything about it, either. Still, this is a minor matter, of course, and will not seriously detract from the worth of one of the most useful historical school-books lately brought to our notice.

—No better proof of the effectiveness of the present Ministry of Finance in Russia can be given than by the fact that it has intrusted the department of indirect taxation to so scholarly and eminently practical a man as Nicholas Brzeski. The series of economic works with which he has enriched Russian scientific literature is rapidly becoming classical. He has now published a short résumé of the 'Village Commune and the Economic Insecurity of the Russian Peasants,' which is a lucid and final rejection of the whole system of communal ownership of land under which Russia still groans. This essay is the more timely since a commission is soon to be appointed for the purpose of subjecting the very unsatisfactory condition of the peasants to a searching scrutiny, and it is to be hoped that, in the interest of Russia's agricultural classes and of the country's future, the last traces of the system will be once and for all abandoned for the more rational holdings in severalty. When the serfs were emancipated in 1861, the visionary enthusiasm of communal ownership, superinduced by Haxthausen's discovery of the "mir," unfortunately prevailed over the sober judgment of a minority of counsellors, and the mir was left in full force as the lowest village unit recognized by the state. On the one hand, it was thought that, by leaving the land intact, and by frequent redistributions of its parcels according to the increase of hearths or male members of the family, the formation of a village proletariat would be an impossibility; on the other hand, the Government was mainly interested in securing an undiminished return of taxes from the peasants—the "taxable estate," as it is even now officially called—and this it deemed best attainable by making the commune collectively responsible for all taxes of each member.

—In practice, however, the very reverse of this has happened, in spite of all the remedial measures of the last fifteen years. The reparaillings of small holdings have in many cases led to the creation of such narrow strips that the harrow could not be run over them without interfering with adjacent plots; the uncertainty of keep-

ing the same land in the next redistribution has disorganized thorough farming and has exhausted the soil by reckless cropping; hence the frequent famines. But, worst of all, since the affairs of the mir are settled by a two-thirds vote, the "flats" and "village ogres," the shrewdest members of the village, have systematically, in legal and illegal ways, enriched themselves at the expense of the less active, or shiftless, peasants, and, as elsewhere, the rich have become richer and the poor poorer. Nor has the Government even distantly been benefited by the measure. Mr. Brzeski sees no solution of the question, and no way of placing Russia on a par with other cultured nations, except by recognizing the individual peasant as a citizen, instead of subjecting him to the tyranny of the mir.

#### THADDEUS STEVENS.

*Thaddeus Stevens.* By Samuel W. McCall. [American Statesmen Series.] Boston: Houghton, Mifflin & Co. 12mo, pp. 370.

The Statesmen Series is a very convenient, handy-volume form in which to have the biographies of our prominent public characters, though a completely adequate treatment would sometimes require an exhaustive discussion of the history of an important period with all its measures and its men. Thaddeus Stevens is one of those parliamentary leaders who are peculiarly identified with the policy and the legislation of a critical time. We talk of the President's policy and the policy of Congress as distinctly marked in the political handling of our civil war, and should not be far wrong in saying that, within the Union party, it was Lincoln's choice of measures against the theories of Stevens which were in debate, as in the Reconstruction period it was a war to the knife between Stevens and Johnson. Mr. McCall's limitations in space have made a current sketch of this history all that was possible for him; but he has given it with fair accuracy of drawing, very properly making it his task to present the personality of Mr. Stevens rather than a full discussion of measures, or an estimate of the men with whom he acted and the reasons for his leadership. The little volume will satisfy the popular demand for a short story of the life of a man so prominent in the politics of the "war period," while it will be useful to the student as an outline about which he may arrange his more extensive reading.

One of the most important facts in Stevens's career is that he did not enter Congress till his fifty-eighth year, and then, after four years of not very noteworthy service, was out of public life till his sixty-eighth year, when he was again seated in the House of Representatives, the year before the election of Lincoln as President and the volcanic eruption of the great Rebellion. His national prominence and his phenomenal energy in active leadership were altogether in his old age. After the period at which the judges of the Supreme Court may retire, and when men generally seek exemption from turmoil and struggle, Stevens began a career, and, in a time of revolutionary struggle, for nearly ten years rode monarch of the storm.

But what had he been doing during the lifetime before the striking new advent? We cannot find much that is interesting in it. It was a very ordinary career of a country law-practice and business speculations in rail-

roads and mines. We find him a competitor of Simon Cameron in local ventures both in business and in politics, but generally defeated in money-making competition and outmaneuvered in political ambition. His later admirers claimed rank for him among great lawyers. No doubt he was a forceful advocate in criminal cases and in controversies where popular effects are more important than profound learning. The strategy of debate and the power of invective are the qualities we hear most of. He had sought public position, had served in the State Legislature, and acquired notoriety in the "Buck-shot war," one of those physical struggles for legislative control, half mobbing and half standing siege. He was evidently regarded as a sort of Ishmaelite, unable to be harnessed with any party, whether Whig, Democrat, or Free-Soil; daring, combative, as troublesome to his temporary friends as he was formidable to his enemies. An important career did not open readily to him. His private life was a good deal of a piece with the rest. His lameness from a club-foot may have made him cynical as Byron's did. We hear nothing of him in social circles. He never married, and lived a lonely life to the end, meeting his fellow-men almost entirely in official relations, or in the informal groups in cloak-rooms and lobbies where his free and trenchant wit would always draw a circle about him, listening and applauding.

To such an elderly man, nearly a septuagenarian, came an entrance into public influence which he seized and made commanding. His judgment and intellectual convictions were with the party which elected Mr. Lincoln, but he could not be said to have prominence in it. In the House, however, he soon became known as a man who formulated in clearest phrase the most radical view of the secession struggle and its outcome. He satirized all efforts at compromise or conciliation. When the Crittenden resolution was under debate, declaring that "the war is not waged in any spirit of oppression" or to interfere with "the rights or established institutions of the Southern States," his way of cutting to the quick was well shown when he opposed such pronouncements by saying: "Ask them who made the war what is its object" (p. 149). A great war of rebellion being flagrant in fact, he rightly defined the actual task of the Government to be "to subdue the rebels."

It does not follow that because such a radical leader's ground was that to which all supporters of the national side ultimately came, Mr. Lincoln was wrong in keeping before the country and the world the principles of the party which elected him. The revolutionists asserted that they were forced to defend the essential rights of the States which were attacked. They had carried their people into secession by asseverating that the object of the Republicans was abolition of slavery within the States by force. Lincoln met this by calm reiteration of the disclaimer of any such purpose. In 1861 he said, If you now desist from rebellion, slavery within the States will not be attacked; but by the close of 1862 the proclamation of emancipation was in order, by 1865 the Thirteenth Amendment of the Constitution was a condition of peace. In such progress, based on public opinion in a representative government, the responsible executive wisely waits for the ripening of that opinion. The radical leader would not be a radical leader if he were not in ad-

vance of the policy which would at the moment be sustained.

When the time for reconstruction came, the defeat of the rebellion had made abolition a foregone conclusion, not only because the magnitude and persistence of the war had made more radical terms of peace necessary, but because the offer by the Confederacy to enlist slaves avowedly included a promise of freedom, and by necessary implication led to general emancipation. Abolition was not now a radical condition imposed by the conqueror; it was the logical outcome of the situation recognized and in principle accepted by the legislation of the Confederacy. All thinking men at the South confessed that slavery was dead. The nature of radicalism in Mr. Stevens now showed itself by demanding more than was thus confessedly won. He demanded immediate suffrage for the freedmen. In the general opinion of the country it was so necessary that a period of education and progress should intervene between the degradation of chattel slavery and political sovereignty, that Mr. Stevens boldly appealed to motives of mere partisanship to overcome the popular hesitation to step upon such dangerous ground. With negro suffrage, he said, "there would always be Union white men enough in the South, aided by the blacks, to divide the representation, and thus continue the Republican ascendancy" (p. 263).

Up to this point Mr. Stevens's radicalism had been only the pioneer work in the march of enlightened progress. The country came gradually abreast of him. It admired his courage, his trenchant dealing with the logical results of doctrines, his apparent foresight and prophetic leadership, and it hailed him as a statesman. Now, however, he put in question all these qualities, and the doubt began to suggest itself whether his dominant impulse were not to ride the wave at all hazards; whether his radicalism were not an ambition to seem to lead, reckless of consequences. Certainly he failed in both parts of his forecast. The representation in the South was not divided, and the solid South has not undone all that was accomplished by the war. The failure in his judgment was due to a totally mistaken estimate of the character of the elements with which he was dealing, and of the forces which would operate in Southern society. He did not understand the human nature of either race.

The quarrel between Congress and President Johnson is one of the most humiliating chapters in our history, in which the unwisdom of the President was offset by the folly of the impeachment. Mr. Stevens had set his heart upon victory in the combat, and felt the defeat as a personal one. Certainly no statesmanship was shown on either side, and injury was done to the cause of popular government by a coarse wrangle in which there was a rivalry in unseemliness. The spectacle made us more and more amazed at the strange providence which permitted the murder of Mr. Lincoln.

We must conclude, then, that Mr. Stevens's fame and usefulness culminated in his work as legislator in support of Mr. Lincoln's war administration, and that he failed in the constructive work which came when hostilities ceased. His doctrine that the rebellion had destroyed the States engaged in it and reduced them to the con-

dition of foreign territory acquired by conquest, was never sound law, and has given way to the accepted dictum of the Supreme Court that the republic was and is "an indestructible union of indestructible States." The great truth of which he was the champion was that the nation may subdue an insurrection by all the means of civilized war. In the practical application of this to the raising, equipping, and supporting of armies he won deserved renown, and his Congressional leadership was a real one.

In the impression he made on the public in his time, his personal characteristics had much to do. Age and experience modified the bitterness of his speech. His sarcasms became irony, and this was often of the playful kind, which amuses and gets the rhetorical advantage without provoking personal ill feeling. His age and his acknowledged leadership made him in a real sense the "father of the House." His witty flagellations, his gravely ironical exhortations, his paternal advice, all uttered in quiet conversational tones, which assumed that it was more important to others to be silent and hearken, than it was for him to exert himself to be heard, schooled the House to new ways when he was on his feet, and brought close around him a crowd of listeners, sure of being entertained and very likely to be taught. He had in a very high degree the "art of putting things," so that his brief, telling statements were often better than argument; for, even when sophistical, they captured at once, if at all, and to stop for analysis was to weaken or destroy the effect. His growing feebleness of body added an element of deferential sympathy to his treatment by his party, and made his eminence seem at the time almost an unrivalled one. It was inevitable that time should diminish this apparent importance. A brilliant and curiously interesting figure of the war period he will always be, but it will be the brilliancy of the partisan chieftain, not of the self-poised general.

#### RECENT WORKS ON DANTE.—I.

The number of new books relating to Dante and his works does not decrease, but the present year will hardly provide students of the life and writings of the poet with as many works of high quality as those which made 1897-1898 notable in the history of Dantesque studies. It is somewhat remarkable that three of these books were of a comprehensive and encyclopædic character—works of information rather than of interpretation—and all of them the result of the labors of many years.

First among them, as an original treatise, is the 'Dante, his Life and Work, his Relation to Art and Politics,'\* of the venerable professor at Freiburg, Dr. Franz Xaver Kraus, whose writings upon Christian Art have long held a high place in the esteem of scholars. The erudition, the fairness of mind, the temperate and liberal spirit displayed in his earlier work are conspicuous in this vast volume of 800 large octavo pages. It is divided into five books, of which the first is given to the Life of the poet, the second to his Minor Writings, the third to

\*Dante, sein Leben und sein Werk, sein Verhältniss zur Kunst und zur Politik. Von Franz Xaver Kraus. Mit zahlreichen Illustrationen. Berlin: Grote. 1897. Pp. xii, 792.

his 'Divine Comedy,' the fourth to his relation to Art, the fifth to his relation to Politics, including his relation to the Church. The comprehensiveness of its design is manifest from the mere statement of its contents, but the breadth of its scope is not so extraordinary as the enormous stock of material which Dr. Kraus has accumulated and dealt with under every head of his subject. Nothing seems to have escaped the author's grasp, and his work is a notable specimen of the minute, laborious industry characteristic of much of the work of German scholars, and of the hardly less characteristic lack of discrimination in regard to the value of his materials. The book would, indeed, have been more useful had its author, following the example of Justinian, rejected *il troppo e il vano*. Nearly one hundred pages of the section entitled "Dante and his Relation to Art" are occupied with an account of the illustrations of the 'Divine Comedy,' in manuscripts, in the printed editions, and in the independent works of many artists. It contains numerous representations of illustrations of various sorts, some of which are of interest, and it affords much curious information on the subject, but it has little to do with Dante himself and might well have been reserved for independent publication. So, too, the elaborate analysis of the contents of the 'Divina Comedia,' which occupies more than thirty pages, might have been omitted.

In spite, however, of its defect of "too much," the book is one for which the student of Dante has reason to be grateful. It is not merely a compilation of the opinions of others and a compend of facts, but its most interesting portions are those in which the author sets forth his own opinions—opinions for the most part well-considered and based on ample knowledge. The sections on the minor works of Dante are distinguished not more for the amount of information which they contain than for the intelligent critical discussion of their contents, their relation to each other, and the light which they throw on the character and life of the poet. In the discussion of matters of controversy, of which there are so many of a nature to excite the bitterest passions of commentators, Dr. Kraus displays an admirable temper. His training as a Catholic theologian is of constant service to him as an interpreter of the poet, and his exposition of the doctrines of his Church and of Dante's presentation of them and general attitude to the Church and the Papacy, is liberal and luminous.

In regard to the much debated question as to the real existence of the Beatrice of the 'Vita Nuova,' Dr. Kraus supports the view of Bartoli, that she was a purely ideal being, or, in his unintentionally humorous and untranslatable phrase, "die Verobjectivirung einer tiefinnerlichen subjectiven Conception." This interpretation, which draws some support from the tendency of the Provencal and earlier Italian poets toward the idealizing of abstract conceptions, falls, as we think, to take sufficient account of the distinctive qualities of Dante's poetic nature. He, indeed, shared in the disposition to dress the conceptions of the prose understanding in the garb of poetry, but his genius found its most natural and freest expression in idealizing the figures of actual life, and in exalting them from the realm of transient existence into the permanent world of the poetic imagination. There

may be good reason for rejecting Boccaccio's identification of Dante's Beatrice with Beatrice Portinari; and the 'Vita Nuova' is to be held not as a narrative of actual occurrences in their literal order and relation, but rather as an artificially composed romantic story. Yet this romance was not a pure invention of the understanding, a carefully elaborated and cold tale of allegorized abstractions, but, on the contrary, it was an ideal and poetic presentation of a real experience, palpitating with genuine emotion, hot with passionate feeling, and shaped by the imagination into the form which corresponded to its true relations with life. The evidence of the actual existence of the Beatrice, the woman whom Dante loved, which is afforded by the 'Vita Nuova,' the 'Convito,' and the 'Divine Comedy,' seems to us absolutely irrefragable, and to be disputed only by those who would interpret the nature of the poet by the rules which serve for the great prose mass of mankind.

But this is not the opportunity for a full discussion of such matters, or for treating the many topics of interest which Dr. Kraus's work presents. In brief, his book is to be commended for many merits, and there is no student of Dante who will not find profit in making himself acquainted with it.\*

Valuable as Dr. Kraus's book is, it was, perhaps, not the most important contribution made by Germany in 1898 to the study of Dante. The year saw the practical completion of Dr. Scartazzini's 'Enciclopedia Dantesca,'† the crowning work of its author's labors in the field which he has done more to cultivate than any other living scholar. In some concluding words, written, we regret to note, in a tone of depression, he speaks of it as a work *che m'ha fatto per più anni macro*, too gigantic in its proportions to admit of absolute completeness in its first draught; and he promises a supplement, to contain what is needed for perfecting it, provided his impaired health allow him to fulfil his intention. He may indeed be congratulated on having already accomplished so much, and the multitude of students already under obligation to him will join in the hope that his strength may be speedily so restored as to enable him to carry out his design to its end. The 'Enciclopedia' is truly a gigantic work, its two volumes consisting of 2,200 closely printed pages of more than 400 words to a full page, exhibiting an amount of erudition even beyond that full measure which the best German scholars have taught the world to expect from them. It is, as its title-page states, "a critical and explanatory Dictionary of whatever concerns

\*It is matter of regret that a work which does so much honor to its author, and which has so stately a form, should swarm with errors of the press. At its close there is a list of twelve of them, but this is to trifle with the reader; we have noted nearly two hundred misprints, and have passed without noting them many more—most of them, indeed, of very slight consequence, and a large proportion of them in the citations from works in languages foreign to the German compositor or proof-reader. But some of them are serious enough to perplex the reader, as, for example, p. 448, n. 6, where the following reference is given, "Summ. theol. II, 2, 9, u. 60, art. 5," which should read, "Summ. theol. II, 2, qu. 64, art. 5." (On p. 476, l. 25, "coelorum indulationi" should be "coelorum circulationi"; and in note 4, on the same page, we read, "id est inter coelum et coelorum talis temporis virtuosus inferior infundetur," but should read, "id est inter coelum et coelum talis temporis virtuosus inferior infundetur." On p. 87, the familiar verse from the 24th canto of the "Purgatorio," "femmina è nata, e non porta ancor benda" is transformed to: "femmina è nata, e non porta amor benda." But enough: "degli altri da laudabile tacerli."

† 'Enciclopedia Dantesca: Dizionario critico e ragionato di quanto concerne la vita e le opere di Dante Alighieri.' Vol. I. and II., sm. 8vo, pp. ix, 2,200. Milan: U. Hoepli. 1896-1898.

the Life and Works of Dante," including a complete vocabulary, not only of the 'Divine Comedy,' but also of the minor works of the poet; and this enormous undertaking has been so well executed that, whatever other aids the student of Dante may possess, this must be held by him as indispensable, and will be found an ample and superior substitute for almost all other books of reference, in its special department. It affords both an original comment and a full compend of the opinions of other commentators on difficult passages in the writings of the poet; it gives accounts, generally concise but sufficient, of persons and events mentioned in them; it deals with the incidents of Dante's own life; and it discusses critically the doubtful and obscure points of his biography and in the relation of his works to each other and to his life. The bibliographical references are so abundant as to direct the student to the sources of further information, and so exact that the path is made easy for him. The vocabulary, in respect to both etymology and definition, though not altogether satisfactory in its etymological portion, is a great advance upon that of Blanc, which, from the date of its publication, nearly fifty years ago, has been one of the most useful of the aids in the study of the 'Divine Comedy.' In this part of his work Dr. Scartazzini has derived much assistance from the invaluable Concordance of Dr. Fay issued by our American Dante Society.

It would be surprising if there were not oversights and defects in a work of such compass and such difficulty; but, whatever they may be, they are of comparatively slight moment. In this book, as in that of Dr. Kraus, the main fault is that of the "too much"; of an occasional heaping together of a mass of material when a selection from it would be more useful. The distinction between pedantry and learning is one which the modern German scholar and his American imitator find it difficult to draw, and a lack of discrimination between the important and the unimportant leads frequently to disproportion in treatment. Dr. Scartazzini's work is not free from this error, and a striking instance of it is afforded by his giving no less than twenty-three pages to the reprint under *Titone* of an essay, from his Leipzig edition of the 'Divine Comedy,' on the interpretation of the first verse of the ninth canto of the *Purgatorio*, *La concubina di Titone antico*. It would have been better to condense the conclusions of this discussion into a single page, and to refer the reader for the full argument to the volume where it originally appeared. The main object of the essay is to show the difficulty attending the acceptance of the interpretations of the passage hitherto proposed, so as to clear the way for the adoption of another reading of the verse and a new interpretation of it, proposed by Dr. Scartazzini in his notes to the Leipzig edition; and it is a little amusing that the essay does not inform the reader what this new interpretation referred to in it actually is, so that, unless he have the required edition at hand, he is utterly unable to determine what it may be.

There are, of course, many points in a work of such scope on which the opinion of a competent student may differ from that of the author, but there are very few on which Dr. Scartazzini's judgment is not to be held in high respect. We repeat, in con-

clusion, that the work is one henceforth indispensable to every serious student of Dante.

*From Comte to Benjamin Kidd.* By Robert Mackintosh, D.D. The Macmillan Co. 1899. 8vo, pp. 312.

*Better-World Philosophy.* By J. Howard Moore. Chicago: The Ward Waugh Co. 1899. 12mo, pp. 275.

Here are two answers to Kidd's 'Social Evolution.' It is a new indication of the usefulness of extreme positions in philosophy that that work should still be evoking refutations and replies. Dr. Mackintosh's book reviews the whole history of the application of biology to ethics from Comte down, and gives serious criticisms of the doctrines of Comte, Hatch, Spencer, Leslie Stephen, Miss Cobbe, Bagehot ('Darwinism in Politics'), S. Alexander, Huxley (Romanes Lecture), Drummond ('Natural Law in the Spiritual World') and 'Ascent of Man'), Sutherland, Ritchie ('Darwinism and Politics'), and Kidd—making a valuable history of this movement of thought. There was no decisive reason for beginning with Comte. The author might as well have gone back at least as far as Cabanis, the original author of the phrase, "The brain secretes thought as the liver secretes bile," usually attributed to the compiler Büchner. Although Cabanis insisted that "the soul is not an entity, but a faculty" (a phrase, by the way, to be noted by those who imagine that all psychologists before Herbart regarded faculties as entities), and maintained distinctly that psychology is a branch of physiology and is to be studied in the physiological laboratory, yet he held that morality is, in some sense, obedience to the will of "the first causes." In truth, the idea of founding ethics on biology may be traced back to the beginnings of modern science. Its germ may be found in Serretus, who thought that, in order to understand the soul and its workings, the motion of the blood must be studied, and in Bernardino Telesio, the father of sensationalism. Still, Comte makes a convenient starting-point, being the earliest of the thinkers of this class whose works are still much read, whose influence is distinctly felt, and whose school survives.

Dr. Mackintosh devotes more than one-sixth of his book to Comte, a disproportionate space, considering how far the author of the Positive Philosophy was from anything like Darwinian ideas. Dr. Mackintosh's criticism seems to be animated by a spirit of fairness, and is certainly thoroughly studied. His ways of thinking, however, are not those of a scientific man. He sometimes intimates dark misgivings as to the foundations of what he calls "(finite) science"—suggestions about as profitable as inquiries on the part of a leper as to whether his leprosy was legitimate. What each generation has to do is to follow out the path that lies open to it—which for us is the path of scientific investigation. About the logic of scientific hypotheses and the logical status of natural selection and of evolution generally, Dr. Mackintosh's ideas seem pretty confused, as a long chapter on "The Metaphysics of Natural Selection," the weakest in the book, shows.

However needful biologists may find it to admit, for the present, that natural selection has been the main agency in the development of species, yet the presumption is

that any hypothesis concerning so complicated a matter, let it seem at first to accord as well as it may with the facts, will come in time to be profoundly modified, just as the hypotheses of general physics are undergoing modification, although this is a far simpler subject than biology. The physicists are unwilling to admit that there can have been life on the earth for so long a period as the Darwinian theory seems to require, or that the history of the globe has been so uniformitarian as Darwin, with unwonted warmth, assumed. The biologists themselves tell us that the life history of the individual reproduces, in outline, that of the development of the race. Now, individual development is at one stage very rapid and at another very slow. Moreover, if Darwinism has any lessons for ethics, we must suppose that intellectual and social development is due to the same general causes as the development of species. But no form of psychical development has, so far as history can trace it, proceeded at a nearly uniform rate. Meantime, there are very few cases, if any, in which we can say of any observed phenomenon that it certainly would have resulted from the action of natural selection; all we can usually say is that it very likely might have so resulted. But, as Dr. Karl Pearson points out, almost anything might result from natural selection. It is too elastic a theory to be very certain. For these and other reasons, though there is no doubt natural selection does act, yet we may not irrationally deem it unlikely that the adaptations of means to ends throughout nature are to be mainly accounted for by minute fortuitous variations together with the elimination of forms unsuited to those ends. Our direct observational knowledge of biological variations in reproduction leaves us altogether ignorant of whether there are any adaptations to needs in those variations, or whether they are quite fortuitous. We know no more about this than we do as to whether the ideas suggested by the law of mental association are, in their nascent state, at all adapted to ends or are purely random. To be confident that it is not so would be rash. But this does not justify Dr. Mackintosh in finding fault with Darwin's procedure in assuming the variations to be fortuitous. Science is not a fixed, unchangeable body of propositions. After a thousand years the general face of science may be modified past recognition. Scientific hypotheses are questions put to nature. In the game of twenty questions no skilful player begins by guessing what he thinks most likely. He seeks to fix one feature at a time. Scientific research is a much more intricate business, and various considerations go to determining what is the best hypothesis to try. But it is certain that if Darwin had made his hypothesis such as Dr. Mackintosh would have it, he would have blundered grievously in asking in one question what ought to have been asked in two.

Mr. Moore's book is as different from Dr. Mackintosh's as it well could be. Dr. Mackintosh does nothing but argue. Mr. Moore does not argue very much; he expresses his sentiments in a forcible and lively manner which is rather persuasive. Those sentiments, except, perhaps, in their strenuous intensity, are not particularly novel. He believes as thoroughly as Mr. Kidd in the natural egoism of man, and thinks that things never can go right until this is recognized,

and until the main effort of education is directed towards its cure. He is particularly shocked at the manner in which man enslaves the brutes. He seems to forget that a horse must be treated as he is—not so very cruelly, by the way, with his valet and his every need provided for—or he would not be born at all. But human nature must be revised "with revolutionary intent." Mr. Moore is quite sure "the sun will yet pour his fire upon an age . . . when it will be a crime for malfectives to beget." Mr. Moore spells *though* "tho" and *through* "thru." We know not how he would spell *height*, for his book does not, we think, contain the word. It is not one Mr. Moore would be likely to use. He would probably prefer *celstly*, or *altiment*, or *vertilitation*.

*Flaubert.* Par Émile Faguet. [Les Grands Écrivains Français.] Paris: Hachette & Cie. 1899. 16mo, pp. 191.

This is the first time that M. Faguet, whose vigorous vivacity and amusing dogmatism are met with often in the *Revue* of these days, has appeared among the writers about writers who are creating the excellent collection of short biographies, or, more truly, studies, of the Great Writers of France. His volume slips into its proper place between those on George Sand, fourth in the irregular series, and on Théophile Gautier, the tenth. The masculine sprightliness of M. Faguet is well set off by M. Caro's unctuous seriousness in the case of George Sand, and his admirable freedom from "gossip" is doubly agreeable by the side of M. Du Camp's unwelcome confidences in the case of Gautier. The whole volume resembles, perhaps a little too much, its frontispiece—a reproduction of the monument to Flaubert at Rouen by Chapu, in which his head merely is given, and the "monument" is the figure of the Muse of Criticism, pen in hand, reading his works, while in the list of them at her side the one he himself cared for most is not included. M. Faguet represents, as this does, the judgment of posterity, and what he says has peculiar value from that point of view. But the judgment of posterity is apt to seem a little cold to the contemporaries of an author who, just because they are his contemporaries, have become his personal friends.

M. Faguet's estimate of Flaubert as a writer is so very high that it makes his want of appreciation of him as a man all the more marked. As a thinker, no one can defend Flaubert, but it never can be said too often that his heart was far more interesting than his head; and when M. Faguet speaks of the touching friendship he formed with "la délicieuse consolatrice des affligés," George Sand in her old age, one wishes that he had indicated the generous and ardent appreciation felt and expressed by the sadder spirit, whose unhappiness was greatly a matter of temperament and of physical conditions, and was much increased by his extreme sensitiveness and the tenderness of his affections.

As a master of the art of writing—"the art of creating with difficulty works of an easy and natural character"—M. Faguet places Flaubert among the highest. "Flaubert is one of the greatest writers in French literature," he declares, and the twenty pages he devotes to "Flaubert écrivain" are among the most interesting in the volume. He ferrets into the details of the structure of Flaubert's impeccable sentences with the most contagious eagerness. More

than one of his remarks are noteworthy. "Flaubert may be considered to be a model for style. I say for style. His *language* is not absolutely pure. . . . In this respect I think Théophile Gautier alone in our time is faultless." A little later there are original and acute pages on the manner in which "the image," whether comparison or metaphor or symbol, presents itself to different minds. And, again, on the variety of *tone* in Flaubert. But the important part of the book lies among the hundred pages in the middle, where romanticism and realism are studied, and Flaubert's relations to them and the relations of them to his works.

M. Faguet is more than right in maintaining that the *fond* of Flaubert's nature was to a high degree romantic, and he could have brought a thousand proofs in support of this belief; but the essential quality of romanticism is its repugnance to realism, its desire to escape from reality, and this quality Flaubert had nothing of. His mind was divided between the perceptions of realities and the conceptions created by a lawless and fruitful imagination. "He liked to see with precision, clearness, vividly, minutely, and surely; he liked to imagine things vast, immense, colossal, terrifying, and somewhat monstrous." These two tendencies show themselves through the whole of his literary life, but never in full force at one and the same time; always in alternation. After 'Madame Bovary,' 'Salammbô'; after the 'Éducation Sentimentale,' the 'Temptation of St. Antony'; after 'St. Antony,' 'Bouvard et Pécuchet.' In the realistic works the romantic side of his nature reveals itself only through the intimacy of his knowledge of the quality. He had observed in himself its many degrees and metamorphoses, and his self-love was less offended by throwing contempt on its manifestations in weaker minds than it was gratified by marking the differences between himself and them in its forms. In his romantic works, the realist in him reveals itself only by his precise description of material objects.

Because Flaubert was the first who perceived that true art demands the essential separation of the two kinds of vision, he was the first true French realist. Balzac's realism was always much mingled with romanticism. Like Flaubert, he put pure realism uniformly into the painting of things, but there is much romanticism in Balzac's characters and still more in the events of their lives. The realism of Stendahl and of Mérimée was chiefly applied to exotic subjects, and both of them were more psychologists than realists, and succeeded in conveying an impression of truth more than of reality. These three great writers therefore created rather than satisfied a taste for reality. 'Madame Bovary' was a work of perfectly new character in French literature. What had been bud and blossom ripened into fruit, in 1857. In 1850 the name of "realism" had become familiar to the literary world in connection, oddly enough, with the works of the estimable and now forgotten author Champfleury; its existence was recognized. But it was Flaubert who decided its character and marked out its path. Twenty years later, the critic Émile Montégut, and not he alone, recognized the historic importance of 'Madame Bovary'; he spoke of it as "a

book that makes a date not only in the history of literature, but in the moral history of the nation," because "Madame Bovary" has really been, for the false ideal brought into fashion by the romantic literature, what Don Quixote was for the extravagance of chivalry, what the 'Précieuses Ridicules' was for the influence of the Hôtel de Rambouillet."

*The Gam.* By Capt. Charles Henry Robbins. New Bedford, Mass.: H. S. Hutchinson & Co.

To the uninitiated the title of this book will require explanation. A gam, technically, is a great collection of whales gathered together preliminary to dispersal, when each goes its own way. Figuratively, it applies to a congregation of whalers for purposes of gossip, story-telling, or for any sort of festivity. When two whale-ships meet at sea, if the weather be fit and no business is doing, officers and crews exchange visits and indulge in a gam. In the present, as in other nautical books recently noticed by us, the author is introduced to the reader by some well-known writer who, in more or less fulsome vein, vouches for his veracity and the merit of his composition. In this instance Dr. Edward Everett Hale stands sponsor for Captain Robbins, who in turn "gratefully acknowledges the editorial suggestions" of a friend. Both of these functionaries are entirely unnecessary. The author is at his best when he is not edited, for then we have the genuine spontaneous talk of a deep-water sailor-man who had followed the sea for forty-eight years, during twenty-one of which he was in command. While the literary value of the book does not attain to that of Dana's or Melville's, it possesses a striking quality of its own that lifts it securely out of the rut of the commonplace.

The opening story, entitled "The Fatted Calf," relates to the return home of a lad after a first experience at sea. It is the least interesting of the series, for too much space is given to silly sentiment and to the description of domestic festivity at New Bedford fifty-eight years ago. Latin is clearly out of place in a nautical yarn told by the skipper of a whaler; yet in this instance the phrase "Absolve te" is a common utterance of the heroine; and the hero is encouraged to tell why he was "a *persona non grata*" on board ship. The lot of a person *non grata* on land, with ample opportunity to escape local criticism, is not a happy one; but when he makes himself obnoxious within the narrow limits of a vessel at sea, the incidents that befall him may be readily imagined.

In the succeeding stories, the author, to his great advantage, is not so much hampered by the "editorial suggestions" of a friend. Consequently, what he has to tell he recounts in a bluff, sailor-like way that imparts unusual force and picturesqueness to the narrative. No better description of the pursuit and killing of a whale has been printed than that given in the story entitled "That Great Leviathan." Capt. Robbins here tenders an explanation of a whale's spout. The imaginative pictorial representations of it would lead one to suppose that a good part of the animal can be seen above the surface of the sea,

and that the spout is composed of great jets of water. All that is visible of a whale from a ship's deck is its spout, and that is a mere column of vapor—the creature's breath. By the spout, the two kinds of whales, sperm and right, can be distinguished. The first has but one spout-hole, through which it ejects the vapor of its breath at an angle of about forty-five degrees; a thick spout and not very high rising from a point near the animal's nose. A right whale has two spout-holes very close together. They are much nearer the lungs than in the sperm whale; consequently the vapor shoots up higher, as straight as a mast, and it spreads as it rises. No liquid is ejected through the spout-hole except blood from the lungs during the death flurry.

For uniform excellence there is little to choose (barring the first) between the various tales of which "The Gam" is composed. In that one entitled "The Albattross" there is an account of a hurricane described by a dauntless, clear-headed captain, the preservation of whose ship depends upon his resourceful seamanship. It is told in simple words, but so realistically and forcefully that it makes the reader feel that he is an actual participant in the perils which beset the battered craft.

*Le Malaise de la Démocratie.* Par Gaston Deschamps. Paris: Armand Colin & Cie. 1899.

This thoughtful book is a contribution to the popular discussion of contemporary France. Although its moralizing is principally intended for home consumption, it is calculated to incite similar reflections upon our own civic life, which, if it has not borrowed evil from without, has developed it from original causes with about the same results as in the younger republic. M. Deschamps's chapter on the decadence of the Deputy from a national representative into a metropolitan agent for his constituents, supplying them with information, introductions, theatre tickets, hotel accommodation, decorations, and, above all, places, till he becomes, not their representative but their valet, reads like a *fabula de te* for our own Congressmen. Not less familiar is the description of a newspaper press, in which the mere gathering, pell-mell, of all sorts of reportage, grave and trivial, under the name of "news," replaces a real editing of the day's events so as to give them their proper perspective, and the *coup de gueule* has boo'd down wit and reason.

M. Deschamps attributes the present demoralization of his country largely to the abandonment of the "Gallic" tradition and the adoption of exotic ideas and systems of education, in the hope of winning the material success of Germans and Anglo-Saxons. The youth of France is educated, not by great teachers, like Michelet, who blended with their lectures idealism and morality, but by the consumption of the husks of knowledge in vast quantities, thus developing a few great specialists and thousands of mediocrities. We accuse the young of irreverence, he says; but we offer them nothing particularly worthy their respect. He hopes for a regenerating revival of French valor, courtesy, chivalry, good sense—in short, of what he calls *un bon nationalisme*—and a reform in the state that will subordinate private interest to the common weal. As to the in-

evitable *Affaire* that obtrudes itself in all current French political discussion, he expresses himself (without hazarding an opinion on the merits) as detesting lies and nonsense (*mensonges et bêtises*). His book is wittily dedicated "To the good Citizens who are afflicted by the Present and anxious about the Future—to the Great Minister we lack—to the Statesman we are waiting for." It will interest all whose happiness depends on the success of democratic government; and, as complementary to Mr. Lecky's more profound work on 'Democracy and Liberty,' should find many readers here and in England.

*From Sea to Sea: Letters of Travel.* By Rudyard Kipling. Doubleday & McClure Co.

The letters of travel collected in the first volume of 'From Sea to Sea' are newer to Americans than those in the second. They are impressions of India, China, and Japan, and, though not remarkable for purely descriptive quality, are all vivacious and readable. Remembering the date of composition, one is interested in the indication of some of Mr. Kipling's qualities which time has so fully developed—conspicuously, observation very quick, yet also patient and accurate, followed by decided opinion and prompt judgment not always profound or sound. Very clearly he blows a whistle of patriotic fervor that has expanded into the trumpet of Imperialism. The temper of the work is exhilarating. One is always in the company of a rollicking boy, who has already done a man's work and is off alone on his first long lark. He is a most companionable youth, shrewd, clean, humorous, perfectly sure of himself, differing from other clever youths chiefly in his passionate eagerness to know all kinds and conditions of men, and his all-embracing curiosity. The letters about America are really not so intemperate as they appeared when served piecemeal by the press nine or ten years ago. Some Americans have peculiar manners, habits of speech, and a mental attitude often objectionable to other Americans and always offensive to foreigners. This very alert and positive young Anglo-Indian fell in with men who "guessed" when they should have known, who never made a moderate statement, and revelled in lurid misrepresentation, who had little regard for human life and less for the honest administration of their country's laws. He loathed such men, and, very naturally supposing that they existed in this country in great numbers, proceeded to generalize in language neither kind nor civil. Nevertheless, he exclaims: "I love this people, and if there is any harsh criticism to be done, I shall do it myself." Following his steps, one wonders where he found anything lovable except the pretty women.

The style of the letters is journalistic, and one may infer from them that the Anglo-Indian is as uncertain about "shall" and "will" as any Scotchman. The bits that take literary rank are characterizations of people met by chance. "Old California," the "insurance man," the "old lady from Chicago," and a dozen others, have the touch of a born painter from life. In the articles entitled "The Smith Administration" the storyteller easily thrusts the journalist out of sight; and in the description of Calcutta, called "The City of Dreadful Night," an imagination inflammable and tragic is vividly present.

*The Art of Teaching.* By David Salmon, Principal of Swansea Training College. Longmans, Green & Co.

Is there no way by which the essentials of the delicate art of teaching can be appropriated by those who have never attended a normal school? The weakness of our normal schools lies, in part, in the scanty knowledge of those who attend them; in part, in the tendency to teach only methods and to exalt the particular method taught, as if there were not many roads by which a goal in education may be reached. Many of the ablest men who enter the teacher's calling lack that moderate amount of training which would have been to them an inestimable boon. The better the scholarship, the finer the character, the greater the natural aptitude, the more is it to be desired that the possessor of scholarship, character, and aptitude should have his attention directed to the general principles which underlie all good teaching. Can this be done by books? "Yes," we answer, and such a book as Salmon's is specially to be recommended for such a service.

It is noteworthy how many excellent books on the teacher's art have recently been produced in England. It is no longer true, as R. H. Quick remarked thirty years ago, that all "good books on education are in German." Salmon's contributions to elementary school literature are many and valuable. It suffices to mention his 'Object Lessons,' 'School Grammar,' 'School Composition,' 'Stories from Early English History.' He has now collected into the volume before us his views on the 'Art of Teaching.' The treatment of the subject is orderly, thorough, authoritative. He takes up first the fundamental matters of order, attention, discipline. Then comes a charming discussion of the art of oral questioning. Next follows an estimate of the claims upon attention of the main subjects of elementary study, with invaluable hints as to the teaching of each. The subjects treated are: Reading, Spelling, Writing, Arithmetic, English, Geography, History. This is, indeed, familiar ground, but the treatment is so able, so acute, so comprehensive, that there is constant variety and constant interest. A very valuable portion of the volume is the section of sixty pages on Infant Education. Not only are the history and development of the kindergarten here admirably discussed, but the original and valuable contributions of England to the education of young children are set forth.

Our first quotations from Salmon shall be in regard to Order:

"The cultivation of essential qualities in himself is only half the price which the teacher must pay for order; the other half is untiring attention to details. A dirty or disorderly school makes dirty and disorderly pupils. Desks, blackboards, books, all materials, should have assigned places, and, except when in use, should never be out of them. Maps and diagrams should hang straight. A basket should be provided for waste papers, and the use of it should be enforced. The habit, which many children have, of taking too much ink on the pen and shaking the excess on the floor, should be repressed; the repression will be made easier if the ink-wells are not more than half filled. The best wall decorations are not maps or charts, but pictures which are works of art. On window-ledge or brackets should be boxes or pots of growing plants or ferns. Children should be encouraged to bring them, and the tending of them should be a reward of neatness or good conduct. Nothing should be omitted that is likely to make the children take a pride in the school-

room and feel that it is a semi-sacred place."

"The whole routine of the school should be regulated, literally, by clockwork. Lessons should always begin and cease precisely at the minute set down. All general motions should be regulated by word of command. There should be a settled plan for assembling, dismissing; standing, sitting; changing places or tasks; giving out and collecting books, papers, etc. Nothing should be haphazard, nothing left to the caprice of children."

"You may say to an individual pupil, 'Please to stand,' but with a class you should say, 'Stand.'"

"Never repeat a command."

"Having given a command, never proceed until all your pupils have obeyed it."

"Never assume that you may be disobeyed."

"Never threaten or promise."

"Never shout."

"Never sneer."

"The great use of order is to secure attention. Children should be taught *how* to attend. As Thring says, 'Sitting over your book and using your mind are not the same; breeches-wear and brain-wear are not the same, though the same time may be spent.'"

"Discipline is as essential to the growth of character as attention to the growth of intellect. Order aims at securing prompt attention to commands; discipline, at making commands unnecessary. Order says to a child, 'You must.' Discipline teaches him to say, 'I will.' Young children have no moral sense; the great end of discipline is to convert the non-moral boy or girl into the good man or woman. The first and last grand rule for the teacher: 'Remember that the end of discipline is the formation of the will.'"

Most wise and helpful is Salmon's discussion of the best ways of teaching the elementary studies. This portion of the book is a true teacher's manual. Our second quotation shall be from the author's discussion of the teaching of English. He begins with the teaching of English composition. No greater mistake, he says, can be made than to suppose that composition can be taught by correction of mistakes alone.

"The essay, like the 'sum' in arithmetic, is a valuable exercise when it compels children to apply instruction already received; but, till instruction has been given, the teacher should no more expect the essay to be written than he expects the 'sum' to be worked."

"Lessons in English have a double aim: the enlargement of vocabulary and the construction of sentences. The complete essay calls for reading, experience, reflection. As these cannot be expected from young children, the earliest exercises in continuous composition should be the reproduction of a short narrative, with an obvious point. To counteract the tendency of children to reproduce the sentences which they have heard, narratives in rhyme should be freely employed. Next in order of difficulty to the telling of a story comes (1) the description of a picture, a building, a village, a walk; (2) the writing of a letter; (3) an essay."

"When the essay is taken up, the children have already learned to express a simple thought. The thing now to be done is to give them confidence by showing them that they have something to say, if they only think."

The author shows most entertainingly how, by stimulating questions, the matter for an essay may be elicited. Suppose the subject to be the "cat." In answer to questions to the class, an outline may be worked out, and this outline may be written on the board, under the following heads:

The cat: (1) where kept, (2) why kept, (3) fitted to be a beast of prey (a) by teeth, (b) by claws, (c) by pads on feet.

The next step is for the pupil to make his own outline, not the exact copy of that which has been placed on the board. This outline or skeleton Salmon regards as es-

sential in the teaching of composition. "A composition," he says, "which has no skeleton cannot help being invertebrate."

It is a genuine pleasure to commend without qualification this admirable manual. It is a worthy companion to Fitch's 'Lectures on Teaching,' and, like that book, ought to be on every teacher's shelf.

*The Custom of the Country: Tales of New Japan.* By Mrs. Hugh Fraser. Macmillan.

The five stories in this volume admirably supplement Mitford's classic 'Tales of Old Japan,' with which they compel comparison and contrast. They are based on a class of facts patent to all keen observers, are framed in by the same phenomena of nature, and have for their general theme the unchanging passions of the human heart. The subjective element in Mitford is prominently masculine; in that of Mrs. Fraser it is pervasively and most delicately feminine. It is all the more unfortunate—a very gibe of fate, the "topsy-turviness" not of Japan but of English Philistinism or Yankee stupidity—that on the cover of this volume the bookbinder has stamped the Yoshiwara woman of the front-tied girdle and hair bedecked with sheaf of tortoise-shell pins. Mitford tells much and often of *her*, Mrs. Fraser never.

The author has potent elements for three of her tales in the lonesome bachelor of the "hong" and the drudging student-interpreter within the legation "compound," in the brilliant dancing girl and pretty geisha and the "alrnest" Scottish missionary. Then there is the allowable and socially orthodox secret heaven for the man who indulges in "the custom of the country," and, over against and below it, the sure damnation of the conscience-driven man who marries a daughter of Japan.

In "In Tokyo," the Scotsman who lives chastely, though employing a Japanese maid, despite the protests of his clerical countryman against the presence of one "ower weel-favored for a single man's home," waits for his betrothed, to whom he was hastily engaged while on holiday in Europe. Happily he sickens and dies before learning that his affianced marries on her way out a fellow-passenger at Hong Kong and abides there. In "She Danced before Him" we have a story told with all the marvellous resources of a colorist in language, who knows Japanese womankind well. It is no daughter of Herodias who fascinates the young Englishman, but a genius of grace and motion, who by night, on land and water, charms a foreign lover, while in hours of drudgery at home she ministers to a leper. The touch of tragedy is not lacking in any of these stories, except the last, which is a pure comedy of smuggling and "Sealskins."

In the title-story, the stiff, narrow, and severe female Christian, who knows, apparently, little of the Master whom in name only she serves, is finely set as foil to the superb womanhood of the Scotsman's Japanese wife. The perils and penalties of the man or the woman who flouts the traditions and braves the orthodoxy of a whole civilization, are set forth with the literary power and the genius which we should expect from the sister of Marion Crawford. In "A Son of the Daimyo" we have a brilliant picture of modern native society in Tokio and of the new navy of Japan in war-time. On the pa-

lette of this literary artist are all the tints borrowed from ocean, sky, and earth, long and lovingly studied. Her drawing, "round as Giotto's O" and exact to a hair-line, sets before us the life of foreigner and native at the point where civilizations meet, while her coloring of language suggests the rich tints of Wores, Lafarge, and Parsons. The book is a fine corrective to Pierre Loti's 'Madame Chrysanthème.'

*Between the Ocean and the Lakes: The Story of Erie.* By Edward Harold Mott. New York: John S. Collins. 1899.

Thoroughly studied and skilfully set forth, the history of the Erie Railroad would present in epitome the history of railroad-building and of corporation growth in this country. Such a volume would begin with the railroad as a tentative novelty, ancillary to the canal, roughly laid with the crude notion that it might serve every one for a public highway, and must, after fifty years, be owned by the State; and would show it expanding till nearly all the travel and inland trade of the continent rolls over its solid bed, linking in a half-dozen distinct lines the shores of two oceans with hooks of steel. It would trace the railroad's financial and political growth, from the years when it was the sport of politics, standing hat in hand to beg for State aid, and the years when it bought judges and corrupted Legislatures, and swayed national policy. It would tell on what meat this our Frankenstein has fed that it has grown so great. And all the lights and shadows of the large picture might be copied from the story in miniature of the Erie Road. For the tide of Erie's fortunes, in its stormy fluctuation, has touched the high-water mark of railroad prosperity, and has once and again ebbed to the depths of distress and ruin. The Erie's long and swiftly changing line of managers exhibits men of supreme ability, statesmen and world-financiers, and also men of consummate villany, who just grazed the penitentiary. In its darkest days it was a treasure-ship, beset by pirates in collusion with its pillaging crew. Yet, even so despoiled, it is still an imperial property. It has always been a training-school for ad-

ministrative ability, and the genius of its management to-day bids fair to redeem it from the errors and blunders of the past.

Now, of all the lessons that might be drawn from its varied and picturesque annals the bulky volume before us, of over 500 pages, reveals scarcely a hint. It is a lively, clever, newspaper relation of its outward subject, illustrating no principles by examples. It is little more than a miscellaneous mass of memoranda, arranged in some sequence, but without even an index of any kind. As such it may do service as a repertory of facts for some future student of that overshadowing problem of our day—the power of corporations.

*From the Child's Standpoint.* By Florence Hull Winterburn. Baker & Taylor Co.

The growth of non-professional educational literature is a feature of our day. This volume consists of thirty-nine little essays, or sermonettes, on practical topics connected with the bringing up of children. Some of the essays have appeared before in the *Sunday-School Times* and in *Harper's Bazar*. Among the subjects are the following: "The Flower of Innocence," "An Uphill Journey" (combating the notion that school can always be easy, or that work is a hardship), "The Right to be Understood" (a little girl, on being told she was too small to do what she wanted, replied, "Yes, I suffer a great deal from that!"), "Childish Affinities," "Cultivating Taste" (parents fail to realize that this is an important part of their duty), "Picture Thinking." We quote the following from the essay on "Self-Government": "When a child shows the disposition to self-excuse, the best plan is not to blame him directly, but to manage so that facts will convict him. It is also desirable to refrain from the common temptation to 'drive a fault home.' A look, half-smiling, half-accusing, is efficacious, but words rouse the defensive instinct and lead to excuses." The following is from the essay on "Nothing Lasts but Love": "The doctrine that misery is good for people is exploded. We hear it said, sometimes, with some complacency, 'I had a pretty hard time in my young days, but I haven't made a worse man (or woman) for

it.' How do we know that? Perhaps we were made narrow, unsympathetic, selfish, by the very trials that seemed to have left no mark."

Mrs. Winterburn's essays give evidence of careful study of children and tender love for them; they are free from extreme views; they show practical good sense.

# The Nation.

NEW YORK, THURSDAY, SEPTEMBER 14, 1899.

## The Week.

The real censor at Manila, about whose doings we have heard so much, stands revealed in the extremely interesting letter which the correspondent of the Associated Press has sent to its general manager. Gen. Otis and the officer whom he detailed for the duty were merely agents of a higher power, operating by cable from Washington. The acting censor revealed this fact again and again in such explanations of his conduct as these: "My instructions are to let nothing go that can hurt the Administration." "Of course, we all know that we are in a terrible mess out here, but we don't want the people to get excited about it. If you fellows will only keep quiet now, we will pull through in time without any fuss at home." "My instructions are to shut out everything that could hurt McKinley's Administration." Who was it that was so anxious to keep the people at home in the dark, and to shut out everything that would injure the prospects of McKinley's reelection? Does anybody suppose that Gen. Otis was following out that policy on his own motion, with no intimation from Washington that such a course would be approved? What he was doing at Manila with the press dispatches, the War Department officials were doing at Washington with his dispatches. Nothing was allowed to come out that would injure the Administration. It has been a huge bunco game from the start, conducted with the blind hope that if the facts could be kept from the people here, some way out of the mess could be found.

We are not surprised to notice that the Imperialist newspapers are unable to find room in their columns for Gen. Lawton's views about the Philippine situation, as ventilated in the *Congregationalist*. The volume of expert opinion against the McKinley policy of peace by extermination if necessary is becoming too formidable to be contemplated with serenity. It includes now all the names of greatest weight in both branches of the service, and all the names of the newspaper correspondents in the islands. "I have never been in favor of violence toward the Filipinos. Rather than make a war of conquest on this people I would up anchor and sail out of the harbor," says Admiral Dewey. "What we want is to stop this accursed war. It is time for diplomacy, time for mutual understanding; these men are indomitable. All they want is a little justice," says Gen. Lawton, the military commander in the field in the islands, and the man who knows

more about the Filipinos than any other in the army. Gen. Funston's view, expressed months ago, was the same: "Less gunpowder and more diplomacy." His latest view, now that the first has been overruled, is that "whipping the insurgents is the only solution; they will never surrender." Gen. Ovenshine, just home from service with Gen. Lawton, says: "I do not like to prophesy, but I think that with plenty of troops the insurrection would be crushed out within a few months after the dry season begins, but I may be mistaken." Crush them out, says McKinley. "They assailed our sovereignty, and *there will be no useless parley, no pause till the insurrection is suppressed.*" Are the American people in favor of this policy—this merciless prosecution of an "accursed war" against an indomitable people who only "want a little justice"?

The most striking and significant deliverance from the religious press that has appeared since the war in the Philippines began, is from the *Chicago Advance*. This is the leading organ of the Congregationalist denomination published west of the Alleghanies; its political sympathies are strongly Republican; and it fairly represents the feelings of the Middle West, upon which the McKinley Administration has depended for unswerving support of the expansion policy. The *Advance* frankly confesses that "the Philippine question is causing trouble of heart to many good people"; it plainly declares that some of the reasons urged for the subjugation of the Filipinos "do not commend themselves to the righteous sentiment of the country"; and it clearly exposes the fallacy and hypocrisy of several of the pleas for a war of conquest which have been put forth by militant clergymen. The conclusion of the *Advance*, that "it ought to be found possible speedily to improve the situation," difficult as that situation is, represents a sentiment which Mr. McKinley cannot afford to disregard.

The War Department has issued a statement showing the cost of collecting the customs duties in Cuba which might well draw forth some comment from Secretary Gage. For the first six months of 1899, the expense of collections in Cuba was 3.30 per cent. of the revenue, while in the United States it was 4.62. At the port of Havana this expense was only 2.37 per cent., which is lower than at any port in this country. The percentage at New York is 2.80, and it is excessively high at the smaller ports. At New Orleans and at Baltimore it is between 13 and 14, which is certainly large enough to demand explanation.

When it is considered that the customs service in Cuba was a veritable sink of corruption, and that the reorganization has hardly yet been completed by the officers of the United States, we may look for even better results hereafter. We do not look for such results in this country, because the collection of revenue is here carried on to a great extent by politicians for politicians. When our army officers give place to civilians in Cuba, we see little reason to hope that the administration of the customs service there will be any better than it is here, and much reason to fear that it may be worse.

The action of the American Bankers' Association on the currency question last week was most significant. It adopted a resolution declaring that "the bankers of the United States most earnestly recommend that the Congress of the United States at its next session enact a law to more firmly and unequivocally establish the gold standard in this country, by providing that the gold dollar, which under the law is the unit of value, shall be the standard and measure of all values in the United States; that all the obligations of the Government and all paper money, including the circulating notes of national banks, shall be redeemed in gold coin; and that the legal-tender notes of the United States, when paid into the Treasury, shall not be reissued except upon the deposit of an equivalent amount of gold coin." This clear, explicit, and comprehensive declaration was not merely adopted by the Association; it was adopted by a unanimous vote, and "with deafening applause." While the resolution was introduced by a representative of New York city, the Association contained a large number of delegates from all parts of the country, and the fact that they were of one mind in taking this pronounced position is important and encouraging.

Even more so, however, was the position taken by the Republican State convention in Maryland on the same day with reference to the currency question. The framers of the platform put this issue to the front by devoting the first resolution to the demands of the financial situation. "We believe in the gold standard," this resolution says; but it does not stop with this statement, nor does it proceed with glittering generalities. Not only do the Maryland Republicans believe in the gold standard, but also "that all our currency should be made by law redeemable in gold coin at the option of the holder." Nor are they content with the simple expression of belief in such good doctrine. "To this faith," the resolution concludes, "we confident-

ly pledge the influence and votes of the Maryland members in each house of Congress." The Republicanism of Maryland, on the Atlantic seaboard, thus reëchoes the demand of Iowa's, in the Mississippi valley, a month ago, that "the permanence of the gold standard must be assured by congressional legislation giving to it the validity of public law," and that "all other money must be kept at a parity with gold"; and that "we urgently call upon our Senators and Representatives in Congress to lend their best endeavors to enact these propositions into law." If the party generally would show the same courage, the question of the gold standard might be settled finally at the session of Congress next winter.

The Maryland platform clearly betrays the embarrassment which the Republican politicians feel about taking a stand regarding the Philippine question. Of course, the resolutions praise the soldiers and sailors who took part in "the late war with Spain" (the Democratic opponents of expansion always do this), and extend their recognition of the army and navy to the bravery manifested in the fighting which has gone on since the war with Spain ended. As for the situation in the Philippine Islands, the Maryland Republicans "deplore the insurrection," and say that "duty demands that we retain and pacify them and safeguard the interests of commerce." But they do not declare that we must retain the islands permanently. On the contrary, the resolution goes on to say—"until the problem of their final disposition be solved in such manner that the glory of our flag be not sullied nor the liberty it stands for restrained," adding that "we repose our trust for such a solution of the problem in our wise and patriotic President and the Republican majority in Congress." This leaves the way open for the ultimate retreat of the United States and the concession of independence to the Filipinos. It is, verbally, highly significant that the policy of conquest should be thus quite ignored and virtually condemned by the Republicans in a close State, where they recognize the necessity of doing everything possible to strengthen their party with the people.

Virginia Republicanism became thoroughly demoralized when it surrendered to Mahone. That boss died some years ago, but the party has not yet recovered its character. A Legislature is to be elected in Virginia this fall, which will choose a United States Senator. The Republican State executive committee has just issued an address, not to urge an active campaign against the Democracy, not to advise the nomination of the strongest possible candidates, not to point out the way to secure an honest election, but to advise that no Republi-

can candidate for the Legislature be nominated in any district of the State! The excuse put forward is that "for some years elections in Virginia, under the pretended forms of law, have been miserable farces," and that it is of no use for Republicans to go to the polls. A more contemptible figure has never been cut by any political organization in a State which it has once controlled. The masses of the party do not conceal their disgust with the managers who recommend such a policy. A convention to nominate Republican candidates for the Legislature has already been called in Rockbridge County, and this example will probably be followed in a number of other counties.

An interesting and important decision affecting the whole country has been rendered by the United States District Court for Arkansas. A few weeks ago a strike broke out among the coal miners of Arkansas, like the one in Illinois last year. The operators of Arkansas, like those of Illinois, found that they could hire men in other States, especially negroes in the South, to work for wages which their old employees had rejected. The strikers attempted to keep these rivals out of the State, and to make the courts help them in so doing. They alleged that the coal companies proposed to import armed men of a low and lawless character, and the judge of a State court granted an injunction restraining the companies from bringing in such men. Judge Rogers of the Federal Court has dissolved this injunction, and has laid down the broad principle that, under the Constitution of the United States, no State has the right to prohibit the citizens of another State from entering it in search of work. He points out that the fourteenth amendment guarantees equal protection to all, and he holds that under that amendment persons have a perfect right to go from one State into another in the pursuit of employment, and that it is not within the power of a State to stop them, so long as they do not belong to certain interdicted classes, like convicts, idiots, lepers, and persons afflicted with contagious diseases. As the men against whom the State court granted an injunction did not belong to any of these classes, the action of that court was null and void.

It seems that there is a higher office in this country than that occupied by Mr. McKinley. This office is held by a Mr. Gubbins, and its title is that of President of the Bricklayers' and Stone Masons' International Union. Mr. Gubbins informs the people of the United States that President McKinley will not be allowed to lay the cornerstone of their new post-office building at Chicago unless he becomes a member of the Union. Neither the President of the United

States nor any citizen thereof is allowed to handle a trowel in the city of Chicago without complying with this condition. Should the President be so insubordinate as to set a stone prepared by non-union labor, that will be the last stone laid in this post-office building. The masons belonging to the Union will refuse to work on it thereafter, or to let any one else work. Whether any way of purging himself of contempt of this trade-union is provided we do not know; but there is some danger of incurring the contempt of a larger Union unless Mr. McKinley asserts his own independence and that of laborers in general.

Evidence accumulates from every quarter showing the intensity of the feeling against the great industrial combinations. This feeling is so general that it cannot fail to affect the issues in politics. The Republicans have control of the government of the country; these great combinations are going on; therefore, the Republicans are responsible for them. That is the manner in which the people reason, and the Republican party must take the consequences of the possession of power. It will have to do something more than pass resolutions if it is to maintain its control. This truth is dawning upon the minds of many Republicans, among whom is ex-Senator Washburn of Minnesota. He frankly says that unless some effective legislation is devised, the popular discontent is so great that it will probably bring about the defeat of the Republican party. That party, he truly says, "is associated with Trusts in the minds of the masses. We have reached a crisis," he adds, "as a party, where we have got to call a halt. The party must disconnect itself from Trusts. It should put forth its entire strength and legislate against them. The feeling in the Republican party is so intense in the West that, unless something is done, it will break ranks." So much for the disease; for the remedy, Mr. Washburn openly declares that the Republican party must modify its protective policy. It must abolish all protective duties where it is evident that a Trust is making exorbitant profits by reason of those duties. The duties on steel rails and on tin-plate should be immediately abolished. Mr. Washburn admits that when he was in the Senate he did his best to impose a heavy duty on imported tin-plate. He believed that it would establish and build up the industry, and it did. It built it up to such an extent that it has made exorbitant profits. The protective duty, Mr. Washburn with much simplicity observes, is being used to put up the price of tin-plate. He is frightened at the success of his legislation, and would gladly undo his work.

Gov. Roosevelt is left in an awkward

position by the action of the Comptroller of the State in deciding that something like \$700,000 of claims for canal work against the State are illegal. The general ground for his decision is that in authorizing contractors to do the work on which these claims are based, without first getting the consent of the Canal Board, Aldridge and Adams acted illegally, and that hence the expense thereby incurred does not constitute a legal claim against the State. The Comptroller goes into the matter very thoroughly, citing the terms of the law and the acts of Aldridge and Adams, and makes out what seems to be a strong case against them. He shows that, under the plea of increase in the quantity of work, Aldridge and Adams really made changes in the original plans, and in so doing violated the law which requires such changes to be approved by the Canal Board. It may be that in thus proceeding in "direct violation of the plain and express provisions of the statute," Aldridge and Adams did not commit acts which made them liable to criminal prosecution, but can the Governor say again, in view of the Comptroller's position, what he said in his revised opinion of the canal scandal?—"I think the charges of corruption were baseless, and discreditable in the highest degree to those making them."

It has been generally supposed that the country is very prosperous, but the Tax Commissioners of the State of New York seem to hold a different opinion. Outside of New York and Brooklyn they find that the people are getting poor. In other words, these Commissioners have increased the assessed value of real property in New York by more than \$165,000,000, and in Brooklyn by \$14,000,000, while the assessments have almost everywhere else been reduced. Outside of the city of New York, the Commissioners find about \$20,000,000 less property than last year. They raise the assessments in nine counties by more than \$200,000,000, and reduce them in fifty-two counties by the same amount. As the assessments have already been greatly raised in the city of New York by the local authorities, the future of the property-owner here is not bright. Any morning he may wake up and find that an annual charge of \$5,000,000, as in the case of the Ramapo water enterprise, has been fastened as a permanent lien on his dwelling, and, after his local rulers have plundered him, the State Commissioners descend on him with enlarged demands. The situation is a very serious one. Under the Raines liquor law a large revenue is collected in New York city for the benefit of the rural districts, and, not content with that, the rural statesmen are constantly increasing the valuation here. The total valuation of the real property in the State is now about \$4,414,000,000, and nearly

three-fifths of this is held to be in New York city and its immediate vicinity. The question naturally arises whether this community, having the greater part of the wealth of the State, might not be detached from the country districts and allowed to apply its revenues to its own uses. Our city government is bad enough, but the Albany legislators do nothing to make it better, and a good deal to make it worse.

Crocker has returned and has resumed his benign habit of talking freely with the reporters. His remarks are unusually interesting. For the life of him he does not know who is behind the Ramapo grab. He has no money in it and no interest in it, but he has unbounded faith in Holahan and Dalton as honest men and devoted public servants. If they say there is something "good" in the proposition to pay \$200,000,000 for the supply, the public can rest assured that there is some ground for the belief. As for being mere tools of Crocker, the man who would say that of Holahan and Dalton would say anything. "They ain't the kind of men to take orders from any one." It will be useless, evidently, to get from them any light upon the real mystery of the Ramapo Grab. Crocker feels sure about that; but he suspects that light can be obtained in another quarter. He does not think much of the course of the Mazet Committee in issuing subpoenas to Frank Platt and Gen. Tracy. "If they want to get at the truth of the matter, why don't they go to the fountain head?" That's what we say. Why not summon the Old Man? What does the boy know about it? Is it likely that the Old Man reveals to him all the secrets of the business? What the public wants is the news at first hand, and the Hon. Thomas C. Platt himself is the only man who can furnish it.

Mr. Mazet announces that his committee will not summon Senator Platt as a witness unless more occasion arises for doing so than exists at present. "To hear Mr. Crocker talk," he says, "one would think it was the Republican party, and not Tammany, which is administering the affairs of the city, and is responsible for the conduct of the municipality." Tammany is unquestionably administering the affairs of this city, but who is responsible for that fact? Not Crocker, but Platt. Mr. Mazet says it is the purpose of the committee to "sift the Ramapo matter to the bottom." Why not sift the election of 1897 to the bottom also? In both instances, as soon as the bottom is reached, two familiar Republican personages will be discovered lying *perdu*—Platt and Tracy. Why did Gen. Lacy loom at the front as President of the company when legislation was needed at Albany to put the Ramapo job on its feet? Why did he loom at the

front as candidate for Mayor when it became necessary to put Crocker in possession of the government of this city? Who was the man behind him in both these transactions? Surely not Crocker, for by himself Crocker could never have accomplished anything with either scheme. Gen. Tracy has not been Crocker's man, but Platt's man, and if the committee wishes to probe Platt devils-tries to the bottom it must begin with Platt.

The wave of arrogant imperialism which has swept the Liberal party in England from its old bearings meets with occasional resistance. Mr. Morley and Mr. Harrison refuse to yield, and their appeals to the consciences of Englishmen cannot easily be disregarded. The *Economist*, it is satisfactory to observe, realizes the folly of the domineering tone of Mr. Chamberlain's speeches, and strongly advocates moderation. It insists that the concessions offered by President Krüger are properly accompanied by the stipulation that the integrity and internal independence of the republic shall be guaranteed. It is unworthy of the British Government, it says, to assume that these concessions are not made in good faith, and it holds that the discussion should be ended. The really sinister feature of the situation is that the more the Boers concede, the more the noisy section of the Outlanders demand. As one of them confessed, they do not want the vote, but they do want the mines. The *Economist* does not hesitate to denounce the outcry against the Boer preparations for war as "sheer, arrogant nonsense." The English, forsooth, "are to send out officers, troops, and ammunition, and the Boers against whom these are to be used are to sit down quietly and cultivate farms as if nothing at all were taking place." What is needed is a reasonable and peaceful spirit on both sides. Mr. Rhodes's brutal statement that there will be peace because Mr. Krüger will yield to irresistible force, and that henceforth the Transvaal will be in the hands of the Outlanders, is precisely the kind of talk which endangers peace. Even such resolutions as those passed by the Canadian Parliament are to be deprecated. They may have been meant to show affection for the mother country, but the *Economist* politely suggests that the Canadians had better mind their own business, and that it is not dignified or wise to assume that the fate of the British empire depends on whether a few thousand people on the Rand are to qualify for the suffrage during seven years or five. The *Economist* closes its very judicious review of the situation with the words: "Do not let an exaggerated imperialism make us ridiculous before the world. Our empire was not built up that way."

## THE DREYFUS VERDICT.

"Le monde entier attend," said Major Carrière, opposing the adjournment of the court when Labori was struck down, and it was the truest word which came from him during the whole trial. It was really the jury of the civilized world before which Dreyfus was tried. Those officers at Rennes, ordered to find him guilty as they might have been ordered to storm a redoubt, had nominal but not the real jurisdiction of his case. The enlightened judgment of mankind has been passing upon the evidence as it was submitted from day to day. Nothing like it was ever known before in the history of the world. No trial of king or colossal criminal ever held the breathless attention of all classes in all countries as has that of this obscure French captain. His insignificant personality but threw into stronger relief the immense issues which were bound up in his fate. The telegraph made all men spectators at the Dreyfus trial—as they could not have been at the trial of Charles, or Louis, or Warren Hastings, or Robespierre—and in his person they saw imperilled justice, innocence appealing to brute force, martyrdom crying out, "Arise, oh God, judge the earth!"

And the entire world has not only waited; it has delivered its verdict—the only verdict that counts. Public opinion has been in this case a competent judge. The decisive evidence was not wrapped up in legal technicalities which only trained minds could weigh. It was a question of fact, which the rough common sense of mankind could form an opinion upon as well as the best judge that ever lived. And it should be remarked that the account of the testimony, as telegraphed, has been substantially accurate. Comparison with the full stenographic reports shows that all the material points were given to the world as to the court-martial. This time the thing was not done in a corner. There is no chance to say, as there was in 1894, that the judges, being honorable men, must have had in their secret proceedings evidence ample to convict Dreyfus. The doors were open; all of the 1894 evidence was repeated; all that five years of espionage and the efforts of the most skilled secret service in the world could rake together was added, and what was the total? A mountain of suspicion, a great "perhaps," a vehement assertion that Dreyfus might have been a traitor. Not one material fact was proved. That any documents were delivered was not shown; that Dreyfus delivered them there was not the slightest attempt to prove. This being so, a verdict of guilty condemns only the men who pronounce it.

They themselves, moreover, show by the fumbling and cowardly terms of their judgment that they know it to be in the teeth of the evidence and of mo-

rality. The verdict, in fact, bears every mark of being an arranged compromise. Two judges were for acquitting Dreyfus outright. It is rumored, and the result makes it probable, that a third was hesitant, and finally agreed to vote for conviction only on condition that the penalty be made light and that the court find "extenuating circumstances." Now this was precisely the plea that Gen. Mercier tried to extract from Dreyfus in 1894. It is practically a plea for mercy. But no, reported Du Paty de Clam, Dreyfus would not confess to anything; "above all, he will not plead *circonstances atténuantes*." Yet the court-martial now makes the plea for him! That is, it recommends him to mercy. So the verdict is: Dreyfus is a traitor; his punishment is imprisonment for ten years, five of which are already served, and if he could be pardoned the rest, the court would be very glad. Such a shuffling verdict is really a verdict against the judges.

"Military justice is not your justice," sneered Gen. Mercier one day, in reply to Labori. Evidently. In the light of the event, the conclusion becomes irresistible that the officers of the court-martial were expected to convict, just as they might be expected to execute any disagreeable military duty to which they were assigned. When Col. Jouaust deliberately excluded the critical testimony of Schwarzkoppen and Panizzardi, hopes of honest men rose high. He must be intending to acquit; otherwise how could he hold up his head after shutting out witnesses who would make it impossible not to acquit? But we see now that he was only a soldier, not a judge. He set his teeth and did this thing to "save the army," just as he would have blown up a house filled with women and children if it were necessary to save the army. He was armed with "pouvoir discrétionnaire," and he used it as if it were poison or a dagger, to dispose of an enemy of the French army. It was Gen. Mercier's "military justice," which we now see to mean brute force.

In our keen disappointment and resentment we must, however, be fair. France stands disgraced before the world by this terrible denial of justice; but let us not be unjust in apportioning the guilt. That the mass of the people hail the verdict; that royalist and Catholic newspapers acclaim it as the judgment of God; that the army is frantic with joy; that the populace who greeted the unspeakable Esterhazy a year ago as the embodiment of French military honor should now have only scoffs and hisses for the sufferer at Rennes, strong in his own innocence—these are the things which are black for France, and which will make men look askance at her for many a day. But the French Government is not directly involved; it did and risked everything to secure revision. French civil justice is not stained; the

Court of Cassation held the scales even in the presence of the popular whirlwind, and there is no doubt what its decision would have been if Dreyfus could have been tried before the upright judges composing that tribunal. The mind and conscience of France came nobly to the side of Dreyfus. Even the popularity-seeking Brunetière will not dare repeat his mumblings about the *chose jugée*. It is not sober and informed France that is shamed by this monstrous wrong. What we see in it is the flaming passion of a misled populace, the malice of wicked journalism; above all, the frenzied fear lest anything be done to impair the prestige of the French army. The Dreyfus verdict is the army vindicating the army. It is French "military justice," which the world now understands to be the grossest injustice under the forms of law.

## COLONIAL POLICY.

The people of the United States have lately been favored with much counsel from foreigners concerning the management of their external affairs. Heretofore we have had no foreign policy, and few entanglements with the foreign policies of other governments. Henceforth we shall inevitably become involved in such entanglements, and must necessarily develop some policy in the management of possessions in which other nations have interests. Therefore, we do not question the propriety of the conduct of foreigners in offering us suggestions. Some of their advice is good and some bad. The motives which prompt it are various, and much of it is colored by foreign prejudice and prepossession. Even when their motives are disinterested, our advisers are frequently ignorant of the character of our government and of the weaknesses of our administrative system. On the whole, with the exception of the counsels of such tried friends as Mr. Bryce and Mr. Morley, we can hardly say that we have derived much enlightenment from foreign admonition.

Yet there are some counsels which take the form of information rather than advice, and the value of these is undeniable. Mr. Alleyne Ireland, in a paper read before the Social Science Association at Saratoga, has thrown a strong light on the financial administration of colonies, and his statements deserve general attention. He begins with a proposition which we have steadily maintained, but which is entirely contrary to the theories which our dominant party has professed as well as to the practice of our government. It is the simple proposition that trade is barter, with the corollaries that it is impossible to sell much to people who produce little, to sell more to people, in the long run, than we buy of them, or to export without importing. In illustrating this proposition, Mr. Ireland shows that the idea that colonies

should yield a direct revenue to the sovereign state has been entirely exploded. It is only the British colonies that deserve particular attention, and to-day Mr. Ireland tells us, not a single British colony contributes a cent to the imperial treasury. These colonies are divided into those which are self-governing and those which are not. Self-governing colonies are outside the field of this discussion, and practically all the colonies administered by the British Government lie within the tropics. In Mr. Ireland's words, "Every colony which manages its own finances lies outside the tropics; every colony within the tropics has its finances controlled by the home Government."

When we examine the statistics of trade, we are at once struck with the fact that tropical peoples are very poor customers. They are indisposed to exertion; they therefore produce little and can consume little. During the period 1893 to 1897, "the United Kingdom imported yearly from her non-tropical countries goods to the value of \$23.18 per head of the population of those colonies, while from her tropical colonies she imported only sixty-six cents' worth of goods per capita. In other words, as a source of supply, each man, woman, and child in the non-tropical colonies was thirty-five times more valuable to the United Kingdom than an inhabitant of the tropical colonies." Owing to the large investments of British capital in the non-tropical colonies, which yield their return in the merchandise that they send to England, exports to these colonies are less than imports from them, and now amount to only \$12.32 per capita; but the exports to the tropical colonies nearly balance the imports, being but seventy-one cents per capita. Even on the basis of exports alone, the value of the people of the non-tropical colonies, as customers, is nearly twenty times that of the people of the tropical colonies.

On further examination, however, we find a great difference between the tropical colonies. Some of them are much more valuable customers than others. This difference Mr. Ireland attributes to the difference in labor conditions. In some colonies the labor supply consists of imported contract labor. In others the population is so dense as to press on the means of subsistence. In the third class the natives are not so numerous as to be forced to hire out as laborers or starve, and no laborers are imported. In colonies of the first class the exports are very large, amounting in British Guiana, Mauritius, and Trinidad during the period from 1882 to 1891 to the yearly average per head of \$45.58. In colonies of the second class this average is not much more than half as great, and in the third it is only one-quarter.

Since there are very few parts of the tropics where there is any pressure of

population on the food supply, we may eliminate the second class of colonies from the problem. We are thus brought face to face with the alternative: either introduce contract labor, or be content with meagre returns from tropical colonies; either establish some form of slavery—for that is what is meant by "contract labor"—and make money, or let men be free, and lose it. So long as men are free they will not bind themselves to work continuously, and they cannot be utilized by absent capitalists unless they work continuously. As Mr. Ireland says, the necessity for the use of imported contract labor in tropical colonies arises from the fact that when a man can satisfy all his wants merely from the bounty of nature, he will not devote himself to steady work. If the tropical colonies are to be developed, some way of making people work must be found, and the device of getting them to make contracts for long terms is the only way that has proved successful.

Mr. Ireland remarks: "I am not prepared to claim that we have any right to go to the man in the tropics and say to him: Come, quit this life of pleasant idleness and work five days a week for me." That is not the aspect of the case which he undertook to discuss; but it is precisely the aspect of the case which the people of this country must consider. They may rely on Mr. Ireland's statement that if they expect to make a profit out of their tropical possessions they must introduce contract labor. If they do so, they must declare that it is right to say to the man in the tropics, Come work for me; and to punish him if he does not comply with the terms of his contract. This issue has been shirked hitherto, but it cannot be shirked much longer. We read that thirty-six Galician laborers have just been released from jail in Hawaii, having been imprisoned since last September for breaking their contracts. Compulsion of this kind must be maintained if our dreams of colonial wealth are to be realized, and very soon the people of the United States will have to say whether or no the principle of slavery shall be reestablished.

#### THE FALL CAMPAIGN.

The States of the Union have so generally made the terms of their Governors either two years or four, and put the elections of these officials in the even-numbered years, that there are only a half-dozen commonwealths among the forty-five which will choose their executives in the fall of 1899—Massachusetts in the East, Mississippi in the South, Maryland, Kentucky, Ohio, and Iowa in the central belt running west from the Atlantic. Two other States, Pennsylvania and Nebraska, are to elect minor State officers, and members of the Legislature are to be chosen in New York, New Jersey, and Virginia, as well as in

most of the States which elect Governors. These new Legislatures in Iowa, Virginia, and Mississippi will have United States Senatorships to dispose of.

So many of the few States in this brief list are one-sided in politics that the range of popular interest in the fall campaign is very limited. In Virginia and Mississippi there is no Republican opposition, and the real election in each of these States is decided when the Democrats make their nominations for the offices at stake. Massachusetts and Iowa are so overwhelmingly Republican that there is only a languid curiosity to see how bad the inevitable Democratic defeat will be this time. Pennsylvania can be in doubt only when the Republican opponents of Quay heartily coöperate with the Democrats in a fight against him, and this year the Republican "insurgents" are entirely inactive. Republican success in the legislative elections in New Jersey seems certain.

There remain two of what used to be called the border States, and two more in what was once the West, which are having campaigns of much interest. Both Maryland and Kentucky elected Republican Governors in 1895, and thus broke a record of Democratic victories which had not been interrupted for a generation. Success proved a hard strain for the victors in each case, and bitter factional controversies have arisen among the Republicans, which injure their chances this year in both Kentucky and Maryland. In Kentucky, however, there is a fight among the Democrats which is so bitter that it makes Republican dissensions seem by comparison like friendly intercourse. The "regular" candidate secured his nomination by methods so offensive, and he is personally so detested by a large element in his party, that another Democrat, who is a vigorous campaigner, has taken the field with abundant support, and Republican success seems certain if the present conditions shall continue until election day.

A campaign for Governor in Ohio is always watched with interest by the nation—especially when it comes the year before a Presidential election, and the man who is President, and the probable candidate of his party for another term, is from Ohio. Of course, there is trouble among the Republicans of Ohio this year; there always is. The contest before the State convention between Hanna and the wing of his party which opposes him was very bitter, and harmony has not been restored since the triumph of the boss. But there is even more bitter warfare among the Democrats, and an important element in the party openly repudiates the nomination of their boss, John R. McLean, for Governor. The candidate put by Hanna at the head of his ticket is personally a good man, and it will be much easier for dissatisfied Republicans to support him than for the

outraged Democrats to accept the man in their party whom they most detest.

The choice of a judge of the Supreme Court in Nebraska would attract no notice outside of the State except for one consideration. Nebraska is Bryan's State, this is the last contest in it before the national campaign in which there is every indication that he will again be a candidate for the Presidency, and he has appealed to Nebraska to "lead the van in the great victory which must crown the great conflict of 1900." Bryan himself engineered a fusion of the Democrats, Populists, and Silver Republicans upon one ticket, but so many currents and cross-currents of State interests are running at present that the set of the tide is not as yet visible.

It would not be fair to omit New York from the States about which a good deal of curiosity is felt. No official is to be voted for by all the people, but the lower branch of the Legislature is to be chosen. The Democrats are going to make a hard fight for the control of the Assembly, and hope to do a good deal better than last year, when the Republicans secured 86 of the 150 seats. A Democratic majority this fall would be a serious thing for Gov. Roosevelt, and would be interpreted as a sign of reaction against the Republicans in a State which, if not of late years the "pivotal" one, will always be regarded by politicians of both parties as most important.

The campaign has not yet fully developed in any section. One drift of sentiment, however, is already visible. The people have largely lost their old absorption in the silver question. They are thinking chiefly about the situation in the Philippines, and they are forcing the politicians, somewhat against their wishes in many cases, to let the issue of expansion come to the front. The Republican managers are generally inclined to evade positive declarations. The Democratic politicians are all the time being pushed into more pronounced opposition to the policy of imperialism. The indications at the beginning of September are that, by the opening of November, expansion will be the general theme of discussion.

#### COLLEGE GRADUATES AND TEACHERS.

The destiny of the swelling host of doctors of philosophy and holders of other higher academic degrees is rapidly attaining the importance of an educational problem. The number of persons, both men and women, so distinguished not only is rapidly increasing, but shows no sign of reaching, in the immediate future, its limit. There is already a portentous list of young scholars who have spent two or three years at some American or European university, acquired much weight of learning in some special department, published a

monograph or two, and, perhaps, enjoyed a period of foreign travel. With comparatively few exceptions, they all look forward to teaching as their profession; with equally few exceptions, also, they confidently expect to find their opportunity in some college or university. Some, indeed, with predominantly scientific training, go into business, or find their career as experts in commercial or industrial undertakings. To the great majority, however, openings in such directions make no appeal. Their ambition looks elsewhere for success. To be scholars, and occupy chairs in universities, is their purpose and hope.

That such an ambition is a legitimate and honorable one none, of course, would question. One of its effects, however, has been to cause the supply of specialists steadily to exceed the demand. University officials confess to increasing difficulty in "placing" their men; and there seems little prospect of change. Able and distinguished professors are loath to retire, and seldom resign. Comparatively few new chairs are established from year to year, and the founding of new institutions, once a pleasant diversion of the wealthy, is now, fortunately, infrequent. With all the vigorous growth of the better grade of colleges and universities, there are still more transfers and promotions than additions. The net annual increase of the teaching force of institutions giving the degree of Bachelor of Arts, or its equivalent, does not equal the number of post-graduate degrees annually conferred. Moreover, higher positions, such as those of professor and assistant professor, in institutions of the first rank, are virtually closed to the recent graduate. Occupants of such chairs must be not merely well-furnished scholars, but men of experience and mature judgment, fit for counsel and responsibility as well as for work; and the infrequent vacancies are now almost invariably filled either by promotion, or by calling from another institution men who have already made their mark. For the new-fledged doctors of philosophy there are left, practically, only the minor places, carrying but small salaries, and offering but uncertain chance of advancement save after years of faithful drudgery. Yet so overstocked is the market and so keen is the competition that the bare suspicion of an approaching vacancy is sure to call out a score of eager applications to fill it.

With such conditions prevailing, it seems clear that an increasing number of university graduates, if they are not to abandon their scholarly ambitions altogether, must enter the secondary schools, and find there their career. At present, probably, no suggestion could be, to the average university man, more distasteful. To ask him to become a "school teacher" is, in his view, to ask him to go into exile, to banish himself

from his scholarly associations, and to turn his back for ever on the professional life for which he has fondly hoped. It must be admitted that the objection has much to justify it. To an enthusiastic young man or woman, fresh from the inspiring influences of an eager intellectual life, and all aglow with a zeal for learning, the public secondary schools, with their elementary requirements, their routine work, their frequently worn-out or vicious methods, their slavish subjection to arbitrary superintendents and committees, and their political cast and uncertain tenure of office, offer, in truth, a rather dreary and uninviting prospect. Yet we are greatly mistaken if it is not precisely this needy field that holds out, to such men and women—themselves the hope of American culture—the best chance for distinction and the largest opportunity for usefulness.

Indeed, one may fairly ask wherein lies the hope of improvement, if the tide of educated power is not to be turned in this direction. One of the fundamental difficulties with American schools, as has been often pointed out, is the fact that the teachers, in so many instances, are themselves ill-taught. They do not know the subjects they are expected to teach, and, in consequence, they teach them very badly. The whole trend of educational progress is towards the employment of specially trained instructors for the various departments of the preparatory work. Where are these to be found, if not among the graduates of our colleges and universities? Unless we can have the services of the thoroughly equipped expert, we must continue to wait for the reconstruction of the school curriculum, the reorganization of methods of instruction, and all the other reforms which have long been faithfully urged. We shall still lack well-contrived school-houses, adequate salaries, stable tenure of office, and freedom from political meddling. Public opinion will clamor in vain for efficient schools, so long as those best able to make them efficient will have nothing to do with them; for it is the teachers, and not the public, who must take the lead.

One important result of such a change is certain to be the closing of the great gulf which now separates the school from the college and the university. The air of superiority often assumed by what, for want of a better term, have come to be called the "higher" institutions, finds much of its *raison d'être* in the unscholarly work of the secondary schools themselves; and the young graduate who scorns a place in the high school, and takes a petty job in a university instead, knows that many of his former instructors at bottom approve his choice. Transfers from secondary schools to college chairs are so infrequent as to be almost unknown; and a

man who begins in the former may count, with assurance, on ending his days there. Elsewhere it is not so. In England, scholarly work in the schools is a distinct commendation to higher positions. In Germany, some of the finest product of university training is utilized in the *Gymnasium* and *Realschule*. Teachers in the French schools are highly trained specialists. Sooner or later, we must come to the same thing in the United States. The masterly work of the universities and colleges must be brought to bear on the work of the schools, or the efficiency of the former cannot be maintained. Educationally, we have at present a waste product, whose utilization means the enrichment of the roots of our intellectual life. Whether those who are pursuing knowledge for pure love of it are to give the benefit of it to those who need it most, or whether they are to go on accumulating in selfish satisfaction, is the question soon to be answered.

#### CO-OPERATIVE PRODUCTION IN ENGLAND.

LONDON, August 19, 1899.

The prospects of coöperative production, in the only sense which to many of us seemed worthy of the epithet, were gloomy indeed when I first came in contact with the coöperative movement at the Oxford Congress in 1882. The undertakings founded by F. D. Maurice and his group of Christian Socialists had long ago disappeared; the co-operative cotton-mills of Lancashire had become mere joint-stock companies; the Wholesale Society, resting upon the support of hundreds of retail stores, and establishing one factory after another on completely "capitalistic" lines, seemed to be carrying all before it; and enthusiasts like Hughes, Vansittart Neale, and Greening, protest as they might at each successive Congress, were apparently voices crying in the wilderness. It seemed but too evident that the self-employing workshop was an impossibility in the midst of modern industrial conditions; and very soon Miss Beatrice Potter (Mrs. Sidney Webb) came forward with her brilliantly written book to persuade us that it was not only impracticable, but also undesirable. Production carried on by the Wholesale Society, even though it gave its workers a share neither in profits nor in management, was really more democratic, it was urged, than when engaged in by independent groups of workmen; because it was controlled in the last resort by the great body of consumers in the distributive stores, to whom also fell ultimately all the profits. As if to confirm this argument, most of the little ventures set on foot about this time by ardent idealists (the shirtmakers in London are a case in point) came to grief after a brief period of ineffectual struggle.

Coming back to England in 1898, one of the most unexpected phenomena that confronted me was the greatly changed position in the coöperative world of coöperative production of the independent type. I had known that a new and convenient term had meantime been invented, viz., "Labour Co-partnership"; a term wide enough to in-

clude even profit-sharing businesses still financed by individual employers. I knew, also, that a new propagandist society, the "Labour Association," had been founded, with a very active secretary in the person of Mr. Henry Vivian. But what I was not prepared to find was a considerable and increasing number of really thriving productive societies, with a capital of more than two and a half million dollars, and selling goods in the year 1898 to a value of more than four and a half million dollars.

During the present week (August 14-19) the coöperators of Great Britain are holding their annual festival at the Crystal Palace; and the Labor Association has taken the opportunity to arrange for an exhibit there of the products of labor co-partnership undertakings. Though the number of stalls is not large, no one can wander among them and converse with the men in charge without being greatly impressed. There is, of course, the old ardent coöperative faith which has complete confidence in its power of moving mountains; but this is no longer pathetic, for all around are the evidences of actual prosperity. The "literature" most liberally provided takes the convincing form of balance-sheets.

The movement is certainly large enough to engage our respectful attention. But the first thing one has to do is to discriminate; lump statistics are quite valueless in a matter of this kind. One must begin by putting on one side the various flourishing farmers' societies in Ireland for obtaining supplies or marketing produce. They are exceedingly interesting, and deserve an article to themselves; but they cast no light on industrial coöperation. Then we must put on one side the Scotch co-partnership undertakings, which are mainly organizations of consumers that allow a bonus to the workpeople in their factories. And finally, when we come to England, we must observe that by far the greater number of the flourishing societies are to be found in the Midlands, and that most of them are in Leicestershire and Northamptonshire, and are concerned with the manufacture of boots, hosiery, and ready-made clothing. The two typical towns are Leicester and Kettering. The latter, with its great coöperative store and its five thriving co-partnership businesses for the manufacture of boots, clothing, and corsets, and also for undertaking building contracts, will for some time be the worthy Mecca of the coöperative world.

What, then, is the secret of their success so far? Or is there no secret? Were the critics of the older productive movement altogether wrong, and did it simply need greater intelligence and perseverance on the part of the workmen to succeed? The answer is, I think, this: the older productive societies thought to find their market among the general public; the newer find 90 per cent. or more of their market within the coöperative world, i. e., in the "distributive" stores. They have appealed, and not in vain, to the coöperative spirit, to coöperative "loyalty"; and had there been nothing else to commend them than their coöperative character, they would almost certainly have secured some trade, especially as they attempted to manufacture only staple articles for which there was a steady popular demand. But they have obtained a much greater trade than mere "loyalty" would have given them, owing to certain striking elements in their constitu-

tion. They have provided the distributive societies, which had larger sums of money (their members' savings) in their hands than they knew what to do with, with an attractive field of investment; and, having invested, mere self-interest will induce the distributive societies to buy as largely as they can in order to insure the payment of their interest. And not interest only. The newer productive societies are distinguished from the old by their more businesslike attitude, both towards capital and towards the consumer. The older societies aimed at putting together their own capital; if they were compelled to obtain capital from outside, they thought they offered enough when they promised a certain fixed interest. The new societies usually obtain a great deal of capital from outside; and, recognizing that capital needs something more than an "average interest" to induce it to run risks, they offer, over and above an interest of 5 per cent. (which is a good deal to begin with), a bonus on capital dependent on profits. And as to the consumer (who is usually in the first instance a distributive store), they allure him by the device which the universal store practice suggests, i. e., by offering him a bonus on purchases. On the side of the productive society, it may be noticed, trade with coöperative stores has the two great further advantages, that it is pretty steady all the year round and that it produces no bad debts.

The conclusion, therefore, which is borne in upon the observer from every side, is the absolute dependence of the new productive movement on the existence of a very large ready-made market in the coöperative retail stores. This is so evident that I am surprised it has not impressed certain American spectators more forcibly than it seems to have done. To found on the example of England an exhortation to American workmen to set up coöperative shops before their market is ready, is, in my opinion, little short of criminal.

And the English movement itself will find itself face to face with grave difficulties as it grows out of its first stage of self-sacrificing ardor. Already, in most of the larger societies, the amount of capital contributed by the stores in the form of shares is much greater than that contributed by the workers. Thus, in the Leicester Hosiery Society, out of a share capital of some \$150,000, only about \$15,000 is owned by the workers, and three-fourths of the rest belong to retail societies. Probably the workman's "bonus on labor" is safe enough; but it is very doubtful whether the workers will long retain a preponderating voice in the election of committee and managers, if they provide the smaller part of the capital. And if they do not, there is nothing in the bonus or in the right of electing two or three committeemen to be outvoted on the board, to arouse any very keen interest on the part of the workmen. There are signs that the leaders are becoming aware of the dangers ahead. They are compelling the workers to become shareholders by withholding the bonus on wages until it reaches the amount requisite for a share; and they are paying off the individual shareholders who are not workers. But if they are to carry on business on a large scale, there seems no prospect that they will be able to dispense with the shareholding societies. They can neither provide an adequate cap-

ital of their own, nor offend their best customers.

Moreover, the point is being neared at which productive societies will begin to compete among themselves. Hitherto the coöperative market has been so large that it could easily furnish trade both for the factories of the Wholesale and for all the independent societies set up in opposition to it. But already the travellers (or drummers) of the boot-making societies are bidding against one another. Mr. Maddison, the very able labor member of Parliament who is President of the Labor Association, does not seem to view the prospect with any alarm. In his reaction against the "centralizing" and "monopolizing" policy of the Wholesale, he uses language which sounds unusual in a coöperator, and would have perplexed both Owen and Maurice. He relies on "the free play of economic forces"; he regards "the horror of what is called competition" as "groundless"; and he would leave the number of productive societies to "natural selection." I am not here concerned with the criticism of either ideal—of either "centralization" or "decentralization." But it may be safely predicted that the increase of competing societies will add increasing cogency to the arguments of the adherents of the Wholesale, and, what is more to the point, tend to a fall in wages and a loss of bonus on the part of the work-people.

As it is, the larger productive societies of the new type are by no means so sharply distinguishable from the Wholesale as the enthusiasts for labor co-partnership might lead one to suppose. They are in the main themselves federations of distributive societies. The Wholesale has but to give its employees a bonus on labor, however small, and a share in the management, however nominal, and it becomes a "labor co-partnership" society also. This being so, the time has come for the Labor Association, not to slacken in its propaganda, but to add to its assertion of the principle of labor co-partnership some more precise analysis of the nature and extent of that co-partnership in the societies already established. W. J. A.

#### ROMAN ROADS AND MILESTONES IN ASIA MINOR.

AMHERST, MASS., September, 1899.

A military Power such as Rome was could not long be content with the bridle-paths which all primitive peoples find sufficient to subserve their commercial interests. For, in order to facilitate the shifting and concentration of their armies at strategic points, they needed a better and more comfortable means of rapid transit than was furnished by the primitive bridle-path. The primary object which the Roman international roads were intended to subserve was military in character, and therefore they were known as *via militares*, though in the provinces we find *via consulares* and *via pratorie*, because they were built by proconsuls or proprætors respectively.

The width of the Roman road varied much according to its importance. Often it was one hundred and twenty feet wide, though in the provinces it was generally sixty, sometimes forty feet wide. In order to understand the reason for this great width and for the substantial construction that was rigidly adhered to, we should bear in

mind the make-up of the Roman army, whose comfort and necessities were continually consulted. In the first place, the Roman soldier was burdened by his heavy armor and other impedimenta in such a manner as to render him wholly unfit (*impeditus*) to repel sudden attack successfully, as we read on nearly every page of Cæsar's Commentaries. The baggage-train was far larger and more unwieldy than anything we know of to-day, for the reason that this train had to transport not merely the tents, artillery, arms, munitions of war, army chest, and a host of other things necessary in the warfare of that day; not merely the effects and plunder of the legionaries, but also those of two secondary armies—an army of women, wives of the legionaries and camp-following prostitutes, and another army of body-servants, for each legionary had one or more servants, so that the *colones* outnumbered the legionaries themselves. When on the march, this unwieldy army maintained the line-of-battle order, theoretically at least, in order to be ready to repel sudden and unexpected attack. Good roads, therefore, were necessary in order to enable the immense train with which the army was handicapped to keep pace with the legionaries, and wide roads were essential, in order, in case of sudden attack, to allow the individual legionaries to make effective use of their arms without interfering with their neighbors.

The Roman roads were built with more care than is expended upon the beds of our railways even. They were made as straight as possible, and natural obstacles were skillfully overcome by the use of cuts, fills, bridges, culverts, embankments, and even tunnels. Stiff grades were avoided, and a level, once reached, was doggedly maintained, even at the expense of making cuts, fills, etc. The work preliminary to the building of any Roman road consisted in excavating all the dirt down to hardpan, and the excavation thus made was filled in, regardless of expense, with layers of sand, stone, and cement, until the requisite level, however high it might be, had been reached. Finally, the surface was dressed with a layer of metal and cement. The road was practically indestructible, and required only occasional repairs. That continuous or even merely yearly repairs were not necessary seems clear from the fact that, when repairs were made, the proprætor of the province thought it so important an event that he celebrated it by inscribing the fact along with his name on the milestones.

Many years ago Bergier made an examination of certain Roman roads still in use in France. One road was examined at a point where it had been raised twenty feet above the level of the surrounding country, and a vertical section revealed a structure of five layers. First came the great fill of sixteen feet and one-half; on the top of this fill came, first, a foot layer of flattish stones mixed with cement, then a foot layer of flattish stones without cement, then a foot layer of firmly packed dirt, then a half-foot layer of small metal in hard cement, and lastly, a half-foot layer of large metal and cement. Other roads investigated by Bergier, while differing in treatment, were just as substantial roads. Paved roads were rare, but the Via Appia offers a remarkable instance of a paved road. The stone used in its pavement

is of the kind of which millstones are made, and they are so carefully dressed and adjusted that the road often seems to be solid rock, and has proved so indestructible that, after two thousand years of continuous use, it is still a superb road. In the countless inscriptions which state that such and such a governor under such and such an emperor repaired the roads and bridges in his province, reference is made to the top-dressing of metal and cement. The military road of the provinces was usually sixty feet wide, and was divided into three tracks: a raised centre and two side tracks, each track being twenty feet wide.

If the old Roman roads in Italy, France, and elsewhere are still existent and in use, there is an especial reason therefor, quite apart from the fact that these roads were originally built for eternity. In the days of Rome's ascendancy all roads led to Rome, and in Europe this has never ceased to be more or less a fact. No city of Europe ever attained such transcendent importance as to make necessary a complete change in the general direction of the road system; so that, in spite of the decline of Rome and the rise of other centres, the roads of Europe still lead to Rome.

In Asia Minor the case was different. Before written history opens, the great emporium of Asia Minor was Pteria, the capital city of the great Asiatic peninsula. The prehistoric system of roads led to Pteria; one great artery was the road from Pteria (or later on, Tavium) to Ephesus on the seaboard; a second was the road from Pteria-Tavium through the Cilician Gates to the southern seaboard, etc. Later on, when the Persians gained control over Asia Minor, Pteria had ceased to exist, but its neighboring Tavium rose in importance and became the emporium of all central Asia Minor. Roads led to Tavium. The first artificial trade roads (leaving out of consideration the mythical roads of Semiramis) were, therefore, built by the predecessors of the Persians in Asia Minor. The first road mentioned in written history was the Royal Road which led from Ephesus to Susa. Now this Royal Road was nothing in the world but the old Hittite road (or roads) along whose immense zigzag the Persians were content to jog for centuries, never dreaming, apparently, of a short cut. If the Persians had built the road themselves, they would never have been guilty of the incomprehensible folly of making the great détour from the Cilician Gates via Tavium to Ephesus, instead of following the direct and natural trade route from the Cilician Gates via Iconium, Antiochia, Celsene, and the Lycus valley to Ephesus. The Greek kings and their successors, the Romans, adopted this natural shortcut, and the Royal Road lapsed into desuetude. Then all roads led to Ephesus, because Ephesus was the gateway to Rome. Later on, Constantinople arose and disputed the queenship with Rome. Her rise demanded a thoroughgoing change in the general direction of all roads in Asia Minor. Roads no longer led to Rome—that is, to Ephesus—but to Constantinople. The Roman road system in Asia became useless for purposes of trade, and was degraded first to neighborhood roads; and as for fifteen hundred years the roads have continued to lead to Constantinople, the good old Roman roads were finally abandoned, lost, and forgotten. Occasionally the traveller can locate a sea-

tion of a Roman road (though their course must generally be argued from the mile-stones, as will appear presently). One such at Kiahhta in distant Kommagene is now a silent but eloquent reminder of Rome's solicitude for even her most distant provinces; every stone of the magnificent old bridge on this road tells a pathetic story of the passing of human grandeur.

For Italia, distances were measured from the *milliarium aureum* in Rome; from Milan for Gallia Cisalpina; from Lyons and Rheims for Gallia Celtica and Belgica respectively, etc. So, in Asia, distances were measured from the provincial centres, from Tavium for Cappadocia; from Melitene for Armenia; from Palmyra for Palmyrene, etc.

Tavium, in northwestern Cappadocia, was, as we have seen, a city of importance at the very beginning of history, and continued to be a centre of commerce down possibly to early Byzantine times. The celebrated rock-sculptures of the neighboring Boghaskienl (Pteria) and Eyyuk prove that Tavium was inhabited by the people nowadays called the Hittites, who have left enduring memorials of their high civilization in the rock sculptures found throughout Asia Minor and northern Syria. After the fall of the Hittite empire, Tavium continued to flourish under the Persians, and was an important station on the Royal Road, over which the earliest recorded postal service travelled. It was the centre of the Roman road system for the whole of northwestern Cappadocia, Pontus, and Galatia, being the point from which radiated no less than seven Roman roads. Consequently, it is a matter of the highest importance for ancient geography that the site of Tavium be located with absolute certainty. An elaborate postal service was kept up throughout the Roman empire; several precious lists of postal stations have come down to us (e. g., the Antonine Itinerary, among others). These lists give not only the names of the postal stations, but also the distance from station to station in Roman miles, beginning with a certain city as the point from which distances were measured for the whole surrounding country for at least two hundred miles. Just as at Rome the *milliarium aureum* was the official spot from which distances were measured, so central milliararia were erected in Asia Minor in the cities from which distances were measured along the roads of a given province. Many of these starting-points are given in the Itineraries, or in the Peutinger Table—an ancient map that chance has preserved; but many of the starting-points are not given, and therefore it behooves the travelling archaeologist to hunt up the Roman milestones that may have survived to the present day, in order to read from them the story they have to tell in regard to the Roman road system.

If the starting-point be once fixed, then the location of the cities or postal stations between, say, Tavium and Ancyra is a comparatively easy matter, that requires only patient investigation of the region of country on the line of march between Tavium and Ancyra. Thus, at a distance of, let us say, twenty Roman miles, as one travels west from Tavium, the traveller knows that he must find the ruins of a town or postal station, and so he scours the country until he finds the object of his search. In many cases the stations were so insignificant that no remains of them will have been spared to the

present day, especially if they were mere temporary quarters, consisting of buildings for the care of relays of horses and the entertainment of the officials in charge. It matters little if the traveller find no traces of these insignificant intermediate stations, provided the mileage between two fixed points, such as Tavium and Ancyra, be ascertained to be beyond all doubt. In that case it is only necessary for the traveller to measure off the distances of the Itinerary, and he has the whole line fixed with a very near approach to certainty. However, if he succeeds in finding one or more of the intervening stations, that fact will strengthen his case materially. Now, from the time when geographers first began to make maps of Asia Minor, they have sorely needed a certain identification of the site of Tavium, and in 1884 it fell to my lot to discover the first milestone on the Roman road between Tavium and Ancyra. This milestone, therefore, locates Tavium definitely, and enables the geographer to fill in with comparative ease the map of the country reaching west to Ancyra, and east to Caesarea, Sebastia, Amisus, Amasia, etc. Afterwards I found the hundredth milestone on the same line, a fact which proved that I was following along the Roman road. In default of this direct epigraphical evidence, a clear case of the corruption of the ancient name by the Turks is a most safe way of identification. For instance, after leaving Tavium I travelled northward, following the line of the ancient Roman road as laid down in the Peutinger Table, and at Tamba Hassan I found several badly defaced Roman milestones, a fact which proved that I was locating the road correctly. Now the Peutinger Table gives Tamba as the first station on this road at a distance of thirteen Roman miles from Tavium, and it takes very little acumen to discover the Tamba of the Peutinger Table in the Turkish Tamba Hassan.

Milestones were erected along the entire line of the Roman military roads. I can speak from personal observation only of those of Asia Minor and Syria. In shape they are a conical column, round in horizontal section, and monolithic. They vary from seven to nine feet in height, with a diameter at the base of from two and a half to four feet, but tapering off to a foot and a half at the bluntly rounded top. They are merely rough-dressed. The majority of them bear inscriptions, which are usually in Latin, but sometimes in Greek, sometimes in both Latin and Greek, while sometimes the distance alone is given in both Latin and Greek. The distance is usually unaccompanied by a statement as to the place from which the distance was measured, though sometimes both the starting-point and the objective point are given. The inscriptions on these milestones give not only the name of the Emperor during whose reign the road was constructed or repaired, but, what is of great importance for the history of the region, also the name of the Roman Governor during whose term of office the road was constructed or repaired. I found in all about one hundred inscribed milestones, many of which were inscribed two and even three times. When the Roman road was originally built, milestones, bearing inscriptions dated by the name of the then reigning Emperor and that of the proprietor who constructed the road, were erected at every mile. Now in the course of time the road needed repairs. A new

Emperor was wearing the purple in Rome, a new Governor, who cared naught for the works and the honor of his predecessors, was lording it in the province. This new Governor was forced to repair the roads and bridges in his province, but instead of going to the expense of erecting new milestones bearing inscriptions announcing his work, he simply had his inscriptions cut on the old stone and directly over the old inscription without having first erased it. Of course while the marks of the chisel were fresh and unweathered the new inscription might be read with comparative ease; but as soon as time and weather had dimmed the freshness of the more recent inscription, then it became a matter of science to decipher the twain. It sometimes happened that a third inscription was cut over the already existing two. I found several such, and my despair when brought face to face with such a stone may be imagined. However, the decipherment proved to be merely a matter of persevering study and painstaking combination of details. Most of these milestones were found in Cataonia, the region east of the Anti-Taurus range of mountains. At the time, I was travelling eastward towards the Euphrates from Comana (the Golden), once the seat of the worship of the great Asiatic goddess of fecundity (here known as *Ma*), in whose temple no less than six thousand slaves (mostly women) were kept; whose chief priest was next in rank to the King of Cappadocia. Judging, then, from the importance of Comana, one might naturally suppose that it was the starting-point of the system of Roman roads for the trans-Anti-Tauran region. But about two hours east of Comana I found the 144th milestone. This, then, was proof positive that Comana was not the starting-point. As I continued to journey eastward and to discover new milestones, I found that the numerals on the stones steadily decreased, until finally it became certain that Melitene (now Malatya), not far from the Euphrates, was the starting-point of which I was in quest.

After my explorations in Cataonia (or Armenia Minor), where I came daily into contact with the Roman milestone, I joined the Wolfe expedition to Assyria and Babylon. On the home journey from Babylon and Baghdad, we crossed the Syrian desert. About one day's journey east of Palmyra, and while still in the desert, my eyes suddenly fell upon a large stone lying by the roadside. It was a Roman milestone, but uninscribed. However, it served to put me on the alert. Further on another, and still another uninscribed milestone was found, until finally I had the satisfaction of finding an inscribed stone, the eighth on the Roman road from Palmyra to Aracha, showing that distance was reckoned from Palmyra. It is well known that people, manners, customs, and names of places change very slowly in the conservative East—nay, the life of Abraham, Isaac, and Jacob may be seen throughout the Mesopotamia and Chaldea of to-day; and many of the cities whose names were familiar to the patriarchs of the Bible still bear their Biblical names. Of this intense stability both of the names on this eighth milestone are interesting examples. Palmyra is but the Latin translation of the Semitic Tedmur, the place of the palms, and its name is still Tedmur, and nothing but Tedmur, throughout the Orient of to-day.

Aracha, the other name mentioned in the inscription on this milestone, is the Latinized form of the Semitic name Erech, and this Erech is still existent, and still bears the name Erech. It is the first station as one journeys east from Palmyra.

Leaving this eighth milestone, we journeyed on towards Palmyra, finding nearly all of the remaining seven milestones, some of them being still in position. West of Palmyra we found the Roman road leading from Palmyra to Hama, and followed it for about five miles, finding inscribed stones, all still erect and in position. If we did not know the exact length of the Roman mile from other sources, it might be measured from the stones of this road. I say *road*, but it is no longer a road. We were travelling over the desert without any road, being guided by native Palmyrenes who knew where the water puddles were to be found in the spring of the year. We stumbled by the merest accident upon a milestone, and shortly afterward another one was descried in the distance. Thus we got the direction of the road and followed it for a few miles—as long, indeed, as prudence would allow; and we turned away from the road and the milestones in silence and in sorrow. Some future traveller who has the courage and the means to venture over the trackless waste between Palmyra and Hama will reap a rich epigraphical harvest.

There is something awe-inspiring about these hoary guardians of the Roman road, simple and rough-hewn though they be. Like the Roman sentinel of old, they are still true to their trust, eloquent and stately reminders of the mighty deeds of mighty Rome. Fourteen, fifteen hundred years have swept over them; they have witnessed the prolonged death-struggle of the imperial city of the seven hills; they have seen empires, nations arise and grow wanton in the pride of strength, only to return to the nothingness from which they sprang, but they still stand proudly erect, simple, austere, sublime, in the silence and the solitude of the desert, bidding defiance to time and to man.

J. R. S. STERRETT.

### HISTORY FALSIFIED.

TO THE EDITOR OF THE NATION:

SIR: Senator Lindsay's address before the American Bar Association, which was at once telegraphed over the country, must be taken as a political outgiving of rather more than ordinary interest. It is, therefore, legitimate to call attention to a few of its curiously unwarrantable assumptions.

His declaration that President Jefferson was overruled by Congress as to the power to erect States out of the Louisiana Territory, is only one of many errors. Instantly upon this acquisition, to wit, on October 17, 1803, he summoned Congress in extra session to "take those ulterior measures necessary for the immediate occupation and temporary government, and for its incorporation into our Union." Not only were Mr. Jefferson's belief and purpose plain in this, but the Ordinance of 1787, for erecting the Northwest Territory into future States, was upon his plan drafted three years earlier. In public and private, Mr. Jefferson urged that all contiguous terri-

tory that should be "settled by our own people," as he expressed it, ought to belong to our family of States. "What harm," said he—"what harm can come of merely extending the Federal principle?" And because this was not provided for in the organic law, he proposed that another article should be added to the Constitution.

And as if this treatment of our early history were not specious and misleading enough, Senator Lindsay uses recent events with fine scorn of the real facts. Of the Filipino insurrection he says: "It was an attempt to utilize the victories the United States had won in the war with Spain for the accomplishment of an end to which they [the insurrectionists] were in no wise committed." Not "committed" to a cause "for which they had been struggling against Spain for countless generations," as the Senator had declared in almost the same breath? And had the Filipinos done nothing? Let Lieutenant Calkins, in his historical article in *Harper's Monthly* for August, answer. After showing that they covered and held the whole outside region to the very gates of Manila, controlled the entire country and its resources, even to the water supply and works, effectually beleaguering the city, he says: "In none of these operations had the Americans borne any part." Indeed, if one will read the article above referred to, he will be convinced that Senator Lindsay, like many other swift witnesses, has made a political speech rather than a statesmanlike presentation of a great question so vital to the interests of the country.—Very truly,

ENOCH KNIGHT.

LOS ANGELES, CAL., September 2, 1899.

### AMERICANS AND GERMANS.

TO THE EDITOR OF THE NATION:

SIR: I am much pleased with the characteristically sensible and temperate tone of the review, in the last issue of the *Nation*, of Prof. Münsterberg's article in the September number of the *Atlantic*, entitled "The Germans and the Americans." I read the article carefully as soon as it appeared, and it seemed to me also that his assertions are altogether too sweeping, and that the reasoning is fallacious in that it assumes that what is true of some is true of all. Prof. Münsterberg certainly does not bring forward any unassailable reason why there should be a larger amount of dislike, of "a kind of antipathy, a half-ethical, half-aesthetic aversion," between the Americans and the Germans than between any other two nations. He states that it would be superficial and wrong to deny the existence of this feeling. I am, then, radically superficial and wrong, for I do not believe that such a feeling exists *naturally* between the great body of the American people and their German brothers, and I claim with even greater faith than the psychologist that the German immigrants become a respectable and very desirable element of the American population; they are industrious, thrifty, skillful, and, above all, honest, and, more than that, they are quick to assimilate Americanism. I am, however, ready to admit that the "energetic" policy and the unwise speeches of the German Emperor have a tendency to stir up ill feeling, but this is unimportant, for Prof. Münsterberg, using rather

strong language, says that the American clings to the belief that the "Emperor is a crank." He goes on to say later (by way of compliment to the Emperor, I suppose) that "the one living American whose personality most closely resembles that of the Emperor William is the brilliant young Governor of New York," and expresses the belief that, if Germany were to become a republic, the people "would elect the present Emperor with enthusiasm as the first President"; but how about the Diet and the canal bills?

Now, the evident purpose of Prof. Münsterberg's article is very praiseworthy, namely, to assist the two nations "to understand each other and to feel the inner accord of their real natures, or at least to overcome hostile prejudices." But can this purpose be accomplished by trying to make the two nations believe that they dislike each other?

As the distinguished psychologist talked "shop" a little at the beginning of his essay, I may perhaps be permitted, in closing, to add a bit of philology. In your reference to Cicero's observation that the same word meant stranger and enemy, I assume you had in mind the Latin *hostis*. In German and English, however, the root of this word is represented by *gaet* and *gwet* respectively, and in this connection it is worthy of notice, as Kluge points out, in how many ways Teutons and Romans have transformed the idea underlying the old inherited word for "stranger": the Roman regards him as an enemy; among the Teutons he enjoys the greatest privileges.

CHARLES BUNDY WILSON.

THE UNIVERSITY OF IOWA, September 2, 1899.

### THE POOR WHITE AND THE NEGRO.

TO THE EDITOR OF THE NATION:

SIR: The negro problem of the South is less one of race and color than of social and economic conditions. Before the civil war, the South had two distinct classes of whites, the slave-owning aristocracy and the "poor whites." For the latter the war was a social and economic revolution as well as for the negro, although the white man did not realize it at the time. Before the war, the "poor white" was most wretchedly situated. In almost every kind of common labor he came into competition with slaves, and his wages consequently were little or no higher than the cost of maintenance of slave labor. In this competition the slave got decidedly the better of it, as his position was assured and he was protected by his master, while the "poor white" had to shift for himself. Under these circumstances it was only natural that the "poor whites" should hate the negroes and the blacks despise the "poor white trash." And yet one never heard of a public lynching in the time of slavery, and negroes were rarely attacked by mobs of whites. The reason is obvious: the slave-owners controlled the Southern commonwealths, and they were fully able to protect their property. A slave was valuable property, and the "poor white" that injured one always suffered for it.

The great conflict between the North and the South changed all this. The ultimate cause of the war may be attributed to the economic conflict between the free labor

of the North and the slave labor of the South. But the economic upheaval brought the greatest benefit of all to the "poor white" of the South. He, far more than the negro, was made a free man. The old slave-owning aristocracy was overthrown, and the "poor whites" gained the ascendancy. This was a blessing to the "poor white," but not to the negro. No longer is the negro valuable property, nor has he his old master to protect him. His former rival, upon whom he had looked with contempt, is now his political master. That the negro is the sufferer by the present state of affairs in the South is proved by the frequent lynchings. Negroes are shot, hanged, or burned, not only for assaults upon white women, but for every serious offence against the whites. And in justice to the negro it must be said that it is only the vicious few, when inflamed by alcohol or passion, who commit the crime of rape; and, moreover, this crime is the occasion of but a relatively small proportion of the lynchings. On the other hand, among the whites it is the lawless few who do the lynching, generally in opposition to public sentiment.

The competition between the "poor whites" and the negroes still obtains in but a slightly modified form, and the whites and blacks are continually clashing in the labor market. This economic conflict makes the "negro problem." The occasional spasmodic attempts of the negro to enter politics are only incidental to the problem. The "poor white" has not completely outgrown the effects of the institution of slavery, and is often shiftless and lazy; but he is vastly more alert and aggressive, as well as more intelligent, than the negro, and whenever the two races clash, the negro is invariably worsted. Fortunately for the negro, certain lines of work are by custom reserved for him, such as domestic labor and work in the cotton-fields. But the moment the negro leaves the beaten path and enters new fields, he comes into competition with white labor. This competition between the two races would do little harm if it did not occasionally lead to crime and bloodshed. The great problem for the South to solve is, how to prevent this resort to force.

There need be no question that the South will solve the question satisfactorily and fairly, without any assistance from the outside. The negro's best friend has always been his old master, who has ever shown him true kindness and sympathy. The "poor white," as a type, is gradually disappearing. Living under improved economic and social conditions, he is being better educated, and, with the possession of political power and a growing sense of responsibility, he is slowly becoming more conservative. Furthermore, he is beginning to realize that capital and immigration, and resulting prosperity, do not come to communities where lawlessness is permitted. With a better and more efficient organization of the forces of law and order, backed by a strong public sentiment, the Southern commonwealths will surely be able to repress the criminal tendencies of negroes and restrain the lawlessness of whites. Then the economic struggle will follow natural laws and be decided on its merits.

But what will become of the negro? The negroes in the South are not increasing relatively so fast as the whites. The relative number of births is greater, but, by reason

of ignorance and neglect, the relative number of deaths is greater still. And when the flood of immigration sets Southward, the negro will form an ever-decreasing proportion of the population. Will the negro, then, disappear before the superior race as the Indian has done? He will certainly disappear as a race, but probably by a slow process of absorption. He is too submissive and too imitative to meet the fate of the Indian. The laws against miscegenation in the Southern States prevent intermarriages, but they are powerless to prevent a gradual increase in the number of mulattoes of illegitimate birth. The process of absorption is slow but unceasing, and it inevitably follows that in due course of time there will not be a full-blooded negro in North America.

Statistics show that the negroes are drifting towards the Gulf and South Atlantic coasts. It is, therefore, probable that this region will in the end have the largest proportion of population of mixed blood; and, as one moves Northward, the proportion will grow less and less. The mulatto is generally well-proportioned and intelligent. He is said to be more vicious than the black. If true, this may be due to the circumstances of his birth and his unfortunate station in life. At any rate, the mulatto is better able to withstand heat and malaria than the white man, and would therefore be better fitted to survive in certain unhealthy regions in the South. And, finally, it is reasonable to believe that, under natural conditions, the mulatto would become a useful citizen and a credit to his country.

H.

[We print this interesting view without comment further than remarking that, in our opinion, confirmed by that of recent good (even Southern) observers, the condition of the "poor whites," economically and spiritually, is more to be commiserated than that of the freedmen.—ED. NATION.]

#### HISTORY IN THE SECONDARY SCHOOL.

TO THE EDITOR OF THE NATION:

SIR: In your issue of August 10 I offered some comments upon certain problems in secondary education. That communication was suggested by the recent Report on Historical Teaching, but dealt with it only as symptomatic of general tendencies and conditions. I contended that secondary schoolmen must solve problems of secondary education, since there was hopeless contradiction among college specialists; that college men put an undue pressure on the secondary school; that the recommendations of specialists in their various fields of study were highly partisan in nature. There was but one feature of the Report dealt with directly and individually; this was its wholesale condemnation of the single-year course in general history.

In your issue of August 24 Dr. McLaughlin, chairman of the Committee of Seven, criticises that communication as if it were directed in some special way at the work of his committee. I venture to ask the courtesy of your columns for a single rejoinder, confining myself to those matters which bear specifically upon the Report.

The statement that the "historians insisted upon a four-years' course" was made in running comment upon a more general matter and as illustration of a general con-

dition. The argument was in no way affected by the exact truth or error of that statement, which may, however, be justified. The Report does not, it is true, specifically "insist" upon a four-years' course. Its leading statement is: "As a thorough and systematic course of study, we recommend four years of work." Dr. McLaughlin writes, with evident approval, "A good many schools now give four years to history." When it is reflected that all these committee reports are to be regarded as diplomatic notes and interpreted by known tendencies and the unofficial statements of the powers, there seems to be a substantial truth in the phrase referred to. The writer heard the chairman of this committee say quite plainly, at an historical conference where the Report was under consideration, that the Committee demanded a four-years' course as its just due. The matter can be easily tested in another way. If a school principal should report to the Committee that he had organized a course with one daily recitation in history throughout the whole four years, what would their comment be? It is inconceivable that they would say: Too much time is given to history in this course when proper consideration is given to all the topics which must have place in the secondary curriculum.—This, nevertheless, is the only just opinion that can be passed upon such a high-school or academy course. FREDERICK WHITTON.

MICHIGAN MILITARY ACADEMY,  
September 5, 1899.

#### COLD SHOULDER.

TO THE EDITOR OF THE NATION:

SIR: Which do you consider the correct expression: *turn the cold shoulder*, or *give the cold shoulder*? I have always considered the latter to be such, believing it to be based on giving a cold shoulder of mutton to an unwelcome guest. Gasc, generally thorough and exact, says *give*. There are higher authorities, of course, but not at hand. F. B.

CAMBRIDGE, September 6, 1899.

[*Cold shoulder* the Oxford Dictionary asserts to be now used "chiefly in the phrase to *show the cold shoulder*," but also to *give*, etc. Scott introduced it ("I must tip him the cold shoulder") in 'The Anti-quary,' 1816, and explained the phrase in the glossary by 'to appear cold and reserved.' Dr. Murray adds: "A 'cold shoulder of mutton' as a dish has suggested many puns and allusive uses."—ED. NATION.]

#### THE SOUND OF I.

TO THE EDITOR OF THE NATION:

SIR: I should like to have my mind set at rest by you, or the member of your staff who deals with such things, as to the proper pronunciation of the letter *i* in the English language.

For the last forty years or more the tendency has been strongly towards giving it the sound of *ee* in *Acad*. This has gone so far that I think very often Americans pronounce the name of that vigorous General who established the English empire in India "Cleeve" instead of Clive—in the very face of Sir William Jones:

"Tis not of Jaffer nor of Clive  
On Plassey's glorious field I sing,  
But of the best good girl alive,  
Which most will deem a prettier thing."

I think the fashion is weakening, but I still hear "Palesteen" and "Philliteen" and "Madeleen" and "Adeleen." I feel inclined often to correct my younger friends (I am nearly eighty, and my acquaintance with the best books of English literature covers a period of about seventy years). I feel tempted to address our American kings and queens as John Kemble once did George IV.: "Oblige would suit your royal mouth better"—"Palestine would suit your royal mouths better." The Frenchifying of English pronunciation has gone so far that some fairly well educated people pronounce "Oude" "Ood."

I give a short catena of instances from English literature between 1800 and 1850:

"Yes, valorous chiefs, while yet your sabres shine,  
The native guard of feeble Palestine."  
—*Heber*, 1803.

"No tranced summer calm is thine,  
Ever varying Madeline."

"Faintly smiling Adeline,  
Scarce of earth nor all divine."  
—*Tennyson*, 1830-42.

The list I am sure could be extended.  
W.

MOUNT SAVAGE, MD., September 6, 1899.

## Notes.

Truslove, Hanson & Comba have nearly ready 'Embroidery, or the Craft of the Needle,' by W. G. Paulson Townsend and Louisa F. Peesel, with 70 illustrations; an 'Illustrated History of Furniture,' by Frederick Litchfield, and the same author's guide to collectors, 'Pottery and Porcelain'; 'The Bibelots,' six volumes of reprints for the book-lover, edited by J. Potter Briscoe, beginning with Coleridge's 'Table-Talk'; 'Saunterings in Bookland,' edited by Joseph Shaylor; and an *édition de luxe* of Hans Christian Andersen's 'Fairy Tales.'

The late Rev. Dr. Alexander Balmain Bruce's 'The Moral Order of the World' will be published next month by Charles Scribner's Sons. Shortly forthcoming also are 'The Powers at Play,' short stories by Bliss Perry; 'Dionysius, the Weaver's Heart's Dearest,' by Blanche Willis Howard; 'On Trial,' by Zack; 'The Yarn of the Bucko Mate,' by Herbert E. Hamblen; 'Searchlight Letters,' by Judge Grant; and the second volume of Max Müller's reminiscences, 'Auld Lang Syne' (in India).

The New Amsterdam Book Co. have in press a new edition of Frank Smedley's novels, with impressions of Cruikshank and Phiz's illustrations from the original plates; Gilbert & Beckett's Comic Histories of England and Rome, with John Leech's illustrations (a part in color); Admiral Beresford's 'Life of Nelson'; and 'Nights with an Old Gunner,' by C. J. Cornish.

Street & Smith's new list embraces a 'Life of Admiral Dewey,' by Will M. Clemens; 'Cuba—Porto Rico' and 'Hawaii—Philippines,' by A. D. Hall; 'The Vampire, and Other Poems,' by Rudyard Kipling; 'The Awakening,' by Count Tolstoy.

James T. White & Co. announce 'Our Three Admirals: Farragut, Porter, and Dewey,' by James E. Homans.

Hardy, Pratt & Co., Boston, will issue directly 'The Personal Opinions of Honoré de Balzac,' taken from his correspondence and miscellaneous writings, and preceded by Brunetière's centenary address at Tours on

May 6; the whole translated by Miss Katharine Prescott Wormeley.

Small, Maynard & Co., Boston, will continue their Beacon Biographies with lives of Hawthorne, by Mrs. James T. Fields; Thomas Paine, by Ellery Sedgwick; John Brown, by Joseph Edgar Chamberlain; Aaron Burr, by Henry Childs Merwin; and Frederick Douglass, by Charles W. Chesnut. Further announcements are: 'The Territorial Acquisitions of the United States,' by Edward W. Bicknell; 'The Future of the American Negro,' by Booker T. Washington; 'Their Shadows Before,' a tale of Nat Turner's insurrection; 'Mr. Dooley: In the Hearts of His Countrymen'; selections from the Letters of Thomas Gray, edited by Henry Milnor Rideout; 'Things as They Are,' social essays by Bolton Hall; 'Little Beasts of Field and Wood,' by William Everett Cram; 'An Alphabet of Celebrities,' pictures and verse by Oliver Herford; 'In Case of Need,' by Ralph Bergengren; new volumes of verse by Richard Hovey ('Talliesin'), Prof. Richard Burton ('Lyrics of Brotherhood'), and John B. Tabb ('Child Verse, Grave and Gay'), and a fresh translation of Hérédia's 'Trophies,' by the Rev. Frank Sewall.

George W. Jacobs & Co., Philadelphia, announce 'The British Isles through an Opera-glass,' by Charles M. Taylor, jr., with 48 full-page illustrations; 'Martial Graves of our Fallen Heroes in Santiago de Cuba,' by Henry C. McCook, D.D.; and 'A Group of Old Authors,' by Clyde B. Furst.

The season opens, as usual, with a fresh crop of reprints and new editions. Beginning with the handier forms, we mention the four volumes denominated "Stories of Great Authors," consisting of a selection from the biographical essays which precede the several specimens in Charles Dudley Warner's "Library of the World's Best Literature." Thus, volume i., Philosophers and Scientists, opens with Prof. E. Ray Lankester's Darwin, and closes at its two hundredth page with Prof. Paul Shorey's Plato; Bacon, Newman, Aristotle, and Spencer coming between. Prof. Charles Eliot Norton sums up Dante in volume iii.; Poets; Leslie Stephen does the same for Carlyle in volume iv., Historians; while Henry James, jr., on Hawthorne, and William C. Brownell, on Thackeray, lend distinction to volume ii. Not all the essays are up to the level here indicated. The publishers are Doubleday & McClure Co.; the typography is not elegant, but the binding is in simple good taste.

The same firm revert to a better style in the fourth series of their "Little Masterpieces," edited by the new conductor of the *Atlantic Monthly*. These three pretty volumes, each with its portrait, give us snatches of Thackeray (including a ballad or two), of De Quincey, and of Lamb (his verses, also).

Next come the dainty "Temple Classics" of Dent-Macmillan, with the 1538 edition of Elizabeth Carter's version of Epictetus's Moral Discourses, in two volumes, embodying the translator's high apology for literal uncouthness—"for else, taking greater liberties would have spared me no small pains;" two volumes of Herrick's *Hesperides* (1648); Basil Montagu's 'Thoughts of Divines and Philosophers' (1832); Sterne's 'Sentimental Journey' (1768); George Cavendish's 'Life and Death of Thomas Wolsey' (after the MS. edited by Singer in 1815, 1827); and Wordsworth's Sonnets, the first complete since the

poet's own extraction of them for separate publication in 1838. This last we must, on the whole, consider the gem of the present instalment of the Classics.

The late George William Curtis's 'True and I' antedates but a year or so William Allen Butler's 'Nothing to Wear,' and Harper & Bros. have now brought out both in handsome style—Mr. Curtis's fantasy with a portrait and three delicate illustrations; Mr. Butler's whole body of poetry, also with a portrait of the author, who still survives to note in the dedication his golden-wedding anniversary.

A second edition of Prof. E. R. A. Seligman's work on 'The Shifting and Incidence of Taxation' appears from the press of the Macmillan Company. So much has been added, and the revision has been so complete, that scarcely a single page, the author tells us, will be found the same as in the first edition. The substance of the work, however, remains the same, and it is too well known to require extended notice. The recent changes in the laws of New York, which recognize the principle of taxing the "unearned increment" in the case of one class of corporations, may produce such a shifting of taxation as will give especial timeliness to the appearance of this volume.

Little, Brown & Co. publish a useful manual entitled 'The War-Revenue Act of 1898 Explained,' by John M. Gould and Edward H. Savary. Besides the text of the act, the interpretations and decisions which every section has received or occasioned are given, as well as the decisions of the English courts on similar provisions of their stamp acts. An appendix contains a paper on the law in its relations to conveyancing, prepared by the Abstract Club of Boston.

'Pauperizing the Rich' is the title chosen by Mr. Alfred J. Ferris for an essay in the field of social reconstruction (Philadelphia: T. S. Leach & Co.). Mr. Ferris writes better than many reformers, but his style is too allegorical to enable us to understand his system very clearly. He proposes to abolish "the tremendous extremes of dire need and excessive wealth" by restoring to the people the "property in ideas" of which they are now robbed. By a computation which we do not follow, he figures that every man's income is to be equal to one-half of his 'present income, plus one-half the average income. To attain this result, the general Government is to impose taxes to the extent of ten and a half billions of dollars. The book is not without interest as showing the influence of the doctrine of rent when pressed to the extreme that it has been by some of our professors of economics.

Should the record in the Dreyfus trial fail to satisfy those who revel in *causes célèbres*, they may take up 'Criminal Appeal and the Maybrick Case,' by J. H. Levy (London: P. S. King & Son). Over 400 pages are given up to a verbatim report of the proceedings in this case; the remainder of the volume, some 200 pages, being largely occupied with protests and petitions and other attempts to convince the public that there was a miscarriage of justice. We shall not pass on that question, and content ourselves with remarking that, on the whole, justice seems to be better administered in England, where no appeal is allowed, than in this country, where there are three or four. The Home Office, it is to be

remembered, acts as a Court of Appeal, and its intervention is, in the opinion of competent observers, a sufficient safeguard to the innocent.

A very elaborate manual, entitled 'American Investments Classified,' has been compiled and published by Mr. Curtis G. Harriman of New York. The peculiar feature of it is its lists not only of investments, but also of investors, which show the ownership of Government, municipal, and other bonds held by all sorts of financial institutions. The labor of making such a compilation is very great, and its value to investors corresponds. Another volume is to follow.

We cannot speak very highly of Mrs. Clement's 'Saints in Art' (Boston: L. C. Page & Co.), though it doubtless contains some information useful to the young person engaged in the study of art. The illustrations are fairly well executed, but, both in the choice of them and in the text, a deplorable preference for second-rate work is shown.

All the more important questions of secondary education have been so thoroughly discussed in this country that it is useless to encumber the subject with material from abroad which has no especial bearing upon any of its phases in the United States. Still, there are certain difficulties almost identical the civilized world over, and on these it pays to compare notes. One of these, the adjustment between the traditional ideal (classical) education and the exigencies of modern life, has been made the subject of earnest study by the French Society for the Study of Questions of Secondary Education, whose reports to the Parliamentary committee on education have been collected under the title, 'L'Enquête sur l'Enseignement Secondaire' (Paris: Belin Frères). The fourth and fifth of these reports, 'L'Enseignement Classique' and 'L'Enseignement Moderne,' deal with the subject in a manner sufficiently broad to deserve being brought to the notice of American educators. The classical men will be more favorably impressed with the arguments presented than will the representatives of the sciences and the modern languages, but it should not be forgotten that the French are essentially a Latin race, and as such may be expected to cling to the classical tradition more tenaciously than other nations.

Those who are interested in the works of Theocritus will find in Legrand's 'Étude sur Théocrite' (Paris: Fontemoing) an extended treatment of that poet and his idylls that is really worth reading. In a book of 442 pages divided into five chapters, one finds a quite thorough discussion of all Theocritean questions. In a chapter on the authenticity of the poems, M. Legrand endeavors to determine which are the real work of Theocritus, while in chapter II. he discusses the poet, his life, residence, and relations with other poets like Kallimachus and Apollonius. Many points embraced in these two chapters are, of course, not subject to absolute proof, and so the author's conclusions, while of interest, can hardly be called definitive. Chapter III., headed 'L'Invention des Motifs,' is a handling of such themes as Theocritus's learning, his pathos of love, his picturing of city and country life, his character-drawing, his art in story-telling, natural description, etc. Seventy pages are then given to the poet's dialect, diction, grammar, versification,

and style, while a final chapter deals with the structure of the idylls separately. The author appears to have made use of all or nearly all the literature of his subject. It is, perhaps, as "un livre de récapitulation" that the work especially deserves notice.

The extent to which the Gothic form of letters is giving way to the Latin in German publications may be seen from the data lately appearing in *Reform*, the monthly organ of the Verein für Altschrift, which is leading the battle against the "broken" or Gothic letters. Statistics running from 1864 to 1897 are published, from which it appears that in the first-mentioned year the percentage of German publications in Latin type was 21.76, and this has gradually increased until it is now 40.40 per cent. In other words, in the last twelvemonth there were 10,329 books published in Gothic and 7,003 in Latin letter. The distribution among the various branches of literature is noteworthy. The great bulk, namely, 90.18 per cent., of works in the departments of mathematics and natural sciences appears in the old or Latin type, followed by medicine, 82.06; architecture and engineering, 77.25 per cent.; geography, 75.45; economics and trade, 63.59; arts and theatre, 63.14; philosophy and theosophy, 61.80; and languages, literature, and antiquities, 61.44. Lowest and least in the scale are belles-lettres, 7.60; theology, 16.05; and pedagogics, 22.34 per cent. The more indistinct Gothic type found a strong defender in Bismarck, but the opponents emphasize the fact that only a mistaken patriotism pleads for its retention; as the Gothic letter is not at all a peculiarly German property, though the Germans are the only people who have made a general use of it apart from its original decorative purpose.

Since the demise of the *Magazine of American History* in 1893, the progress of historical coöperation and publication has been, we should have said, adverse to the revival of that once useful medium. An effort is making, however, to resuscitate it, with Mr. William L. Stone for editor in chief. Mr. Stone, whose address is Mount Vernon, N. Y., is chairman of the committee having the enterprise in charge.

Mr. Charles Welsh has satisfied himself that the Mother Goose rhymes and jingles have been preserved with remarkable purity in this country, and he now asks that such rhymes as are familiar in our nurseries, but are not to be found in the Mother Goose collections, may be brought to his attention. His address is Winthrop Highlands, Mass.

—A key to methods of business, legal usages, and popular manners and customs, at the end of the thirteenth century, is furnished in the 'Calendar of Letter-Books of the City of London, Letter-Book A. 6705 1275-1298,' edited by Reginald R. Sharpe, D.C.L., just printed by order of the Corporation (London). The "Letter-Books" comprise volumes of the Records of London, and are so called "from their being severally distinguished by a letter of the alphabet." They cover a period from the early years of the reign of Edward I. to near the end of that of James II., three whole centuries and parts of two others. Those who know Riley's 'Memorials of London,' published in 1868, and consisting of extracts from the volumes relating to the earlier three of these five centuries, can guess at the nature of the

contents of this book. It is, to be sure, what they call a "Calendar," that is, a sort of enlarged index, giving, in chronological order, a short summary of the contents; but this is furnished with a judgment and literary skill which preserve the interest as well as the substance of the original text. A great many pages of this volume (which covers pp. xii, 259, imp. 8vo) are filled with those recognizances, and enrolments on public records of deeds, bonds, leases, and contracts, by which our English ancestors obtained certainty and security in their business dealings, and a speedier remedy than the clumsy and dilatory methods of jury trial allowed. In dealing with foreign merchants especially, these ends were important. The very first entry of a recognizance (p. 3) is one in which "William Bukerel came to the Guildhall and acknowledged that he owed John de Schyben, merchant of Brabant, £20 sterling to be paid [etc.]. And unless he did so he granted that the same should be levied on lands, rents and chattels, etc." When a man paid, wholly or in part, that fact also was entered on the record. In the case just mentioned, a marginal entry shows that the English merchant had paid—*quidam est*. These excellent methods, not unknown in modern practice, might well be followed in our times much more commonly than they are—methods by which, when an obligation is acknowledged of record, process may issue, on default, directly, without the delay of a trial. Of the many other interesting matters in this excellent book there is not room to speak. Although it is not distinctly so stated in the short introduction, it may be inferred that the whole series of Letter-Books is to be thus treated. It is much to be desired that they should.

—The new and revised edition of Sir Frederick Pollock's 'Spinoza' (London: Duckworth & Co.; New York: Macmillan) is a boon to all readers of philosophy and of Spinoza. When first published in 1879, the book was at once recognized as the most interesting and valuable introduction to the study of Spinoza existing in English; but it speedily rose to famine prices, and even at these was very difficult to obtain. Hence it is a matter for congratulation that its accomplished author has, amid his manifold occupations, found the leisure to reissue it and to tell us what he thinks of the contributions to the knowledge of Spinoza which have been made in the last twenty years; for, of course, Germany has not been idle in the interval, while the learned men of Holland have prosecuted the research into the life, character, and times of Spinoza with the utmost assiduity. This minute research has added greatly to our knowledge of the facts in detail, but fortunately it has revealed nothing that could compel us to subject our estimate of Spinoza, as a man and as a philosopher, to a radical revision. In the philosopher it has brought out more strongly, perhaps, a number of Jewish and mediæval affinities that must be admitted to detract from the historical accuracy of an interpretation which, like Sir F. Pollock's, prefers to emphasize rather the anticipations of modern thought to be found in, or extracted from, Spinoza. But then Sir F. Pollock's modernizing tendency in this respect was avowedly deliberate, and has admittedly proved itself to be the stimulating and valuable factor in his reading of Spinoza, and so he was well-advised to leave his general treatment unchanged. Nor,

again, have the new facts which have been unearthed about his life effected anything substantial in elucidating the mystery or in breaking the charm of Spinoza's personality. It still exercises a fascination which is greater and more widely felt than that of his doctrine; it still remains a matter of sympathetic imagination rather than of documentary evidence to penetrate through the atmosphere of philosophic detachment which conceals the inner self of the lonely maker of lenses. It is conceivable that the source and genesis of every one of his doctrines may be traced with incontestable accuracy, and that further additions may be made to our knowledge of the things he did and endured; but the abiding consolation will remain that the real problem of Spinoza, the real pathos of his life, can never be destroyed by the minutest searchings and researchings. And it is satisfactory to note that Sir F. Pollock appears to be of the same opinion.

—A foretaste of what may come to the United States is to be found in a Blue Book just issued on recent land legislation in Ceylon. The Government wished to put an end to disputes on claims to forest and waste lands, and framed a measure prescribing the manner of making entries and establishing possession. In due time it came before the Legislative Council, where it was debated by the Attorney-General, the Planting Member, the Governor, the General European Member, the Burgher Member, the Sinhalese Member, the Mohammedan Member, and the Tamil Member; the natives being opposed to the bill. Notices of claims were to be printed in the Gazette in the English, Sinhalese, and Tamil languages. The difficulty of treating the subject appears in the origin of most of these claims. Lands in large blocks are held by families of villagers, in undivided ownership, under grants made in remote ages by the Sinhalese kings. These grants were made by the delivery of small plates of copper or strips of ola leaf, called *sunnas*, or by a mere verbal expression of the King's pleasure. Most of the evidences have been destroyed, and in 1866 an ordinance was passed declaring all ancient documents inadmissible in evidence unless registered within a certain period—a requirement which the holders of these documents, mostly ignorant and poverty-stricken villagers, to whom the English language was unknown, were generally unable to observe from mere want of knowledge of the law. Long possession was the only means of proof of ownership, and possession was established by cultivation—chena cultivation in the case of high lands, from which a single crop was gathered at intervals of eight or more years, and rice on the low or marshy lands. Forest reserves for village purposes, and Patanas, or uncultivated wastes for grazing, were found necessary for the life of an agricultural community. The introduction of coffee culture threatened to lead to the alienation of land, but the nature of the soil proved unfit, and the leaf disease attacked what plants were set out. The success attending the culture of tea and coconuts has again raised the question, and the chena lands and village jungle, held by poor village communities, are sought to be sold as crown property. The evidence of the Government's Surveyor-General reads like a paragraph from a 'Century of Dishonor': "Patanas and jungles adjoining villages are too often sold without due regard to the grazing, water, and what may be termed jungle

rights of the villagers, who, squeezed into a corner, are tempted to sell their chenas and fields, and, after spending the money in gambling and drink, become vagabonds." Crime is increasing throughout the island, and the Sinhalese are diminishing in numbers. It is admitted that there are evils connected with the unrestricted cultivation of chena lands as at present; but the interference of Government as outlined in this measure went too far. The whole report is worth a study as an example of the perplexities of colonial rule.

—During the past four years the Prussian Government has made repeated attempts to deprive Dr. Arons of his position as privat-docent in the University of Berlin because he is a Socialist. These efforts have been constantly defeated by the members of the Philosophical Faculty, who have steadfastly refused to discipline any academic colleague on account of his political opinions; and without their consent and cooperation nothing can be done. A few weeks ago the matter was again referred to the professors with the same result. They expressed their surprise that a man should be tried twice on the same charge without any additional evidence to sustain it, and declared their decision to be unalterable. They state, also, that Dr. Arons is a keen investigator and excellent instructor in his department of physics, and that he has never overstepped permissible limits in the expression of his views. His conduct is in this respect exemplary, and the formation of his opinions is his own affair. Meanwhile, it is reported that Dr. Arons has been appointed to the chair of physics in Würzburg as the successor of Prof. Röntgen, who has been called to Munich to fill the place left vacant by the recent death of Prof. Lommel. If this information be correct, and it is quite probable, it will not be the first time that Catholic Bavaria has taken occasion to teach Protestant Prussia a lesson in tolerance. Fifty years ago the Prussian Government removed a young physician and surgeon, Rudolf Virchow, from his position as prosecutor in the Berlin hospital and pathological institute "Charité" on account of his liberal political opinions. A few months later, he was appointed to a professorship in Würzburg, where he soon became so distinguished for his researches that in 1856 he was offered a professorship in the Berlin University, which he accepted. His subsequent brilliant career as a physiologist and pathologist is known to the scientific world. As one of the founders and leaders of the progressive party he has remained true to his political convictions, and for this reason is eyed askance by William II.; but he is too important a personage to be molested, since it is chiefly to him that the medical faculty of the Berlin University owes its reputation.

—The eclipse expeditions to India a year and a half ago, besides obtaining excellent observations, also aroused an interest in the question of the future direction and programme of work of the observatories which are under the control of the Indian Government, none of which have a sufficient equipment, or have so far issued results at all commensurate with the clear skies they enjoy. Both Mr. Christie and Sir Norman Lockyer visiting India early in 1898, the Secretary of State requested these eminent astronomers to inspect these observatories

and others in the realm, with a view to reporting upon them and drawing up a scheme for their consistent reorganization. At Dehra Dûn, under the direction of the Surveyor-General's Department, is an observatory where, for many years past, daily photographs of the sun have been taken under the auspices of the Solar Physics Committee of the Royal Society. Also, in Calcutta there is another observatory, for magnetic records chiefly and time determinations; besides still others at Simla, where the sun's radiant energy is studied, and at Poona, where Prof. Naegamvela, of the Royal College of Science, has prosecuted researches in solar physics. At Kodaikanal, too, in the Palni Hills, is in process of erection still another observatory under the supervision of Prof. Michie Smith, now director of the observatory at Madras, as successor to Prof. Norman Pogson, whose death occurred in 1891. As a result of the visitation of Mr. Christie and Sir Norman Lockyer, the research work of India in astronomy is to be carefully systematized and divided among the several observatories, the chief of which will be the new one at Kodaikanal, where observations of positions of the stars and sun, moon, and planets, in addition to investigations in solar physics, are to be prosecuted under the direction of the Government Astronomer of India, with a Deputy Astronomer and a staff of native assistants. A Board of Visitors, composed of the Surveyor-General, the Meteorological Reporter, so called, with one or two other officials, will make an annual inspection of the Indian observatories, and report to the Government on their condition and administration. All this signifies a conspicuous advance in astronomy and terrestrial physics in a land of high possibilities hitherto relatively unproductive.

#### RECENT WORKS ON DANTE.—II.

It was not in Germany alone that 1898 was a year of mark in the publication of books, relating to Dante and his works, of unusual interest and value. In England the issue of Mr. Paget Toynbee's 'Dictionary of Proper Names and Notable Matters in the Works of Dante' (Henry Frowde) provided students of the poet with a book of high quality. So far as its design extends, it covers similar ground to that embraced within the more extensive 'Enciclopedia' of Scartazzini, and a comparison of the two works goes far to establish the trustworthiness and value of each. Mr. Toynbee's scholarly work is a *commentum perpetuum* of the best sort—clear and full in statement, well proportioned in the treatment of its subjects according to their relative importance, and furnishing sufficient references to authorities. The good judgment and good scholarship of the compiler are manifest throughout. It is, indeed, to be noted with some regret that Mr. Toynbee's references to German authorities whose work would have supplied him with matter of value, are scanty. A few articles need revision to secure entire exactness or completeness of statement, but, taken as a whole, the volume is surprisingly free alike from errors of fact and errors of the press. Its value is enhanced by a long series of genealogical and chronological tables of dynasties and of important noble families frequently referred to by Dante, affording information not easily accessible elsewhere.

Another book, and one of admirable quality, which appeared in 1898 is Mr. Edmund G.

Gardner's 'Dante's Ten Heavens: A Study of the Paradiso' (London: Archibald Constable & Co.). A more interesting original study of the poem has seldom been made. It is intended to serve as an introduction to the "Paradiso," and to expound the inner meaning of the deepest and most difficult part of the 'Divine Comedy'; for there is not only more of mediæval theology and scholastic philosophy in the "Paradiso" than in the preceding divisions of the poem, which require interpretation for the modern reader, but more also of meaning lying within the narrative, "hidden like a creature wrapped in its own silk." In order to penetrate to this meaning, both special studies and poetic insight are required. One of these is not enough. The study of the schoolmen, especially of the works of St. Thomas Aquinas, the chief teacher of theology to Dante, and also of the writings of St. Bernard, of Richard of St. Victor, and of the 'Sentences' of Peter Lombard, will afford a sufficient knowledge of the doctrine of the poem, but it is only by poetic insight that its true character will be recognized and its full significance and incomparable charm revealed. It is in this portion of the 'Divine Comedy' that Dante's poetic imagination displays its highest power. In "Hell" and "Purgatory" the clear vision of the imagination beholds and presents with intense realism scenes and incidents outside the limits of actual experience, yet not of a nature remote from it. But in the "Paradiso" the poet enters upon supersensual regions, where experience affords no guidance; yet even here, dealing with what might seem to lie above the mark of mortal powers, his imaginative vision is no less clear, and sees and shows its own creations with complete and convincing distinctness.

Mr. Gardner has made good study of the mediæval authorities, and is not devoid of the faculty requisite for the appreciation and elucidation of the inner significance of the poem. His work is free alike from exaggeration and from mysticism, faults into which it were easy to fall, and, while its author makes excellent use of the suggestions of other commentators, he has added fresh interpretations of his own which are often both lucid and illuminative. We know of no other book which affords more trustworthy guidance in the study of this portion of the 'Divine Comedy.' It is true, indeed, that some of Mr. Gardner's elucidations are questionable, and that occasionally he fails to set forth Dante's conception with clearness. For instance, the statement on p. 50 concerning the motion and influence of the spheres is hardly adequate as an exposition of a doctrine fundamental to the system of the universe as conceived by the doctors of the church whose teaching Dante follows. But, though Mr. Gardner's work lies open here and there to question and criticism, it is seldom that a book on Dante affords so much of interest from freshness of treatment, and so much of value as an original contribution to the better appreciation and fuller enjoyment of the 'Divine Comedy.'

America also furnished, in 1898, a book of great worth to the student of Dante, in the first part of the Catalogue, compiled by Mr. Theodore W. Koch, of the Dante Collection presented by Prof. Willard Fiske to the library of Cornell University. Both Collection and Catalogue are remarkable, the collection for its extent, it now being one of the largest, if not the largest,

in the world of Dantesque literature; and the Catalogue for its comprehensive scope and fulness of treatment, which make it rather a general bibliography of Dante's works, and of works relating to him and to his writings, than a descriptive list of a special collection. It affords evidence on every page of the extraordinary industry, thoroughness, and intelligence of its compiler. This first part, a very handsome and admirably printed volume, in small quarto, of about one hundred pages with two columns to a page, comprises the list of Dante's works in the original and in translation. It gives full information in respect to the various editions of the works, including notes on their textual value, analyses of their subordinate contents, descriptions of their illustrations, and accounts of special points of interest in them. Translations are treated in a similar manner, with notes where desirable, in respect to the end aimed at by the translator, and occasionally with brief critical opinions as to their merit by scholars of authority. Nor is this all. Mr. Koch has made an extensive investigation of periodical literature, and has cited in their respective places such articles as contain matter worth recording in regard to the titles in his lists. Every scholar will recognize the value of this portion of his laborious work. Part II. of the Catalogue, comprising Works on Dante, is in the press, and Part III., containing a Supplement, and Index of Subjects, and an Appendix on the Iconography of Dante, will speedily follow. Altogether, the work promises, when complete, to be by far the most comprehensive, exact, and valuable Dante bibliography ever attempted, and will possess permanent value for every student engaged in the investigation of any subject relating to Dante and his work.

We pass now to some less important publications which have appeared in the current year, beginning with the fourth edition of the late Mr. Symonds's 'Introduction to the Study of Dante' (Macmillan), a reprint of the last which was published under its author's supervision, just before his lamented death in 1893. It is an instance of the survival of the fittest. The book was written in 1870, and was the first volume produced by Mr. Symonds's prolific pen. At the date of its publication in 1872, its existence was justified by the lack of any book in English treating satisfactorily of the life and work of Dante. Miss Maria Rossetti's 'Shadow of Dante' had, indeed, appeared in the preceding year; but this original and interesting work was little more than a systematic and intelligent exposition of the physical and moral conceptions embodied in the 'Divine Comedy,' and a summary narrative of the course of the poet through the eternal world. Mr. Symonds aimed to provide a general view of Dante's life and times, to set forth the qualities of his genius, the scheme of his chief poem, and the place of his work in the history of the development of Italian literature. The book did not display any considerable critical scholarship or poetic insight. It was marked by a certain superficiality of treatment, such as is not altogether absent from the writer's later and more important writings. His tastes directed his studies rather to the later Renaissance, and he was better fitted by nature, as well as by acquisitions, to deal with Petrarch and Boccaccio and their successors than

with a genius such as that of Dante. But whatever value the book may have possessed it has now lost. The increase of knowledge in respect to Dante and his times has been so great during the past thirty years, and the recent critical study of his works has thrown so much new light upon them, that a book in which no account is taken of what has been done during this period is not merely antiquated, but in considerable part untrustworthy. Mr. Symonds's 'Introduction,' never really sufficient for its purpose, has become wholly insufficient, and beginners of the study of Dante should understand that it is no safe guide, and has no such intrinsic merits as make it worth reading for its own sake.

Almost at the same moment with the new edition of the 'Introduction' appears another book, with a similar design in part, the 'Dante Interpreted' of Mr. Epiphanius Wilson (Putnam). It might have been written by a pupil of Mr. Symonds who had learned little from other sources, and who had no special faculty for the task which he undertook. Its style indicates that it is the production of youth, and it is here and there as amusing as it is incorrect, as, for instance, in such a passage as the following:

"When we think of the placid life of such poets as Goethe or Tennyson, we see the trimly kept parterre of a garden, the softness and smoothness of a meadowland and level river bank, the symmetry and completeness of a newly finished temple. When we come upon Dante's life we see that the garden has been trampled by a squadron of horsemen, an earthquake has heaved up the velvet basin of the valley, and the river is bursting through crags and over precipices, while the Grecian temple still stands half dismantled, and is blackened and broken with tempest and fire."

There are less futile things than this in the little volume, but it is so full of errors that such virtue as it may possess is more than counterbalanced by them. We open it at random, and find, p. 124, Oderisi da Gubbio called "Roman Oderisi"; p. 125, Provenzan Salvani is said to have "fallen at Montaperti." At the time of the victory of the Sienese in 1260 at Montaperti, Provenzan Salvani was at the head of affairs in Siena; nine years later, at the fight at Colle in the Val d'Elsa, he was taken prisoner and beheaded. P. 126, Sapia is said to have hated her countrymen "because she was in banishment," a statement for which, we believe, there is no foundation. But there are even more considerable errors than these. Piccarda is twice (pp. 71 and 156) spoken of as the sister of Dante's wife; on p. 166, Dante is said to be "accosted by the spirit of George Martel of Hungary," which should be corrected to Charles Martel of Naples; through his mother, Charles Martel was indeed titular King of Hungary, but he never visited that land or exercised rule over it. P. 70, Pier della Vigna is said to have been a man of Tuscany. P. 71, Sordello and Matilda (the Countess Matilda, see p. 137) are spoken of as contemporaries of the poet, but the last record of Sordello is of 1269, when Dante was four years old, and the Countess Matilda died one hundred and fifty years before Dante was born. The list of errors is not exhausted.

But 1899 has brought us one book of worth enough to make up for a wilderness of such books as Mr. Symonds's and Mr. Wilson's—the second volume of the Rev. Dr. Moore's admirable 'Studies in Dante.' We must reserve it for the special notice which it de-

serves, meanwhile commending it as of great interest to all serious students of Dante.

#### LORD SELBORNE'S AUTOBIOGRAPHY.

*Memorials*, Part II. Personal and Political. 1865-1895. By Roundell Palmer, Earl of Selborne, Lord High Chancellor. 2 vols. Macmillan.

Quite apart from any personal interest which may be felt in Lord Selborne's character and career, the conclusion of his 'Memorials' is a biographical event of some moment. During the years covered by these final volumes, 1865-1895, the author occupied a position of undeniable eminence, and dealt with affairs of the highest public importance. His friendships were distinguished and numerous, his legal and political connections made him the confidant of jurists and statesmen. Although no one could well claim that he was the greatest lawyer who has reached the woosack in this century, he proved an able Chancellor, and by the Judicature Act he left a mark upon the English legal system. Furthermore, the chiefs of both political parties are represented in his correspondence. After actively upholding Liberal principles throughout a generation, he grew alarmed at Gladstone's increasing radicalism, parted company with his old leader at the time of the Unionist schism, and for the last ten years of his life dealt hard blows at Home Rule, Welsh Disestablishment, and other causes which were espoused by his former colleagues. Finally, he is to be regarded as the foremost advocate of church principles among the Anglican laymen—the chairman in convocation of the lay house for the province of Canterbury, the darling of the Episcopal bench, and its hope when Nonconformist threats waxed loud. While science, literature, and art were unaffected by his influence, he touched the action of his age at many points, and what he writes about himself cannot be neglected.

Lord Rosebery, in addressing the House of Lords at the moment of Lord Selborne's death, recalled the late Chancellor's industry, "which was in reality sleepless, and of which the traditions surpass perhaps all that is known of human industry." On the best authority, no other lawyer has so carefully mastered the facts before entering court, and, to take a single example from his practice at the bar, Palmer once worked sixty hours together without getting a snatch of rest. The same diligence which was displayed in the long course from Winchester school to an earldom, continued when another man might have thought himself *rude donatus*. Lord Selborne kept steadily occupied long after his personal ambitions had been appeased, and, whether fighting publicly for principles or engaged privately in good works, his toll was incessant till death came. The one example of persistent effort which we have now in mind is that offered by the composition of his long autobiography. It was begun at the age of seventy-three, and carried steadily forward until about 2,000 printed pages had been produced. The proportion of letters and other allied matter is large, but, after all subtractions are made, the writer's own part still remains of ponderous bulk.

Like the autobiographical sketch which Darwin left, it was designed for the immediate family circle. Otherwise, the two nar-

ratives differ as widely as did their authors in particular beliefs and cast of mind. It would be invidious (and probably futile) to draw a contrast between the men themselves, because each was true and honest; but if literary effect alone be considered, Darwin's simplicity and directness are much more telling than Lord Selborne's minute and elaborate description of his own attitude towards sundry public questions. Considering the vast superiority of Darwin over Lord Selborne in the matter of general influence upon mankind, it may seem unreasonable that the latter should have been so prolix. Still, we must remember the total difference of circumstance between the two lives. After Darwin settled at Down, he had little to record except the publication of his several books. Lord Selborne was in the thick of the *mêlée*, and must tell of the blows he struck. The life active has a wider range of topics than the life contemplative or the life scientific.

Whether one derives more advantage from these two volumes than from their predecessors, will depend largely on whether one approaches them from the outside or the inside. During the period traversed in the second part, Palmer gained the summit of his power and fame, conducted cases of the first magnitude, acted for the Crown in the Geneva arbitration, and was a source of strength to any view or cause which he supported. Thus, lovers of gossip about public affairs will prefer the present instalment, looking at the matter merely from the standpoint of information. On the contrary, those who in reading biography keep their eyes fixed on the gradual unfolding of character, will hardly find the interest proportionately heightened by the tale of wealth and honors. It is true that Palmer's refusal of the Chancellorship in 1868, on grounds of conscience, may seem superior to any single act of integrity connected with his early days, and it is a fine thing to see men in high place continuing above reproach till the end; but for some reason the fruition of Lord Selborne's early resolves has impressed us less than the formative influences which were the means of shaping those resolves. Any one who sets out to direct his course by a religious rule, giving evidence thereof in his daily walk, will assuredly not escape being called a prig, especially if he makes public profession of his purpose. A good many gibes were levelled at the first part of these memoirs on account of their pious tone, but, quite apart from theological opinion, Lord Selborne's constancy to his exacting views is proof of sincerity and strength. France, for instance, could hardly fail to profit by the sudden discovery among her lawyers and politicians of a few such persons as Lord Cairns and Lord Selborne. *Esto perpetua*—a motto which any country might gladly assume—is made to appear reasonable in states where even a few politicians are lovers of something higher than their own advantage.

Of the hundred subjects which are started by the episodes or interests of Lord Selborne's prime, we shall detach only a few from the mass as texts for our comment. The *Alabama* arbitration, the Judicature Act, and the breach with Gladstone over Home Rule were milestones in his career, and to these we shall mainly confine our attention. First on the list comes the *Alabama* difficulty, a case which at intervals occupied Palmer's mind from its appearance in 1862 till its settlement at Geneva in 1872. He was Solicitor-General

when the Confederate cruiser left Liverpool, as leader for the Crown in the arbitration court he went exhaustively into the evidence, and even in his memoirs he returns with some zest to the merits of the controversy.

Almost precisely three years after Palmer had declined the Chancellorship, he was named principal counsel and left for Geneva amid showers of congratulation, Sir John Coleridge, for instance, declaring the appointment to be the greatest of all his professional successes. It may be gathered from the pains which he lavished on his meanest client that he threw himself unstintingly into this national cause, and the award gave him keen disappointment. His tone in addressing posterity regarding the claims and the personnel of the trial is a calm, judicial one; but while he studiously preserves a candid demeanor towards his associates and antagonists, he leaves an impression adverse to Sir Alexander Cockburn and to the legal intelligence of the board. He thus glances at the British arbitrator for his ill-advised vehemence: "He allowed his discontent at the manner in which the other arbitrators, overruling his opinion, conducted their proceedings, to appear too plainly, and, by so doing, may have thrown more power than was desirable into Mr. Adams's hands." Concerning the disinterested members of the tribunal he says: "Of the three, Count Sclopis had, in his own country, some reputation as a jurist. If the other two had ever studied law, it was (I suspect) but slightly, and perhaps only for the purpose of this arbitration." And in one or two passages he barely stops short of stating that the issue was prejudged. "Viscount d'Itajuba, the fairest man of the three, entered upon the arbitration as if there were no serious question, except as to the amount which Great Britain ought to pay; and this (if I may judge from a conversation which I had with him in his own house) he thought we need not much care about: 'Vous êtes riches, très riches,' he said."

Despite the adverse decision which was rendered at Geneva, Palmer's reputation suffered no loss through his part in that celebrated litigation. Lord Hatherley's eyesight failing in the summer of 1872, the woosack became vacant, and Gladstone renewed the offer already made in 1868. No stumbling-block like the Irish Church Resolutions now presented itself, and, on his return to England, Palmer without delay or difficulty accepted the seals. He entered office full of energy and reforming zeal, the immediate effect of which was the Judicature Act of 1873. Lord Selborne was not the first Chancellor to be impressed by the conflicting jurisdictions of the English legal system. Lord Hatherley and Lord Cairns had both seen the need of simplifying the cumbrous machinery of justice, but Selborne must receive full credit for grappling with the subject of appellate jurisdiction, and for drafting a bill which could be carried through both houses of Parliament. Difficulties certainly arose over the question of taking from the House of Lords "the authority exercised in their name by the legal members," and on Disraeli's return to power in 1874 the jurisdiction of this chamber, "strengthened by the addition of two, and eventually four, salaried life peers, was restored." Still, the new act escaped other

organic modifications, and has proved a great boon. It constituted one High Court of original jurisdiction, consisting of various divisions as the convenience of business required;

"giving to all the Judges, in every Division, equal jurisdiction in Equity as well as in Law, enabling them all to give assistance, when needed, in Divisions not their own; providing for a procedure, in all divisions, as far as possible uniform, making all times, throughout the legal year, available for all London business, and excluding all unnecessary circuitry or multiplicity of proceedings with reference to the same dispute, or between the same contending parties."

Lord Selborne drafted the whole measure with his own hand and considered it his enduring work. "If I leave any monument behind me which will bear the test of time, it may be this."

Lord Lyndhurst was Chancellor four times, and Lord Selborne, by steadily following Gladstone's leadership, might have enjoyed the same remarkable experience, for in 1892 he was disqualified neither by failing health nor failing faculties. But Home Rule, Disestablishment, and the rest of Gladstone's radical programme after 1885, brought about a breach of the co-operation which till that date had been long and intimate. Though personal friends, they had never reached terms of the closest confidence. Lord Selborne ascribes this fact partly to the urgent claims of legal practice upon his time, partly to having met Gladstone only after their school and college days were over, and even more to a third cause. "The attraction of common principles on subjects to which we both attached cardinal importance was limited between us by a tendency to divergence of opinion, after a certain point, as to their practical application." From occupying a seat in the Lords, Selborne could take no part in the election of 1885, and he devoted the holiday thus afforded him to an outing in Italy. While away from the country, he heard that the left wing of the Liberal party was exacting Disestablishment pledges in certain constituencies. Disturbed at such news, he corresponded with Gladstone, and found that on a "test question" their views seriously diverged.

The final political rupture (it was unaccompanied by any acute personal friction) occurred at the end of January, 1886. The elections gave the Liberal party a majority of eighty-four over the Conservatives, leaving out of account altogether eighty-six Irish Home-Rulers. Prior to the voting, no scheme of Home Rule had been fathered by Gladstone, and Lord Selborne ascribes his action in 1886 to fear that the Tories might capture the Irish with some Home Rule proposition of their own. "But I have never myself doubted that, on this as well as other occasions, the motives which had most influence upon his [Gladstone's] conduct—right or wrong, wise or unwise—were higher and more honorable than those of mere personal ambition." Selborne did not turn his back on all schemes to create "an Irish legislative body for Irish affairs." He stipulated, however, as fundamental principles, the protection of the landlords, and the exclusion of the Irish from Westminster as soon as their separate legislature were constituted. Two days after he had framed this ultimatum (January 30, 1886) he was asked by Gladstone if he could not again

accept the seals. The next morning they met to discuss a basis of possible agreement:

"Our conversation was very friendly, but the result was that I did not think the prospect of our agreement about Ireland sufficient to justify me in accepting a place in his cabinet. If he could succeed in producing measures by which my difficulties might be overcome, I might be more useful to him out of office than in it; if not, my duty would be to oppose him, which I could best do by retaining in the meantime my independence. We parted with expressions of affection and regret, but we parted, practically, for ever."

Lord Selborne's autobiography abounds with character sketches of the author's friends and adversaries; e. g., Lord Westbury, Lord Cairns, Sir Alexander Cockburn, Lord Salisbury, Sir William Harcourt, Lord Granville, and, most conspicuous of all, Mr. Gladstone himself. Its chief merit will, according to some, be found in these judgments. They are carefully weighed and do not sacrifice truth to epigram. By far the most studied of them is that with which the work closes, the estimate of Gladstone. Merely as a piece of writing, it gives evidence of careful revision; it is twenty pages long, and it contains an account of Selborne's attitude towards him from the beginning of their connection to a time when each was more than eighty years old. We shall not attempt to compress into a few lines the minute analysis of qualities which constitutes this historical portrait, but we may say that, however emphatically Lord Selborne differed from the radicalism of Gladstone's old age, he never impugns his leader's motives. He can even bring himself at the end to say:

"Whatever he may have done, or may yet do, to increase the power of some of the adversaries of the Christian faith, he has himself not ceased to be among its defenders. Nor can I wonder that, to such as share his enthusiasm, see with his eyes, and judge with his judgments, he should appear, not (as he does to me) a Hercules no longer master of himself, using his strength blindly for ends not his own, but an Alexander who has discovered new worlds to conquer."

Lord Selborne's affection for the Anglican church was such that he inclined to reckon among "adversaries of the Christian faith" any one who might advocate Disestablishment. Yet he was not a bigot. He could give calm reasons for any course he took. If, as Lord Salisbury says, "he was a strong party man, and he did his best for his party," he could never be styled a bitter partisan. Both publicly and privately he lived in the spirit of the motto which is inscribed over the fireplace in his hall at Blackmoor: "Ego autem et domus mea serviemus Domino."

*George Müller of Bristol and his Witness to a Prayer-Hearing God.* By Arthur T. Pierson, author of 'The Crisis of Missions,' etc., etc. With an Introduction by James Wright, son-in-law and successor in the work of George Müller. New York: The Baker & Taylor Company.

For both the zealous believer and the curious psychologist the life of George Müller was a very interesting one. The latter may be inclined to question his sincerity, but can, we think, impugn it only within very narrow limits—those of a self-

deception to which Müller lent himself unconsciously for the most part. His biography, as we have it here, is written in a spirit favorable to the acceptance of all the miracles that have been reported from the earliest times—the spirit of one of Müller's favorite texts, "Open thy mouth wide and I will fill it"; the eyes meantime being shut as close as possible. There is not a suggestion of the critical attitude from the first page to the last. On the other hand, there are no ingenious attempts to cover up certain things which, to any one at all critically disposed, must obviously suggest a doubt of the complete validity of Müller's extraordinary claims for the methods and results of his phenomenal career. The book is written in the dialect of that vulgar piety whose slang expressions are the current coin of camp-meetings and revivals. These expressions may commend it to the constituency on which Mr. Pierson relies for the success of his venture, but, if they do not, it is not as if his reliance were upon these alone. A foot-note reads: "The author of this memoir purposes to give a copy of it to every foreign missionary and to workers in the home fields, so far as means are supplied in answer to prayer." That the children of this world are wiser in their generation than the children of light is not so sure, perhaps, in our own time as it was formerly.

The frontispiece portrait of George Müller is a frank and interesting comment on the later pages of the book. It is convincing that his self-confidence was equal to his confidence in God. And, indeed, the self-confidence of the man must have been enormous for him to imagine that he could at almost any time subject the universe to his convenience and control, and use the Deity as an errand-boy to run hither and thither with this message or that timely or belated meal. We say "at almost any time," because Mr. Müller did a great deal of praying which was without immediate result. Every day for half a century and more he prayed for the conversion of two friends, naming them every time as if to avoid misunderstanding, but they remained unconverted. Nothing daunted, he confidently expected to meet them in the happy fields, holding God in honor bound to see to it that so much good praying should not go for nought. There were no exceptions to his faith in prayer, but sometimes his ingenuity was severely taxed to account for the apparent exceptions and the long delays. The death of his first wife seemed at the time an untoward circumstance, but when afterward he made a series of world-wide missionary journeys, it became evident why she was taken: she could not at her age have endured those journeys; the second wife, a much younger woman, took to them like a duck to water.

At times both the treasury and the larder ran very low, and many remarkable instances are given of the help which never came too late. Sometimes the children of the Bristol Orphan Houses sat down to empty tables, but they never went away from them hungry. It must be confessed that some of the instances recorded are more eloquent of the naïveté of Müller's "jealousy for God" than of miraculous interposition. For example, we are innocent-

ly told that one of two pence given by a poor woman was "just the amount required to make up the sum needed to buy bread for immediate use." At another time eight pence more were needed to buy bread, and only seven could be got together. "But on opening one of the contribution boxes, one penny only was found deposited, and thus a single penny was traced to the Father's care." It was nice reckoning that could make the necessities in these cases jump with the timely aid. Müller's "jealousy for God" was a strong point with him. He was jealous for His reputation as a prayer-hearing and prayer-answering God, and he got a tremendous leverage by bringing this idea to bear upon the Eternal. Either He must answer Müller's prayers for this or that particular benefit, or be openly disgraced. If there is a suggestion of blackmail in this for the ungodly, with Müller it was a logical part of a consistent scheme. It may be objected that his ideas of God and prayer were unspiritual and mechanical and gross. They must seem so to a great many excellent people. They did not seem so to him, or, if they did, they were no worse to him on that account.

There was one way in which Müller came to the rescue of the Almighty's reputation which smacks of fraudulent practice, if his biographer has not done him gross injustice where he has written:

"It has, since Mr. Müller's departure, transpired how large a share of the donations are to be traced to him; but there is no means of ascertaining as to the aggregate amount of the secret gifts of his coworkers in this sacred circle of prayer."

If Müller and his coworkers held in reserve the right to answer their own prayers in cases of extremity, we have a very sensible diminution of the wonderfulness of his emergence from some trying situations. The amount of Müller's help to his own schemes is set down as having been more than £80,000. So much generosity on his part would

seem to leave a narrow margin for divine interposition.

The sceptical have frequently made this criticism upon Müller's work: that his prayers were over-heard, and that they advertised his necessities and put the faithful on their honor to maintain a man of such principles and a work conducted so piously. But Mr. Pierson assures us that great pains were taken to conceal the necessities of the Bristol Orphanage. At one time, we are told, the annual report was kept back for several months when the conditions were precarious. But this was not done more than once, and it is obvious that, in a general, if not in a particular, way, the avowed methods of Müller's work and its various needs were kept steadily in the public view. It is equally obvious that a good deal of worldly prudence mingled with Müller's piety. It is significant that when certain friends were starting for the Continent, he not only prayed for their personal safety and the safety of their luggage, but made a note that several pieces of the latter were thrust into a boot under the coach where they might easily be overlooked. Mohammed's advice to Omar, "Tie thy camel and commit him to God," was such as Müller would have approved. It must ever be impossible to say how much his prayers and how much his prudence availed for the success of his great Orphanage. Counted in pounds sterling, this success was certainly immense—£988,829 from first to last. This for the orphan work alone. Nearly £500,000 more came in for other uses. At the start no orphans were prayed for. They were taken for granted, and it looked for a time as if Müller had reckoned without his host. But it arrived in time, more than ten thousand strong. Five orphan-houses were built from time to time. Eventually they proved more than sufficient for the orphans that could be aggregated. But this was because other similar institutions had sprung up all over the country. A careful

sociological study of the character of Müller's work and its effects is a desideratum.

It is a far cry from his theological opinions to those of the modern scholar. He confidently expected the return of Jesus to this world, and his purpose was not to save everybody—a clear impossibility—but to make up a church of select Christians fit to receive Jesus at His coming. The Bible was for him verbally infallible, and he read it through nearly two hundred times, and in its isolated texts found guidance equal to every possible emergency. In general his exegesis impresses us as much more simple and straightforward than that of the average popular preacher of our time. His endeavor was to find out what the Bible actually taught and to shape his action on its words. Told that he must turn the other cheek to the smiter, it did not occur to him that this might be interpreted as a command to knock him down and grind his face into the dust.

# The Nation.

NEW YORK, THURSDAY, SEPTEMBER 21, 1899.

## The Week.

We called attention, when Gen. Otis ordered the exclusion of the Chinese from the Philippine Islands, to the very grave consequences of such a step. These consequences are already beginning to appear. The Chinese Government has now delivered to our State Department an emphatic protest against this arbitrary act. It insists that it is a violation of international law and in derogation of existing treaties. It is certainly a violation of international comity, and in disregard, as this protest declares, of the friendly relations which have long been maintained between the two countries. It may be said that the form of the order simply extended the restraints on Chinese immigration into the United States to the Philippine Islands, and that this is proper because the Philippine Islands are a part of the United States. But that is an altogether erroneous view to take of the matter. If these islands are a part of the United States, a great many other laws would at once apply there which there is no pretence of applying. No customs duties, for instance, could be levied there except such as are uniformly levied throughout the United States. It is a case where all laws or none apply, and the order issued by Gen. Otis is simply an application of martial law; martial law consisting, according to the Duke of Wellington, in the will of the commanding officer for the time being. There was some talk of "military necessity"; but no explanation was offered of the nature of this necessity. There was no suggestion that the Chinese were giving aid and comfort to the insurgents, or that they were other than a desirable element in the population. The order was on its face unnecessary, barbarous, and insulting to the Chinese Government, and it ought to be rescinded and apologized for by our own.

We observe that the Imperialistic newspapers which have never allowed their readers to see the text of the remarks Gen. Lawton is said to have made on "this accursed war," insist that a recent semi-official denial of something else, which has been put out as coming through Gen. Schwan, applies to these utterances. Gen. Lawton's words were published under the signature of a chaplain in the army, who is also the pastor of a Congregationalist church in Somerville, Mass., and appeared in one of our leading religious newspapers, the *Congregationalist*. The character of the writer has never been called in question,

neither has the authenticity of the language he put into Gen. Lawton's mouth been denied. Two days after the interview was published, the authorities at Washington put out a cable message from Gen. Schwan, in which he said: "Lawton pronounces as utterly foundationless newspaper reports of interview asserting that he commented on military situation or criticised conduct of operations here." Whatever this denial may have referred to, it certainly did not cover the *Congregationalist* interview, for that contained not one word about the military situation or the conduct of operations. It referred entirely to the capabilities and character of the Filipinos, and took the general ground that "this accursed war" should be ended because all that the Filipinos demand is a "little justice." If it was a criticism of anything, it was the policy of the President, and not of the military operations at Manila. The Schwan message read like the denial of a charge, which had been made a few days earlier, that Gen. Lawton had criticised the conduct of his superior officer, Gen. Otis. We do not expect the Imperialistic press to give these facts to their readers, but they ought to be above resorting to the red herring.

Secretary Hay's letter to the Ohio Republicans is chiefly significant as a sign of the extreme trepidation of the Administration over the outlook in the President's own State. "What!" people will say, "is it as bad as that?" "Wanken auch die Berge?" the German Republicans will exclaim, seeing the party summoning even its "d—d literary fellers" to the rescue. Col. Hay as an economist must be a somewhat amusing figure even to himself; and his jaunty assumption that protective duties were designed to stimulate exports, and his assertion that high wages mean low cost of production, are enough to make orthodox protectionists faint away. What he says about the English "alliance," and friendly relations with foreign countries in general, is as true as it is trite; but we think it will hardly allay the noble rage of Irish-Americans, to which the Ohio Democrats are so artfully appealing, just as Col. Hay and his friend Blaine appealed to it in 1884. However, for one thing we must thank him, and that is his silence about the President's policy of subjugating the Filipinos. That, indeed, is a policy which can be supported, but, as we see, only in silence. Col. Hay must in particular have felt his hand stayed by his knowledge of what Lincoln said about the plea which McKinley makes for his conduct in the Philippines—that he is giving the natives as much self-government as they

are capable of. The private secretary of Lincoln must remember how that statesman declared such a plea to be that of an enslaver and tyrant; and the Secretary of State of McKinley cannot, out of sheer loyalty to the memory of his former chief, defend what his present chief is doing. We must also praise Col. Hay's judicious silence about the President's betrayal of civil-service reform. The Ohio Republicans lauded McKinley for this, but the Secretary of State stands dumb before it, leaving the rôle of official apologist to Mr. Gage. It is possible that the Hon. John Hay of the State Department feared that somebody might recall, and apply to him, what the author John Hay wrote of Spanish public men:

"There is a lack of principle in the higher walks of government. It is not so much dishonesty as it is a total absence of conscience in political matters. . . . They have a brow of bronze when detected and exposed in a misrepresentation."

Ex-Speaker Reed, being now a private citizen, feels free to express his mind about the President's Philippine policy. When Mr. Reed arrived in this city a few weeks ago, he declined to express any other view about the war than this: "I believe in the Declaration of Independence." In his letter of farewell to his constituents he now says: "Whatever may happen, I am sure that the First Maine District will always be true to the principles of liberty, self-government, and the rights of man." These sentiments are distinctly "reasonable," but we should think that the spectacle of a man whom Republicans have so long hailed as the best brain of the party, now giving up public life as the strongest possible protest against the mad course of the Administration, would open some blind eyes. With Senator Hoar speaking peculiarly for the conscience of the Republican party, and Mr. Reed for its intellect, both in revolt, the time for old-fashioned Republicans to ask whither they are drifting has plainly come. And this is but one of many signs that the elements of a terrible reaction against McKinley are gathering.

The speech with which Fred E. White, Democratic candidate for Governor of Iowa, opened his canvass at Davenport on Thursday, is highly significant of the drift of political discussion. In the last previous campaign the Iowa Democrats put the financial issue to the front, and the party's stump-speakers devoted themselves to the silver question. Now their gubernatorial nominee makes a speech almost entirely confined to the issues of Trusts and imperialism, "leaving the subject of finances almost un-

touched." As to Trusts, Mr. White would remove one cause for their existence by "repealing the Trust-fostering part of the tariff," and another by bringing about Government ownership of railroads. But, important as he considers the question of Trusts, he declared that the "issue of imperialism, from the very nature of the case, in view of the momentous consequences which must immediately and necessarily begin to follow, has become so transcendently important that we are safe in saying it sweeps temporarily aside all other questions." Mr. White meets this issue clearly and boldly, putting the question before the voters in this pointed way:

"If any man wants to endorse the McKinley policy of 'Criminal Aggression,' he can so declare by voting a Republican ticket, for that party is its select and special champion. Whoever wants an end put to the continuance of this crime can also so declare, but he must cast a Democratic ballot, for that party stands in eternal hostility to imperialism and all it implies."

The new commander of the Grand Army makes it plain at the start that he will do everything in his power to help on the movement for the greatest recklessness in pension appropriations. Upon his return to his home in Watertown, N. Y., Col. Shaw made a speech in which he outlined his "policy," saying that a great deal of his time will be given to pension legislation, declaring that "the old soldier is entitled to lasting consideration," asking, "What if the pension roll is large?" and answering his question with the argument that "the old soldiers saved this nation," and that "their reward should be commensurate with their services." Finally, he showed that no considerations of governmental economy or of a deficit in the national Treasury will weigh with the Grand Army machine, saying further:

"If the burden should prove too heavy, I am in favor of a patriot pension bond issue, so that only the interest would have to be met from year to year. Let posterity meet the bonds when they mature. Why not? The country was saved to posterity. It is only proper that a part of the burden should fall on posterity."

This suggestion is interesting not only in itself, for its bearing upon an important feature of the governmental policy, but also for the proof which it furnishes of a growing sentiment in favor of the nation's running in debt for its ordinary expenses, and leaving it for "posterity" in the twentieth century to pay a part of the burden incurred by the United States during the closing years of the nineteenth century. It is such an easy thing to raise money by selling Government bonds that people are more and more ready to see this device for meeting current bills employed rather than to insist upon economy in administration and new taxes, if necessary to meet

the cost of an economical administration. Expenditures exceeded receipts by nearly \$90,000,000 during the fiscal year ending with the 30th of last June, but what of it? There was plenty of money in the Treasury to meet all bills as they fell due, was there not? More money can be obtained in the same way, can it not? Posterity is going to share in the profits to come from the war in the Philippines, is it not? Why should not posterity foot part of the bills?

"Senatorial courtesy" is what Quay depends upon to secure him his old seat next winter, upon the appointment of Gov. Stone, according to his colleague and creature, Senator Penrose. Mr. Penrose was in Washington last week, and "talked freely" on the subject, manifesting the greatest confidence in Quay's success. He says that Quay will be asking recognition of old friends, and that consequently his case will stand on a very different footing from that of other claimants to seats upon gubernatorial appointments who came to Washington without friends or influence in the body which was to pass upon their credentials. Ex-State Senator Andrews, a devoted follower of Quay, professes even greater confidence than Penrose, declaring that "from personal knowledge" he is positive that the Senate will seat Quay. It is evident that the friends of the Pennsylvania boss have been making a canvass of the Senate, and that the results encourage them. It cannot be said that their confidence is unjustifiable, for nobody who is familiar with the character of the Senate will be surprised to see it disregard the precedent which it made in the last Congress, when the appointee of Oregon's Governor was refused admission by a large majority.

Illinois continues to pay the penalty of having elected to the governorship three years ago a demagogue who has no respect for justice or law. Last fall a strike broke out among the white miners of Pana, in Christian County, near the centre of the State, and the operators brought in blacks from Alabama, as they had a perfect right to do under the laws of Illinois and the Constitution of the United States. The Governor refused to protect these colored citizens in their right to earn a living, issued orders that "under no circumstances should any negro from another State be allowed to enter Pana," and announced that he would "blow to pieces with Gatling guns" any such body of laborers who might thereafter try to enter Illinois. State troops were sent to Pana, very tardily, to preserve order, but their commander, taking his cue from the Governor, declared that "if I lose every man under my command, no negroes shall land in Pana." Tanner enjoined the troops that they were "under no con-

sideration to assist the mine-owners in operating mines with imported labor," and the natural consequence was disorder, rioting, and abuse of the blacks by the whites for a long period. More recently a strike broke out among the white miners of Cartersville, in Williamson County, in the southern part of the State, and here, too, blacks were brought in from the South. The same troubles occurred at Cartersville as at Pana, and at last troops were sent there to restore order, but they were withdrawn last week before they could prudently be spared, and on Sunday there was a bloody riot, in which five blacks were killed.

Even Tanner seems at last to have been sobered by the bloody outbreak, and to realize what a reproach it is to Abraham Lincoln's State that black citizens of the United States are killed for the offence of seeking work at wages which suit them. In a statement which he gave out on Sunday night, the Governor expressed some very proper sentiments, as that "this is a blot on the fair name of the commonwealth of Illinois," and that "the people of Cartersville, and especially of Williamson County, should use every means possible, and that vigorously, to bring the parties guilty of this wholesale murder to speedy justice." In their efforts to do so he promised "the coöperation of the State, and the whole National Guard, if necessary," to bring about the arrest and conviction of these parties, and the restoration of peace and good order in the county." This is all very well, but the man primarily responsible for the riot at Cartersville is the law-breaking Governor, who was, very properly, indicted by the grand jury last December for "wilful neglect of duty as an officer," in not taking the action required of him by law and by his oath of office to prevent rioting which should not have occurred, and need not have occurred if he had discharged his obligations as executive.

Mr. Holahan, who is the Croker President of the Board of Public Improvements, revealed the connecting link between Tammany and the Republican "organization" in the Ramapo job when he testified on Friday that Lauterbach was the man who first called his attention to the matter; that Lauterbach "hounded" him for months about the contract; that Lauterbach sent him the contract first; that he and Lauterbach agreed upon the price that the city should pay, and that the contract which Holahan tried to "jam through" the Board of Public Improvements was the one that Lauterbach arranged and approved. Holahan could not explain why Lauterbach had gone over the head of Dalton, who was Commissioner of Water Supply, and had come direct to him, but that's "an easy one." Holahan

stands much closer to Croker than Dalton, and as President of the Board has greater power as a jammer. The Comptroller declares that Holahan said to him, before the Board voted on the contract, that he had the necessary votes and would "jam it through." Lauterbach is no amateur as a Platt-Tammany go-between. He has never concealed his friendliness for Tammany. He disclosed with great frankness, in the spring of 1897, when he was at the head of the local Platt machine, the programme which Platt followed later with Tracy's candidacy. He said then that rather than see non-partisan ideas triumph in the election, he and his associates would turn the city over to Tammany. During Mayor Gilroy's administration, Lauterbach was able to have his son employed as one of Col. Fellows's assistants in the District Attorney's office. If there was to be a Republican-Tammany "deal" in Ramapo, he would be the natural expert selected on the Republican side to arrange it, and Holahan would be the most natural person to act in a similar capacity on the other.

Mr. Platt's Quigg is an entertaining person on nearly all occasions, but never more so than when he gets upon high moral ground. He is much pained because the Citizens' Union declines to "confer" with him, especially with a view to the renomination of Mr. Mazet, and remarks: "I have been going on the assumption that we all regarded Tammany Hall as something in the nature of a semi-criminal conspiracy against the public welfare rather than as a legitimate political organization, and that a campaign against Tammany Hall and for the election of men nominated by the Union and by the Republican party, acting together, and nominated solely for their known ability and integrity, would be a task to which the Citizens' Union could devote itself without any compromise of its principles." Why did not Quigg proceed on this "assumption" in 1897? Why did he, acting under Platt's orders, exert successfully the whole power of the Republican organization to turn the city of New York over to this "semi-criminal conspiracy against the public welfare"? Does he really think that his organization is any better than Tammany's, any less criminal? Has he forgotten what Cornelius Bliss said about it in 1896: "An organization based upon such wholesale frauds cannot command the confidence of the Republican party, nor of the public; honest Republicans cannot support it, nor is there any basis on which they can coöperate with the men who have secured control of it by means of frauds which they refuse to undo"? Quigg was the "head devil" in these frauds. The reputation which he earned then he strengthened a year later, when he made Van Wyck's election sure.

The prompt pardon of Capt. Dreyfus is, of course, an official confession by France that the verdict of the Rennes court-martial was of no real weight, either in law or in morals. Nothing that has been said by foreigners in condemnation of the majority of the court is so severe in effect as this action by the French Government. It is tantamount to proclaiming Dreyfus innocent and his judges guilty. Yet the decision will be accepted quietly in France. The army will feel that it has been already sufficiently "vindicated"; and the public will be glad to let the whole matter drop. From a mere political point of view, the solution is doubtless a happy one, as both parties to the long and fierce quarrel will now claim a victory. But, morally, the affair has a bad look, having all the marks of an adjustment agreed upon in advance. Instead of *chose jugée*, we have *chose préparée*, otherwise known as *coup monté*.

War between England and the Transvaal is now freely predicted, though not by any one in responsible position in either country. The English press is almost unanimous for war, but that, luckily, does not prove that there will be a war. In the crisis with France a year ago, over Fashoda, the newspapers were as certain that there would be hostilities; the fleets were mobilized; war risks were demanded on shipping; everything looked as squally as it does now; yet Lord Salisbury suddenly appeared with a peaceful settlement of the whole dispute in his hand. That he will, if humanly possible, find some similar way out of the present *impasse*, there is every reason to believe. At any rate, it is folly to contend, as some of the more headlong newspapers are doing, that diplomacy has been exhausted. The fact that the negotiators on both sides have done a good deal of fencing and finessing, altering their proposals and their demands from time to time, only shows that they have been playing the diplomatic game in its full rigor, and does not at all argue that they are bent on an ultimate rupture and that the case is hopeless. This moment of irritation and suspicion and wrangling over details is the very one for some comprehensive plan of settlement to be urged and accepted.

As the matter stands, it is clear that there is no sound reason for war, and an irrational war is a crime. The latest Transvaal answer alleges that its offers of August 19 and 21 were made only on the assurance of the British agent at Pretoria that they would be accepted by her Majesty's Government. Yet they were refused as "insulting." The reply also asserts that the Transvaal Government was "assured by Mr. Chamberlain" that the proposals made would

not be considered by him a refusal of his terms. Now, England cannot go to war with such a charge of trickery on the part of her agents unrefuted. Whatever the exact truth about this, we have only to revert to the text of Sir Alfred Milner's account of the Bloemfontein conference last May, to see that Krüger has since offered all that was then demanded, and, moreover, that the coupling of a new assertion of Transvaal independence with the franchise concessions was practically a suggestion of Sir Alfred's. He said to Krüger that a change of policy towards the Outlanders would "strengthen the independence of the republic," and in his own detailed scheme of franchise reform he distinctly specified that the new citizens were to take oath to "defend the independence of the country." Yet when this was put by Krüger in his official proposals to the British Government, it was declared quite inadmissible. Undoubtedly he is a shrewd and obstinate old gentleman, who means to mark every point in the diplomatic game, and prove himself a hard hand at a bargain; but he has, as far as the official documents show, made out a good case for his charge that England has been evasive and has been steadily increasing her demands.

Mr. Bourke Cockran has written a letter to President McKinley, suggesting that he should proffer the friendly mediation of our Government in the controversy between England and the Transvaal Republic. The consequences of such a war, Mr. Cockran observes, might be disastrous to all Christendom. The assertion by one country of a right to prescribe the electoral franchise in another country admittedly independent, he continues, is an act of "criminal aggression." Here Mr. Cockran, we apprehend, shows that he is not altogether sincere in claiming that his suggestions are prompted solely by a regard for the welfare of humanity and the true glory of our flag. He reminds us painfully of our lost vantage-ground. A few years ago we might have offered to mediate, and while there would have been good reasons why England should decline the offer, it would have been a creditable act on our part. But such an offer would be now regarded as little less than impudent. We are engaged in reducing a remote people to subjection, and any offer of mediation by another Power would be extremely offensive to our Government. For the present, at least, the prospect for mediations and arbitrations is dark enough, and the great opportunity which we should have had for throwing our influence in favor of peace and disarmament at The Hague Conference has been lost. It will be a little awkward for some time yet to air our sympathy for "oppressed peoples," and until we are disposed to accept mediation we need not talk of proffering it.

## THE NEGLECTED DUTY.

President Schurman chose the psychologic moment for his important public statement of the Philippines situation and the Philippine duty. On the one hand, the country had been startled by President McKinley's proclamation of the policy of blood. "No useless parley," was the stark announcement of his Pittsburgh speech. But, on the other hand, evidence had been rapidly and overwhelmingly accumulating that McKinley's Philippine policy had been one long miserable mistake, and that his plan of merciless extermination was the crowning blunder, as it was the culminating cruelty. Dewey's voice had been heard in opposition; he would have the violence "cease at once." Lawton's horrified protest had reached the United States: "Stop this accursed war"; all that the Filipinos want is "justice." A great revulsion of feeling was already setting in; the sober second thought was beginning to assert itself; American love of fair play and justice was making itself heard in ever clearer and stronger tones. At this critical juncture President Schurman steps in.

We know nothing of the motives which led him to speak out, but suppose them to have been simply a sense of duty to himself and to the public. As an educated man who had accepted a difficult and thankless task in going to the Philippines, he was in honor bound to rebuke the ignorant ranters who go about, like Gov. Roosevelt, denouncing the Filipinos as "savages." President Schurman has clapped an extinguisher on that flaming nonsense. He ranges himself alongside Dewey and Lawton and the naval officers who have travelled in the interior, and speaks emphatically of his "confidence in the people of the Philippine Islands" and of his "sympathy for their aspirations." Like a sensible man, he judges the natives by their best representatives, not their worst, and declares that "an educated Filipino, of whatever tribe, will bear comparison with an educated man of any other race." Mr. Schurman's account of present conditions in the islands seems to us eminently fair, except that he probably does not allow enough for the changes for the worse in the situation since he came away. The dislike and distrust which he notes as existing among the tribes nominally at peace, have in many cases passed into positive hatred and open hostility. But his statement nails so many lies of the McKinleyite press that we cannot but hail it as a great public service, destined to have a profound effect on the opinion of the country.

We are very well aware that the alarmed and desperate imperialists will seize upon President Schurman's expression, "National honor will not permit us to turn back," and claim it as an

endorsement of the policy of blood. But we shall take the liberty to interpret his meaning to be that we are not to "turn back" from the path of an honorable, and rational, and peaceful, and American solution of the problem we have on our hands in the Philippines. "Is there anything to do but fight it out?" President Schurman was specifically asked by his interviewer. Yes. Let Congress step in and declare the national intention respecting the form of government to be set up in the islands. This is his answer. In place of blind, brute force, let there be reason, consideration, the immediate grant of home rule. He does not explicitly say that he is against the McKinley policy of blood, but all the indications of his interview look that way. He has gone as far as he could without showing open disrespect for the President, whose commission he still holds.

But to our minds the most pregnant remark in the whole statement is the suggestion that Congress speedily intervene. Why does not the President call an extra session? He is in an extraordinary position. He is carrying on a war which is every day assuming larger proportions, and has never deigned to ask Congress either for authority to do it or for some alternative legislation. This is an unprecedented thing for any President to do, and Mr. McKinley is under a special obligation not to do it. He has publicly bound himself to be guided by Congress in this whole matter, and yet he has not asked for guidance—so far as in him lies, has made it impossible for Congress to guide him. He has refused it information. He has hastened its adjournment. In this alarming crisis he does not summon it to Washington. All this, we say, is in the teeth of his implied promises in his Boston speech last February. He then confessed his own ignorance and uncertainty. "I know no one at this hour who is wise enough or sufficiently informed to determine what form of government will best subserve their interests and our interests." But there was one fountain of wisdom: "The whole subject is now with Congress." This from the man who never asked Congress to help him, and does not now invoke its aid, though the situation is a thousand times worse than it was last February! "Until Congress shall direct otherwise," Mr. McKinley said he would do—what? Ravage the islands? Fill them with graves? Go ahead like Genghis Khan with "no useless parley"? Not at all. His pledge then was simply to "possess and hold the Philippines," and to make the people feel that "we are their friends, not their enemies." Launching an army of 60,000 men against them, with orders to allow no "parley or pause," is a fine token of friendship—a very "friendship's garland"!

We do not say that McKinley has done all this without warrant in law, but he

has certainly done it without the sanction of the American people, and absolutely without consulting their representatives in Congress. Yet if ever there was a man marked by nature as in need of advice, plenty of it and laid on thick and strong, it is William McKinley. If it were a question of picking out a man to deal with a matter of world-politics like this Philippine business, he and his Canton crony, Judge Day, would have been selected last. Yet these are the two men who have got us into our Philippine mess. Both of them parochial politicians, and proud of it; neither of them ever having been abroad, or having any acquaintance with foreign politics, or knowing so much as a foreign language, they plunged us into an interminable war of conquest, seven thousand miles from home, and have never said to Congress, "By your leave"! This is the really astounding feature of the situation. Here is a President who, by nature and habit, calls aloud for advice. His mind is always made up for him by others. He professes to be the slave of Congress, yet he lets a general or two and a civilian Secretary of War form his bloody determination to subdue the Filipinos at any cost, and never asks the opinion of the representatives of the people. This anomalous condition should not be prolonged. If Mr. McKinley had any just sense of his duty and any regard for his plighted word, he would call Congress together at the earliest possible day, and turn over to its free discussion and final decision the great problem of the Philippines, which so vitally concerns our national honor and safety, and which he has shown himself totally unable to solve.

## THE CONFERENCE ON TRUSTS.

Perhaps the most significant act of the conference which has just closed its session at Chicago was its refusal to adopt any resolutions. A meeting of English-speaking people that not only does not adopt, but does not even consider, a set of resolutions, is an anomaly. Every boys' club that debates the question whether Cæsar or Alexander was the greater general, or whether aristocracy or monarchy is the better form of government, closes the discussion with a vote, and it is certainly on its face surprising that, after so many expressions of opinion as took place at Chicago, on the part of individuals, no collective judgment was pronounced.
